As to how Mr. Lie came to be chosen the paper draws the conclusion that since the site of the UNO was set for the New World, the Secretary-General had to be a European. By this the first choice of the Anglo-Saxon countries, Lester Pearson, Canadian Minister in Washington, was eliminated. Since neither Russia nor Britain would tolerate a man from the other country, and France was this time too weak to assert itself, he had to come from a small country. Since, furthermore, the Russians knew they did not have enough votes to elect their first choice, a Yugoslav by the name of Simitch, they nominated Mr. Lie whom both they and the United States had supported as the first President of the Assembly. Both Mr. Bevin of Britain and Mr. Stettinius, approved of the idea and Mr. Lie was chosen.

Trygve Lie is a man of the people. His father was a carpenter in Oslo, and thanks to his own efforts, as well as the economic sacrifices of his parents, he was able to obtain a university education. He was also a good athlete, a football player and a sprinter. He is reported to have made the 100 meters in 11 seconds flat. Having entered the University of Oslo at the age of 18 in 1914, he obtained an administrative law degree in 1919 and immediately became a secretary in the Norwegian Labor Party. Three years later he became legal adviser to the Norwegian Trade Unions and in 1935 he entered the Government as Minister of Justice. Four years later he was shifted to the post of Minister of Commerce, Shipping and Industry and as such he had to provide what he could for the Norwegian army of resistance when the Germans attacked the next spring. He is said to have been the last member of the Government to quit Oslo on April 9, 1940. Later he requisitioned the whole Norwegian merchant marine, turning it over to the Allies. The services rendered by these 4,000,000 tons in supplying Britain food and munitions are supposed to have been equal in value to the military aid of an army of a million men. In November, 1940, he succeeded Halvdan Koht in London as the Norwegian Minister for Foreign Affairs. In 1945, when the Government returned to Oslo, he was one of the few ministers retained in the new Government. C. J. Hambro, who had been the Conservative Party Leader, President of the Storting and head of the Assembly of the old League of Nations, was not reelected to the new Norwegian Parliament.

[From the American Bar Association Journal, March 1946]

LAWYERS IN THE NEWS

A rugged lawyer of and from whom a great deal is likely to be heard, in the United States and the World, is TRYGVE LIE, of Oslo, Norway, the 50-year-old Secretary-General of the UNO, who will come to New York and establish his headquarters early in March. The son of a carpenter, he entered the University of Oslo in 1914 and completed his legal training in 1919. His name is pronounced as "Trig-va Lee", with the accent on the "Trig".

From the first, he devoted himself to labor law and politics, and became the Secretary-General of the Norwegian Labor Party, which was making a long, uphill fight for power. In 1939 he became Minister of Trade, Shipping and Industry; and in 1941, the Norwegian Foreign Minister in exile in London. He and his family had had a "messy" time when the Nazis invaded Norway, but they got away to London.

Without previous background in international law or diplomacy, he has ever since devoted himself to it with "impassioned interest." His selection as Secretary-General of the UNO resulted from the "veto power" and a compromise. When the UNO General Assembly met in London for organization, the Soviet Union and the United States supported Mr. Lie for election as President of the Assembly. But Great Britain won a majority for the doughty Paul-Henri Spaak, of Belgium.

The United States and seven other members of the Security Council of eleven meanwhile were supporting the able and popular Lester ("Mike") Pearson, Canadian Ambassador in Washington, as best qualified to be the Secretary-General. The Soviet Union had a "veto power" on this office and proposed to use it, in order to force the election of a continental European, in view of the choice of the United States as permanent site for the UNO. American acceptance of Mr. Lie as the compromise nominee broke the dead-lock. The three "key" positions in the UNO, organizationally, are thus held by the Norwegian Labor Party's Trygve Lie as Secretary-General, by the Australian Labor Party's Norman Makin at the head of the Security Council, and by the Belgian Socialist Party's Paul-Henri Spaak, as President of the Assembly.

Mr. Lie is stocky and very energetic, spends his leisure in skiing and tennis, and is devoted to agreeable companionship and good living. He will receive an annual salary of $20,000 and $20,000 for living expenses in addition to a furnished house, all at the expense of the UNO and all exempt from American taxation.

He has a formidable job ahead of him, in organizing and staffing a secretariat of probably at least 2,500 persons, from many countries and speaking many languages. Beyond his heavy administrative tasks with the Security Council in continuous session, the Charter gives him powers and duties for keeping the peace. One of his duties is to "bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security" (Charter, Article 99).

This is a good deal of a job, for a labor lawyer who has devoted his adult life to the advocacy of the political program of labor in politics: but his friends are confident that in one of the key jobs of the new World he will show capacity, impartiality, skill in avoiding flare-ups, and "impassioned" devotion to the cause of peace through justice and law. American lawyers will welcome his coming to our shores and will be of any help to him they can.

[From the New Republic, Mar. 25, 1946]

UNO'S TRYGVE LIE

(By Alfred Joachim Fischer)

Trygve Lie, Secretary General of the UNO, began his political career at the age of ten, when he borrowed a horse and cart on election day and rode through the suburbs of Aker, near Oslo. He offered passers-by a lift, and those who accepted were set down at the polls after being given a harangue from the labor viewpoint.

Norway's former Foreign Minister, like Bevin, owes his political career to the confidence of the trade unions. At the age of fifteen he was enrolled in the Labor Party. He was then working after school as an errand boy to support his widowed mother, and expected to become a carpenter, like his father. His teachers, however, recognized his gifts and advised him to continue his studies. He won a scholarship to the university at Oslo, where he studied law. During this period he was a member of the Trade Union Executive.

By 1919, Trygve Lie had established himself as a lawyer, and acted as secretary to the Central Executive of the Norwegian Labor Party and legal adviser to the trade unions. He was responsible for obtaining many wage concessions and a progressive labor-arbitration law. He also played a prominent part in the administration of Aker, his native town. In 1926 he was elected to the National Executive of his party. Nine years later, when Lie, at 38, was serving his first term in the Storting, Johan Nygaardsvold invited him to join the Labor government as Minister of Justice. Lie has always belonged to the left wing of the Labor Party, as his books testify. In 1931 he published *The Anti-Labor Laws and the Battle Against Them* and *The New Labor Arbitration Law*, jointly with Viggo Hansteen, whom Terboven made into a trade-union martyr during the occupation.

When the war broke out, Lie was Minister for Supply and Shipping. In anticipation of a blockade, he started a program to store supplies. Norway was the only country in Europe which did not have to introduce gasoline rationing during the first months of the war, and when Germany submitted her ultimatum she had unprecedented reserves of grain and fuel. As the Germans invaded, Lie escaped to British headquarters in northern Norway with the King and government.

In spite of great difficulties, he succeeded in keeping the troops supplied in the fighting around Tromso and Aandalsnes. But his outstanding achievement of those days was to save the Norwegian merchant fleet for the Allies. Working day and night with a number of experts in a small mountain hotel, he managed to snatch four million tons of shipping from the Germans and evolved provisional measures to requisition the entire Norwegian merchant fleet for his government. Over the short-wave radio he ordered Norwegian ships to put in at Allied ports. The thousand ships saved were a major factor in winning the Battle of the Atlantic.

In 1940 Lie took over the Ministry for Foreign Affairs provisionally, and in 1942 in a permanent capacity. He won friends and concessions from the diplomatic corps in London while keeping in close contact with the Home Front. His information services worked smoothly. The blowing-up of a Norwegian bridge, for example, was often known in London sooner than in Oslo. Lie himself went to Norway for several weeks during the war via the underground. Chain-smoking Turkish cigarettes with his usual aplomb, he afterwards told his London friends who remarked on his long disappearance, "I have been extremely busy."

Lie spent his honeymoon in 1921 visiting the Soviet Union to see the development of a socialist state. He and his wife were hindered by the loss of their suitcases; no clothes could be bought and they were unable to attend any meetings, because their only set of underwear was on the clothesline. This experience, however, did not result in an anti-Soviet complex. It is his conviction that Russia is as interested, for security reasons, in a free and independent Norway as are England and America. It was he who called on Maisky in London in August, 1941, to reestablish diplomatic relations. In his first speech before the United Nations Assembly, Lie spoke of "international unity," citing the example of Björnson, the great national poet of Norway who had fought for the freedom of the oppressed Poles, Czechs and Slovaks forty years earlier. And frequently he refers to Fridtjon Nansen, the explorer and humanitarian, who regarded a world peace without Russia's active cooperation as an impossibility. Yet Lie has also said, when asked what he thought of England, "The mentality of the British is so familiar to me that I even think in the same way as they do." He has been noted for his efforts for closer Scandinavian cooperation, to make the northern countries serve as an ideological bridge between Russia and the West.

The fact that Lie's straightforward political life lifts him above any suspicion of favoring any power group or groups makes him a suitable man to act as servant of the world," as he interprets his new task. His country, which gladly records this honor as an appreciation of its gallant resistance, is respected by all and feared by none. Norway is one of those small nations unburdened by inverted inferiority complexes and hence free from chauvinism. Trygve Lie can look back on a great Norwegian tradition.

Despite his bulkiness, Lie's special hobby is sport. For many years chairman of the Worker's Sports Union, he skis, plays tennis and football. During his exile, he rooted for the Chelsea football team, and described his fervent cheering as "healthy lung exercise." He likes young people and his flat in London became the rendezvous for young Norwegians and soldiers on leave. His political friends claim that he used to bribe his three daughters with ice cream to have them in the front row of any audience he addressed.

Lie is a good mixer and a good organizer. He speaks English, French, German and a little Russian. He starts work early and works till late at night with only a short mid-day rest. His UNO colleagues may find the following hints useful. As a rule Lie is gentle and good-tempered. Disturbances when he is tired or engaged in some important work may cause an occasional outburst, but an apology invariably comes within half an hour. He never sulks—with one exception; he may sit brooding for days if a member of his family forgets his birthday.

WORLD WATCHMAN—TRYGVE LIE OF UNO

(By Drew Middleton)

LONDON.—The faith of many early adherents of the United Nations Organization has been shaken by ominous conditions which surround the approaching meeting of its Security Council. The dispute over Iran is a critical issue—the first great hurdle that UNO must surmount. But there are those of great faith who believe that UNO will take the barrier and go on to the sunny uplands of peace. And among them are Trygve Halvden Lie, a hard-bitten, practical Norwegian lawyer, who is Secretary General of the organization.

As Secretary General Trygve Lie might be called the world's first internationalist. Under the charter of UNO he "may bring to the attention of the Security any matter which in his opinion may threaten maintenance of international peace and security." His responsibilities, says the charter, are "exclusively international" in character and he is not to be influenced in his duties by any member of the United Nations. He is, in fact, the world's watchman.

First and foremost his job is to administer UNO. He is its chief administrative officer, acting in that capacity for all meetings of the General Assembly, the Security Council, the Economic and Social Council and the Trusteeship Council and he must perform any other functions entrusted to him by these organizations. Lie's willingness to shoulder extra burdens is a measure of his terrific energy.

Under regulations laid down by the General Assembly, Lie appoints the entire staff of the secretariat and assigns appropriate staffs to the Economic and Social Council and the Trusteeship Council. This in itself involves a tremendous amount of investigation and conisderation by Lie as well as a considerable measure of personal power.

For as he himself says, "There is always a tendency to appoint those who come forward first. But I think it is best to go slow, to make sure that appointments are *right*. That is better than waiting two or three months and then learning that I have made a wrong choice. For by then replacing a man will mean upsetting an entire department."

Selection of the staff must be done on the basis of two considerations: securing the highest standards of efficiency, competence and integrity and spreading appointments throughout the member states. These considerations, Lie admits, make selection difficult, but he is adamant in maintaining that they are necessary.

Lie, with the consent of the Security Council, can notify the General Assembly at each session of many matters relative to the maintenance of international peace and security that are being dealt with by the Security Council and shall similarly notify the General Assembly or members of the United Nations if the Assembly is not in session, as soon as the Security Council ceases to deal with such matters.

Thus, from the point of view of the selection and direction of his staff, he has great powers and is, in fact, a virtual dictator. But from the standpoint of power over various delegations, his role, as it is now envisaged, is that of a coordinator rather than director.

Lie's public activities during the first Assembly of UNO and the Security Council in London were not spectacular. He did not preside, he attended, and he left the table-banging to others. Indeed, were it not for a certain intensity of expression this heavy-shouldered man, who sat stolidly through the sessions, would have passed for a house detective. Like Clement Attlee, Lie is at his best in committee, where his integrity, firmness and willingness to see both sides of any question are impressive. He is not the type of man who lends himself to political exploitation, having no great attraction as a speaker. But he has moral qualities that the world and UNO need.

Lie at 50 is a plain man speaking and working for the plain people of the world and all their hopes. His intellect and ability are far above the average but, during the last seven years, he has encountered the physical and mental dangers which have beset the average man in Europe. The experience endowed him with a sense of kinship with the people not only of western Europe but of the world.

In many ways the man is a study in contradictions. The snap judgment of an eminent Frenchman that Lie is "a proletarian with his shoes shined" is superficial, but it does underline two contradicting factors of Lie's character; he is a proletarian of the proletariat, yet he knows how to work and bargain in the glossy, cynical world of international affairs.

There are few grays in Lie's character. He is a study in black and white. Toughness, a combination of peasant shrewdness and strong will working with one of the best legal minds Norway ever produced, is perhaps his outstanding characteristic. But this toughness is balanced by genuine friendliness. That much-overworked word, "charm," applies to Lie. Capable of great affection and loyalty to friends and subordinates, he can be rousingly angry in a manner which shakes his associates, but sometimes clears the air.

In late years he has learned to curb his rages and tendency to talk too freely about his work. Today he exudes affability. His face, long and rounded, breaks into frequent smiles. He gestures often with his hands and manages to do it gracefully despite the fact that each hand is as large as a small ham.

Generally his tall, strong body, which is just beginning to run to fat, is clothed impeccably in a blue double-breasted suit. He has learned the polite chit-chat of cocktail diplomacy, although like many members of Britain's present Labor Government, he dislikes this form of social intercourse. His attitude toward the trappings with which many wish to adorn the UNO's new home reflects his affection for plain people and plain speaking.

"I don't want the UNO to have too much or ask for too much," he said shortly before he left for America. No palaces and extensive and expensive grounds. Just plain Government buildings, the kind that American officials would want if they were abroad. We are not coming to the United States as anything but plain people. We are not coming as rulers or anything like that. We are plain people working for plain people all over the world and we hope that this will be understood in the United States. I hope we can show we are working in the interests of all common men and women everywhere and working without the old diplomatic tricks."

Lie, both as a person who throughout his life has seen problems successfully solved by negotiation and discussion and as a moderator for a voiceless section of humanity in the councils of the great, places primary importance on international discussion either inside or outside of UNO, although naturally he hopes and expects that more of the world's problems will be deposited on UNO's doorsteps.

Lie himself has come very far on his own ability in discussion and debate in Government councils, in the law courts and in the rough-and-tumble of Norweigan party politics. He has discussed world affairs with Norwegian seamen and English Tommies and listened to voices of men who helped to shape the world in which he sees the United Nations as the greatest hope.

A quarter of a century ago he listened to Lenin in the Kremlin for three hours and during the war he sat in the White House and Downing Street and heard Roosevelt and Churchill discourse on the world as they saw it.

Lie got his start in life in an industrial suburb of Oslo, where his mother kept a boarding house. It was a textile center and Lie as a schoolboy heard Swedish syndicalists and Norwegian labor union members debating their rights and wrongs as he toiled over his books.

Like many another poor boy watching his mother work, he resolved to grow rich and famous. His "rags to riches" story went according to Horatio Alger routine until 1914, when he entered Oslo University. But Oslo at the start of the first World War was not Mr. Alger's America and Lie, instead of following the conventional scenario by entering a business, saving it and marrying the daughter of the boss, found himself in the thick of turbulent Norwegian Labor party politics and keeping company with Hjordis Joergensen, daughter of the local station master.

Lie's preoccupation with books and politics did not prevent him from becoming a first-class football player and track athlete at Oslo University. But when he received his law degree he was already secretary to Martin Trammel, secretary of the Norwegian Labor party. In 1921 he married Hjordis Joergensen and journeyed to Moscow as secretary of a Labor party delegation. It was during this visit that Lie listened to Lenin talk for three hours.

A year later he became legal adviser to the Norwegian Trade Union Federation, a post he held for thirteen years. In addition to handling court cases he wrote a number of pamphlets of an explanatory nature. His own course in labor politics was moderate. As his activities and interest expanded so did his circle of friends, and the big, gregarious young labor lawyer soon had nearly as many friends in Vestkanten, Oslo's upper-east side, as he had in proletarian Russia. He began to travel extensively in western Europe and Scandinavia. The Oslo lawyer had started on the path toward becoming a citizen of the world in the truest sense.

But he was no more than a capable young man in Oslo when in 1935 he joined the Norwegian Government as Minister of Justice. Indeed, his gregariousness, his fits of temper, his occasional political indiscretions, worried some of the weightier members of the party. One of these once said, "For six days a week I think Trygve is a genius. On the seventh he is just a child."

Lie's political character, like that of many another public man of our times, can best be assessed by his personal reaction to two principal political doctrines which have flowered during the first half of the twentieth century: communism and fascism. As a Socialist he has been extremely interested in the progress of socialism in Russia and as a European he is fully alive to the Soviet Union's position as a great power in Europe and the world. But since he is a Scandinavian Social Democrat he favors change by evolution rather than revolution, and since he is Norwegian and a western European, he believes firmly and fervently in those freedoms residing in the Bill of Rights.

Naturally, a man of this political orientation, a democrat of the people who believes in socialism, was repelled by National Socialism, the most powerful manifestation of fascism yet seen in the world. Watching from the north, Lie saw the Social Democrats in Germany broken by their Nazi masters, their leaders forced into exile or driven to concentration camps. There was nothing that he, a minor Minister in the Cabinet of a nation of 3,000,000 souls, could do about it, but it is reasonable to believe that Lie's present devotion to peace and human liberty received its greatest impulse during the years when he sat on the rim of the Nazi state and watched night settle over Germany.

A month after the outbreak of war in September, 1939, Lie was named Minister of Supply and Shipping in Norway. Thus, when in April of 1940 the Germans invaded Norway, he controlled perhaps the most important single asset which the kingdom was able to contribute to the Allied cause: the Norwegian merchant fleet of 3,500,000 tons and 25,000 seamen.

Lie became the Norwegian Foreign Minister in November, 1940, a step which led to his current position, for it placed him in direct and frequent contact, not only with the representatives of the great powers in London, but with the envoys of smaller nations already overrun by the Wehrmacht or menaced by its ruler.

In his present position, Lie inevitably is a target for speculation on the subject of "who is backing him." The subject is a fruitless one, for Lie happens to be backed by two of the strongest powers. Contrary to popular opinion it was not Russia that first proposed Lie for an important post in the UNO. It was the United States. The State Department suggested to the Russians in November, 1945, that Lie might make a likely President of the Assembly. When this post went to Paul Henri Spaak, the Russians advocated Lie for the post of Secretary General, which he now holds.

So today Norway's "man of the people," who has walked with the great of the world and kept touch with the common people, is in a position where he can do the most good for the men and women of the class from which he sprang and for which he reserves his greatest affection. Cartoonists sometimes see him as an affable, although captive, barrage balloon. His friends in every country think of him as a tough, determined fighter for peace and men's rights.

[From World Report, Nov. 12, 1946]

LIE: "SERVANT OF THE WORLD"

The 51 delegates to the U.N. Assembly all represent the views and interests of their own countries. Only one man who sits with them is responsible to no government. This diplomat without a country, who speaks for the peoples of all lands, is Trygve Lie, (pronounced Trig-va Lee) Secretary-General of the U.N.

The big Norwegian, who stands 6 feet 1 inch tall and weighs 250 pounds, exercises many powers limited otherwise to sovereign states in the world organization. He takes part in U.N. debates on equal terms with member nations and can call the attention of the Security Council to situations that threaten the peace.

A socialist in economics, but a democrat in politics, Trygve Lie came to the U.N. with three decades of experience as a lawyer, trade unionist, politician, Cabinet officer and Foreign Minister in his own Norway. But he still dislikes protocol and receives visitors in shirt sleeves and suspenders.

VIGOROUS

Broad-shouldered, robust, florid and intensely energetic, Lie works with amazing speed despite his bulk. Papers fly as he clears his desk each day.

Leisure hours to the Oslo Laborite mean good talk, good jokes, good wine, good food (which he consumes in proportion to his size) and sports. Once a college wrestler and football player, he misses few major sports events in New York and at every opportunity, takes to hunting, skiing and tennis himself.

Skis helped Lie escape from Norway in 1940. His rifle kept his wife and three daughters in meat during the grouse-hunting season in wartime Britain. Now he sometimes skips tedious sessions of the U.N. for a set of tennis. At 50, he still plays a smashing game.

During meetings of the General Assembly and the Security Council, Lie sits quietly at the right hand of the chairman and whispers advice on procedure and rules.

But when the Secretary-General takes the floor, he goes into the big issues with a vigor that pays no heed to the policies of member nations, big or small. In his first report to the Assembly recently, he denounced the failures of the U.N., urged action against Franco Spain and criticized the Big Four for not reaching agreement among themselves. Unanimity of the Big Five, rather than repeal of the veto power, is his remedy for current difficulties of the U.N.

Though usually genial, Lie sometimes reveals a turbulent temper, which time and diplomacy have not curbed. During his flight from Oslo in 1940, Norwegian troops, with Lie in their midst, surrounded a Nazi road block. The Norwegian commander gave the Germans 10 minutes to surrender. Lie broke into the telephone negotiations and bellowed: "You have five minutes, no more, no less!" The Germans promptly gave up.

A carpenter's son who married a stationmaster's daughter, Lie knew dire poverty in his youth. At the age of 10, he became an office boy for the Norwegian Labor Party to help support his widowed mother. He made his political debut by hauling voters to the polls with a horse and cart. At 16, he was made president of an Oslo branch of the Labor Party. After working his way through law school, he became secretary to the party's national chief.

In 1922, at the age of 26, Lie was appointed legal adviser to the Norwegian Trade Union Federation, a job he held until he became Norway's youngest Cabinet officer in 1935. As Minister of Justice then, he got more laws enacted than any of his predecessors.

As Minister of Shipping later, Lie was the last Cabinet member to leave Oslo when war came. On a scrap of paper torn from a notebook, he wrote the dramatic order that sent 4,000,000 tons of Norwegian shipping scurrying into friendly ports, saving 85 per cent of Norway's merchant marine from the Nazis.

Appointed Foreign Minister in London in November 1940, Lie traveled to Moscow, Washington and San Francisco and cemented Norway's relations with the Russians as well as with the Western powers.

In the hands of a lesser man, the U.N. Secretariat, like that of the League of Nations, would be little more than an administrative organ. Lie is making it a potent force in international politics.

Building on his authority to inform the Security Council of threats to peace, Lie now claims the right to undertake his own investigations of international disputes, make his own recommendations for their solution and appeal at any time to world opinion. Efforts of the Security Council itself to make such inquiries can be blocked by the veto, as in the Greek-Yugoslav conflict recently. But no veto can bind Lie's hand.

Trygve Lie is determined to make his job as Secretary-General of the United Nations exactly what he terms himself—"the servant of the world."

[From Time magazine, Nov. 25, 1946]

IMMIGRANT TO WHAT?

In 1902, a Norwegian carpenter named Martin Lie, leaving his wife and a small son, went off to the fabulous world which Oslo still called new. Driven by the instincts common to migrants of all time in quest of adventure or security or freedom (or simply of wider skies and unfamiliar faces), he sailed toward the west. The hard but hospitable shores received him and he vanished, unknown and untraced, in the fertile chaos of a country's growth. No one ever knew whether he found what he sought. He didn't write home.

Forty-four years later, the carpenter's son Trygve came, with all possible public atten-

tion, to the same shores, driven by the old longing of an intolerably troubled civilization for security and wider skies. He too was an emigrant who had left his country for a new and larger allegiance. Trygve's destination was less substantial than the U.S. of 1902, but not necessarily less important or less noble.

The entity to which Trygve Lie had sworn loyalty was known to the world as the United Nations; no one was quite sure what that meant. Was it a new world, also? Or a legal figment, spinning a web of Whereases and Be it Resolveds between a war and a war?

That, in the fall of 1946, was the world's most fatal question. A large part of the answer depended on the new immigrant himself, but Trygve Lie, sawing and smoothing and (sometimes) hacking brusquely away at tasks immediately before him, was no man to waste time wondering whether he was building Utopia or merely providing material for a footnote on how two civilizations (and some threescore sovereignties) catastrophically clashed.

FORESHADOWINGS

The U.N., in its 13th month of existence, was no longer in acute danger of disruption, as it had been at its first meeting in London, early this year. It now faced the chronic and perhaps more serious crisis of paralysis through the stubborn inflexibility of its component parts. To stave off U.N.'s slow death by deadlock, many people looked to Trygve Halvdan Lie (pronounced Lee), the U.N.'s Secretary-General, its chief administrative officer, the man who stood closer than any other single individual to U.N.'s mechanism, if not to its heart.

Internationalism Lie had known ever since his childhood. He grew up in an exciting era, when the battle for the receivership of the 19th Century had just begun. His mother's boardinghouse in Grorud, near Oslo, was cosmopolitan—Swedish, Finnish, Polish, German, Russian workers paid mother Lie 20¢ a day for room & board. In the evening, around the table, Trygve heard them talk of the Russo-Japanese War, of the abortive Russian revolution of 1905, of Norway's breakaway from Sweden, of syndicalism and the brotherhood of all workers. In those days Trygve Lie also acquired a faith: Socialism. But even then, his faith was tempered—as it would be through all his later life—by a cool, stolid pragratism.

Young Trygve tried to read Marx and Engels, but, says he: "I didn't get very far." (He hasn't yet; Lie's reading is confined almost exclusively to official reports and books directly connected with his work.) At 16, he was a practical local politician, driving voters to the polls in a borrowed sledge. And as Secretary-General of U.N. he once admonished a friend: "Say nothing against local politics. From local politics I came and to local politics I may some day have to return."

His favorite proverb is: "A snuffbox has many sides." Lie has seen many sides of many boxes. Despite his Socialism, he accepted a scholarship from one of Norway's wealthiest men. As Norway's young (39) Minister of Justice, he sent police to maintain order during strikes and at the same time called the strike leaders with a warning: "You must keep quiet; I've just had to send the police over." By the simple device of sticking with the majority, he managed to steer smoothly through the splits of the Norwegian Labor Party when, in 1921, it briefly entered the Communist International. Appointed a member of a Labor Party delegation to visit Lenin in Moscow, Lie was impressed with the honor, but not wholly absorbed in his mission; he took his young wife along for a belated honeymoon trip.

Lie gleefully remembers this junket, which today makes him one of the world's few non-Communist statesmen who saw Lenin plain. Lie recalls sitting at the back of the room as a junior delegate, while Lenin ("eating apples all the time") asked innumerable questions about Norway's vital statistics. Lie frantically produced them from a pocket almanac. In the end Lenin prophesied glumly that as Britain went, so would go Norway.

Forbearance. Lenin was spectacularly correct. When Norway fell to the Nazis in 1940, Lie followed his King to London, where he became Foreign Minister of the Government in Exile, a friend of Anthony Eden, and a great favorite of Allied diplomats. He frequently played tennis with Anthony Drexel Biddle, U.S. Ambassador to the Government in Exile, whose tricky chop and drop shots kept Lie puffing around the court, muttering: "Damn that Biddle! Damn that Biddle!"

[From U.N. World, Feb. 4, 1947]

TRYGVE LIE

(By M. R. Werner)

(NOTE.—In the first complete biography of Trygve Lie, Secretary-General of the United Nations, M. R. Werner tells how a Norwegian labor lawyer, who started life as an office boy, became the "public secretary of the world" and the warden of its society.)

There is one man in the world today who is always on call. When the British claimed that the Albanians had fired on their warships in mine-filled waters of the Corfu Channel, while the Albanians claimed the British ships had no business in those waters, there was only one impartial man to whom telegrams could be sent about the dispute. Conflicting complaints and claims by Greeks, Albanians, Bulgarians, Yugoslavs, Iranians and Indonesians, among others, have to be sent to a fifty year old citizen of the world of Norwegian birth of international repute, whose name is Trygve Lie.

Ten years ago most of the people of Oslo could have told you who Trygve Lie was. Today many people in the United States, the British Empire, the Soviet Union, Latin-America and the Far East can tell you who Trygve Lie is, even though they first began to hear his name in February 1946, when he was elected Secretary-General of the United Nations in London. It was only last spring that people began to learn much about the activities of the world organization of which Lie is both practical administrator and spiritual guide. In that short interval, events have made the man and the man has helped to shape events vital to the peace and security of the world and to the welfare of its two billion and a half inhabitants.

This transformation of a Norwegian labor lawyer and government official into the top-ranking peace worker of the world is a success story in which the success is shaded between the individual himself and the peoples of the world. The post of Secretary-General of the United Nations was created with past failures of the League of Nations in mind. Almost as many reasons are given for the failure of the League of Nations as are given for the rise of fascism and the development of depression. But many people today will agree that one important thing the league lacked was an impartial guide, philosopher and mediator, who could help nations with interests that often conflict to avoid the perils of disputes. The Charter of the United Nations adopted at San Francisco on June 26, 1945 remedied that lack by creating the office of Secretary-General of the new United Nations and by granting to the Secretary-General broader powers than any ever entrusted to one individual in the history of mankind.

The Secretary-General was not only held responsible for acting as public secretary of the world, but was empowered to call to the attention of the United Nations through its permanent board of directors, the Security Council, any matter which in his opinion threatened international peace and security. He was also authorized to call to the attention of the UN's permanent board of human welfare, the Economic and Social Council, any matter which might promote the well-being of the peoples of the world. These are tremendous tasks for one man, and yet only one man, with expert assistance, could effectively perform them. The problem became one of finding the right man.

When the General Assembly of the United Nations opened its first session at Central Hall, Westminster, London, in January 1946 it had to find a president for itself as well as a secretary-general. These two posts were clearly recognized as the two leading jobs in the new one world, and there were various candidates for both of them, backed by various governments of different ideologies. The leading candidates for President of the General Assembly were Paul-Henri Spaak, Foreign Minister of Belgium, and Trygve Lie, Foreign Minister of Norway. The American Ambassador to Norway had approached Lie some time before about taking the post of President of the General Assembly, and Lie was pleased at the prospect. Great Britain and its close friends preferred Spaak, or someone from the Netherlands. The Soviet government had no strong candidate of its own, but it had no important objections to Lie. After considerable back-stage manipulation, the presidency of the General Assembly went to Spaak, but Lie got 23 votes to Spaak's 28, showing that the voting was not at all along lines of west vs. east, or vice versa.

When the United Nations began organizing, it was generally considered that the President of the General Assembly would be about the most important man in the world, and Lie was said to be disappointed that he didn't get the job. As things have turned out, his disappointment turned into an advantage, for the Secretary-General, being continuously active instead of presiding over the General Assembly only once a year, has become the key job in the United Nations. In the jockeying for the post, the United States and Great Britain had originally put forward Lester B. Pearson, Canadian ambassador to the United States, and the Soviet Union had put forward Stanoje Simitch, Yugoslav ambassador to the United States. The Soviet Union was opposed to anyone too closely allied with the western sphere of influence, and the United States and Great Britain were opposed to anyone too closely allied with the eastern sphere of influence. Finally, Edward R. Stettinius, head of the American delegation, suggested Trygve Lie, of Norway, and the Security Council agreed unanimously to nominate him to the General Assembly, where he was elected on February 1, after a secret ballot by a vote of 46 to 3.

On Saturday, February 2, 1946 Trygve Lie, a stout, genial-looking man, not very well known to the delegates of the 51 nations present, appeared on the platform at Central Hall, flanked by the seven vice-presidents of the new General Assembly, and the presidents of the Security Council and the Economic and Social Council. He took an oath of office which not only called for "loyalty, discretion and conscience" in carrying out his functions as Secretary-General, but enjoined him to discharge those functions "with the interests of the United Nations only in view, and not to seek or accept instructions in regard to the performance of my duties from any Government or other authority external to the Organization." After swearing him in, Paul-Henri Spaak, President of the General Assembly, gave Lie his recipe for success of the Secretary-General: "You will be firm without instransigence; you will be conciliatory without weakness; you will be impartial without exception." He also advised Lie "never lose contact with reality."

There is very little danger that Trygve Lie will ever lose contact with reality, for ever since childhood he has coped with real problems in a country which combines national realism with international aspirations. Nor-

way, midway between west and east ideologically and geographically, had intimate contacts with internationalism through the League of Nations. Fridtjof Nansen, one of its subjects, was perhaps the leading citizen of the world after the last war, and took the most active part in repairing the human devastation it caused to displaced persons. One reason that a Norwegian subject was chosen Secretary-General of the United Nations was that the problem of selection was almost a mathematical equation, and the answer was a social democrat with affiliations that were neither too close to western capitalism nor eastern communism. That seemed to spell a Norwegian Labor Party man.

Trygve Halvdan Lie was born in Oslo on July 16, 1896. His father, Martin Lie, was a carpenter, and his mother kept a boarding-house in Grorud, the Oslo suburb where the family lived during Trygve's childhood, and where his father was station-master until his death when Trygve was a small boy. While getting his education, Trygve worked as an office boy at the Norwegian Labor Party headquarters in Oslo, which brought him into early and intimate contact with the growing Norwegian labor movement. He also managed to keep up active interest in sports and once remarked that he was practically born on skis. Lie became president of the Aker branch of the Labor Party at the age of sixteen, while he was still in high school, and kept both that post and the job as office boy when he entered the law school of the University of Oslo in 1914. After his graduation from law school in 1919, Lie was appointed secretary in charge of administration of the Norwegian Labor Party. He was then twenty-three years old, tall, slim, powerful and good-natured.

In 1921 Lie went as a sort of supply sergeant and general handyman to a labor delegation from Oslo on a visit to the Soviet Union. He took along Hjördis Jörgensen, the girl he had recently married. She also held office in the Norwegian Labor Party, and the two of them attended to the eating and travel arrangements of the mission, cooking its food on a Primus stove in a railroad car. Russia was in the throes of a food shortage and was still endeavoring to protect its revolution from counter-revolutionary invasions. The members of the mission called on Lenin in the Kremlin. Lie sat in the back of the room, as became a young assistant, but he watched everything eagerly. Lenin asked many questions about Norway's natural resources, which Lie's superiors could not answer. Pulling out his pocket almanac, Lie quickly supplied the answers.

He recalls that one member of the mission who was eager for the world revolution, and who later left the Norwegian Labor Party in his impatience and became a follower of Leon Trotsky, asked Lenin when he thought the revolution would come in Norway. Lenin looked at him sharply, went over to a map on the wall, pointed to England and said: "As England goes, you go." In Norway the prestige of the Soviet Union has always been high, though the interest in communism for Norwegians has never been great; Norwegians, generally, recognize, however, that the Russian Revolution had at least as much significance for the world as the French Revolution.

Trygve Lie became a specialist in labor law soon after he began to practice, and he never had any other clients except labor people. One of his tasks was to defend Norwegian pickets who went into the woods pretending to be on hunting expeditions and "accidentally" brought down strike-breakers. Lie managed to get some of them off in court. He himself has always been an ardent hunter and is a crack shot, but there is no evidence that he ever bagged a strike-breaker.

While studying labor law and practicing it, Lie rose steadily in the hierarchy of the Norwegian Labor Party. His conciliatory spirit, amiability and interest in working hard and managing the practical problems other men sometimes like to avoid, stood him in good stead. He became president of the party's regional branch in the province of Akershus, in which Oslo is located, and legal adviser to the Trade Unions Federation, fighting its cases constantly in court and advising it on its many legal problems. In addition to his law work and his political activity, Lie wrote two books, "The Anti-Labor Laws and the Battle Against Them," and "The New Labor Arbitration Law." He also took part in Oslo municipal politics and was a member of the city council. Since he has become Secretary-General, he has told a friend: "Say nothing against local politics. From local politics I came and to local politics I may some day have to return."

From local office-holding in Oslo Lie graduated to national office when the Norwegian Labor Party came into power for the second time on March 20, 1935. He then became Minister of Justice in the government headed by Johan Nygaardsvold. The Labor Party had a hard time keeping a majority in the Storting, and there was an election coming up on October 19, 1936. Meanwhile, Leon Trotsky who was put out of France, was granted asylum in Norway. He and his friends had pleaded with the Norwegian Labor government to grant him asylum on the grounds that he was very ill and did not have long to live. Trygve Lie, as Minister of Justice, was responsible for Leon Trotsky's good behavior, and the warrior of world revolution had promised not to engage in political activity while he lived in Norway, for such activity might get the Norwegian government into embarrassing difficulties with the Soviet government.

But to ask Trotsky to refrain from political activity for the world revolution was like asking fish to give up swimming. The Labor government learned that Trotsky was up to his old tricks, and Lie sent for him. He was brought to the Ministry of Justice in great secrecy and surrounded by guards. Lie, who likes to deal fairly and pleasantly with every one, politely warned Trotsky. He explained how crucial it was for the Labor Party to win the coming election, in which the Conservative opposition was using Trotsky's presence in Norway as a campaign argument to show that the Labor Party was a gang of "Reds." Trotsky replied arrogantly: "I don't give a damn about your Labor Party. In five years you will all be exiled." Trotsky was later expelled from Norway, but not at Lie's suggestion. The Prime Minister felt that Trotsky had lied to the Labor ministry about his health. He had promised that he was dying and had failed to die. Lie always a manager of practical details, had to supervise Trotsky's secret journey to Mexico.

Lie served as Minister of Justice until June 1939, when he was made Minister of Commerce. When a war broke out in September, he was appointed Minister of the new Department of Shipping and Supply. In this office he showed abilities he has manifested many times, arranging the practical housekeeping of government or a group. This time large-scale hoarding was involved, and Lie worked day and night to build up supplies for Norway and hid much of them in ships in the northern fjords. When the Nazis attacked Norway on April 9, 1940, it was estimated that Lie's efforts had given the country at least three years' food supplies. Though the Germans got some, Norwegians under occupation lived better than some other occupied countries because of Lie's foresight.

After the German invasion, the Storting, before adjourning, designated the Nygaarsvold Cabinet the official governing body of Norway and empowered it to continue the fight from outside the country if necessary. Lie accompanied the government and the King during the two months of fighting within Norway which took place before the government was forced to flee the country or face capture by the Nazis. During those two months the population, though it was intensely patriotic, was frightened when the King and the government came to town, for Nazi air raids followed them. Lie had the job of helping to calm fears and of obtaining housing and supplies for the government and royal party. On the walls of Lie's office at Lake Success are two quiet engravings. One is a portrait of King Haakon, whom Lie admires very much. The other is of Fridtjof Nansen.

Before leaving Norway with the King and the government, Lie sat in a mountain cottage in a village in the Romsdal valley and drew up a regulation requisitioning the more than four million tons of Norwegian shipping, 85 percent of the Norwegian merchant marine, which had not yet fallen into Nazi hands. This four million tons of shipping was a good bargaining advantage when Lie went to see Winston Churchill after the Norwegian government-in-exile established itself in London in June 1940. Churchill was impressed with the amount of Norwegian tonnage and in return for the right to use it he asked what the British could do for the Norwegians. Lie requested uncensored use of BBC radio facilities to Norway, and he and other Norwegian leaders were thus able to give their radio instructions and appeals to the underground and the population in general unrestrained by the British government's own policies.

On February 21, 1941 Trygve Lie became Minister of Foreign Affairs of the Norwegian government-in-exile, after the resignation of Halvdan Koht. As Foreign Minister he made trips to Washington to consult President Roosevelt and became a close friend of the late Harry L. Hopkins, from whom he got American planes for Norwegian fliers being trained in England. He also paid courtesy calls on Marshal Stalin during the war. As Foreign Minister he always managed to ride deftly between the Scylla of the west and the Charybdis of the east. When liberation was near for Norway, Lie negotiated the agreement on administration during the liberation period, and he was careful to have it signed simultaneously in Washington, London and Moscow so that there could be no hard feelings as well as no misunderstandings. Relations between Oslo and Moscow have remained cordial, for the Red Army, after helping to liberate Norway, left as soon as possible without any controversy about its departure.

Lie headed the Norwegian delegation to the San Francisco conference at which the Charter of the United Nations was drawn up. He was chairman of Commission III which drafted the sections on its most important organ, the Security Council, with which he now works so closely. From San Francisco Lie went in May 1945 to London with C. J. Hambro, president of the Storting, and arranged for quick shipments of food and clothing to liberated Norwegians. Again his ability as a manager of practical details was called into service.

When the government-in-exile returned to its capital on June 12, 1945, Lie was one of the happy ministers who were cheered by an enthusiastic populace which respected the achievements of its exiled leaders, who were regarded as the most enlightened government-in-exile in England. The Labor Party won the elections of October 1945 by a landslide vote, and Lie became Foreign Minister in the Cabinet of Einar Gerhardsen. He headed the Norwegian delegation to the first General Assembly of the United Nations in London in January 1946 before being elected Secretary-General.

Lie's term of office is five years, and he can be re-elected. He gets a salary of $20,000 a year, tax exempt, and another $20,000 a year for expenses, as well as a house. He lives with his wife and two younger daughters at 123 Greenway North, Forest Hills, Long Island, a 14-room house which used to belong to Albert Phelps Armour, and which the United Nations has leased for him for three years.

The elder daughter, Guri, 21, studies at Columbia University. Mette, 15, attends a girls' preparatory school. Mette was left behind in Norway by a misunderstanding during the flight of the government in 1940 and spent four years under German occupation living with an aunt in Oslo, before the underground could get her to London. There were some fears for her safety because of her father's vigorous broadcasts urging resistance to the Nazis. Sissel, Lie's oldest daughter, now married and living in Oslo, was secretary to the Norwegian delegation to the San Francisco conference. Guri was secretary to the delegation at the General Assembly meeting in London.

THE MIND OF AN ASSASSIN

(By Isaac Don Levine)

BACKGROUND

It was late in the afternoon of August 20, 1940. Leon Trotsky sat at his desk in the study of his fortified villa on the outskirts of Mexico City. Within his reach was the switch to an alarm system, but at that moment a young man of twenty-seven stood between him and the switch. The young man has told, in memorable words, what then happened:

"I put my raincoat on the table on purpose so that I could take out the ice-axe which I had in the pocket. I decided not to lose the brilliant opportunity which was offered me and at the exact moment when Trotsky started to read my article, which served as my pretext, I took the *piolet* out of my raincoat, took it in my fist and, closing my eyes, I gave him a tremendous blow on the head . . .

"The man screamed in such a way that I will never forget it as long as I live. His scream was *Aaaa* . . . very long, infinitely long and it still seems to me as if that scream were piercing my brain. I saw Trotsky get up like a madman. He threw himself at me and bit my hand.—Look, you can still see the marks of his teeth. Then I pushed him, so that he fell to the floor. He lifted himself as best he could and then, running or stumbling I don't know how, he got out of the room."

Trotsky's chief guard, who was in the next room, has described what followed: "The Old Man stumbled out of his study, blood streaming down his face. 'See what they have done to me!' he said." Shortly afterward he lapsed into unconsciousness.

"See what *they* have done to me!"

They, as Trotsky knew in the last moments of his life, were the planners whose patient, ingenious, and painstaking efforts over four years had finally achieved their goal—his murder. . . .

THE ASSASSIN AND HIS MOTHER

No, our philosophical executioner is a rationally indoctrinated murderer, the product of the age of reason at its dead end. He is a monument to the school which makes a religion of politics. He is, like Stalin himself, a mockery of the communist philosophy of economic determinism, that super-rational theory which negates the role of the hero in history. He is a scientist of the kind to whom all life is matter. In this philosophical executioner modern man, the bearer of a 4,000-year old spiritual heritage, has produced the pioneer of a line of soulless monsters, the harbingers of a coming race.

In August, 1936, one month after the outbreak of the civil war in Spain, the first of an infamous series of purge trials was staged by Stalin, with Trotsky as the chief defendant *in absentia*. To no one's surprise, it came to a close with the conviction of Trotsky and his son, Leon Sedov. "They were sentenced to death by the Moscow court," wrote Natalia Sedova, the wife and the mother of the two doomed men. And on a later occasion she added: "Since the first Moscow trial, i.e., for more than three years, we have been waiting, with sure inner knowledge, for the assassins."

Stalin struck his first ominous blow at Trotsky while the latter was living in great secrecy in Norway. The Kremlin's ambassador demanded Trotsky's expulsion from the country, and the Norwegian government quickly went into action. In 1936 its Minister of Justice was none other than Trygve Lie, the man who a decade later emerged as a world figure in the post of the first Secretary General of the United Nations. Incidentally, this honor came to him after the Soviet delegate had first proposed that Trygve Lie be elected President of the General Assembly by acclamation (upon waiving the secret ballot requirement).

To Trotsky, one of the founders of the Communist International, Trygve Lie was no stranger. Lie had visited Moscow in 1921 and, according to Trotsky, had been identified with the Comintern in its early days. At that time Trotsky was at the height of his glory as the victorious war lord of the Red Army. Now Trygve Lie, as Norwegian Minister of Justice, faced Trotsky at bay and presented to him, immediately upon the conclusion of the Moscow trial, a demand that he voluntarily sign a statement submitting his mail to censorship and that he stop writing on current events. Trotsky saw in Lie's proposal a scheme of Stalin's to gag him, and proposed that he be given an open trial in Norway to establish his innocence and to expose Stalin's judicial frame-up.

On August 26, two days after the Moscow announcement of the verdict at the purge trial, Trotsky addressed a letter to Trygve Lie which had been suppressed in Norway but was later published in the United States.[1]

"To refrain from bringing me to trial before a Norwegian court," Trotsky wrote, "and at the same time to rob me of the possibility of appeal to public opinion on a question that concerns myself, my son, my whole political past, and my political honor, would mean to transform the right of asylum into a trap and to allow free passage to the executioners and slanderers of the GPU."

Trygve Lie insisted that Trotsky submit to being muzzled.

"If you intend to arrest me," Trotsky told Lie, "why do you want me to authorize you in that act?"

"But there is an intermediate step between arrest and full liberty," retorted Trygve Lie.

"That's either ambiguous or a trap. I prefer arrest," replied Trotsky.

The Minister of Justice obliged Trotsky at once. First Trotsky's secretary was expelled from Norway. Then Trotsky and his wife and all their belongings were transferred to a large country house at Sundby where they were installed on the second floor. The ground floor was occupied by a squad of fifteen policemen. No visitors were allowed and the Trotskys could not leave the grounds. For the first time since the summer of 1917, Trotsky found himself in prison.

This was the beginning of the drama which was to reach its criminal climax in Mexico four years later. And contributing heavily to the initial blow which Stalin inflicted upon Trotsky was the hand of a leading American communist, Louis F. Budenz, then editor of *The Daily Worker* in New York. Budenz was destined to play in other ways a key role in the backstage preparations for the assassination of Trotsky, according to his own voluntary testimony.[2] As Budenz tells the story, the ground for the Soviet pressure upon Norway was confidential information he had supplied to "Roberts," his superior in the underground, a top Soviet secret agent in the United States. Budenz reported that a former colleague of his, the prominent left-wing pacifist, the Rev. A. J. Muste, had visited Trotsky in his Norwegian hideout early in June, 1936, and that Trotsky had discussed with him plans for the violent overthrow of the Soviet regime. The highly reliable Rev. Muste states, however, that no such discussion had ever taken place and denies having had any conversation with Budenz upon his, Muste's, return from Norway. There can be no dispute over the fact that Budenz did make such a report, even if it stemmed from second-hand sources, for we have it on the authority of Budenz himself in the form of an affidavit. Budenz went further and disclosed that "Roberts" had subsequently acknowledged his collaboration in these words: "This information had been of great value in private representations made by the Soviet Union to Norway . . . that Trotsky was using Oslo as a base to attack Soviet Russia."

Finding himself under house arrest at a time when world public opinion was reverberating with the melodramatic challenges of the Moscow show trial, Trotsky "raged like a caged tiger," his wife Natalia wrote later. "Delayed newspaper accounts of the then famous first of the Moscow-staged trials, his inability to answer it and expose the lies, were the greatest torture. . . ."

Several times Trygve Lie came to see Trostky and, according to the latter, their exchanges were "not remarkable for excessive courtesy." Trotsky had since his youth admired Ibsen and had written glowingly of him. Trygve Lie reminded Trotsky of Burgomaster Stockmann, one of the unsavory characters in Ibsen's *An Enemy of the People*. Trotsky quoted to Lie the line by the Burgomaster's brother when he was being suppressed for the disclosure that the prosperity of his native town was built on polluted mineral baths: "Now we shall see whether baseness and cowardliness can stop the mouth of a free and honest man." To this insult Trygve Lie replied:

"Do you imply that I am Burgomaster Stockmann?"

"To make out the best case for you, Mr. Minister," said Trotsky, "your government has all the vices but none of the virtues of a bourgeois government."

"We committed a stupidity by granting you a visa!" Trygve Lie exclaimed to Trotsky in the course of his next call.

"And are you preparing to rectify this stupidity by means of a crime?" Trotsky challenged Lie.

During the months of his detention, Trotsky's friends and political admirers were frantically trying to obtain for him permission to take up residence in some other country. No European government would admit him. One of Trotsky's admirers was the famous Mexican painter, Diego Rivera. He approached President Cardenas of Mexico with the request that Trotsky be given asylum there. Cardenas readily granted the request.

When the good news reached Trotsky by cable, he sent this message to Trygve Lie through his police escort:

"Kindly inform the government that my wife and I are ready to depart from Norway at the earliest possible moment. However, before applying for a Mexican visa I would like to make arrangements for a safe voyage. I must consult my friends. . . . With their assistance I shall be able to secure an escort, and to assure the safety of my archives."

Trygve Lie, recorded Trotsky in his journal, "was obviously staggered by the extremism of my requests."

"Even in Czarist jails," Trotsky told him upon his arrival the following day, "the exiles were allowed to see their relatives or friends in order to arrange their personal affairs."

"Yes, yes," replied the Minister of Justice philosophically, "but times have changed. . . ."

Lie took pains to secure the Mexican visas for the Trotskys, and proceeded to make the transportation and security arrangements to get them safely out of Norway as soon as possible.

Out of the Spanish inferno came the manhunters who eventually caught up with and sealed the fate of Trotsky in faraway Mexico. The Spanish civil war had in that summer of 1936 burst into a conflagration involving the intervention of Hitler, Mussolini and Stalin, and threatening to develop into a world war. Since the Spanish Republic had a Popular Front government, communist, socialist, revolutionary and other anti-fascist elements from all corners of the earth rallied to its support. Spain became a symbol of the struggle against fascism, but behind the main front another civil war was silently being waged in the Republican ranks. Stalin, whose Spanish policy was calculated to appease Hitler and Mussolini ordered his gunmen in Spain to launch a campaign of extermination of all dissident revolutionaries and libertarians who were branded as Trotskyites. Under the protection of a government which depended upon Stalin's favors, his executioners began their purge.

Even before the Trotskys departed from Norway, a delegation of Spanish communists set sail from Barcelona bound for Mexico. The leading member of this mission traveling on the *Manuel Arnuz* to the Caribbean was a woman of striking appearance whose destiny was to be inseparable from that of Trotsky. She was Caridad Mercader, the 44-year-old mother of Ramon, the future assassin.

SERIES ON "LAW AND ENVIRONMENT"—PART V

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, the fifth article in the Christian Science Monitor series on "law and environment" is concerned with the next generation of anti-pollution and environment-concerned citizens. More specifically, those who we pray will be leading the fight in future years—graduates of our law schools. There is growing evidence to show that young lawyers are more concerned with the great public questions; should the trend continue—and we hope it does—a body of environmental law will develop more rapidly than current trends indicate.

Present-day conservation-minded lawyers can help produce tomorrow's leaders by encouraging law schools to establish relevant course work. I know it sounds pretentious to call for the "institutionalization" of environmental problems, but then, how else will we find the legal talent for the confrontations ahead? If we are brutally frank with ourselves, we will admit that the battle over the proper use and/or control of our environment will get fiercer as technology expands, and that it will take men better prepared than we were to engage in future legal controversies.

Such training, and the opportunities in the field of "environment law" were on the agenda of the recent Arlie House conference upon which the series is based.

The article follows:

[From the Christian Science Monitor, Oct. 16, 1969]

LAW STUDENTS SHUN WALL STREET TO WORK FOR WIDER GOALS

(By Robert Cahn)

WASHINGTON.—A number of law school professors and public-interest crusaders such as Ralph Nader are urging young lawers to get themselves actively involved in the movement for a better environment.

"A lot of law students today don't want to go to work on Wall Street," James Krier of the University of California at Los Angeles law faculty told participants at the first Conference on Law and the Environment held recently in Warrenton, Va. "They don't want to go to work for big Washington firms, or for conglomerates. They really want to go out and take on a lot of those kinds of interests, and they can do it very, very well."

It may not have been exactly what Mr. Krier had in mind, but a short time after the conference a group of young law students in Washington literally "took on" one of the town's major law firms.

The group, organized under Ralph Nader, who had been a participant at the law and the environment conference, picketed the offices of Wilmer, Cutler & Pickering.

CONCERN DRAMATIZED

The law students through their ad hoc Committee on Motor Vehicle Air Pollution and the Law said they were dramatizing their concern over the role of the law firm's representation of the Automobile Manufacturers Association. The Justice Department, after filing an antitrust complaint in January against the association alleging engagement in a conspiracy to retard development of automobile pollution-control devices, accepted a consent decree in September.

The protesting law students challenged the firm for using its influence to avoid trial. In their resolution, the students said they had been taught that the attorney is the "keeper of his client's conscience" and that the "public is the lawyer's first client."

If the firm does not agree to the students' request to try to convince the client to have a public trial, said student leader Robert Sweben, "then the public will begin to understand why major law firms throughout the country are encountering ever-increasing difficulties in hiring young law graduates, many of whom are raising similar questions concerning the ethical standards of their future colleagues."

Most lawyers would not concur with actions such as picketing or confronting a law firm with a resolution. And they would disagree with Mr. Zweben's statement, arguing perhaps that the Automobile Manufacturers Association is entitled to the lawyer of its choice, as are environmental groups in their cases. Yet the protest served to illustrate one of the issues most discussed at the Conference on Law and the Environment—the changing attitudes of law students and young lawyers.

Direct involvement by lawyers in environmental cases sometimes raises ethical problems, said Rep. Paul N. McCloskey Jr. (R) of California, who is a lawyer. Lawyers may be violating the old canon of ethics by doing such things as inventing causes of action, taking part in fund raising, or calling a press conference to publicize a cause, Representative McCloskey said.

CANON CHALLENGED

Many of the conference participants felt that the old canon of ethics is outdated and reflects a set of social and political conditions that no longer exists. The lawyers working today for environmental clients often have difficulty with the burden of proof, standing in court, raising funds, or having their lawsuit taken seriously by industry or governmental agencies. Thus the lawyers may find it necessary to advise their clients in fund raising, deal directly with the press, or otherwise be involved in nonlegal aspects of a case.

The current law-school student interest in the environment and the encouragement to specialize in environmental law raise a problem for the young graduate because the opportunities to make a living in this field are still sparse.

Several conference participants pointed out, however, that the graduating lawyer would have more opportunity for employment and a better chance to work in environmental causes if the law school furnished him with a background in biology and other scientific sciences as well as in resource and urban planning.

A course in "Ecology and Public Policy" should be taught in all law schools, it was suggested.

NATIONAL DAY OF PRAYER

(Mr. BUCHANAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BUCHANAN. Mr. Speaker, the Congress, by joint resolution of April 17, 1952, provided that the President "shall set aside and proclaim a suitable day each year, other than a Sunday, as a national day of prayer on which the people of the United States may turn to God in prayer and meditation at churches, in groups, and as individuals." Such a day is quite appropriate in the life of this country since America was founded on the ethical and moral principles embodied in the Judeo-Christian tradition.

America's greatest strength lies in the faith and religious commitment of her people. "In God We Trust" must remain more than a mere motto for the people of America if our country is to remain strong and free.

This year, President Nixon, by proclamation on October 8, set aside Wednesday, October 22, as our National Day of Prayer. In his proclamation, the President asked that "on this day the people of the United States pray for the achievement of America's goal of peace with justice for all people throughout the world."

In observance of this day it was my privilege, along with a number of my colleagues who regularly attend the House and Senate prayer breakfast meetings to attend a prayer breakfast at the White House with Dr. Billy Graham. The remarks of both the President and Dr. Graham, together with prayer led by the Honorable DEL CLAWSON of California, were of great inspiration to those assembled.

The one prayer on the lips of all mankind, of whatever religious persuasion, should be a prayer for peace with justice and a prayer for those in places of high responsibility in our land.

The President is to be commended for setting aside this day and it is my hope that all men everywhere shall benefit from its observance.

SO-CALLED NONGASSY MINES—THEIR GRIM FATALITY AND INJURY RECORD

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, I am pleased that when we debate coal mine health and safety the committee's bill, H.R. 13950, eliminates the distinction between a gassy and a "nongassy" mine. This endorses the con-

clusion which the Bureau of Mines first made as long ago as 1926 that "all mines are potentially gassy." Unfortunately, however, the bill provides too much time for the so-called nongassy mines to make all electric face equipment permissible or spark proof.

In the case of large electric face equipment, the bill gives the operators of the large gassy mines—like Consolidation Coal Co. and the captive mines of United States Steel and other big steel companies—and the small gassy mines up to 28 months to make this equipment permissible—see section 305(a)(1) of H.R. 13950, page 72. They have already had 17 years. If the equipment was in use in the gassy mine before the 1952 act or before the date the mine was classified as gassy, whichever is later, the operator can continue to use this dangerous grandfathered nonpermissible equipment. With the record of ignitions and resulting deaths and injuries so unconscionably high, this 28-month extension is too long. The period should be no more than 15 months.

THE 51 MONTHS OF GRACE

Even worse, the bill gives the operators of small and large so-called nongassy mines, in the case of such equipment, a full 51 months after enactment to obtain this equipment. If they fail to act, then the Secretary may waive this requirement in a mine-by-mine basis for 2 years if he determines that such waiver is "warranted"—see section 305(b)(1) of H.R. 13950, page 73. Thus, the operator can sit on his hands and do nothing for 51 months, then get a waiver for 2 years. Despite the statement in the committee's report that the committee "intends that the Secretary use his discretion in determining if such waivers are warranted for mines requesting them, but expects his first consideration to be the availability of permissible replacement equipment," the bill does not require this finding until the Secretary reaches the end of the 6 years and 3 months when he can, on a mine-by-mine basis, grant further waivers if the equipment "is not available to such mine"—see page 73, section 305(b)(1).

6 YEARS PLUS

Thus, the operators of large and small nongassy mines have been given, at least 6 years, and a further indefinite period to comply with this requirement. In the meantime, the miner is subjected for this indefinite period to the hazard of a gas ignition and possible death or injury. Again, the rule that governs here is not the life of the miner and what his loss means to his family, but purely and simply economics. Which is more precious? Money, or a man's life?

Let me review the facts, the record, and what I believe to be the proper approach to this problem—one that places life first, but recognizes that everything cannot be done overnight.

Since January 1941, 1,142 miners have been killed and 965 have been injured in the 683 underground coal mine ignitions or explosions which have been reported to the Bureau of Mines. These ignitions and explosions have been among the major causes of death and injury to coal miners.

THE DANGERS OF METHANE

First, let us understand the hazardous nature of methane gas. Explosive mixtures are formed when the methane concentrations in the mine atmosphere range from 5 to 15 percent. The energy required for ignition is extremely minute.

When methane gas is present in a coal mine, in sufficient quantities, a frictional spark such as one emanating from a motor on a piece of equipment, or one caused by metal striking rock, or even one caused by the flint of an ordinary cigarette lighter, can provide the energy necessary to ignite the methane with the resulting ignition and explosion and death and injury to the miners. The potential for an explosion can increase with the presence of coal dust suspended in the atmosphere. As the amount of coal dust in the atmosphere increases, the amount of methane needed for an explosion may decrease to much less than 5 percent.

WHAT THE 1952 ACT REQUIRES

In 1952, Congress, in recognizing the importance of preventing methane ignitions and explosions, established some measures designed to prevent the accumulation of methane in explosive quantities and to eliminate the sources of methane ignition. Although the measures required by the 1952 act are deficient, that act does require that—

All mines must ventilate the working places;

In gassy mines, air passing through an abandoned area which cannot be inspected cannot be used to ventilate the face;

In gassy mines, preshift examinations for methane must be made 4 hours before the shift, and in nongassy mines, once a day;

Pillar workings in gassy mines must be tested for methane before a roof fall is made;

Rock dusting be used to prevent propagation of explosions;

Electric face equipment and junction and distribution boxes in gassy mines, with some exceptions, must be permissible, and trolley and feeder wires cannot extend beyond the last open crosscut;

Smoking and open flames in gassy mines be prohibited;

Tests for methane be made after blasting; and

The drilling and sealing of oil and gas wells be done by the owners thereof under State laws.

DID 1952 ACT SUCCEED?

Were these provisions successful in reducing these ignitions? Let us look at the record again.

Since enactment of the 1952 act through June of this year, there were 454 methane ignitions and explosions in underground coal mines. This is almost double the 229 ignitions and explosions that occurred during the 1941–52 period. These pre-1952 ignitions and explosions killed 401 miners and injured 501. Although fewer miners have been killed and injured in methane ignitions and explosions since 1952, it is scarcely a record to cheer about.

The causes of these ignitions are legion. They are: Smoking, the use of matches to light explosives, the improper use of explosives, the flame safety lamp, trailing cables, locomotives, welding, and numerous other causes, as the following table shows:

Ignition source	Number killed	number injured	Number of ignitions and explosions
Explosives	44	63	43
Electrical equipment (either nonpermissible or in nonpermissible condition)	43	88	52
Smoking and open flames	13	46	55
Locomotives	10	18	22
Trailing cables	9	18	21
Flame safety lamp	5	25	17
Miner bits	3	141	156
Multiple source	135	19	13
Not determined	83	14	15
Miscellaneous	60	58	55
No data available	0	4	1

ADEQUATE SAFEGUARDS MUST BE PROVIDED

From this shocking record, it is clear first, that the safeguards in the 1952 act were inadequate to control methane before it reaches the explosion stage in all mines and, second, that the requirements of the 1952 act did not eliminate the causes of methane ignitions and explosions. Greater safeguards are needed in this area. Halfway measures are no longer acceptable. We must control the methane and we must eliminate the causes. Accordingly, the bill—

Requires that all mines be mechanically ventilated and that the ventilation equipment be inspected daily;

Increases the minimum quantity of air reaching the face workings;

Requires the use of brattice cloths or other approved devices to improve ventilation at the face;

Increases the frequency of testing for methane;

Prohibits, in ventilation of face workings, the use of air that passes through an abandoned area that is inaccessible or unsafe for inspection;

Requires sealing or ventilating by bleeders of abandoned areas or areas where pillars have been removed;

Requires Federal inspectors at especially hazardous mines;

Improves present standards relative to rock dusting to prevent propagation of methane ignitions;

Prohibits the use of open flames and smoking;

Provides greater protection in the use of trailing cables;

Requires continuous testing for methane while welding;

Provides greater safeguards in the use, storage, and transportation of explosives;

Requires that operators make more diligent searches for oil and gas wells, and that operators provide and maintain larger barriers around such wells; and

Requires that flame safety lamps be approved and properly maintained at each mine in accordance with specifications to be prescribed by the Secretary.

In addition to these very detailed and comprehensive safeguards included in this bill, there are two other causes of ignitions that arouse considerable concern.

SPARKS FROM CONTINUOUS MINER

First, sparks from the bits of the continuous miner and from the cutting

machine. There have been 155 such ignitions since 1952, many of which have occurred since the late 1950's. These have killed three and injured 141.

Unfortunately, the technology here is not very advanced. I am informed by the Bureau of Mines that a device to suppress these ignitions as they occur is now being developed and should be available very soon. To accelerate this process, the bill directs the Secretary to act promptly on this research and to require such a device as soon as possible. Also, immediate attention must be given to complete prevention of these ignitions.

FLAME SAFETY LAMP

At this point, I might also dwell on the flame safety lamp problem as a device to measure and detect methane, it is not satisfactory. Miners using this lamp, despite claims to the contrary, are unable to measure the methane in the mine atmosphere at the low percentages required either in the 1952 act or in this bill, except under ideal conditions which may exist in the laboratory but are not found in the mines.

These lamps give different readings to different people. Their accuracy also depends on whether they are properly set by the men who use them and that setting is necessarily being changed all day long.

So, as I have indicated, research is necessary. Furthermore, the record is clear that flame safety lamps, in many instances, are not properly maintained. Indeed, since 1952 there have been five miners killed and 24 injured in 17 ignitions caused by flame safety lamps. This emphasizes the need to maintain these lamps properly each day. And this is required under the definition of the term "permissible" in section 318(c)(1) of H.R. 13950, although I believe a specific provision on this lamp is desirable.

RESEARCH ON METHANE DRAINAGE

One promising area of research now underway in the Bureau to control methane, is a program of methane drainage, in advance of mining. The potential of this research is great and the bill directs that it, too, be accelerated with primary emphasis on safety aspects of the research.

Further, the bill contemplates that additional measures will probably be needed in the future to control methane and prevent methane ignitions and explosions. The research programs just mentioned and other efforts of the Bureau of Mines in this area, if fruitful, will form the basis for action by the Secretary to promulgate additional regulations on this subject.

ELECTRICAL FACE EQUIPMENT

Now, we come to the major problem—electrical face equipment and the nongassy classification.

The bill follows the recommendation of the Department of the Interior that mines, whether classed as gassy or nongassy under the current law should be treated alike, in providing these new and additional safeguards to control methane and prevent ignitions.

Since 1952, the Federal Coal Mine Safety Act, as amended, has contained special provisions allowing the use of electric face equipment which is not spark proof—that is, has not met the standards of the Bureau of Mines—in mines that have never had an ignition or have never been found to have methane of more than 0.25 percent. In addition, the act has specifically provided that many of these particular safeguards, such as the frequency of preshift examinations, and the prohibitions of smoking and the use of open flames underground applied to only one class of mines; namely, those which have had methane ignitions or in which there was methane of 0.25 percent or more.

SPECIAL TREATMENT FOR NONGASSY MINES

Thus, the so-called nongassy mines—again those that have never had an ignition or have never been found to have methane of more than 0.25 percent in the mine atmosphere—have received special treatment under the premise of the 1952 act that a mine need not adopt special measures to control methane and prevent ignitions until there was "evidence of gas." I believe, however, that, based on the record, this premise was not valid. The committee shared my view and reached the decision to treat all mines alike.

The principal opposition to this uniform treatment of all underground coal mines came from the small nongassy mine operators, particularly those from eastern Kentucky, southern West Virginia, Virginia, and Tennessee. These operators, who want the special treatment for nongassy mines under the 1952 act continued, objected primarily to the requirement in the bill that large electric face equipment in these mines must be made permissible—that is, sparkproof.

CONTENTIONS THAT SMALL MINES MAY CLOSE

These small, nongassy mine operators, who produce less than 8 percent of the Nation's coal and employ between 15,000 and 20,000 employees contend that this requirement will be costly to the operators of these mines and cause many of them to close their mines. They further contend that the history of gas being detected in these mines, either by ignition or air analysis during inspections, does not warrant such a requirement.

NUMBER OF GASSY AND NONGASSY MINES

Based on 1967 and 1968 data of the Bureau of Mines, there are 3,778 active underground bituminous and anthracite coal mines of which 450 are now classed gassy. The remainder, 3,328, are classed nongassy, of which 2,755 are small nongassy mines, not 4,000 as some contend. Many of these small nongassy mines are found in eastern Kentucky, southern Virginia, and West Virginia and are drift mines. As I have stated, under these conditions there is a good chance for methane that was present in the coal many years ago to have escaped from the coal seam before mining is undertaken. But, as I also stated, no one can be sure of this and frequently the methane remains as a cause of disaster and threat to the lives of the coal miners.

Based on data of the Bureau of Mines, the total annual coal production from underground bituminous and anthracite mines during 1967 and 1968 was about 350 million tons. Large and small gassy mines accounted for about 60 percent of this total of 210 million tons. Large and small nongassy mines combined accounted for the remaining 40 percent or 140 million tons.

Small nongassy mines annually produced slightly less than 12 percent, or 39 million tons—a far cry from the 40-percent production claimed by some who want to retain this administrative distinction for small nongassy drift mines.

THE SAFETY OF THE MINER

After all is said and done, one must still conclude that the special treatment granted nongassy mines for the past 17 years relative to the use in such mines of sparkproof electric face equipment should not be continued from the standpoint of the miner's safety. It is important that my colleagues in the House understand the reasons for this conclusion.

Both the previous administration, in January 1969, and the present administration, in March 1969, in propsing coal mine health legislation, specifically proposed that all mines should be "subject to the same standards because all underground coal mines are potentially gassy." Both administrations were reiterating the position taken by the Bureau of Mines as long ago as 1926, that all mines whether classed gassy or nongassy, are potentially gassy.

It is clear from the history of ignitions and explosions in the Nation's coal mines that the exceptions permitted by the 1952 Federal Coal Mine Safety Act, as amended, are not warranted. There is neither a scientific nor technical basis for these exceptions. The record shows that no one can predict when gas may be found in such quantity in any mine to cause considerable damage.

EXPLOSIONS DO OCCUR IN NONGASSY MINES

Past history shows that mines, once classified nongassy, do suddenly have sufficient accumulations of methane gas to cause ignitions and explosions. As the record demonstrates, this has happened at least 87 times since 1941. Let me stress that point—87 mines in the past 28 years have been classified nongassy, yet they have had sufficient methane gas to cause an explosion and, as a result of these 87 gas ignitions, in so-called nongassy mines, 84 miners were killed and 111 were injured. See the following table which shows where these have occurred:

METHANE IGNITIONS AND EXPLOSIONS IN NONGASSY MINES, 1941–69

State	Number of ignitions	Number of miners killed	Number of miners injured
Pennsylvania	33	18	69
Kentucky	14	17	13
Virginia	13	0	9
West Virginia	6	17	10
Tennessee	6	14	0
Ohio	4	3	6
Illinois	2	11	3
Maryland	2	3	1
Colorado	2	0	3
Washington	2	0	2
Alabama	1	0	0
Indiana	1	0	0

WHERE THE EXPLOSIONS HAVE OCCURRED

These dangers exist in all nongassy mines, whether they are large or small; whether they are drift mines, slope mines, or shaft mines. As the record

demonstrates, of the 55 methane ignitions that have occurred in nongassy mines since the 1952 Safety Act, over half—30 to be exact—occurred in small mines; almost half—22 to be exact—occurred in drift mines. In some of these 55 ignitions, fewer than five miners were employed in the mine. As recently as August 1968, a methane gas ignition occurred in a small nongassy drift mine, in Kentucky, injuring three miners. On two previous inspections, the methane gas in the atmosphere at the mine registered less than 0.25. On one inspection, it registered 0.15, on the other, no methane gas whatsoever was detected. Yet, on August 5, 1968, a methane gas ignition occurred in that "nongassy" mine.

RECLASSIFICATION OF MINES AS GASSY

In the last 4 years alone, 168 nongassy mines had to be reclassified as gassy. Sixty-nine of these were small mines, and 17 of the 168 were drift mines.

See table I, which follows:

TABLE I.—203(f) ORDERS, GASSY CLASSIFICATION, ISSUED FROM 1964 THROUGH 1968 BY DATE, STATE, REASON, AND AIR ANALYSIS FOR THE 2 PREVIOUS INSPECTIONS

[1] Form 203(f) orders were not issued when mines were classed gassy by State department of mines.
[2] No prior inspection.
[3] No samples.
[4] Data not available.
[5] None.

Most of these gas ignitions in nongassy mines have been caused by smoking, open flames, and small nonpermissible electric equipment. The bill prohibits smoking and open flames, and requires that the small electric equipment be made ignitionproof.

However, since ignitions have also occurred from larger nonpermissible equipment, and large permissible equipment in nonpermissible condition, the bill also requires that this larger equipment be made ignitionproof. The committee believed this requirement to be necessary for a very simple reason. Where there is methane, any spark—whether it be from a machine, cigarette lighter, or small or large piece of electric equipment, can cause an ignition. In fact, as we have learned, five methane ignitions in nongassy mines have been caused by sparks emanating from large pieces of equipment.

A methane ignition was recently caused in a nongassy drift mine by a large piece of equipment which, the Bureau of Mines reports, was in nonpermissible condition at the time of the ignition. Five men were burned and hospitalized. In that case, fortunately, none were killed.

THE BLUE BLAZE CASE

In the most serious of these 55 methane ignitions in nongassy mines since 1952, 11 miners were killed in Herrin, Ill.—Blue Blaze Coal Co. These miners were working in a mine which the law said was nongassy. Yet, a spark, emanating from a large shuttle car, found methane gas which was not supposed to be there, and exploded the methane gas. The Bureau of Mines reports that the shuttle car was in nonpermissible condition at the time of the ignition.

The mine involved had not been classified gassy by the State of Illinois. According to the report, "methane was never detected in the mine with a permissible flame safety lamp, except for the one time that the mine manager thought he might have found a very small amount in a roof cavity." Air samples collected during State inspections of the mine showed a maximum methane content of 0.08 percent which, under current law, is well below the nongassy classification limit of 0.25 percent.

A shuttle car was being repaired. It had been manufactured originally to meet the Bureau's standards. During the course of repair, however, the control panel was open.

OFFICIAL INVESTIGATION REPORT

The Bureau of Mines investigators, in reconstructing the facts after the disaster, believe that during the course of repair, the repairman energized the power to the shuttle car for test purposes. Since the control panel was open, sparks were permitted to emanate. According to the final report of the investigation, "Federal inspectors are of the opinion that the disaster was caused by the ignition of methane in the air current. The gas was ignited by an arc or spark from the open control panel while repairs were being made on the shuttle car." Had the control panel been properly sealed when the machine started to operate, and under the Department of the Interior standards it must be, the ignition would not have occurred. The final report of this explosion follows:

FINAL REPORT OF MAJOR MINE-EXTENSION DISASTER, MINE NO. 2, BLUE BLAZE COAL COMPANY, HERRIN, WILLIAMSON COUNTY, ILLINOIS, JANUARY 10, 1962

(By F. J. Smith, District Supervisor; J. R. Summary, Federal Coal-Mine Inspector; C. M. Dovidas, Federal Coal-Mine Inspector; S. J. Douglas, Federal Coal-Mine Inspector, Electrical)

INTRODUCTION

A gas and dust explosion occurred in Mine No. 2 of the Blue Blaze Coal Company, 2 miles northwest of Herrin, Illinois, about 6:30 p.m., Wednesday, January 10, 1962, and caused the death of 11 men. These eleven were the only persons in the mine and all died from suffocation, burns and/or forces.

The names of the victims, their ages, marital status, occupations, and the number of dependents are listed in Appendix "A" of this report.

Bureau of Mines investigators believe the explosion originated in room 2 off 3 north entry at the neck of the second north crosscut when an explosive mixture of methane-air was ignited by an electric arc or spark from a piece of electrical equipment. The explosion was propagated by methane and coal dust.

Forces of the explosion radiated from room 2 off the 3 north entry and spread west and north, south and west towards the main shaft, and west and south into the holed-through abandoned sealed north working section at room 1 off the 1 north entry. All of the forces converged at the bottom of the main shaft, traveled up the shaft and dispersed upon reaching the surface.

GENERAL INFORMATION

Mine No. 2 is located 2 miles northwest of Herrin, Williamson County, Illinois. Coal was transported from the mine in autotrucks.

The operating officials of the company were as follows: Claud Gentry, Owner, Route 2, Carterville, Illinois; Virgil E. Woodburn, Mine Manager and Day Shift Leader, Cambria, Illinois; Rays Woodis, Night Shift Leader, Herrin, Illinois.

On January 10, 1962, a total of 30 men was employed; 6 on the surface and 24 underground on two coal-producing shifts. The average daily production was reported to be 280 tons of coal. The mine is opened by a concrete-lined shaft 168 feet deep and a 16-inch cased pilot hole which was primarily used as a refuse hole for the blasted strata for the enlargement of the air shaft. The workings are in the Illinois No. 6 coal bed, which averages 106 inches in the present mining area and dips very slightly to the north and east.

In 1956 a 7- by 10-foot concrete-lined slope was driven near the present side of the cased pilot hole for the proposed 6-foot circular air shaft. The slope was driven, to a depth of 210 feet and collapsed unexpectedly, due to caving ground and an inrush of what is locally referred to as quicksand. Plans for opening the mine were suspended until April 23, 1959, when ground was broken for the present hoisting shaft. The hoist or main shaft was completed November 24, 1960; however, the further development of the mine was temporarily halted, until the surface structures were erected. Coal on one shift was first produced July 30, 1961, and continued to be produced intermittently until the day of the explosion. A full crew on the second shift started to produce coal mine working shifts prior to the disaster.

The partly completed air shaft, located 520 feet east of the main shaft, was started November 7, 1961. The 6-foot circular steel-lined air shaft had been driven periodically to a depth of 70 feet below the surface soil and to within 74 feet of the coal bed at the time of the explosion.

The immediate roof is a medium-firm gray shale which is about 12 inches in thickness, overlaid by 12 feet of hard shale, 3 to 5 feet of limestone, and by 49 feet of sandstone,

successively. The immediate roof disintegrates after it is exposed to the mine atmosphere, and to protect it from weathering approximately 12 to 18 inches of top coal is left. The floor is a smooth soft fire clay that also disintegrates when exposed to the mine atmosphere.

The analysis of a coal sample from the Illinois No. 6 coal seam obtained from a coal company located in the immediate vicinity is as follows: Moisture, 7.2 percent; volatile matter, 34.8 percent; fixed carbon, 51.0 percent; ash, 7.0 percent.

Numerous tests conducted by the Bureau of Mines have shown that coal dust having a volatile ratio of 0.12 is explosive and that the explosibility increases with an increase in the volatile ratio. The volatile ratio of coal in this mine as determined from the aforementioned analysis is 0.40, indicating that the dust is explosive.

A Federal inspection had not been made of this mine prior to the disaster. A Bureau of Mines roof-bolt representative visited the mine and issued a roof-bolt plan on July 31, 1961, but the mine was idle on several occasions when a Federal inspector visited it or contacted some of the employees to determine if the mine were in operation. The mine did not come under the provisions of Title II of the Federal Coal Mine Safety Act until January 1962, by virtue of the fact that less than 15 men were employed underground until that time.

MINING METHODS, CONDITIONS, AND EQUIPMENT

Mining Methods: The mine was being developed by a panel, room-and pillar method and pillars were not extracted. Main entries were driven in sets of seven, 16 feet wide on 50-foot centers. Room-panel entries were being driven 16 feet wide on 50-foot centers in sets of 2 and 3 at various intervals. The first room crosscuts were used as shuttle-car roadways and were referred to as entries by the management. Rooms were driven 18 to 22 feet wide on 50-foot centers to various depths, and crosscuts were generally 18 feet wide and 60 feet apart.

The mine is surrounded by worked-out mines and provisions had been made in the projected development to allow 200 feet of coal for a barrier pillar between the mine and abondoned properties.

Bolts were used exclusively for roof support throughout the mine, and with one exception, were being installed according to the recommendations of the Bureau's roof-control representative.

A loading-machine unit was operated on each of the two coal-producing shifts.

Blasting: All coal in the mine was undercut by a rubber-mounted cutting machine and was broken down on shift by means of compressed air. Explosives were not used underground.

Ventilation and Mine Gases: Ventilation was induced by a 24-inch, electrically driven, centrifugal fan operated blowing and circulating approximately 7,500 cubic feet of air a minute. The fan was operated continuously and was installed on the surface, offset a few feet from the main shaft and was attended constantly. Room-panel and temporary stoppings were normally constructed of lumber covered with wood fiber; however, brattice cloth was used occasionally for temporary stoppings until replaced by lumber. No doors were used in the mine; however, two double thickness brattice cloth curtains were suspended from a wooden frame near the shaft bottom. Permanent stoppings were built of concrete blocks.

The air was directed into the mine through a 22½-inch metal air duct which extended from the fan down the hoist shaft and through a circular hole in the poured concrete lining of the shaft. The air duct was constructed of a series of empty 55-gallon capacity oil drums that were joined by welding after the ends were removed from the barrels.

A split system of ventilation was used in this mine. A small split of air ventilated the temporarily idle main west section and a larger split was ventilating the active working area which included the 1, 2 and 3 north room-panel entries and the main east entries. The air entering the mine through the cased pilot hole of the air shaft combined with the air returning from the north entries and returned out the main east haulage and parallel entries and up the hoist shaft. No air readings were recorded in the mine examiner's book.

The mine was not classified gassy by the Illinois Department of Mines and Minerals. Preshift examinations were made of the entire mine for gas and other hazards by the mine manager and night shift leader for their respective shifts. On-shift examinations were made by the mine manager for gas and other hazards during the day shift; however, an on-shift examination apparently was made only for other hazards on the night of the explosion, since a flame safety lamp was not found in the mine during the investigation. The mine manager did state that he thought he detected gas in a roof cavity about three months prior to the day of the disaster; however, it was not noted in the record book. The analysis of air samples collected during State inspections of the mine showed a maximum methane content of 0.08 percent. There were no known oil or gas wells penetrating the coal bed in the area being worked.

Dust: The mine in general was dry, but water was present on the floor in the main east entries inby the north working section and in 6 and 7 east air course entries outby the north working section. The entire north working section was dry and dusty. Loose coal and coal-dust accumulations were present along the main east haulage road, at the hopper near the main shaft and throughout the north working section. Rock dust was applied daily by hand and the main entries had been rock-dusted by machine.

During the investigation, 20 mine-dust samples were collected in the main east and north entries and all of them contained less than 65 percent incombustible (see Table 2). A sample for coke was collected in room 2 off 3 north entry at the second north crosscut where the explosion was believed to have originated and at the junction of main east track entry and 2 north. The mine-dust samples collected were not representative of mine conditions prior to the explosion, as coal dust thrown into suspension and deposited on the rock-dusted surfaces increased the combustible content.

Transportation: Eight-ton Jeffrey trolley locomotives were used to haul the 8-ton, all-steel, drop-bottom-type coal cars from the north working section to the coal hopper located south of the main shaft. The coal was then loaded into a 5-ton skip and hoisted to the surface where it was prepared for domestic trade and for resale to another coal company.

Electricity: Power was purchased at 4,160 volts, three phase, and was transformed to 440, 220, and 110 volts for use on the surface and underground, with the exception of the surface motor generator, which operated at 4,160 volts on the primary side. Alternating current equipment underground consisted of a coal conveyor at the shaft bottom, and two water pumps, all 440-volt type. Direct-current power was generated at 250 volts by a 400 kilowatt conversion unit located in the hoist house. Direct current was transmitted into the mine by two plastic pipe-enclosures 1,000,000 circular mil copper cables installed in an 8-inch cased borehole. Power was transmitted along the motor roads and face region by 320,000 circular mil (6/0) trolley wire and 750,000 circular mil feeder lines, all well installed on insulators.

Face equipment consisted of a Joy 11BU loader, Joy 10SC shuttle car, Joy 10RU cutting machine, Joy CD41 coal drill, and a Jeffrey 56 RDR roof-bolting machine, all operated from the direct-current system. Face equipment was permissible with the exception of the roof-bolting machine, which lacked only an approval plate. Face equipment was fairly new and maintained in a permissible condition. The 10SC shuttle car contactor enclosure cover had been removed by the second shift which exposed a considerable array of electrical arcing devices, and repair work was in progress at the time of the explosion. Upon inspection it was discovered that a main contact on one of the tram reversing contactors would not close, therefore, the shuttle car could have only trammed towards the face on one motor at high speed and tramming would have been possible at low speed in the same direction. The 10SC shuttle car is a four-wheel drive type with tram motor mounted on each side and each tram motor driving the two wheels on its respective side. Jockeying the shuttle car near the loader with the described fault would have been difficult as the car would have jumped on forward tram and probably frequently outed the overloaded relay. The regular mechanic was not working on the night of the explosion and repair work on the shuttle car was being done by members of the face crew, who apparently were not experienced in such work. This fact was self-evident when it was discovered that they had started to diassemble the wrong contactor. Under such conditions it was customary at this mine to try the equipment with the power on, with one person observing the contractors. The removal of the enclosure cover would provide several gas ignition sources which could have and probably did provide the primary ignition, as there was evidence that gas had burned in the enclosure.

Face equipment controller positions were checked after the ignition and all equipment was in an "off" position, except the coal drill which was apparently drilling at the time. Trailing cables were not provided with short-circuit protection at the nip ends, except the loader which had a 300-ampere fuse type nip. Temporary splices in trailing cables ranged in number from none to eight; all were fairly well made with the exception of one splice in the shuttle car cable which was bare. Trailing cables were listed as fire resistant, with the exception of some 75 feet of cable on the roof-bolting machine.

Illumination and Smoking: Permissible electric cap lamps were used for portable illumination underground, and fixed electric lights were installed at the underground shop, at the hopper and at frequent intervals along the haulage roads. Smoking was prohibited underground; however, smokers' articles were listed among the personal effects of one of the explosion victims. A damaged and corroded cigarette lighter was also found on the main east haulage road near the coal hopper but apparently it had been discarded sometime before the explosion.

Mine Rescue: A mine rescue team was not maintained at the mine and none of the mine personnel had been trained in mine rescue work in recent years. The nearest State-maintained mine rescue station and mine rescue teams were at Benton, Illinois, about 17 miles from the mine. Other State-maintained teams were from 20 to 178 miles away and were available. Each rescue station is equipped with the necessary gas-detection devices, McCaa 2-hour self-contained oxygen breathing apparatus, Chemox ¾-hour oxygen-generating breathing apparatus, and all-service gas masks. A box containing 6 self rescuers was kept underground in the shop near the shaft bottom. The underground employees were not searched for smokers' articles before entering the mine.

Two travelways, one of which was in intake air, were provided from the working section to the main shaft bottom; however, the main shaft was the only way out of the mine to the surface. A check-in and check-out system was in effect, and the men used

assigned numbered electric cap lamps as a means of identification while underground.

Several fire extinguishers and rock dust were available on the surface and underground for fire-fighting purposes. Water furnished by the city of Herrin was also available on the surface for fire-fighting purposes.

STORY OF EXPLOSION AND RECOVERY OPERATIONS

Participating Organizations: These include the Blue Blaze Coal Company, the Illinois Department of Mines and Minerals, United Mine Workers of America and U.S. Bureau of Mines.

The following Illinois State mine rescue teams assisted with the recovery operations: Benton No. 1 and No. 2, DuQuoin and Eldorado.

Activities of Bureau of Mines Personnel: A representative of Mine Safety Appliances Company, Benton, Illinois, notified J. R. Summary, Federal coal-mine inspector, Benton, Illinois, of the explosion about 8:25 p.m., Wednesday, January 10, 1962. Mr. Summary immediately notified F. J. Smith, District Health and Safety Supervisor, District E, who with Harry Schrecengost, Technical Assistant, U.S. Bureau of Mines, Washington, D.C., was on a special assignment in Benton, Illinois, at the time of the occurrence. Mr. Smith then relayed the information to other Bureau of Mines personnel. F. J. Smith, Harry Schrecengost and J. R. Summary left Benton, Illinois, at about 8:45 p.m., and arrived at the mine about 9:20 p.m. Federal Inspectors B. J. Dona, M. R. Messersmith, C. M. Dovidas, S. J. Douglas, J. A. McCune, J. P. Sheridan and Louis Lorenzo arrived at various times between 10:30 pm., January 10 and 2:15 a.m., January 11. James Westfield, Assistant Director—Health and Safety, and R. W. Whittaker, Federal coal-mine inspector, arrived about 2:30 p.m., January 11. Federal inspectors H. E. Basinger, Brank Beck, J. R. Laird and J. A. Mower, stationed at Madisonville, Kentucky, arrived Sunday afternoon, January 13, and assisted in restoring ventilation in the mine to permit an investigation of the disaster the following day.

The bodies of the 11 victims were recovered at various times during the night of January 11 by rescue teams using oxygen-breathing apparatus, and by 12:40 a.m., January 12, all bodies were removed from the mine.

Mining Conditions Immediately Prior to the Explosion: The weather on January 10, 1962, from 7:00 a.m., until noon consisted of scattered clouds and from 1:00 p.m. to 4:00 p.m., it was clear. The temperature at Herrin, Illinois, airport during this period ranged from 4 degrees below zero at 6:00 a.m., to 6 degrees above zero.

Records of barometric pressure on January 10, 1962, are as follows:

BAROMETER READINGS, JAN. 10, 1969

[The accepted standard barometer reading at the mine is 29.80]

Time	Barometric pressure	Time	Barometric pressure
1:00 a.m.	30.15	1:00 p.m.	30.30
2:00 a.m.	30.17	2:00 p.m.	30.30
3:00 a.m.	30.19	3:00 p.m.	30.30
4:00 a.m.	30.20	4:00 p.m.	30.30
5:00 a.m.	30.20	5:00 p.m.	30.30
6:00 a.m.	30.20	6:00 p.m.	30.30
7:00 a.m.	30.20	6:30 p.m.	(1)
8:00 a.m.	30.20	7:00 p.m.	30.30
9:00 a.m.	30.25	8:00 p.m.	30.30
10:00 a.m.	30.30	9:00 p.m.	30.30
11:00 a.m.	30.30	10:00 p.m.	30.30
Noon	30.30	11:00 p.m.	30.30
		Midnight	30.30

[1] Time of explosion.

At noon on January 9, 30½ hours prior to the time of the explosion, the recorded barometric pressure was 30.00 and it continued on a gradual rise until a high of 30.30 was recorded at 10:00 a.m., January 10, 1962, after which it leveled off and remained steady until midnight. The atmospheric pressure was not a contributing factor in the explosion. The mine was in operation at the time of the explosion and had been on an 8:00 a.m., and 4:00 p.m., operation since Monday, January 8, 1962. The fan was operating and the mine examiners did not record any unusual conditions in the mine.

Evidence of Activities and Story of Explosion: At the beginning of the 4:00 p.m., to midnight shift on January 10, eleven men entered the mine and all the men except the cager and two motormen walked to the working section. The underground employees reached the working section presumably without mishap, and all the coal-producing workmen had been in face of regions approximately 2½ hours when the explosion occurred. Conditions found after the explosion indicated that coal was being produced as usual. The mine examiner's record book at the mine showed a preshift examination of the entire mine had been made for the oncoming shift. Methane was not reported and the air was traveling in its normal course and quantity.

Normal operating procedure at this mine required all the day shift crew to be on the surface, except the mine manager, before the afternoon crew was permitted underground. The hoisting engineer on the afternoon shift stated that on January 10, 1962, at about 3:30 p.m., after all the crew was lowered, normal operation of the mine followed.

A trip of coal was being hoisted out of the mine and at approximately 6:25 p.m., the skip was lowered to the bottom and was stopped for about a minute when he heard a whirring and hissing sound similar to a short-circuit in high voltage power cable, followed by a terrific vibrating sound. The generator set was only a few feet from the hoist controls and, being concerned about the high voltage power, he pulled the power cut-off switch on the generator, stopping the set. Upon turning around he observed the hoisting cables vibrating, followed by a jet black column of smoke or dust pouring out of the shaft accompanied by a deafening whirring and vibrating sound. After waiting a few minutes he walked outside and around the corner of the hoist house and disconnected the 440-volt power to the mine. He walked back into the building housing the hoist, bath room, supplies and air compressor. The Airdox compressor was still in operation, and he then tried to call underground by telephone but could not get an answer. Realizing then that an explosion had occurred, he shouted from the hoist room door to the topman who was in the mine office to call the owner of the mine and tell him there had been an explosion in the mine. The owner-operator returned to the mine immediately and assisted in the recovery operations.

During the development of the main east entries toward the proposed air shaft, a set of north entries was driven to a depth of about 312 feet, with 5 rooms driven off to the west approximately 165 feet in depth and 4 rooms driven off to the east to a depth of about 87 feet. This was to provide storage room for rock and refuse that was dropped down the 16-inch pilot hole when sinking the 6-foot diameter air shaft. The panel was abandoned because of the distance and time it took to haul refuse from the shaft to unload in the panel, and because the panel would have to be ventilated and inspected it was closed January 7, 1962, by concrete-block stoppings. To facilitate the sinking of the air shaft and to offset the operating cost, the 1, 2 and 3 north room-panel entries off 7 main east were driven to increase production and to provide a closer area for storing the refuse from the shaft sinking operation.

All coal was mined with conventional mobile electric equipment, and the coal drill was the only piece of face equipment in operation when the explosion occurred. The roof-bolting machine was parked in No. 2 room off the 1 north while the face of the place was being broken down by compressed air by the shooter and the roof-bolt drill operator who occasionally helped the shooter. The explosion forced the drill boom of the roof-bolting machine about 8 inches into the partly broken down fall of coal, and the shooting shear strip was perforated in the shooting shell found in the bottom hole on the left side of the face. The bodies of the shooter and roof-bolt operator were found alongside of the roof-bolting machine. The mining machine was parked about 25 feet from the undercut face of No. 2 room off 3 north and had many new bits set in the cutter chain. The idle loading machine waiting for the shuttle car under the boom of the loader to be repaired was in the second crosscut north off No. 2 room off 3 north. The coal-drill operator was drilling the first hole in the last crosscut being driven east off 3 north, and the loading machine used to load rock and material from the air shaft sinking operations was parked on 3 north entry between 4 and 5 main east entries. All the controls of the face equipment were in the "off" position, except the coal-drilling machine. The 8 bodies of the victims in the 1, 2, and 3 north working section were found near their working places, except the shift leader whose body was found on 2 north entry about 25 feet from the end of the track and near the nipping station. One of the mining machine men was found near the spare rock and material loading machine, one motorman was found near the east end of the coal hopper at the hoisting shaft, the other motorman was in an empty coal car next to the motor on the 3 east haulage road about 80 feet from the coal hopper, and the bottom man or cager was found near his station at the skip hopper loading conveyor on the south side of the hoisting shaft. The victims died from one of the following causes: Burns, inhaling hot gases, lack of oxygen, or violence.

The day shift mine manager and shift leader stated that on January 10, he knew that No. 1 room off 1 north was near the closed abandoned north workings. He instructed the afternoon shift leader not to cut the face but did not take further action to assure that his oral instruction was followed. Sometime after the 4:00 p.m., shift started to work the closed abandoned north workings were penetrated by an opening of about 90 square feet by cutting and breaking down the coal in No. 1 room off 1 north permitting methane to enter into the air current ventilating the 1, 2, and 3 north working section. The gas then was apparently ignited by an electric arc or spark while repairs were being made in the control panel of the shuttle car. The cover was removed from the control box, the repairman's tools were nearby, and there was evidence of burning in the control compartment. The shuttle car was positioned behind the loading machine in the second crosscut left in room 2 off 3 north and extended part way into the intersection.

From the written report made in the mine examiner's record book, dated January 10, 1962, a preshift examination of the mine was made for the day and afternoon shifts and indicated the mine to be in safe condition. Testimony of day shift workmen was to the effect that tests for methane were frequently made on shift by the mine manager. The day shift mine manager stated he handed a flame safety lamp to the afternoon foreman, but no lamp was found underground.

The explosion destroyed all the stoppings underground. Only minor damage was done to the trolley, power feeder wires, telephone lines and the 3 locomotives near the hoisting shaft. The face equipment appeared to be in good condition, except for the burnt seats on the shuttle car and a seared tire on the mining machine. The major damage was done in the immediate vicinity of the shaft bottom, shaft, and to the coal skip which was at the shaft bottom.

The explosion resulted in the loss of production from the entire mine. The closure Order on the entire mine issued January 11, 1962, remains in effect.

Recovery Operations: Claud Gentry, owner, after informing Ray McCluskey, district State mine inspector, of the explosion proceeded to the mine. Immediately after arriving at the mine, Gentry and McCluskey viewed the damage and discussed what was to be done to get underground as quickly as possible. While calls were being made for State mine rescue teams and other emergency units, work on installing a temporary auxiliary fan operating exhausting at the 16-inch pilot hole at the proposed air shaft was started to establish temporary ventilation underground, because the metal tubing from the main fan installed in the hoisting shaft was destroyed by the explosion. Considerable delay was encountered in hoisting and removing the coal skip from the damaged shaft and arranging for other temporary hoisting equipment. A truck-mounted winch was obtained and a small cage with enclosed sides that could accommodate two men was fastened to the winch rope and swung into the shaft. The fan at the air shaft was exhausting about 2,500 cubic feet of air a minute, and to increase the ventilation another auxiliary fan operating exhausting was set in parallel, increasing the quantity of air to about 3,500 cubic feet a minute. Numerous difficulties were encountered in getting on and off the 2-man cage at the surface and shaft bottom. At approximately 11:45 p.m., the lowering of rescue team members wearing oxygen-breathing apparatus began, and about 4:00 a.m., January 11, all bodies were accounted for. There were no survivors. In the meantime, an auxiliary blower fan with 18-inch tubing was obtained and the tubing was extended down to the shaft bottom landing to ventilate the immediate area around the bottom. This fan was capable of producing about 4,000 cubic feet of air a minute.

At about 11:10 p.m., January 11, the first body was brought to the surface and by 12:40 a.m., January 12, all bodies were hoisted out of the mine. On January 13, to facilitate the transportation of men and material into the mine, a triple deck construction cage that had been used when sinking the shaft was put into operation, utilizing the main hoist. On January 14, a voluntary crew of 13 men wearing gas masks, when the occasion required, constructed semi-permanent stoppings so that the small quantity of air available would clear the mine enough to conduct an investigation.

INVESTIGATION OF CAUSE OF EXPLOSION

Investigation Committee: The underground investigation of the cause of the explosion was begun on January 15, 1962. Members of the official investigation committee were:

Illinois Department of Mines and Minerals: William J. Orlandi, Director; Harold V. Richmond, Inspector At Large.

Illinois Mining Board: H. E. Mauck, Member.

Blue Blaze Coal Company: Claud Gentry, Operator and Owner.

United Mine Workers of America: Floyd Morris, Special Representative, District No. 12.

United States Bureau of Mines: James Westfield, Assistant Director, Health and Safety; F. J. Smith, District E. Supervisor.

Other representatives of the afore-mentioned organizations participated in different phases of the underground investigation of the disaster. Bureau of Mines representatives included: Messrs. B. J. Dona, M. R. Messersmith, J. A. McCune, J. P. Sheridan and Louis Lorenzo.

William J. Orlandi, Director of the Illinois Department of Mines and Minerals, conducted an official hearing on the investigation of the explosion by interrogating the owner-operator, day shift mine manager and employees of the company at the Mines Rescue Station, Benton, Illinois, January 18, 1962. The purpose of the hearing was to hear and record all testimony relevant to conditions and practices in the mine prior to and on January 10, and to determine therefrom, if possible, the cause of the explosion. Some of the information thus obtained is included in this report. Representatives of the United Mine Workers of America, Illinois Department of Mines and Minerals, U.S. Bureau of Mines, and the mine owner-operator participated in the questioning of witnesses.

Methane as a Factor in the Explosion: The mine was not classed gassy by the Illinois Department of Mines and Minerals. Reportedly, methane was never detected in the mine with a permissible flame safety lamp, except for the one time that the mine manager thought he might have found a very small amount in a roof cavity. This trace of methane was detected in one of the east entries just after breaking away from the shaft bottom about 150 feet. The analyses of air samples collected during State inspections of the day shift mine manager and employees was that gas had not been detected during recovery operations. The analyses of 9 air samples collected at various locations underground after recovery operations had been completed and during the investigation showed the maximum amount of methane to be 0.40 percent. The maximum quantity of air the fan was producing was estimated to be approximately 7,500 cubic feet a minute. No written record of air measurements taken underground was available at the mine.

Fragile, globular coke droplets adhering to the roof and ribs, indicative of burning gas, were found on the south rib of the second crosscut from the face of No. 2 room off 3 north, the west rib of 3 north entry between the last open crosscut and the crosscut being driven between 2 and 3 north entries, the north rib of the last open crosscut between 2 and 3 north entries and the east rib of the last open crosscut between Nos. 2 and 3 rooms west of the closed abandoned north workings. Soot streamers were found about 100 feet east of the main hoisting shaft, in the abandoned north entries, 1, 2 and 3 north working section and to within about 200 feet of the faces of the main east entries.

Obviously, methane that was released by cutting into the closed abandoned north workings entered the ventilating current and was ignited by an electrical arc or spark while repairs were being made in the shuttle car control panel in No. 2 room off the 3 north.

Flame: Evidence of heat and flame, in the form of coke, soot or partly burned paper, canvas and wood, was observed in the north working section, in the abandoned north entry panel, in the main east entries about 100 feet inby and about 350 feet outby the north working section. (See Appendix B).

A total of 22 mine-dust samples, including two for coke only, was collected after the explosion, starting at a line across the 7 east entries about 100 feet inby the shaft bottom and continuing along the east entries at various intervals and into the main north working section to within about 100 feet of the north entry working faces. (See Tables 2 and 3 and Appendix B). The presence of coke in the mine-dust samples is one of the criteria by which extent of the flame was fixed, even though it is possible that such coke in the main east entries may have been blown there. All of the samples collected contained coke ranging in quantities from small to very large, and the two samples collected specifically for coke contained large and very large amounts. Coke was plastered on the roof and ribs at and near the intersection of the 3 east and 2 north haulage roads. Extremely heavy coke was evident in the 3 north entry inby the last open crosscut to within 50 feet of the face and in the last open crosscut between Nos. 2 and 3 north entries. A small amount of coke was observed on the east rib in the last open crosscut between rooms 2 and 3 which were driven west off the abandoned closed north entries.

Forces: Difficulty was not experienced in discerning the direction of forces. Coking and evidence of slow burning gas were on the roof, ribs and equipment at and near the intersection of room 2 and the blind crosscut in room 2 being driven towards room 3. The emanation of forces was from this area outward and extended throughout the entire mine converged at the main shaft bottom, continued up the shaft and upon reaching the surface dispersed into the atmosphere. The only evidence underground of extreme violence was observed at and near the bottom of the main shaft. All of the stoppings were blown out. The stoppings in the north entries were driven in a westerly direction and with the exception of one, all concrete-block stoppings were blown in a southerly direction.

Probable Point of Origin: The consensus of the Bureau of Mines investigators is that the explosion originated at the last crosscut turned north off No. 2 room off 3 north where the shuttle car was being repaired.

Factors Preventing Spread of Explosion: The explosion spread throughout the mine and out the shaft, dissipating into the atmosphere.

Summary of Evidence: Conditions observed in the mine during recovery operations and the investigation following the disaster, together with information obtained from company officials, State mine inspector, workmen, and mine records, provided evidence as to the cause and the point of origin of the explosion. The evidence from which the conclusions of the Federal investigators are drawn is summarized as follows:

1. Records of the preshift examinations of the mine indicated no unusual conditions.

2. The Illinois No. 6 coal bed in the area is "gassy." All abandoned mines surrounding this mine were classified gassy.

3. The roof bolter was apparently assisting the shooter prepare coal in room 2 off 1 north since this was common practice. The shearing strip in the Airdox shell indicated that the shell was discharged prior to the explosion.

4. The roof bolt machine was apparently parked in the 1 north entry at room 2 and the forces of the explosion rammed it into the loose coal at the face of room 2. The chuck of the roof bolt drill was imbedded about 8 inches into the partially blasted coal face. The shooter and roof bolter were the only persons working in the rooms off the 1 north entry.

5. The coal drill was the only piece of electrical face equipment in operation at the time of the explosion and had drilled a top hole about 4 feet in depth in the right corner of room 4 off the 3 north entry.

6. The mining machine was not in operation. It had been pulled back about 25 feet from the recently cut face of room 2 off 3 north and apparently the operator and his helper had just changed bits and were waiting to undercut the crosscut after the coal was loaded out.

7. The loading machine operator had loaded about 2 shuttle cars of coal out of the crosscut in room 2 and repositioned his loading machine and loaded about 500 pounds of coal into the shuttle car when he stopped loading to assist in repairing the disabled car.

8. The shuttle car was being repaired. The control panel cover had been removed, exposing contractors which readily would provide a source of ignition with the trailing cable connected to the source of power.

9. The workmen trying to repair the shuttle car apparently deenergized the power before work was done on the machine. The shift leader found near the nipping station may have energized the power to the shuttle car for test purposes, which in turn may have created the arc or spark within the open control panel.

10. On-shift examinations for gas were apparently not always made, since a flame

safety lamp was not found in the slightly damaged north working section after the explosion.

11. Methane probably entered the ventilating current from the abandoned closed north panel which was holed-through shortly after the start of the 4:00 p.m., shift and was carried by the ventilating current to where repairs were being made on the shuttle car.

12. Boreholes were not drilled in advance of the face when No. 1 room off the 1 north entry was being driven by the second shift crew within 50 feet of the abandoned north panel.

13. All forces emanated from room 2 off the 3 north entry.

14. Face equipment was fairly new, and with the exception of the roof-bolting machine which lacked only an approval plate, all the equipment was in permissible condition.

15. The coal is highly volatile, and the mine surfaces were dry, except at a few locations.

16. Coal dust in the immediate area entered into the explosion, which then picked up all the fuel necessary for propagation from the accumulations of coal throughout the north working section.

17. Smokers' articles were listed among the personal effects found on one of the victims of the explosion and an old discarded cigarette lighter found near the coal hopper indicated that smoking was practiced to some extent underground. Management did not have a searching program to assure that smokers' articles were not carried into the mine.

18. Fragile, globular particles of coke that would be indicative of slow burning gas were found adhering to the roof and ribs in No. 2 room off 3 north entry, in the 3 north entry, in the last open crosscut between Nos. 2 and 3 north entries, and in the last open crosscut between rooms 2 and 3 driven west in the abandoned north panel.

19. Plastered coke was observed on the roof and ribs at and near the intersection of the 3 east and 2 north haulage roads. Soot streamers were observed 100 feet inby the main shaft, in the abandoned north panel, in the entire north working section and to within 200 feet of the faces of the main east entries.

Cause of Explosion: The Federal inspectors are of the opinion that the disaster was caused by the ignition of methane in the air current in room 2 off 3 north entry at the entrance to the second north crosscut. Methane apparently entered the ventilating current from the abandoned north panel that had been penetrated. The gas was ignited by an arc or spark from the open control panel while repairs were being made on the shuttle car. Coal dust in the immediate area entered into the explosion, which then picked up all the fuel necessary for propagation from the accumulations of coal throughout the north working section.

RECOMMENDATIONS

1. Officials whose regular duties require them to inspect working places should have in their possession, and should use, when underground, a suitable permissible device capable of detecting methane and oxygen deficiency.

2. In all underground face workings in a gassy mine where electrically driven equipment is operated, examinations for methane should be made with a permissible flame safety lamp by a person trained in the use of such lamp before such equipment is taken into or operated in face regions, and frequent examinations for methane should be made during the operation of the equipment.

3. Whenever any working place in an underground mine approaches within 50 feet of abandoned workings in such mine, as shown by surveys made and certified by a competent engineer or surveyor, which cannot be inspected and which may contain dangerous accumulations of water or gas a borehole or boreholes should be drilled to a distance of at least 20 feet in advance of the working face of such working place. Such boreholes should be drilled sufficiently close to each other to insure that the advancing face will not accidentally hole through into such workings. Boreholes should also be drilled not more than eight feet apart in the rib of such working place to a distance of at least 20 feet and at an angle of forty-five degrees. Such rib holes should be drilled in one or both ribs of such working place as may be necessary for adequate protection of persons working in such place.

4. Coal dust and loose coal should not be permitted to accumulate in dangerous quantities in active underground workings of a mine.

5. Where rock dust is applied, it should be distributed by such methods to insure application to the top, floor, and sides of all open places and maintained in such quantity that the incombustible content of the combined coal dust, rock dust and other dust will not be less than 65 percent plus 1 percent for each 0.1 percent methane in the ventilating current.

6. The effectiveness of rock-dust applications should be determined as necessary.

7. The quantity of air reaching the last open crosscut in any pair or set of entries should not be less than 6,000 cubic feet a minute.

8. At least once each week, a properly certified or competent person should measure the volume of air entering the main intakes and leaving the main returns, the volume passing through the last open crosscut in each active entry, and the volume at the intake and return of each split. A record of such measurements should be kept in a book on the surface, and the record should be open for inspection by interested persons.

9. Tests for methane with a permissible flame safety lamp, a permissible methane detector, or by chemical analysis should be made at least once a week by the mine manager or other properly certified person designated by him in the return of each split where it enters in the main return, at seals and in the main return. A record of these examinations and tests should be kept at the mine.

10. Each day, the mine manager and each assistant should enter plainly and sign with ink of indelible pencil in a book provided for that purpose a report of the condition of the mine or portion thereof under his supervision, which report should state clearly the location and nature of any danger observed by them or reported to them during the day, and the report should state what action, if any, was taken to remedy such danger.

11. Permissible junction or distribution boxes should be used for making multiple-power connections in working places where dangerous quantities of methane may be present or may enter the air current.

12. Only flame-resistant trailing cables should be used underground.

13. Trailing cables should be provided with short-circuit protection.

14. Temporary splices in trailing cables should be made in workmanlike manner, mechanically strong and well insulated.

15. A program should be established to insure that trailing cables containing as many as five temporary splices will be removed from the equipment and service until such splices have been vulcanized.

16. The practice of smoking, carrying matches, lighters, and smoking materials underground should be prohibited, and management should initiate a search program to assure that smoker's articles are not carried into the mine.

17. The intentional creation of any arc, spark, or open flame should be prohibited, except as provided in Section 209(g)(6) of the Act.

18. Only development work necessary to connect the main opening with the air shaft should be done when opening a new mine.

19. A second means for men to escape from the mine in an emergency should be provided before the mine resumes operation.

20. Mine explosions, mine fires and fatal incidents should be reported immediately and by the quickest available means to the nearest office of the Federal coal-mine inspector or other representative of the Health and Safety Activity, United States Bureau of Mines.

ACKNOWLEDGMENT

The cooperation of the owner and employees, Illinois Department of Mines and Minerals, United Mine Workers of America and various coal companies in the area during this investigation is gratefully acknowledged.

Respectfully submitted.

ANALYSES OF AIR SAMPLES, MINE NO. 2, BLUE BLAZE COAL CO.

[Date collected: Jan. 13, 1962]

Location in mine	Bottle No.	Laboratory No.	Percent in volume: Carbon dioxide	Oxygen	Methane	Carbon monoxide	Nitrogen	Cubic feet of air per minute	Cubic feet in methane in 24 hours

APPENDIX A.—VICTIMS OF EXPLOSION, MINE NO. 2, BLUE BLAZE COAL CO., JAN. 10, 1962

Name	Age	Occupation	Marital status	Number of dependents	Total years' experience in mines
1. John Barkus	54	Shuttle-car operator	Married	1	30
2. Ralph Brandon	50	Shooter	do	3	17
3. William Gartner	55	Loading-machine operator	do	1	30
4. Willie Gulley	43	Cager	do	2	15
5. George A. Horsley	55	Driller	do	3	30
6. Joseph H. Kimmel	44	Roof bolter	do	1	20
7. Melvin G. Ramsey	42	Cutting-machine man	do	2	20
8. Virgil Tanner	55	Motorman	do	3	30
9. Ira Williams	60	do	do	1	35
10. Roy Woodis	47	Shift leader	do	3	25
11. Ira Yewell	65	Cutting-machine man	do	1	40

This may be called a borderline case. Since the particular equipment was manufactured in compliance with Bureau standards, it would not be prohibited by the bill. The fact is, however, that the machine was in a condition of noncompliance with standards at the time of the ignition. It is also not arguable that 11 miners died in a mine when a spark ignited gas which the law said was not supposed to be there.

THREE OTHER IGNITIONS

In addition to this major disaster caused by sparks emitting from a large piece of equipment in a so-called nongassy mine, the Department of Interior reports that three ignitions, in 1944—Ohio, three injuries; in 1945—Virginia, two injuries; and in 1952—Pennsylvania, four injuries—had been caused by cutting machines which did not meet the department's standards. This same general type of equipment is still in use in the so-called nongassy mines today, but would be prohibited by the bill.

With this history, one should reach no other conclusion than to eliminate the artificial distinction recognized in the 1952 act.

Two arguments have been advanced against the judgment that safety required an elimination of the nongassy classification. One argument was economic, the other was practical.

COST TO SMALL MINE OPERATORS

The proponents of retaining this unsafe distinction contend that the cost of eliminating the distinction to the average small mine operator would be approximately $250,000 per mine. Estimates of the cost for all of the Nation's small mine operators have ranged from $100 to $300 million.

In addition to these astronomical economic figures, these proponents argue that it might take as long as 10 years, and even more, for the necessary equipment to become available.

Both the cost estimates and estimates of equipment availability were outrageously high because of basic erroneous assumptions. Both of these estimates were based on an assumption that the small mine operators, in order to comply, would have to purchase brandnew electrical equipment.

Before I explain, however, the facts as they developed, I should note that the latest Department of Interior estimates are that it may cost the Nation's small mine operators approximately $10,000 per mine, and, that equipment availability is a relatively small problem. Let me explain.

The Department of the Interior, many years ago, established a laboratory in Pittsburgh, Pa. One of the functions of this laboratory was to develop, experiment with, and test electrical equipment to insure that it was ignition-proof.

THE TESTING OF EQUIPMENT IN PITTSBURGH

Under schedule 2(G) of the department's regulations—the regulations governing approval of electrical equipment—the department's procedures require, under ordinary circumstances, that the equipment to be approved be sent to the Bureau's Pittsburgh laboratory for testing. In addition, the Bureau requires specifications, design drawings, descriptions, and application fees.

Ordinarily, under this procedure, a manufacturer of specialized mining equipment would submit a prototype to the Bureau of Mines. After rigorous testing, which may take up to 3 years, the equipment may be approved.

This procedure was adopted years ago without the need for considering the special problem it might create for the small mine operators. It is clear, and I readily admit, that if this is the procedure which must be followed, the extremely high cost estimates and time estimates, although perhaps still inflated, are close to reality.

Many small mine operators, using traditional American ingenuity, have manufactured homemade mining equipment. These pieces of equipment may differ from each other in each of the 3,000 small mines. There obviously is no pro-

totype which can be sent to Pittsburgh for inspection. Nor could any small mine operator afford the expense and delay that would be necessitated by such a procedure.

The key question, therefore, is how do we solve this problem of logistics? The small mine operator could convert his homemade equipment to assure its safe operation with relatively little cost, if the department could bring its approval system to the small mine; if, so to speak, Pittsburgh could be moved to Kentucky.

FIELD APPROVAL SYSTEM

The bill, therefore, should provide, as my amendment does, the authority to the Secretary of the Interior to adopt a field approval system, under which the equipment used by small mine operators can be tested at the mine for ignition prevention and other safety characteristics. This relatively simple solution will not only permit the conversion of equipment in a shorter period of time than originally estimated, but at a clearly reduced cost to the small mine operator. Yet, it will not lower the safety standards; it will not sacrifice the miners' safety to economic considerations.

As far as the economic considerations are concerned, the Department of Interior has conducted a nationwide survey for the other body of 10 small nongassy mines in each of nine States including Kentucky, Virginia, West Virginia, Tennessee, Illinois, Ohio, Pennsylvania, Colorado, and Utah. The results of this survey by the Department of the Interior are as follows:

TABLE III

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., August 29, 1969.

DEAR SENATOR WILLIAMS: Enclosed are two attachments (A & B) in response to your letter of July 5, 1969, requesting further information on the cost of changing nonpermissible electric face equipment in underground coal mines to permissible condition under the procedures (Schedule 2-G) of the Bureau of Mines. These procedures are primarily designed to assure that such equipment, if maintained in permissible condition, will not emit a spark or arc and cause a mine fire or explosion.

The first of these attachments is an updating and correction of estimates previously prepared and supplied to your subcommittee in relation to the cost of changing non-permissible equipment to permissible and the time needed to accomplish it.

The other attachment is the results of a survey of underground coal mines conducted, at your request, by the Bureau of Mines in each of the 9 major coal producing States. The survey was undertaken through the Bureau's district offices and compiled here. While it included some contact with the industry, repair shops, and equipment manufacturers, it is largely a paper survey based on records and data of the Bureau, including inspection reports, etc. We have discussed informally the results of the survey with your staff.

At the request of your staff, we checked, after completing the survey, on whether a bias had been introduced inadvertently due to the small number of mines sampled in the 9 States. Time did not permit a greater sampling. We have concluded that the samples for at least 3 of the States, Virginia, Kentucky, and West Virginia, are not truly typical of the small mines in those States. Thus, a bias was, in fact, inadvertently introduced.

From the survey we have, at your request, estimated the cost of making this equipment permissible either by conversion or rebuilding it. The estimates are as follows:

	Estimated costs
A. Small nongassy mines:	
Cost of "conversion" [1] of all equipment:	
1. Nine States only	$37,000,000
2. Country-wide basis (by extrapolation from data)	42,500,000
Cost of upgrading or using rebuilt equipment:	
1. Nine States only	54,882,580
2. Country-wide basis (by extrapolation from data)	63,000,000
B. Large nongassy mines:	
Cost of upgrading or using rebuilt equipment: [2]	
1. Seven States only	13,475,650
2. Country-wide basis	18,100,000

[1] Assume field permissibility approval will be feasible even for equipment that had never had permissible approval.

[2] Assumes that all equipment could be upgraded and none would be converted.

You also requested that we provide an estimate, based on the survey, of the costs of making this equipment permissible, through conversion, upgrading, purchasing rebuilt or purchasing new, in the case of those gassy mines with "grandfathered" equipment is still permitted under the 1952 Act. The estimates are as follows:

Grandfathered equipment, all gassy mines:	
Cost to upgrade	$3,591,350
Cost of rebuild	14,158,060
Cost new	36,951,170

Because of the bias mentioned above, you also asked if we could use the survey and make some estimates taking the bias into account. Probably the most appropriate way to make such an estimate is to use an average of the capital cost per yearly ton of coal produced. For these larger and more efficient mines covered by the survey a mine producing 20,000 tons per year would require an investment of about $16,000. If the equipment were used for 20 years this would represent a cost of 4 cents per ton of coal mined. There is, however, some tonnage produced in hand loaded mines where permissible equipment would not be required. On the other hand, smaller mechanized mines, also not included in the survey, would be expected to have a higher investment per daily ton than those included in the survey. In our estimate, we have assumed that these two factors to be in balance.

Using this method then, the cost for the small non-gassy mines for the country as a whole to convert or rebuild the equipment would be $30 million.

If all the equipment could be converted rather than using a combination of conversion and rebuilt equipment, the cost would be about $21 million.

The total cost can thus be estimated at:

	Millions
Grandfathered equipment (all upgraded)	$3.6
Cost of upgrading or using rebuilt equipment in large non-gassy mines	18.1
Cost for converting or using rebuilt equipment in small non-gassy mines	30.0
	51.7

These figures are lower than those in Attachment A because we have assumed that the new concept of conversion which we have discussed with your staff using field approval for permissibility will be possible and because the size of the sample in the latest survey introduced a bias. Since, in fact, the upgrading of non-permissible equipment would be expected to be a mixture of field conversion and purchase of rebuilt or new equipment a more realistic cost estimate would be between $50 and $60 million. It is probable, however, that some portion of this sum would be expended anyway due to normal replacement needs.

Another cost is that of the Government which would be appreciably higher if all the equipment were converted, since it would involve a large increase in the man-hours required for field inspections of field converted and approved equipment.

Sincerely yours,

HOLLIS M. DOLE,
Assistant Secretary of the Interior.

Hon. HARRISON A. WILLIAMS, Jr.,
Chairman, Senate Labor Subcommittee,
U.S. Senate, Washington, D.C.

ATTACHMENT A

GENERAL COMMENT ON ELECTRIC FACE EQUIPMENT

COST OF BRINGING EQUIPMENT TO PERMISSIBLE CONDITION

Any attempt to estimate the cost of replacing and/or overhauling electric face equipment to meet the permissibility requirements, particularly that over 25 h.p., is difficult to make. The Bureau of Mines has not had the advantage of obtaining such estimates from the industry, although we have had some discussions along this line. Despite this shortcoming, we believe it is possible, by using two different methods of making the estimates, to provide a range of costs that are most probable. The details of making these estimates are attached as Appendix A.

Using method 1, the costs would range from about $110 to $219 million. Using method 2, they would range from about $69 to $330 million with a "reasonable" estimate by this method being about $155 million.

Typical sizes and costs of electrical equipment used underground are shown in Table 7 and published costs of new large equipment are shown in Table 8.

TIME REQUIRED

Data on which to base estimates of the time required to replace nonpermissible equipment are also difficult to obtain. In Appendix B, an attempt has been made to determine what the time parameters might be. Although the data are limited, it appears that a minimum of eight years might be required if the manufacturers could triple their sales capacity. It may, however, be as much as ten years if an adjustment is made for the fact that some of the equipment now sold is nonpermissible. On the other hand, these estimates are biased on the high side since there is no allowance for those pieces of equipment that are converted or those that might be bought new.

It is also important to recognize that manufacturers will probably give preference to their present customers and will prefer to use their capacity to produce new equipment rather than provide parts for replacement purposes. Also, the mine operator will have to consider whether he should replace, or, if the equipment can be made permissible, whether he should overhaul it for this purpose.

In summary, these are conservative estimates based on the best knowledge available. We believe it is possible, given the legislative directives in the bill and the incentives to the coal mining industry, that this period could be shortened considerably. But this possibility must be tempered by the knowledge that the equipment manufacturers may not gear up to provide the necessary capacity. Certainly ten years to complete this transition is too long a period, although we believe anything less than four years would not be realistic from the standpoint of available equipment and the potential costs involved.

APPENDIX A

1. Method 1

Large Mines

In West Virginia (District B), a recent survey was made of nonpermissible equipment in mines. It was found that there were 182 nonpermissible machines in 84 large mines. The survey did not show whether the equipment was ever permissible or whether it could be made permissible. Extrapolating the data to the 400 large mines in the State showed that there would be about 840 nonpermissible machines in operation in large mines. Table 1 shows the cost of new equipment for a continuous miner section and for a conventional miner section. The average large mine in West Virginia has one conventional section and one continuous miner section so that for large mines the cost of new equipment would be: $840 \times \$43,900 = \$36,000,000$.

Table 2 shows the cost of rebuilt permissible equipment for both a conventional and continuous miner section. If all mines used rebuilt equipment, the replacement cost would be: $840 \times \$17,800 = \$14,600,000$.

Small Mines

In the West Virginia survey, it was found that there were 85 nonpermissible face machines in operation in the 22 mines surveyed. Again the survey did not show whether the equipment was ever permissible or whether it could be made permissible. Extrapolating the data to 800 small mines in the State showed there would be 3100 nonpermissible machines in operation. Table 3 shows the costs of rebuilt equipment, if available, that might be used in these typical mines (this type of mine could not afford new equipment). The total cost of converting to rebuilt equipment would be: $3100 \times \$2700 = \$8,400,000$.

Similar calculations were made for the other Health and Safety districts of the Bureau of Mines using these approximate equipment costs but with modifications to reflect local conditions. For example, in District D no costs were included for continuous miners since all continuous miners in the District were permissible. Using this method, the estimates in the following table were calculated:

COSTS TO BRING NON-PERMISSIBLE EQUIPMENT TO PERMISSIBLE CONDITION

[In millions of dollars]

District	Number of nonpermissible units	Large mines		Small mines rebuilt	Range
		New	Rebuilt		
A	880	18.0	7.0	1.5	
B	3,940	36.0	14.6	8.4	
C	10,375	120.0	48.0	22.5	
D	485	20.0	6.5	(1)	
E	230	2.4	.6	.8	
Total	15,910	196.4	76.7	33.2	229.6-109

[1] Included in large mine figures.

2. METHOD 2

Small mines: The number of mines and amount of production classified by gassy or nongassy and by large and small are shown in Tables 4 and 5. Table 6 gives the costs of bringing an average sized small one shift nongassy coal mine to meet gassy mine standards for three conditions—upgrading the equipment, assuming it had once been permissible, purchasing *used* equipment, and purchasing *new* permissible equipment. The information in Table 6 represents a cost per ton of $1.00, $1.40, and $5.60 for upgrading, purchasing used, and purchasing new equipment. Using this data and that in Table 5, the following can be calculated:

Small mines:	*Millions*
Upgrading, $1/ton \times 39,000,000 tons	$39
Used, $1.40/ton \times 39,000,000 tons	55
New, $5.60/ton \times 39,000,000 tons	220

Large mines: Using the data in Tables 1 and 2, extrapolating the "upgrading cost", and combining that with the data in Table 5, the following costs were calculated:

	Millions
Upgrading $0.30/ton	$30
Purchasing used permissible equipment:	
Continuous miner $0.40/ton	40
Conventional miner $0.40/ton	40
Purchasing new permissible equipment:	
Continuous miner $0.80/ton	80
Conventional miner $1.10/ton	110

Assuming that all mines could be "upgraded", would give the lowest estimate of $69 million. Assuming all mines would purchase new equipment, would give the highest estimate of $330 million. A "reasonable" estimate would have the large mines purchasing about one half of their needs in new equipment and about one fourth upgrading and one fourth purchasing used equipment for a total cost of about $110 million. The small mines would upgrade when they could and purchase used equipment, if available, for the balance of their needs so that total costs might be about $45 million for small mines with an overall cost of $155 million.

APPENDIX B

1. Amount of Equipment Now in Use: The total amount of equipment now in use underground and the amount purchased in 1968 are shown in Table 9. The data were obtained from the Minerals Yearbook of the Bureau of Mines, the annual article published by Coal Age on equipment purchased and from the Department of Commerce publication on Mining Machinery and Equipment of Current Industrial Reports. It is not known how much of the equipment sold is nonpermissible and how much is permissible, although most coal cutting large equipment is probably manufactured so that it meets permissibility tests.

Assuming that the manufacturers were able to triple their selling rate, it would take a minimum of eight years to replace existing nonpermissible equipment in coal mines, if all the equipment being manufactured were of the permissible type and all the nonpermissible equipment were replaced with new equipment. The available data is based on sales, thus we cannot estimate what the production capacity is. Since some of the equipment sold is nonpermissible and it would take new manufacturers some time to design equipment and obtain permissibility approval of the Bureau of Mines, the total replacement time could be even greater again assuming that all of the nonpermissible equipment is replaced rather than repaired.

TABLE 1.—*New equipment*

Continuous miner section:	
1 CM 35Y miner	$121,000
2 16SC shuttle cars	80,000
1 Galis 300 roof-bolter	16,000
Conventional section:	
1 14BU10 loader	60,000
2 18SC shuttle cars	76,000
1 Galis 300 roof-bolter	16,000

TABLE 1.—*New equipment*—Continued

Conventional section—Continued	
1 Joy coal drill	$20,000
1 16RB cutting machine	84,000
1 Supply tractor	10,000
Total price of face equipment (11 pieces)	483,000
Average price of one permissible machine ($483,000 divided by 11)	43,900

TABLE 2.—*Rebuilt equipment*

1 CM 35Y	$75,000
2 6SC shuttle cars	20,000
1 Galis 300 roof-bolter	9,000
1 14BU9 loader	22,500
1 Galis 300 roof-bolter	9,000
2 10SC shuttle cars	12,500
1 Joy coal drill	12,500
1 11RU cutting machine	30,000
1 supply tractor	6,000
Total price of face equipment (11 pieces)	196,500
Average price per rebuilt permissible machine ($196,500 divided by 11)	17,800

TABLE 3.—*Rebuilt equipment*

2 bottom cutting machines	$5,000
1 T–2 utility truck	3,000
2 permissible battery tractors and trailers	13,000
3 hand-held drills	450
Total	21,450
Average price of replacement machine ($21,450 divided by 8)	2,700

Total	309
Small:	
Gassy	2
Nongassy	39
Total	41

Estimated costs of converting one section of an average size small 1-shift nongassy coal mine to meet gassy mine standards

A

Average number of men employed at the mine	6
Average number of men employed in the section	5
Average annual production (tons)	15,000

B

The average section in a small mine now uses two bottom cutting machines, one T–2 truck for tramming the cutting machines, three drag cable shuttle cars, and three hand-held drills. All of these pieces of equipment are nonpermissible type.

C

The cost of *converting* these pieces of nonpermissible-type equipment to permissible-type is:

Bottom cutting machine (2 at $1,000 each)	$2,000
T–2 truck (1 at $500 each)	500

Drag cable shuttle car (not practical to convert, must purchase 2 battery tractors (used) at $6,500 each)	$13,000
Hand-held drill (3 at $150 each)	450
Total	15,950

D

The cost of purchasing used permissible-type equipment is:

Bottom cutting machine (2 at $2,500 each)	$5,000
T-2 truck (1 at $3,000 each)	3,000
Battery tractor (2 at $6,500 each)	13,000
Hand-held drills (3 at $150 each)	450
Total	21,450

E

The cost of purchasing new permissible-type equipment is:

Modern rubber-tired cutting machine (1 at $60,000 each)	$60,000
Battery tractor (2 at $12,000 each)	24,000
Hydraulic drill (1 at $300 each)	300
Total	84,300

F

The cost of maintaining permissible-type electric face equipment in permissible condition is 16½ cents per ton.

G

Other costs of converting from nongassy to gassy status: $2,500 initial outlay for improvements in ventilation, purchase of a recording pressure gage, and methane detectors.

TABLE 7.—Estimated Size and Cost of New Electrical Equipment Used in Coal Mines May 27, 1969

Coal drill: ¾ hp to 50 hp (Maximum horsepower of hand-held drills =3) $300 to $25,000.

Loader: 20 hp to 140 hp, $30,000 to $80,000.

Shuttle car: 3 hp to 160 hp, $5,000 to $50,000.

Tractor (battery): 5 hp to 35 hp, $3,000 to $20,000.

Telephone, $20 to $800.

Longwall equipment: 175 hp to 400 hp, $750,000 to $2,000,000.

Rectifier: 40 kw to 1,000 kw, $1,000 to $40,000.

Transformer: 5 kva to 1,000 kva, $500 to $45,000.

Rock duster: 3 hp to 100 hp, $1,300 to $80,000.

Car spotter and car hoist: 5 hp to 20 hp, $5,000 to $25,000.

Roof bolter: 3 hp to 40 hp, $2,500 to $35,000.

Cutting machine: 35 hp to 425 hp, $2,500 to $125,000.

Continuous miner: 50 hp to 600 hp, $50,000 to $200,000.

Methane detector with charging equipment, $273.

Methane detector, $2,000 to $2,500.

Mine lamp and charging equipment, $55.

Mine fan: 10 hp to 500 hp, $300 to $100,000.

Hoist: 20 hp to 500 hp, $40,000 to $100,000.

Pump: 1 hp to 500 hp, $100 to $25,000.

Electric locomotive: 40 hp to 400 hp, $12,000 to $150,000.

Personnel carrier: 10 hp to 25 hp, $6,500 to $20,000.

Belt drive: 25 hp to 600 hp, $2,000 to $35,000.

Belt feeder: 7½ hp to 50 hp, $2,000 to $25,000.

Battery charger: 5 kw to 50 kw, $1,000 to $8,000.

Air compressor: 1 hp to 100 hp, $300 to $50,000.

Auxiliary fan: 5 hp to 15 hp, $1,500 to $2,500.

Cap lamp with battery, $32.50.

TABLE 8.—*Cost of new equipment*

Joy Manufacturing Co.:	
14 BU loading machine	$53,000
15 RU cutting machine	76,000
RBD-15 roof bolter	14,500
10 SC shuttle car	43,000
16 SC shuttle car	40,000
18 SC shuttle car	40,000
CB-71A coal drill	37,000
8 CM continuous miner	129,000
1 CM continuous miner	159,000
6 CM continuous miner	150,000
9 CM continuous miner	123,000

ATTACHMENT B

COST OF UPGRADING ELECTRIC FACE EQUIPMENT IN SMALL NONGASSY MINES TO PERMISSIBLE STATUS OR TO PURCHASE USED REBUILT PERMISSIBLE EQUIPMENT IF UPGRADING IS NOT FEASIBLE [1]

State	Cost per small nongassy mine	Number of small nongassy mines	Total cost
West Virginia	$16,430	719	$11,813,170
Tennessee	13,740	99	1,360,260
Virginia	26,460	522	13,812,120
Alabama	9,600	67	643,200
Pennsylvania	17,345	121	2,098,745
Ohio	10,550	32	337,600
Colorado	[2] 2,485	29	72,065
Utah	8,470	10	84,700
Kentucky	31,455	784	24,660,720
Total		2,388	54,882,580

[1] Basic data were developed by selecting at random 10 small nongassy mines in each State, getting the number of pieces of electric face equipment in use by type of equipment, and whether permissible or nonpermissible type, then finally getting from local shops the cost of upgrading the equipment to permissible status or to purchase used rebuilt permissible equipment if upgrading is not feasible.

[2] Most of the equipment is maintained in permissible condition and upgrading is not required.

INFORMATION ON ELECTRIC FACE EQUIPMENT USED AT SMALL NONGASSY COAL MINES, JULY 1, 1969

COLORADO

[Underground employment, 6; daily production (tons), 100]

Type of equipment	Permissible type	Nonpermissible type	Cost to convert to permissible condition	Cost of similar used rebuilt permissible equipment
1 Joy 8 BU loading machine	X		[1] Nil	6,500
1 Sullivan CE7 cutting machine		X	2,000	2,500
1 Joy 6 SC shuttle car		X	2,000	10,000
1 Chicago pneumatic hand-held drill		X	150	150

[1] This equipment is maintained in permissible condition.

[Underground employment, 3; daily production (tons), 35]

Type of equipment	Permissiole type	Nonpermissible type	Cost to convert to permissible condition	Cost of similar used rebuilt permissible equipment
1 Joy JCM continuous miner	X		[1] Nil	80,000
1 Joy 8 BU loading machine	X		[1] Nil	5,000
2 Joy 6 SC shuttle cars	X		[1] Nil	[2] 10,000
1 Ingersoll hand roof bolting machine		X	1,000	9,000

[1] This equipment is maintained in permissible condition.
[2] Each.

TOTAL COST OF CONVERSION

On the basis of this survey and taking into account the field approval system, the Department of the Interior has concluded that the costs to the Nation's small nongassy mine operators will be no more than $30 million, perhaps as low as $21 million. This is approximately $10,000 per mine, as opposed to the estimate of $260,000 per small mine originally suggested. And this figure includes the cost of upgrading or replacing the small equipment which all now agree should be made explosion-proof.

Under my amendment—

First. All small horsepowered electric face equipment must be permissible 15 months after enactment.

Second. All grandfathered equipment at gassy mines must be permissible in 15 months also.

Third. In the case of so-called nongassy mines below the watertable and those above the watertable annually producing more than 50,000 tons per year—the truly large mines—such equipment must be permissible in 15 months, but the Secretary can extend this requirement on a mine-by-mine basis an additional 21 months. Thus, these mines would have 3 years to comply, but the extension would only be granted if the equipment is unavailable to the mine.

Fourth. In the case of the so-called nongassy mines above the watertable which annually produce 50,000 or less tons of coal per year—the truly small mine—such equipment must be permissible in 28 months, but the Secretary may extend this period based on unavailability of equipment an additional 20 months. Based on data supplied me by the Bureau of Mines, it is estimated that about 1,700 so-called nongassy mines would be covered by this provision, or about one-half of the so-called nongassy mines. The term "watertable" includes areas above the drainage level.

Fifth. Field testing and approval would be required, where appropriate.

Sixth. The provisions of 303(m), relating to the use of the methane monitor would apply to this equipment, although the Bureau of Mines contends that this device is merely a "backup" device. As time goes on, the device will become more reliable.

Seventh. Like H.R. 13950, when nonpermissible equipment undergoes a major overhaul it must be made permissible.

I strongly urge support of this amendment which follows at this point in the RECORD:

AMENDMENT TO H.R. 13950 OFFERED BY MR. HECHLER OF WEST VIRGINIA

On page 72, line 11, strike all through page 74, line 17, and substitute the following:

"ELECTRICAL EQUIPMENT

"SEC. 305. (a) Effective one year after the operative date of this title—

"(1) all junction or distribution boxes used for making multiple power connections in the active workings of a coal mine shall be permissible;

"(2) all handheld electric drills, blower and exhaust fans, electric pumps, and other such low horsepower electric face equipment as the Secretary may designate within two months after the operative date of this title, which are taken into, or used in, the working section of any coal mine shall be permissible; and

"(3) all electric face equipment which is taken into or used in, the working section of any coal mine classified as gassy under any provision of law prior to the operative date of this title shall be permissible.

"(b) (1) Effective one year after the operative date of this title, all electric face equipment not referred to, or designated under, subsection (a) (2) of this section which is taken into, or used in, the working section of any coal mine, except a coal mine subject to the requirements of subsection (a) (3) of this section or paragraph (2) of this subsection, shall be permissible.

"(2) Effective two years after the operative date of this title, all electric face equipment not referred to, or designated under, subsection (a) (2) of this section which is taken into, or used in, the working section of any coal mine, except a coal mine subject to the requirements of subsection (a) (3) of this section, which is operated entirely in coal seams located above the watertable with one

or more openings made prior to the date of enactment of this Act, and with a total production of coal that does not exceed fifty thousand tons annually, based on the mine's production records for three calendar years prior to such date, shall be permissible.

"(3) In the case of any coal mine subject to the requirements of paragraph (1) of this subsection, if the operator of such mine is unable to comply with such requirements on such effective date, he may file an application for a permit for noncompliance with the Secretary ninety days prior to such date. If the Secretary determines that such application satisfies the requirements of paragraph (6) of this subsection, he shall issue to such operator a permit for noncompliance. Such permit shall entitle the permittee to an extension of time to comply with such requirements of not to exceed twelve months, as determined by the Secretary, from such effective date.

"(4) In the case of a coal mine subject to the requirements of paragraph (2) of this subsection, if the operator of such mine is unable to comply with such requirements on such date, he may file an application for a permit for noncompliance with the Secretary ninety days prior to such date. If the Secretary determines, after notice to all interested persons and an opportunity for a hearing, that such application satisfies the requirements of paragraph (6) of this subsection, and that such operator, despite his diligent efforts will be unable to comply with such requirements, the Secretary may issue to such operator a permit for noncompliance. Such permit shall entitle the permittee to an additional extension of time to comply with such requirement of not to exceed twelve months, as determined by the Secretary, from the date such compliance is required.

"(5)(A) Any operator of a coal mine issued a permit under paragraphs (3) and (4) of this subsection who, ninety days prior to the termination of such permit, determines that he will be unable to comply with the requirements of said paragraphs upon the expiration of such permit may file with the Secretary an application for renewal thereof. Upon receipt of such application, the Secretary, if he determines, after notice to all interested persons and an opportunity for a hearing that such application satisfies the requirements of paragraph (6) of this subsection and that such operator, despite his diligent efforts, will be unable to comply with such requirements, may renew the permit for a period not exceeding twelve months. Any hearing held pursuant to this paragraph shall be of record and the Secretary shall make findings of fact and shall issue a written decision incorporating his findings therein.

"(B) Any permit issued pursuant to this subsection shall entitle the permittee to use nonpermissible electric face equipment, as specified in the permit, during the term of such permit. Permits issued under this subsection to operators who must comply with the requirements of paragraph (1) of this subsection shall, in the aggregate, not extend the period of noncompliance more than thirty-six months after the date of enactment of this Act. Permits issued under this subsection to operators who must comply with the requirements of paragraph (2) of this subsection shall, in the aggregate, not extend the period of noncompliance more than forty-eight months after the date of enactment of this Act.

"(6) Any application for a permit of noncompliance filed under this subsection shall contain a statement by the operator—

"(A) that he is unable to comply with paragraphs (1) or (2) of this subsection, as appropriate, within the time prescribed;

"(B) listing the nonpermissible electric face equipment by type and manufacturer being used by such operator in connection with mining operations in such mine on the operative date of this title and on the date of the application for which a noncompliance permit is requested and stating whether such equipment had ever been rated as permissible;

"(C) setting forth the actions taken from and after the operative date of this title to comply with such paragraphs, together with a plan setting forth a schedule of compliance with the appropriate paragraphs for the equipment referred to in such paragraphs and being used by the operator in connection with mining operations in such mine with respect to which such permit is required and the means and measures to be employed to achieve compliance; and

"(D) include such other information as the Secretary may require.

"(7) One year after the operative date of this title all replacement equipment acquired for use in any mine referred to in this subsection shall be permissible and shall be maintained in a permissible condition, and in the event of any major overhaul of any item of equipment in use one year after the operative date of this title such equipment shall be put in, and thereafter maintained in, a permissible condition, if, in the opinion of the Secretary, such equipment or necessary replacement parts are available.

"(8) The operator of each coal mine shall maintain in permissible condition all electric face equipment, required by this subsection and subsection (a) of this section to be permissible.

"(9) Each operator of a coal mine shall, within two months after the operative date of this title, file with the Secretary a statement listing all electric face equipment by type and manufacturer being used by such operator in connection with mining operations in the working section of such mine as of the date of such filing, and stating whether such equipment is permissible and maintained in permissible condition or nonpermissible on such date of filing, and, if nonpermissible, whether such nonpermissible equipment has ever been rated as permissible, and such other information as the Secretary may require.

"(10) The Secretary shall promptly conduct a survey as to the total availability of new or rebuilt permissible electric face equipment and replacement parts for such equipment and, within six months after the operative date of this title, publish the results of such survey.

"(11) No permit for noncompliance shall be issued under this subsection for any nonpermissible electric face equipment, unless such equipment was being used by an operator in connection with the mining operations in a coal mine on the operative date of this title.

"(12) As used in this title, the term "permissible electric face equipment" means all electrically operated equipment taken into or used in the working section of any coal mine the electrical parts of which, including, but not limited to, associated electrical equipment, components, and accessories, are designed, constructed, and installed, in accordance with the Secretary's specification, to assure that such machines will not cause a mine explosion or mine fire, and the other features of which are designed and constructed, in accordance with the Secretary's specifications, to prevent to the greatest extent possible, other accidents in the use of such equipment. The regulations of the Secretary in effect on the operative date of this title relating to the requirements for investigation, testing, approval, certification, and acceptance of such equipment as permissible shall continue in effect until modified or superseded by the Secretary, except that the Secretary shall promptly provide procedures, including, where feasible, field testing, approval, certification, and acceptance by an authorized representative of the Secretary, to facilitate compliance by an operator with the permissibility requirements of this subsection within the periods prescribed.

"(13) Any operator or representative of miners aggrieved by a final decision of the Secretary under this subsection may file a petition for review of such decision in accordance with the provisions of this Act.

"(c) A copy of any permit granted under this section shall be mailed immediately to a duly designated"—.

WORLD'S LARGEST BUBBLE CHAMBER IN OPERATION AT ARGONNE LABORATORY

(Mr. PRICE of Illinois asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PRICE of Illinois. Mr. Speaker, after 5 years of diligent effort, the world's largest bubble chamber went into operation on October 13, 1969. The 12-foot chamber, which contains 6,400 gallons of liquid hydrogen, will permit researchers using the powerful 12.5 Bev Zero Gradient Synchrotron to look for the elusive neutrino, which has zero mass, no charge, and travels with the speed of light. We know the neutrino exists because it does interact with matter, however weakly. The other interesting feature of the bubble chamber is that it is inside the world's largest superconducting magnet. This magnet requires only 30,000 watts to come to full field strength and then because its coils are cooled by liquid helium, requires almost no additional power. The temperature of these coils is minus 451 degrees Fahrenheit. A normal magnet would require 10 million volts to reach and maintain full field strength.

A press release from Argonne about the bubble chamber follows:

TWELVE-FOOT BUBBLE CHAMBER

ARGONNE, ILL.—Late Monday evening, October 13, 1969, the first successful operation of the world's largest bubble chamber was recorded at the Atomic Energy Commission's Argonne National Laboratory.

As the temperature and pressure were carefully adjusted to bring the 6400 gallons of liquid hydrogen within the giant vessel to the predetermined operating point, the tiny lines of bubbles resulting from the passage of cosmic ray particles through the liquid became visible and were successfully photographed.

The particles themselves are much too small to be observed directly. It is through the study of the lines of bubbles (called tracks) formed in the trail of high energy particles passing through the liquid hydrogen that elementary particle physicists determine their properties.

Several days after observation of the cosmic rays, a beam of particles from the zero gradient synchrotron, Argonne's high energy proton accelerator, was directed into the chamber fluid and photographs were obtained. These show the collisions of the beam particles with the hydrogen atoms in the chamber fluid. Later this year, after the data from the present operation have been analyzed and the chamber's operating characteristics well established, a beam of neutrinos will be passed through the chamber and a new chapter in the investigation of nature's basic building blocks, the elementary particles, will get under way.

The 12-ft. bubble chamber project was begun some five years ago during the summer of 1964. It was then apparent that if that part of the nation's high energy physics research program devoted to the investiga-

tion of neutrinos was to be further advanced it would be essential to study the collisions of neutrinos with hydrogen atoms. The neutrino interacts only weakly with matter; if the experiments were to be feasible an enormous volume of liquid hydrogen would be required.

Conceived at a time when the largest bubble chamber in operation had a length of 80 inches and a volume of about one cubic yard, the Argonne design specified a chamber vessel 12 feet in diameter and 7 feet tall with a volume of about 26 cubic yards. During operation, the vessel is maintained at a temperature of —413 degrees F. It is located inside an 18-kilogauss magnet with superconducting coils, the largest magnet of its kind in the world. The expansion system which creates the very sudden changes in pressure within the chamber volume that are necessary for bubble formation is driven by one of the most advanced hydraulic systems in existence today.

The 12-ft bubble chamber was designed, built, and brought into operation by a team of scientists, engineers, technicians, and others totaling about 50 people. The effort has been directed by Dr. E. G. Pewitt. Total cost of the project was approximately 18 million dollars.

MINING THE NATIONAL CAPITAL TREASURE

(Mr. HANNA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANNA. Mr. Speaker, last July I introduced legislation which would permit Washington, D.C., banks to expand into the neighboring States of Maryland and Virginia. At that time, I asked:

Is it too much to suggest that for once a primacy of consideration be bent toward the interest of economic entities within the District?

The District's neighbors gave their answer last week. In chorus, the Capital area's suburban interests echoed a shrill "No" before the Senate Banking and Currency Committee.

Although I am from California, it is not very difficult to discern what is happening here. The suburbs have grown and prospered because of the District, and now that the District banks wish to participate in some of that growth and prosperity the bristly spines of parochial interests are raised.

Now that the treasure of prosperity has been amply mined from the Capital City the suburbs have little further interest. It seems ironic that the principal cause for the area's prosperity, namely the city, should not find itself the stepchild of that prosperity.

I believe the House of Representatives will recognize these circumstances for what they are. It is time—no, it is past the time—that Congress concerns itself with the future of the institutions within the District.

We will have that opportunity when we consider the legislation which will permit District banks to either branch in the suburban areas or associate themselves with Maryland and Virginia banks. The banks of the District want only to follow the economic imperative that now finds Garfinckels, Woodward and Lothrop and other District department stores out in the suburban shopping centers. There is hardly a major department store in the city that is not now branched to the suburbs. Without such moves, is there any existing doubt but what these fine stores would have perished in the city?

Because of the unique circumstances of the banking institutions of this city, it is necessary we give this legislation the priority it deserves. Mr. Speaker, the Comptroller of the Currency submitted a statement on this legislation as part of the hearings. I am deeply impressed by the Comptroller's statement because it is scholarly and objective and deals with the unique problems faced by banking institutions in the National Capital region. For the benefit of my colleagues, I am inserting this statement in the RECORD. I am naturally gratified that the Comptroller of the Currency has agreed to support legislation I have introduced:

STATEMENT OF ROBERT BLOOM, CHIEF COUNSEL TO THE COMPTROLLER OF THE CURRENCY, BEFORE THE SENATE BANKING AND CURRENCY COMMITTEE ON S. 2569, OCTOBER 8, 1969

The proposed legislation would relax, for the National Capital region only, existing restrictions against the ownership by bank holding companies of banks located in more than one state. It would permit a registered bank holding company located in the District of Columbia to own banks located in the District, Montgomery and Prince Georges Counties in Maryland; and Arlington, Fairfax, Loudoun, and Prince William Counties, plus the Cities of Alexandria and Falls Church in Virginia. Banks anywhere in Virginia or Maryland would be permitted to form holding companies to organize or acquire banks in the District.

All of the other requirements of the present Bank Holding Company Act would apply in full force and no holding company could be set up without the approval of the Federal Reserve Board. The Federal Reserve would apply the same antitrust, capital, management and other factors to its consideration of the formation of S. 2569 companies as it does to other holding company applications.

In order that there may be no misunderstanding of the effect of the amendment, it should be emphasized that the bill makes no change in the existing powers of the states to regulate the business of banking within their borders. A new state bank organized by a District-based holding company would have to receive the approval of the appropriate Virginia or Maryland authorities. Virginia and Maryland chartered banks would continue to be subject to the full jurisdiction and examination by the state banking authorities. There is likewise no change effected in the authority and power of the states to define the extent of branch banking within their borders, although opponents of the legislation will argue to the contrary. We will be glad to supply the Committee with a legal memorandum setting forth the clear distinctions which the courts and Congress have made between branch and holding company banking.

S. 2569 would allow the creation of bank holding companies with three different geographic bases: one group of holding companies could control banks in the District and in the Washington suburbs in Virginia and Maryland; a second could control banks operating anywhere in Virginia and in the District; the third could hold banks operating anywhere in Maryland and in the District.

A number of benefits would flow from passage of this legislation. First, banking competition in the National Capital region would be enhanced. The District of Columbia based banks would provide additional competitive muscle through affiliates acquired or established in the Washington suburbs. And although opponents of this bill deny any interest, it is not unlikely that at some point certain of the strong Baltimore- and Richmond-based banks would become affiliated with newly created or acquired District banks. The resulting inter-penetration would undoubtedly enliven competition, to the benefit of consumers of banking services.

Next, private funds available for the extension of credit in the National Capital region can most efficiently be allocated on a regional basis. There is no assurance, and in fact it is rather unlikely, that the regional distributions of deposits and of credit requirements are similar. The bill would provide a means of improving the mobility and optimum use of deposit capital at a time when such capital is in short supply.

Third, a number of the credit needs of the National Capital region require loanable funds in aggregates of considerable magnitude. The passage of S. 2569 would allow bank affiliations that would make these aggregates more readily available.

Critics of S. 2569 may assert that each of these arguments can be applied to any major metropolitan area in the country. To some degree, this is correct. However, it is not difficult to demonstrate the unique nature of the District and its financial setting.

First, the core of the National Capital region—the District of Columbia—is more constrained than is the core of any other major metropolitan area. A number of the banking constraints stem from the fact that the city is not a part of any state. Were it in fact a part of either Maryland or Virginia, the Washington banks would enjoy much greater freedom to expand. Thus it is apparent that the federal status of the District has itself created special banking problems. In this light, action by Congress to alleviate these problems appears most appropriate, and would in no sense create a precedent for similar action in other areas.

The National Capital region poses special problems for both banks and banking customers within it. The federal government as a whole constitutes a unique dominant employer. Employees of government agencies find it easier to move to another agency within the federal government than do members of the work force in other areas for whom a change in employment frequently involves a move to a separate organization. Federal employees, for example, do not relinquish retirement benefits or leave status, etc., when moving from one agency to another, as is often the case when moving from one private firm to another. As a result, labor mobility in the National Capital region is extremely high. Federal employees shift from agencies with downtown offices to those with offices in the Maryland or Virginia suburbs or conversely from a federal agency with offices in the suburbs to another with central city location. Such moves generate problems for banking customers. It is often costly and highly inconvenient to continue to bank where they have established favorable banking connections. To relinquish those established banking connections and establish new banking connection with a suburban or downtown bank is likewise costly and inconvenient.

Similar problems for the banks and banking customers are engendered also by the movement of federal agencies, and offices within an agency, from the central city to one of the suburbs or from one suburb to another or from the suburbs to the central city. The bill, by permitting limited area-wide banking, would help relieve employees of the federal agencies of some of the costs and inconveniences of either establishing new banking connection or maintaining their banking connections at remote locations where they formerly worked.

The Congress has a special responsibility to provide a legal framework for the District that will foster the economic viability of this vital center of the National Capital region. We are all aware of the problems faced by the core areas of every metropolis. Virtually every solution advanced requires the expenditure of a large volume of funds. The greater the volume of private funds available, the less the demands on the public funds. We believe that S. 2659, representing an attempt to alleviate special problems faced by District banks as a result of the District's federal status, merits favorable consideration by the Congress.

INCREASED AUTHORIZATION FOR DRUG ABUSE RESEARCH

(Mr. HANNA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANNA. Mr. Speaker, I am introducing today for myself and 31 cosponsors legislation which will substantially increase the research authorization for the Division of Narcotic Addiction and Drug Abuse.

The bill I am introducing will authorize $25 million in additional research funds for this fiscal year. At present the division has approximately $5 million available for research during fiscal year 1970. Of this $5 million, approximately $1.5 million will be available to initiate new research programs. The remaining funds will be used to support efforts that have been committed in the past.

Anyone familiar with the rising rate of drug abuse realizes that $1.5 million in new research money does not even begin to answer the need. Not only are extensive funds required for massive in-depth investigations into the consequences of marihuana abuse, but research is required on the literally dozens of new compounds that are being abused at an alarming rate.

Dr. Sidney Cohen, Director of the Division of Narcotic Addiction and Drug Abuse, has described the state of our knowledge on the consequences of drug abuse as comparable to the state of our knowledge about the effects of cigarette smoking 50 years ago. That such a condition is deplorable is obvious. That so few have raised their voices for improving the state of our knowledge is astonishing. That the Congress has not come to grips at this late date, with the issue of needed funds for necessary research is discouraging.

For years we have been told about the increasing abuse of a wide range of dangerous drugs. For years reports have been printed warning of the increasing use of dangerous drugs by young people. And for years experts have been telling us there is a serious insufficiency of accurate information on the affects these dangerous drugs are having on a rapidly expanding group of young abusers.

I believe it is now necessary—absolutely necessary—that the Congress commit itself to an all-out intensive effort to bridge this glaring knowledge gap. This can only be done with money, and it is precisely money, $25 million, that this legislation addresses itself to.

While $25 million in additional funds may sound, at first blush, as an enormous sum, it in fact is not. When considered in perspective to the problem and to other programs of research on which funds are being expended, the picture balances quite clearly. A recent special report in Newsweek suggested as many as 35 percent of high school and college students may be "turning on." An Army report titled "Marijuana Use in Vietnam: A Preliminary Report" estimated as many as 35 percent of the troops are smoking pot. Newsweek's conclusions:

First, the age of U.S. drug users is dropping rapidly. Second, as drugs become widespread the young have built a culture and a rationale of their own around their use and abuse.

Now let us consider a research program similar in many ways to the research effort on drug abuse. Similar, that is, in many things except money and purpose. This other program I am talking about seeks knowledge on the effects biological and chemical compounds have on the human body, yet the ultimate goal of this research is to determine the most efficient methods for destroying or disabling life. Of course I am speaking of CBW—chemical and biological warfare. The best estimates I have been able to obtain suggest an expenditure in this fiscal year for research in CBW at between $90 to $95 million. This compares with less than $5 million for research on drug abuse. Even if we raise the authorization for drug abuse by $25 million, as my bill does, we will still be spending one-third of what we are spending for CBW research.

I contend that the real chemical warfare this Congress should be concerned about is the one now taking place in the schoolyards, streets, and neighborhoods throughout America. Knowledge about the effects of speed, bennies, grass, acid, and the dozens of other chemical and biological compounds being abused by countless thousands of young Americans must be our first concern.

No matter how shrill the rhetoric on curbing abuse becomes, and I will be first in line to propose strong measures to curb dangerous drug abuse, we must realize the very real fact that abuse of these dangerous drugs has become a sad fact of our culture. To deal with this fact rationally requires accurate and modern techniques—and most importantly dependable and carefully researched information. We do not now have this and as a result countless people are suffering, decisions are being made based largely upon ignorance, and there is a rising cacophony of frightening incoherent demands for action that may prove undesirable and unwise.

Hopefully, the bill I am introducing today will spur the overdue discussion on the needed funds for drug abuse research. Hopefully this Congress will act quickly.

Mr. Speaker, I would like to include at this point an article that appeared in the San Francisco Chronicle last year; perhaps it will offer some insight:

[From the San Francisco Chronicle, May 4, 1968]

THE LONG LINE OF YOUTHS NEEDING DRUG TREATMENT

(By George Draper)

Some 5000 young people with drug-induced psychotic symptoms were treated at the Immediate Psychiatric Aid Center at San Francisco General Hospital during the last year.

This was disclosed yesterday by Dr. Arthur B. Carfagni, chief of the center, who said amphetamines (speed) outnumbered LSD by three-to-one as the cause of these symptoms.

"Not one of the patients was a marijuana user," he said.

CONFERENCE

Dr. Carfagni addressed a group of interested physicians attending a conference on "Effects and Complications of Psychedelic Drug Use" at Children's Hospital and Adult Medical Center.

The program was part of a Continuing Education in Health Sciences series presented by the hospital and the University of California Medical Center.

Dr. Carfagni said that of the 5000 persons treated at his center for drug-induced psychotic symptoms, 2800 "merely had to be brought down" and were released within four to six hours.

The remaining 2200, he said, stayed at the center for periods ranging from one day to three months.

Four of the 5000 were so disturbed, he said, that they had to be committed to mental hospitals.

The psychiatrist said that in the earlier part of the year the average age of these patients was about 20 but that in the latter part of the year the average dropped to about 18.

NEWCOMERS

Most of these young persons suffering from drug abuse had been in San Francisco only about three weeks when they came to the Immediate Psychiatric Aid Center, he said.

Dr. Carfagni said that in his opinion drug abuse is fast becoming a most important public health problem.

But, he said, many members of the medical profession have not been dealing with this problem, either through personal choice or because drug abusers have avoided them.

And yet, he suggested, it is important that doctors help in the battle to terminate, as quickly as possible, drug-induced states of psychosis.

"If the psychotic state is prolonged," he said, "it can go into a chronic form."

He suggested two tools that physicians might use to combat these drug-induced psychotic conditions.

INDUCED

One is the understanding that the apparent psychotic condition is drug induced—a concept that should be pressed home to the patient, as "this is his one tie with reality."

The other is the use of fairly large doses—sometimes 4 or more times as much as in conventional treatment—of a certain sedative drug.

"We're dealing in marked excursions in human behavior. The treatment must be heroic," he said.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CORMAN, for October 22 and 23, on account of official business.

Mr. WALDIE, for October 23 and 24, on account of official business.

Mr. PEPPER (at the request of Mr. BOGGS), for today through October 29, on account of official business.

Mr. MOSS, for from 4:00 p.m. Thursday, October 23 through October 28, on account of official business.

Mr. CONTE (at the request of Mr. GERALD R. FORD), for today and the balance of the week, on account of official business as a member of the House Committee on Appropriations.

Mr. CAMP (at the request of Mr. GERALD R. FORD), for today and the balance of the week, on account of official business as a member of the House Committee on Interior and Insular Affairs.

Mr. DON H. CLAUSEN (at the request of Mr. GERALD R. FORD), for today and the balance of the week, on account of official business as a member of the House Committee on Interior and Insular Affairs.

Mr. WIGGINS (at the request of Mr. GERALD R. FORD), for October 22 through October 27, on account of official business as a member of the House Select Committee on Crime.

Mr. WATSON (at the request of Mr. GERALD R. FORD), for October 22 through October 27, on account of official business as a member of the House Select Committee on Crime.

Mr. DENNEY (at the request of Mr. GERALD R. FORD), for October 22 through October 27, on account of official business as a member of the House Select Committee on Crime.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. HECHLER of West Virginia, for 10 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. DANIEL of Virginia); to revise and extend their remarks and to include therein extraneous matter:)

Mr. HAMILTON, for 10 minutes, today.

Mr. DADDARIO, for 15 minutes, today.

Mr. RYAN, for 60 minutes, on November 12.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MADDEN in two instances and to include extraneous matter.

Mr. ZABLOCKI and to include extraneous matter in two instances.

Mr. ALBERT (at the request of Mr. STEPHENS) to extend his remarks following those of Mr. STEPHENS on his amendment to H.R. 13827, page 1, line 4, today.

(The following Members (at the request of Mr. LANDGREBE) and to include extraneous matter:)

Mr. GUBSER.

Mr. HALL.

Mr. CHAMBERLAIN in two instances.

Mr. STAFFORD.

Mr. HANSEN of Idaho.

Mr. MINSHALL.

Mr. BUTTON in two instances.

Mr. BUSH.

Mr. SCHWENGEL in three instances.

Mr. BERRY.

Mr. UTT.

Mr. FOREMAN.

Mr. WYMAN in two instances.

Mr. HOSMER.

Mr. REIFEL.

Mr. DERWINSKI.

Mr. KYL.

Mr. STEIGER of Wisconsin in two instances.

Mr. POLLOCK.

Mr. LIPSCOMB.

Mr. BOB WILSON in four instances.

Mr. CARTER.

Mr. FULTON of Pennsylvania in five instances.

Mr. HORTON.

Mr. ASHBROOK in two instances.

Mr. PELLY.

Mr. FRELINGHUYSEN.

Mr. ZWACH.

Mr. SCHADEBERG.

Mr. ROUDEBUSH.

Mr. KEITH.

Mr. MCCLORY.

(The following Members (at the request of Mr. DANIEL of Virginia) and to include extraneous matter:)

Mr. DADDARIO in two instances.

Mr. OTTINGER in two instances.

Mr. RARICK in two instances.

Mr. HELSTOSKI.

Mr. THOMPSON of New Jersey.

Mr. LEGGETT.

Mr. VANIK in two instances.

Mr. O'NEAL of Georgia in two instances.

Mr. HÉBERT.

Mr. DOWNING in two instances.

Mr. ANDERSON of California.

Mr. JACOBS.

Mr. COHELAN in two instances.

Mr. O'NEILL of Massachusetts in two instances.

Mr. BARING.

Mr. SLACK in two instances.

Mrs. HANSEN of Washington in two instances.

Mr. MONAGAN in two instances.

Mr. TUNNEY in two instances.

Mr. HECHLER of West Virginia.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 1279. An act to create a rebuttable presumption that a disability of a veteran of any war or certain other military service is service-connected under certain circumstances; to the Committee on Veterans' Affairs.

ENROLLED BILLS SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 2768. An act to amend title 38 of the United States Code in order to eliminate the 6-month limitation on the furnishing of nursing home care in the case of veterans with service-connected disabilities; and

H.R. 3130. An act to amend title 38, United States Code, to provide that the Administrator of Veterans' Affairs may furnish medical services for non-service-connected disability to any war veteran who has total disability from a service-connected disability.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 2768. An act to amend title 38 of the United States Code in order to eliminate the 6-month limitation on the furnishing of nursing home care in the case of veterans with service-connected disabilities; and

H.R. 3130. An act to amend title 38, United States Code, to provide that the Administrator of Veterans' Affairs may furnish medical services for non-service-connected disability to any war veteran who has total disability from a service-connected disability.

ADJOURNMENT

Mr. DANIEL of Virginia. The Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly, (at 6 o'clock and 13 minutes p.m.), the House adjourned until tomorrow, Thursday, October 23, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1271. A letter from the Assistant Secretary of the Interior, transmitting the report of the Secretary on the East Greenacres unit, Bathdrum Prairie project, Idaho, pursuant to the provisions of section 9(a) of the Reclamation Project Act of 1939 (53 Stat. 1187) (H. Doc. No. 91–182); to the Committee on Interior and Insular Affairs and ordered to be printed, with illustrations.

1272. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a report of receipts and disbursements pertaining to the disposal of surplus military supplies, equipment, and materiel, and for expenses involving the production of lumber and timber products, during fiscal year 1969, pursuant to the provisions of 10 U.S.C. 2665, to the Committee on Appropriations.

1273. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administration of the Collbran Job Corps Civilian Conservation Center under the Economic Opportunity Act of 1964, Collbran, Colo., Department of the Interior, Office of Economic Opportunity; to the Committee on Education and Labor.

1274. A letter from the Comptroller General of the United States, transmitting a report on unused engineering and design effort in the military construction program, Department of Defense; to the Committee on Government Operations.

1275. A letter from the Comptroller General of the United States, transmitting a report on opportunities for increasing the effectiveness of the conservation operations program, Soil Conservation Service, Department of Agriculture; to the Committee on Government Operations.

1276. A letter from the Assistant Secretary of the Interior, transmitting copies of an order and supporting documents canceling certain reimbursable charges of the Federal Government, pursuant to the provisions of 47 Stat. 564; to the Committee on Interior and Insular Affairs:

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. POAGE: Committee on Agriculture. H.R. 12588. A bill to amend the Agricultural Act of 1949 with regard to the use of dairy products, and for other purposes; with an amendment (Rept. No. 91–587). Referred to the Committee of the Whole House on the State of the Union.

Mr. POAGE: Committee on Agriculture. H.R. 8536. A bill to amend section 602(5) and section 608c(6)(I) of the Agricultural Marketing Agreement Act of 1937, as amended, so as to authorize production research under marketing agreement and order programs; without amendment (Rept. No. 91–588). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BROOMFIELD:

H.R. 14450. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. FOLEY:

H.R. 14451. A bill to provide for the establishment of an international quarantine station and to permit the entry therein of animals from any other country and the subsequent movement of such animals into other parts of the United States for purposes of improving livestock breeds, and for other purposes; to the Committee on Agriculture.

By Mr. FRIEDEL:

H.R. 14452. A bill to provide for the designation of special policemen at the Government Printing Office, and for other purposes; to the Committee on House Administration.

H.R. 14453. A bill to authorize the Public Printer to grant time off as compensation for overtime worked by certain employees of the Government Printing Office, and for other purposes; to the Committee on House Administration.

By Mr. GREEN of Pennsylvania:

H.R. 14454. A bill to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes; to the Committee on Education and Labor.

H.R. 14455. A bill to amend the Tariff Schedules of the United States to repeal the special tariff treatment accorded to articles assembled abroad with components produced in the United States; to the Committee on Ways and Means.

By Mr. HELSTOSKI (for himself, Mr. ANDERSON of California, Mr. BIAGGI, Mr. BOLAND, Mr. CARTER, Mr. CÓRDOVA, Mr. FEIGHAN, Mr. WILLIAM D. FORD, Mr. FULTON of Pennsylvania, Mr. GALLAGHER, Mr. GIBBONS, Mrs. HECKLER of Massachusetts, Mr. MCKNEALLY, Mr. MATSUNAGA, Mr. MIKVA, Mr. MOSHER, Mr. PETTIS, and Mr. RYAN):

H.R. 14456. A bill to require that impact-resistant eyeglasses be issued under the medical program for members of the uniformed services on active duty; to the Committee on Armed Services.

By Mr. KLEPPE:

H.R. 14457. A bill to amend the Federal Meat Inspection Act to give any State an additional year to develop and enforce an effective inspection program for meat and meat food products that are distributed wholly within such State, and for other purposes; to the Committee on Agriculture.

By Mr. LONG of Maryland:

H.R. 14458. A bill to prohibit the sale or shipment for use in the United States of the chemical compound known as DDT; to the Committee on Agriculture.

By Mr. OLSEN:

H.R. 14459. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. REUSS:

H.R. 14460. A bill to amend the Employment Act of 1946 to bring to bear an informed public opinion upon price and wage behavior which threatens national economic stability; to the Committee on Government Operations.

By Mr. WYDLER:

H.R. 14461. A bill to establish a commission to study and investigate possible programs to promote cooperation between New York and surrounding States in addressing problems relating to the disposal of solid waste; to the Committee on Interstate and Foreign Commerce.

By Mr. ZWACH:

H.R. 14462. A bill to improve farm income and insure adequate supplies of agricultural commodities by extending and improving certain commodity programs, and amend the Food Stamp Act of 1964, as amended; to the Committee on Agriculture.

By Mr. COLLIER:

H.R. 14463. A bill to authorize the Secretary of Transportation to prescribe rules, regulations, and performance and other standards as he finds necessary for all areas of railroad safety and to conduct railroad safety research; to the Committee on Interstate and Foreign Commerce.

By Mr. FALLON (for himself, Mr. GRAY, Mr. JOHNSON of California, Mr. CRAMER, Mr. HARSHA, and Mr. BENNETT):

H.R. 14464. A bill to amend the act of August 12, 1968, to insure that certain facilities constructed under authority of Federal law are designed and constructed to be accessible to the physically handicapped; to the Committee on Public Works.

By Mr. STAGGERS:

H.R. 14465. A bill to provide for the expansion and improvement of the Nation's airport and airway system, for the imposition of airport and airway user charges, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HAMILTON:

H.R. 14466. A bill to amend the Military Selective Service Act of 1967 to provide for a fair and random system of selecting persons for induction into military service, to provide for the uniform application of Selective Service policies, to raise the incidence of volunteers in military service, and for other purposes; to the Committee on Armed Services.

By Mr. STEIGER of Wisconsin:

H.R. 14467. A bill to extend for 3 years the authority of the Armed Forces and the Veterans' Administration to use dairy products purchased by the Commodity Credit Corporation; to the Committee on Agriculture.

By Mr. ASHBROOK:

H.R. 14468. A bill to equalize the retired pay of members of the uniformed services of equal grade and years of service; to the Committee on Armed Services.

By Mr. CHAMBERLAIN:

H.R. 14469. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. FULTON of Tennessee:

H.J. Res. 963. Joint resolution to authorize the President to proclaim the month of January of each year as "National Blood Donor Month"; to the Committee on the Judiciary.

By Mr. MATSUNAGA:

H.J. Res. 964. Joint resolution to create a joint congressional committee to review, and recommend changes in, national priorities and resource allocation; to the Committee on Rules.

By Mr. SANDMAN:

H.J. Res. 965. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. MATSUNAGA:

H. Res. 588. Resolution to provide for record voting in the Committee of the Whole House upon the assent of one-fourth of the Members present; to the Committee on Rules.

By Mr. CUNNINGHAM:

H. Res. 589. Resolution to authorize the Committee on Interstate and Foreign Commerce to conduct an investigation and study of the practices followed by the Washington Gas Light Co. of the District of Columbia in the sale, installation and servicing of heating and air conditioning units; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. GREEN of Pennsylvania:

H.R. 14470. A bill for the relief of Whitehouse Paper Co., Elsie Heilveil, and Maurice Heilveil; to the Committee on the Judiciary.

By Mr. HALEY:

H.R. 14471. A bill to authorize the Secretary of the Interior to sell reserved phosphate interests of the United States in certain lands in Florida to John Carter and Martha B. Carter; to the Committee on Interior and Insular Affairs.

By Mr. ROUDEBUSH:

H.R. 14472. A bill for the relief of Rafael Ramos; to the Committee on the Judiciary.

By Mr. WRIGHT:

H.R. 14473. A bill for the relief of Peter Brothers, Inc.; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

305. The SPEAKER presented a petition of the State Council of Ohio, Junior Order United American Mechanics, relative to freedom of speech, which was referred to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

ADDRESS OF THE POLISH PRESIDENT IN EXILE, HIS EXCELLENCY AUGUST ZALESKI

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. DERWINSKI. Mr. Speaker, as I have before on numerous occasions, I am pleased to insert into the RECORD the speech of His Excellency August Zaleski, the President of the Polish Republic in exile, delivered on October 11 at Caxton Hall in London on the occasion of the opening of a new session of the Council of the Republic of Poland, which functions as a parliamentary body in exile.

This is a forceful, pertinent, and accurate commentary on the situation in Poland and the continued Russian occupation of that land:

ADDRESS OF THE PRESIDENT OF THE POLISH REPUBLIC IN EXILE, LONDON, OCTOBER 11, 1969

The news reaching us from Poland is still very sad. Our Fatherland remains under Russian occupation and is forced to pursue policies dictated to her by the leaders of the Kremlin who, of course, exploit the situation to their own advantage. It has to be said that in doing this Russia does not only pursue her own immediate interests, but aims at weakening Poland, both politically and economically, being aware that Poland will make use of any opportunity that may present itself to throw off the yoke of Russian imperialism.

We cannot forget, however, that the present international situation is the result of the so-called Yalta Agreement freely concluded by our own allies towards the end of the war: this ceded the Eastern part of the Polish Republic to Russia and gave her such rights in the Western part so that Poland is now virtually a Russian colony. It may be that the authors of the agreement deluded themselves that these concessions will satisfy Russia who will then forego further territorial aggrandisment. They did not take into account that Russia, throughout her history, has always pursued a policy of territorial expansion. Only the ostensible motives changed with time. They were in turn: the gathering in of alleged Russian lands, the expansion of the Russian Orthodox faith, the unification of all Slav peoples under Russian rule, a civilising mission to any backward, or only allegedly backward, country of the world and lately the unity of all Communist states.

There is no doubt that the Polish people as a whole are well aware of all this and do not cease in their struggle to bring about a radical change in the situation. We, Poles outside Poland, are also called to work towards this goal with a deep faith that sooner or later the world will understand that in the nuclear era any international conflict can be solved only by peaceful means. The principles of law and justice must oust any idea of war which could only lead to a major catastrophe involving not only the loss of innumerable human lives but the end of civilisation itself.

Alas, the United Nations Organisation, created as a forum for the peaceful settlement of international conflicts, has so far been unequal to its task. It still remains a task for the future involving the whole of mankind. Poles everywhere will contribute to this general aim without forgetting their more immediate goal which is the restoration of the independence of their Fatherland.

The Government will report to the Council on their activities and present their plans for future action.

In declaring the third session of the present Council of the Republic of Poland open I pray that God may bless your labours.

Mr. Speaker, may I observe that the Polish Government in exile is far more representative of the true aspirations and thinking of the people of Poland than the officials that are maintained in office in Moscow by Russian bayonets.

GUARANTEED WAGE AND HUMAN DIGNITY

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. ASHBROOK. Mr. Speaker, by whatever title one wishes to label it, the guaranteed annual wage proposal should be the subject of much discussion in the months ahead. Pushed for a number of years by the welfare staters, this issue, if finally put to the people for approval through their representatives in Congress, should be an indicator as to what extent the American people have retained their historic sense of individual responsibility. Granted, it is hard to answer the humanitarian argument of alleviating the poverty of the disadvantaged with the cold rebuttal of personal responsibility and workability of the program, but the so-called poverty program of recent years and its tragic abuses should have provided an object lesson.

Lawrence Welk, the nationally known orchestra leader, commented recently on this all-important issue. In the August 5 issue of Christian Economics, he looks ahead to the effect that such a program would have on the children of recipients of a guaranteed wage:

I am also concerned about the effect such a guaranteed wage plan would have on our children. A child raised in an atmosphere of defeat and apathy, and taught to expect that his every need will be taken care of whether he works or not, stands little chance of developing a strong character. His own natural eagerness to learn and to grow and to excel is cut off at the very beginning of his life, and he may never know the thrill of achievement on his own.

Mr. Welk's views are not those of a politician or a statesman, as he points out, but as one who has known extreme poverty and who has climbed to success by hard work and his own initiative. He bases his argument not only on his own experience but on the success stories of members of his orchestra whose names are household words to Lawrence Welk fans.

The virtues and qualities of those who made this Nation unique cannot be stressed too often, and for this reason I include the views of Mr. Lawrence Welk on religious faith, human dignity, and wholesome industry in the RECORD at this point:

[From the Christian Economics, Aug. 5, 1969]

GUARANTEED WAGE AND HUMAN DIGNITY

(By Lawrence Welk)

(The author is well known throughout America for his Saturday night television program, The Lawrence Welk Show.)

Numerous spokesmen today are advancing the theory that a guaranteed annual wage plan for every person in the United States would solve our hard-core unemployment problem and dramatically alleviate the suffering of our poor. I share very deeply the common concern we all feel for these terrible conditions . . . but I believe there is a better solution than a guaranteed annual wage.

I speak not as a politician or a statesman . . . but simply as a father, a business man, an orchestra leader and a concerned citizen of this country which I love so very much. I have known extreme poverty in my lifetime, and I have been blessed with a measure of success, and I have had an unique opportunity during these past forty-five years in show business to observe human nature at work. I base most of my objections to the wage plan on the lessons I have been able to learn through practical experience and observation.

A guaranteed annual income would pay each person in the United States a fixed sum of money every year. Four thousand dollars has been suggested as the minimum amount for a family of four. If the head of the household earns part of that sum, the government will make up the difference. If, however, he earns nothing at all . . . the government will pay him the full amount.

To my way of thinking this is a negative approach which does not solve the basic problem. Instead of inspiring and helping a man fulfill his potential by working to support himself and his family, it actually encourages him to sit back and do nothing, secure in the knowledge that the government will take care of him. This destroys his initiative and his will to succeed. It robs him of his natural human dignity, and even the right to direct his own life.

I am also concerned about the effect of such a guaranteed wage plan would have on our children. A child raised in an atmosphere of defeat and apathy, and taught to expect that his every need will be taken care of whether he works or not, stands little chance of developing a strong character. His own natural eagerness to learn and to grow and to excel is cut off at the very beginning of his life, and he may never know the thrill of achievement on his own. A child who is encouraged early to earn extra pennies by shining shoes or selling newspapers or doing household tasks, stands a much better chance of reaching them than a child who is taught to do nothing.

The most destructive aspect of the guaranteed wage plan, it seems to me, is the fact that it endangers our free-enterprise system . . . and I believe with all my heart that this is the best system the world has ever known.

We have achieved a higher standard of living, given more, helped more, and been more alert to the needs of our citizens than any people, under any other form of government in the history of the world . . . and I, for one, do not want to lose it. I believe one of the reasons our country has been able to accomplish so much is that our founding

fathers and early immigrants had the freedom to dream great dreams and work hard to achieve them. We must not lose this right.

My own parents came halfway around the world in search of the freedom this country offered . . . and they found it. They started with nothing but boundless hope and optimism, and through sheer hard work managed to acquire their own farm. Thousands of others did the same thing. Their achievement was limited only by their energy and initiative. Nobody tried to stop them, or tell them what to believe or how much they could earn or whether they could pray to their God or not. The Constitution of this country guaranteed them their basic freedoms. They taught their children what a priceless gift that was and what a great nation this is. To lose our liberties now would be tragic and senseless, but I'm afraid we stand a very real danger of doing just that if we continue to trade off our personal freedoms for more and more government paternalism. The bigger the government . . . the smaller the people.

I grew up on a small farm in Strasburg, North Dakota, along with seven brothers and sisters, and my parents taught all of us children the value and joy of work. They will never know how grateful I have been all my life for their example and their teachings! Our parents taught us that nothing good is ever achieved without work, and that there is a kind of joy in work itself which contributes to one's peace of mind and inner tranquility.

And the work should be quality work! A few years ago American children were taught routinely that a job worth doing was worth doing well, but somewhere along the line that idea seems to have vanished. Today . . . in talking with various businessmen . . . I have learned that it is becoming more and more difficult to find competent workmen . . . men who take real pride in performing their craft. In my own profession, I have found it next to impossible to find a well-trained young musician. I have been looking for almost two years for an experienced young violinist, and have not been able to find one who combines talent with the training and self-discipline necessary to do the job. True competence in any field takes time, perseverance, infinite patience . . . and hard work.

Rather than give a man money, simply because he exists . . . let us educate him to the glory that can be found in work . . . and then bend every effort towards helping him find and hold a job. I do not think it is ever too late to help a man accomplish this, no matter what his condition in life. We can start right now by educating our people to the fact that this is still the land of opportunity, and that any job . . . no matter how lowly . . . can lead to a successful and happy life if it is performed with spirit and enthusiasm. Our primary goal should be to build the character of the man who is doing the job, for in this way we will build the character of the nation as well.

One of the deepest joys of my own life has been to recognize the potential in other people and help them try to achieve it. It is a wonderful experience to watch any man or woman develop his talents to the fullest and I have noticed that the happiest people in our orchestra are always those who work the hardest.

Many examples come to mind . . . Years ago I suspected that Larry Hooper, our pianist, could also be a singer, because of the exceptionally deep resonance of his speaking voice. When I encouraged him to try, he found to his surprise that he really could sing, and he not only developed into a popular singer, but his whole personality improved! Jack Imel, who was a drummer and dancer on our show, came to me with ideas for production sketches, and the more he worked, the better his ideas became, until today he is the assistant to our brilliant producer, Jim Hobson.

Myron Floren overcame the twin handicaps of poverty and serious illness. Myron was stricken with rheumatic fever as a youngster, but he turned all of his energy and willpower into making a full recovery, and was able to regain his health completely. His fortitude, dependability and complete devotion to whatever task he undertakes have become almost legendary in our band. He has developed the inner strength and self-confidence necessary to handle whatever new responsibilities come his way. He has today reached goals no one would have thought possible for him when he was a young boy growing up in poverty on an obscure farm.

You cannot build character and courage in an able-bodied man by taking away his initiative and spirit of independence. You cannot buy happiness for a man. He must earn that for himself. That is one of my basic objections to the Guaranteed Annual Wage Plan. It does not really help a man to grow.

We have made tremendous progress in the fields of science and technology. We have learned how to send a man to the moon and probe the underside of the sea. We have learned how to split the atom and harness the energy of the sun. We have built giant computers that do incredibly complex jobs for us. But we have neglected our most important obligation. We have neglected our primary duty to build men.

I think we began to get into serious trouble when we took God out of our schools and out of our hearts. We need to re-introduce basic moral values into our lives. We need to affirm again those American verities of hope and courage and faith . . . the principles of fair play and integrity, and an honest day's work for a day's pay.

Somehow I feel that the real answer to our difficult problems can best be found in the teachings of Christ. He spoke of the dignity of the individual human being. He demonstrated through the love and compassion of His own life just how valuable each human soul is.

A human being is far too valuable to be paid off in money. A human being grows and prospers through the dignity of work.

A MILESTONE IN NUCLEAR POWER AT HANFORD, WASH.

HON. CATHERINE MAY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mrs. MAY. Mr. Speaker, an event of some significance has occurred at Hanford, Wash., and I believe the Members of this body will be interested.

A real milestone in the history of nuclear power was reached at Hanford, Wash., at 1 minute past 9 o'clock yesterday morning. That is when the world's largest power-producing nuclear reactor reached the 10 billion kilowatt-hour in total electric generation.

This reactor, which was authorized to go into power production by the Congress 7 years ago, has become the first reactor in the world to reach the 10 billion mark. The next closest contender in the United States is a reactor at Roe, Mass., which may make the same mark late this month or early next month.

Ten billion kilowatts is a tremendous amount of power, Mr. Speaker, and I understand that this reactor may hit its second 10 billion kilowatts in a much shorter period of time. Owen Hurd, managing director of the Washington public power supply system, which operates the steam generating plant, tells me that the second 10 billion mark will possibly be observed in about 2 years.

The Hanford steam plant was authorized by Congress in September 1962, financing arrangements were completed in 1963, and the power from the plant was synchronized with the Bonneville system in 1966.

My congratulations to Mr. Hurd and WPPSS.

COHOES MODEL CITY STRATEGY

HON. DANIEL E. BUTTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. BUTTON. Mr. Speaker, I have strongly expressed my support in the past for the model cities approach to solving the problems of our cities, and would like to underscore that commitment once again. Model cities encourages and requires a strong local alliance between citizen, city government, and business to get the job done. I feel the city of Cohoes, in my district, exemplifies these key ingredients in its strategy for implementing the model cities program.

I recently received from Mrs. Virginia B. McDonald, vice chairman of the Model Cities Social Services Planning Committee, a letter informing me of the progress of the Cohoes model cities program. Cohoes is one of 150 cities that has completed its model cities plan. Mrs. McDonald, widow of the late mayor of Cohoes, Mayor James E. McDonald, under whose guidance the model cities program got its start, also enclosed a copy of the program strategy statement which I feel gives an excellent example of how one model city is doing.

Because this program strategy statement makes such good sense, and because it raises questions critical to the direction our country is taking in facing up to the problems of our older, core cities, I am inserting Mrs. McDonald's letter and the accompanying statement in the RECORD at this point and commend it to the close attention of all Members of this House:

OCTOBER 10, 1969.

Hon. DANIEL E. BUTTON,
Longworth House Office Building,
Washington, D.C.

DEAR CONGRESSMAN BUTTON: In keeping with your request to keep you informed of the progress and activities of the Cohoes Model Cities Program, the Director, Paul Van Buskirk, has asked me as Vice-Chairman of the Social Services Planning Committee, to forward to you a copy of the Program Strategy Statement.

This statement will give a brief, but concise, insight to the approach which the City of Cohoes wishes to use in implementing the program. We would appreciate your review and comments, and opinion as to whether the statement is in general agreement with the policies of Congress and the U.S. Department of Housing and Urban Development.

Yours truly,

VIRGINIA B. MCDONALD,
Vice Chairman, Social Service Planning Committee.

STRATEGY STATEMENT

The CDA Planning Committees' Planning Board and Governing Body, as a result of the Workshops, Pilot and Comprehensive Survey and background studies, selected five program components in which the long range goals are addressed to the following five categories listed in order of strategy sequence:

1. Human Resources
2. Relocation
3. Housing
4. Economic Development
5. Physical Environment

The program components were selected for a number of reasons: they provide convenient "packages" for specific identified problems (see Part I); they form reasonable bases for the development of overall strategies and approaches to problem-solving; and they are easily translated into statements of long-range goals as formulated by the CDA committees and boards.

Because of strong interrelationships and interdependencies among selected program components, the CDA planning committees and boards found it very difficult to arrange goals strictly according to problem severity. (Each of the broad program components contains specific high-priority problem areas.) Hence, strategy programming or sequencing of activities, as reflected in the order of the above listing became a very significant and sensitive undertaking.

The reason for the selection of the order of long-range goals was:

Since the development of MNA human resources is considered without question to be the most important objective of the entire program, it would be necessary to provide MNA residents with improved social and health services, educational opportunities, counseling, etc. These resources will provide the MNA residents with necessary services and assistance which is needed to improve their quality of living. This program will enable MNA residents to call upon the many resources which are needed to support and maintain the physical improvements they desire in their neighborhoods; such as housing, open spaces and employment opportunities. A secondary benefit of the Human Resources Component is that MNA residents could rely on their resources for assistance to protect their investments, and community investments, of money for physical improvements and prevent the recurring deterioration, which would require further investments for corrections in the future.

Another reason for giving primary attention to development of human resources is to allow an alternative approach to solving MNA problems, should financing or other problems preclude other needed programs. In other words, since human resources can be improved independently of other planned improvements, residents would be given the necessary social tools to instill initiative, and create the ability, desire, and awareness of a decent quality of living. An objective of the program is to develop human resources for a resident who may have to rely on his resources to improve his neighborhood regardless of the success or failure of other planned programs.

The reason for selecting relocation as the second item in the sequence of Model Cities activities is the demonstrated necessity to have a well-established relocation program functioning before critically needed physical programs (which require displacement) are undertaken. The relocation program would be carefully coordinated with the social services cited above and would provide sensitive and efficient relocation services for MNA families, individuals, and businesses. To build new houses and rehabilitate existing housing units without properly planned and coordinated relocation services could result in a completely ineffective overall program. The object of the Cohoes Model Cities Plan is to look upon relocation not as a necessary evil but as an opportunity to serve MNA residents, provide social services, and upgrade the quality of living.

Housing was chosen as the third item in the strategy sequence. Once the human resources and relocation programs are formulated and delivering services, relocation could commence with the assurance that new or rehabilitated housing is decent, safe, and sanitary and that it meets residents' needs and preferences. Furthermore, as a result of the human resources development program, residents would have available financial assistance and services needed to acquire, or rent and maintain, decent and safe housing. The housing program is viewed as a logical extension of both the human resources and relocation activities.

Economic Development is placed fourth in the sequential order of activities. In order to obtain adequate housing, provide physical improvements and enjoy the benefits of improved health, education, etc., there must be sufficient economic activity to increase individual income levels and to broaden and reinforce the city's tax base. This program would help provide future revenues as well as the industrial and commercial facilities and services necessary to sustain residents.

It seemed logical to the CDA planning committees that the physical environment can be maintained and upgraded only after proper social services are provided, relocation services are firmly established, housing is available, and activity in the economic sector has been stimulated. Specific physical improvements which would support each of the other strategic activities would include additional and improved parks and open spaces, better streets (including sidewalks, street trees, lighting, etc.), a reduced level of structural and environmental blight, and major improvements in sewage and waste collection, treatment, and disposal.

STRATEGY AMONG GOALS

Housing, especially for low and moderate income families, was ranked by the CDA Workshops as the Model Areas most serious problem and the CDA attaches greatest importance to this goal.

The objective of the Housing Goal is to provide 1,000 new housing units, to rehabilitate 500 substandard houses, to remove 600 dilapidated units, and to increase homeownership in the MNA by 428 families. In order to achieve this goal, it will be necessary to accomplish the objectives of the following goals:

Human Resources Goal: To have in effect the necessary home management and home maintenance programs and other social programs related to housing.

Relocation Goal: To have the Central Relocation Agency established and a Relocation Plan formulated.

Economic Development Goal: To have programs formulated to raise income levels above the Cohoes CPIC.

Physical Environment Goal: To begin to establish and administer an effective system of regulatory controls and to demolish "dilapidated" housing units (vacant ones first).

One of the greatest concerns of the MNA residents is in the area of economic development. This was brought out in the CDA Workshops, Comprehensive Survey and Pilot Survey. The Economic Development Goal would be of greatest concern, next to the Housing Goal.

The objectives of the Economic Development Goal are to implement a comprehensive employment program, to bring all MNA households above the CPIC income level, to rehabilitate non-residential structures, redevelop and develop land for industrial expansion and to have in effect, a long range industrial and commercial development program. In order to reach this goal, it would be necessary to develop the following:

Human Resources Goal: To have effective education programs; such as vocational and skill training, adult basic education and adult education.

Relocation Goal: To have, in operation, a Central Relocation agency and relocation plan for industries and businesses.

Physical Environment Goal: To redevelop 26 acres of industrial land.

STRATEGY AMONG PROGRAM APPROACHES AND CHANGES WITHIN A GOAL

Human Resources: The strategy among program approaches within the Human Resources Goal will be described according to the sub-components for the sake of clarity. With reference to related program approaches among the sub-components, the program approaches of the Human Resource Component are geared to the family as a unit. Programs, projects and activities have their objectives formulated to the family.

Social Services: The activity for this program approach would provide for the development of social services under a "single roof" concept (Human Resources Center) for delivery to identifiable families. The initial action would be to commence a Comprehensive Social Services Study to identify MNA families, their characteristics and need and to evaluate existing social services, gaps and program development. While the study is being undertaken, the recruiting of the initial core-staff of the Human Resources shall be underway. This core-staff's purpose will be to develop the administrative structure and work program, as well as program activities for operation in the second year, when the Human Resource facility will be leased or purchased and then occupied. The core-staff shall develop a recording system (IBM data processing) of services needed and rendered identified families. Programs that are directly geared to family management, such as home management, will commence early in the program.

Health: The lack, or disorganization of, health data shall be corrected by developing a collecting and reporting system on health statistics. The delivery of existing health services to MNA residents shall be accomplished in the first year by training project aides. The approach for needed health facilities will be accelerated by the fact that the local hospital has developed plans for expansion and need financial assistance for carrying this out. Construction of these facilities can convene in the first year with financial assistance from the CDA, and be completed by year two. Necessary changes, site selection, etc., will be completed in the first year for construction of a nursing home to begin in the second year and be completed by the third year. Recruitment for needed professional medical personnel will be formulated and concluded the first year for results in year two.

Education: The program approaches under this sub-component revolve around three basic areas; pre-K, adult education and reinforcing the academic program by beefing up the guidance counseling, curriculum and remedial reading. The first year would consist of developing and conducting a head-start program. In conjunction with the employment program, a day-care center will be developed. An effective adult and basic education program, leading to a high school equivalency, will be established and closely coordinated with the comprehensive employment program. Curriculum gaps, such as remedial reading for elementary students, will be filled in the first year. Special activities, such as the development of new curriculum and a comprehensive guidance counseling program for secondary school students, will be initiated during the first year and be fully established by the second and third years.

This will complete the thread of educational program beginning with pre-K thru to adult basic education.

A study will be completed in the first year for needed educational facilities in the MNA and a program to maximize the availability and uses of existing school facilities for education, recreation and cultural purposes.

Recreation and Culture: To expand MNA acreage to meet national standards would be the first objective. This would be done by developing, approving and implementing new park and recreational areas to meet the needs of all MNA age groups especially focusing on specialized "social nodules" or areas of activity. On-going planning and action would take place over the five year period for the gradual requisition of land and establishment of more specialized recreational and cultural areas culminating in the Old Erie Canal Trail Parkway following the historic canal route. However, recreational activities for all age groups must be developed and conducted as physical facilities are completed.

The development and implementation of new programs and facilities would be carried out the first year with the immediate erection of the Cohoes Community Center providing social, cultural and recreational services and programs to MNA families. In addition, innovative plans have been submitted for a joint historic preservation, educational, recreational and cultural venture which would restore the Old Opera House and connect it into two greatly needed facilities; namely, a theatre and a library.

Crime and Delinquency: To combat adult crime, a comprehensive survey will be made the first year for the purpose of improving systems for maximizing the security of residents regarding their persons and property and developing new programs to meet these ends during the second and succeeding program years. Juvenile delinquency will immediately be attacked by supporting community youth programs and facilities while developing improved and innovative systems and programs. The Juvenile Aid Bureau will be established and the Youth Bureau expanded through supplemental funds during the first year. A police and community relations will be developed in the first year, including the conducting of police training programs.

Relocation: First program approach would be to initiate a Comprehensive Housing and Relocation Study to determine specific relocation needs by characteristics of households. This approach would also include the monitoring of the Economic Base Study to determine specific relocation needs of industry and business.

While this study is under way, the city should then create, through new legislation, a Central Relocation Agency; recruitment of a staff to administer an effective city-wide program and provide supplemental funds to organize the agency.

Relocation standards and policies should be adopted by the City government and the administrative machinery would go into full operation.

Housing: First program to be initiated would be the Comprehensive Housing and Relocation Study, cited in the Relocation Goal. Next, the development of open sites by installing needed utilities and the establishment of a Housing Development Corporation. This would be followed by development of programs for construction of new housing on open developed sites or redevelopment sites.

Vacant dilapidated units would be demolished early in the program.

Rehabilitation of sub-standard housing could take place that would not cause major dislocation. Upon completion of new housing units, families and individuals from dilapidated housing, major rehabilitation projects and those dislocated from major improvement projects could be relocated. Simultaneously the program for assistance toward homeownership could be in effect.

Economic Development: The immediate need under this component is to provide redevelopment land (land that is currently occupied by vacant, obsolete, and deteriorated structures) for existing industries whose facilities have become obsolete for the construction of new facilities. Therefore, the program approach to develop blighted land and install facilities would be of first priority.

While this action is being initiated under an NDP program, a Comprehensive Economic Base Study would begin which would include an employment study, an update of the 1965 economic base study, and long range industrial and commercial development plans.

A Comprehensive Employment Program would be organized and implemented. This would be followed shortly by the program to identify characteristics of MNA households below the CPIC, and the development programs, according to household needs, to boost incomes above the CPIC.

The demolition of dilapidated non-residential buildings would begin under the NDP program along with demolition under the Physical Environment Component.

Restoring of industrial and commercial buildings would begin with the reorganization of the Cohoes Industrial Development and Redevelopment Corporation as a Community Development Corporation.

A long range CBD plan and industrial development plan would begin to be implemented through a Community Development Corporation.

Physical Environment: The program approach to which the greatest attention should first be given is the adoption and enforcement of the necessary regulatory controls. This approach also serves as an alternate approach, in the event that sufficient financial resources are unavailable, or other problems arise, which might prevent the implementation of other program approaches under this component. The strategy behind this is that if an effective system of regulatory controls is established, individual, corporate or other organized initiative could be marshalled to correct deficiencies in the physical environment.

The execution of various planning studies under the above approach would begin early in the program. These studies are described throughout the plan and include historic preservation, thoroughfare plan, Erie Canal trail development, housing, and relocation, commercial and industrial development, etc.

During the first year of the program, engineering studies, drawings, specifications, etc., would be completed for the development of 60 acres of recreation and open public spaces.

The construction of sewer intercepts would begin in the first year to eliminate the open polluted canals, and would continue through and be completed by the end of the five year period, including sewer treatment facilities.

The selection of alternate sites for solid waste disposal would be completed by the end of the first year with sites available by the second year for the removal and disposal of various solid wastes.

Comprehensive studies: Several comprehensive studies will be conducted during the first year action program.

The following studies will be conducted under the "701" Program:

Housing and Relocation.
Open Spaces.
Historic Preservation.
Economic Base Study.
Thoroughfare Plan.

These studies are necessary for the following reasons:

1. To obtain detail and sufficient data, presently not available, for program planning and implementation.

2. To obtain data in order to establish proper measures for program evaluation.

3. To determine projects and activities, their priorities, feasibility, cost estimates, cost benefits, analyses required to properly achieve the long-range goals and five-year objectives of this plan submission.

However, projects and activities will be undertaken during the first year which are related to the comprehensive studies.

These projects have been selected because sufficient information is presently available to require completion of these programs, financial resources are available and the need is apparent.

Examples of such programs are the Neighborhood Development Program as part of the Economic Development Component, Restoration of the early American Theater, as part of Culture and Recreation of the Human Resources Component. As these studies are being conducted, other projects and activities will be formulated.

Other studies coinciding with the strategy herein described will be:

Social Services and Activities.
Health.
Police Services.

These studies will result in a sound program development for the entire community.

In conclusion, the overall strategy and goal of the Cohoes Model Cities Program, as visualized by the CDA, is the elimination of social and economic problems so common to our many cities, the elimination of physical blight and the sound development of the entire city. When we realize that the City of Cohoes is a small city of 20,000 people, and its problems can be defined and are controllable, this goal is not impractical or unrealistic. The attainment of this goal depends on the commitment of the community. The CDA believes that the people of the City of Cohoes will fully dedicate themselves to this goal and show the nation that the problems of the cities can be solved through total community effort.

CHIEF OTHA THOMAS CUSTALOW

HON. WILLIAM LLOYD SCOTT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. SCOTT. Mr. Speaker, it is not too well known outside of the nearby Eighth Congressional District of Virginia, but in this historic area are contained the reservations of two Indian tribes: the Mattaponi and the Pamunkey.

Today on the Mattaponi Indian Reservation, near West Point, Va., burial services were held for Chief Otha Thomas Custalow of the Mattaponi Tribe.

Chief Custalow was an ordained Baptist minister. On Sundays he preached the Gospel of Christ to his small gathering of faithful servants. During the week he taught Indian history to schoolchildren and adults. He frequently visited other nearby schools to tell young people about his tribe and their ancestry.

Chief Custalow was a descendant of Powhatan and Pocahontas. Among the most treasured possessions in his small museum was a necklace worn by Pocahontas. He frequently spoke of his desire to visit the grave of Pocahontas near London, England; and at the time of his death, an effort was being made to grant the chief his lifetime wish.

Chief Custalow was a persuasive, articulate, and colorful spokesman for

the American Indian. He used such phrases as "big birds flying across the blue waters"—transatlantic flights—the "happy hunting grounds," and the "great beyond."

Mr. Speaker, I include in the RECORD a eulogy written by one of Chief Custalow's many friends:

CHIEF OTHA THOMAS CUSTALOW, 1898–1969

(By Capt. Frank A. Manson, U.S. Navy, retired, director, National Security and Foreign Affairs, VFW)

Chief Otha Thomas Custalow was a man of God. He was a man of Peace. He believed in the Resurrection and the Life Everlasting. He loved his people, their traditions and he loved the American flag. He loved his family and he loved the soil and the dust to which his body has returned. He loved the meadows, the streams, the trees and the source of all life, the Great Spirit.

May the life of Chief Custalow be an inspiration for all Americans to remain steadfast in their courage and faithful in their ideals; to persevere in their adversity; to rejoice in their bounty—and to love their God, the source of all blessings.

May the people of America build a monument on this Mattaponi Reservation which will honor Chief Custalow's memory. May that monument be higher than the tallest tree to reflect his stature among men. May his face and his arms be lifted toward the Heavens where his spirit and love reside. And may his face wear the smile of serenity and purpose for he was a Great Chief with a great vision.

LETTER FROM A YOUNG CONSTITUENT

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. STOKES. Mr. Speaker, the startling perception and eloquence of young children can often be of great value to their elders, if the latter group will only take the time to pay sufficient attention.

Last week the House narrowly rejected an amendment which would have raised the appropriation for water pollution control from $600 million to $1 billion. Subsequently, I received a letter from David Stanley, a third-grader at Fairfax School in Cleveland Heights, Ohio, which states in the clearest possible terms why this action was a mistake.

I include David's letter in the RECORD, and ask that my colleagues take careful note of his words:

FAIRFAX SCHOOL,
CLEVELAND HEIGHTS, OHIO,
October 3, 1969.

DEAR SIR: Our class went on a boat ride down the Cuyahoga River. We saw factories dumping scraps and waste in the river. We saw people throwing bottles and paper in the river. I got sick of the water. I would like to swim in the water. I would like to have a nice boat ride on a nice river.

It is sad to look at filthy water. We are doing experiments about dirty water. Alum helps clean the dirty water. Please help us to stop polluting Lake Erie and the Cuyahoga River.

Sincerely,

DAVID STANLEY,
Grade 3, Fairfax School.

BIG TRUCK BILL

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. SCHWENGEL. Mr. Speaker, my editorials for today are from the Louisville Times, Louisville, Ky., and station WAVE, Louisville, in the State of Kentucky. The editorials follow:

AID AND COMFORT FOR TRUCK LOBBY

The Nixon administration has acknowledged it has reservations about the safety of permitting bigger trucks than the goliaths now roaming the highways, as certainly it should have. However, it isn't letting this prevent it from encouraging the idea.

Instead of joining forces with the various highway safety groups opposing the trucking industry's highway-monster bill now before Congress, the administration's highway chief, Francis C Turner, has actually given it qualified support. As he told a House subcommittee the other day, he thinks it would be good for the country. However, if it is to be enacted at this session he wants the effective date postponed three years to give the administration time to work out safety standards. This is like graduating the class dullard and then giving him a test.

Figures his own department has publicized in the past should resolve any doubts Mr. Turner may have about the safety factor. These show that the big trucks now in use figure in 19 per cent of all highway deaths even though they constitute only 7 per cent of the registered motor vehicles. Isn't that horrible enough without worsening the ratio with wider and heavier trucks?

As for the heavy damage that would be done to highways by the proposed super-goliaths—well, this the Nixon spokesman airily dismissed as something that, in his opinion, would be outweighed by the bountiful economic benefits that would come from hauling larger cargoes than present law allows, which is a generous 72,280 pounds per truck.

Economic benefits to whom besides the big truck owners? Maybe funeral directors and operators and auto graveyards would share in the boom, but who else? Certainly not the hard-pressed state governments whose taxpayers must foot the high cost of highway maintenance without help from Washington.

News accounts of Mr. Turner's testimony mention $300 million as the estimated cost of upgrading the interstate system to accommodate the bigger tractor-trailer rigs that are proposed. That is no small sum, to be sure, but critics of the truckers' bill have put the probable cost (including maintenance) at closer to $3 billion.

Whatever the figure, it is more than taxpayers ought to have to bear for the benefit of an industry that many believe is oversubsidized already. But even if one joins the Nixon administration in ignoring this not unimportant factor, there remains the even more important safety element about which it acknowledges misgiving. That it can give the truckers' bill even conditional support in these circumstances is, as one congressional critic has aptly expressed it, truly incredible.

[WAVE editorial, Aug. 21, 1969]

TRUCKS: THEY'RE PLENTY BIG ENOUGH

Trucks play a vital role in transporting the food, produce and materials that keep our complex society moving and growing. For this WAVE salutes the trucking industry. But we cannot endorse the industry's effort to win congressional approval of legislation to permit bigger and heavier trucks on interstate highways.

The American Trucking Association, which sponsors the bill, wants to use trucks 10 feet longer, six inches wider and 35,000 pounds heavier on the interstate roads. The ATA says the bigger trucks could, by hauling more cargo, help keep truck shipping rates from going up. And Paul Young, Executive Secretary of the Kentucky Motor Transport Association, says that without wide use of bigger trucks rates are sure to go up.

While bigger trucks might let the industry operate more economically, there are major flaws in the truckers' arguments. For one thing, public safety would certainly suffer. The Federal Highway Administration says trucks of over 60,000 pounds weight are at least implicated in 19 percent of all highway fatalities. Yet trucks represent only seven percent of the vehicles on the roads.

Another factor is highway maintenance. The Bureau of Public Roads estimates that passage of the truck size increase would add nearly six billion dollars to expected cost for repair and construction on interstate roads in the first ten years. And all the talk about bigger trucks using the interstates ignores the fact that they must also use the smaller and less durable secondary roads to get onto and off of the interstates. That would result in higher state outlays for road maintenance. And the hazards of bigger trucks on secondary roads are even greater than for the interstates.

We hope Congress will reject the industry's bid for bigger and heavier trucks just as it did in 1968.

WOMEN'S WEEK

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. CONTE. Mr. Speaker, the past half-century has witnessed important changes in the status of women in our society. These dramatic changes have been reflected in the labor force. This trend toward increased employment becomes evident if you consider the statistics.

For the most part, the change was gradual. It was World War II, with its sudden demands on manpower resources, which gave women the impetus needed to work outside the home under socially acceptable conditions.

Due to a prospering national economy, and a better climate of acceptance of women as part of the Nation's work force, there has been a 4-million rise in the number of women workers in recent years.

The biggest step in this direction was the passage of the Civil Rights Act of 1964. Title VII of that act prohibits discrimination in employment on grounds of sex. The law provides that no woman can legally be discriminated against because she is a woman.

Women have made considerable headway in the face of seemingly insurmountable barriers. The time may not be far off when the public will ask why a woman is not working rather than why she is.

CO-OP AT DREXEL

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. EILBERG. Mr. Speaker, the Drexel Institute of Technology in my city of Philadelphia, is an institution which has long commanded my admiration and respect.

Drexel has a tradition of innovation and imaginative administration. One of its programs, the work-study cooperative or co-op plan, provides a perfect example.

The program at Drexel is now in its golden anniversary year and it is as relevant today as it was back in 1919.

One of the more compelling features of this program is the opportunity it provides young people, working within the system, to see and judge the system firsthand. Having had this opportunity, very few Drexel men and women drop out, an interesting commentary in itself.

Judgments based on hearsay are inadmissible in our courts because traditionally they have been inaccurate, something our youth, eager to judge us all, should keep in mind.

Drexel's co-op program gives a young man or woman a chance to judge for themselves.

With the unanimous consent of my colleagues, I enter in the RECORD an excellent article about the Drexel program written by John J. Tully of the institute for the summer issue of Pennsylvania Business, the official magazine of the Pennsylvania State Chamber of Commerce:

CO-OP AT DREXEL

(By John J. Tully)

Michael von Moschzisker, whose column, "Light and Lively" runs in the Philadelphia *Bulletin*, recently asked: "How can we ease student unrest? By abolishing the draft? Improving our values? Relaxing campus rules? Clearing channels of communication between administration and students? Naming students to boards of trustees?"

He answered his questions by pointing to Drexel's Co-op system as one way of helping students feel that they are part of things. And co-op is the keystone of Drexel's educational program. Under the fifty-year old plan, for a period of five years, 98 percent of Drexel's day undergraduates spend alternating three or six month periods in Drexel's labs and classrooms and on-the-job in business, industry or government.

By the time he graduates, a Drexel student has had a full, intensive undergraduate program, plus 18 to 24 months of on-the-job education and experience with one or more of over a thousand companies or government agencies, most in Pennsylvania but also spreading from the Arctic Circle to South America.

Many people think of co-op as a work-study program that helps a student earn his tuition, and to some extent it does that. Last year, 3500 Drexel co-ops earned more than $8,000,000, most of which was spent in Pennsylvania for tuition, clothes, rent, cars, and general expenses.

For Drexel, however, this is incidental. The primary reason for the program is to enable the student to apply his academic education to practical problems, to get firsthand experience early in his college program to help him determine whether his choice of a career is a wise one. It provides the cooperating industries with a steady source of intelligent college manpower that is a high value, low cost training program, all the while giving the student an appreciation of the system that makes our economy tick.

Early co-op programs began at the University of Cincinnati, Drexel, Northeastern University, Antioch College, Georgia Tech and a few other institutions. Today there is a boom in cooperative education that is confirmed by every set of statistics. The latest figures from the National Commission on Cooperative Education indicate that there are more than 50,000 students in 133 colleges and universities in the United States in some kind of co-op program. In addition to getting an education, they are earning almost $90,000,000 a year.

Drexel was one of the first to adopt a cooperative education program in 1919. Fifty years later the program is the second largest in the country and one of the most respected. The Cooperative Education Association, made up of the 133 institutions, has its headquarters at Drexel. Stewart B. Collins, head of Drexel's co-op program, is also executive director of the organization.

Although Drexel has been a leader in the Co-op program nationally from its earliest years, it is not content to coast along and is again making an effort to broaden the program at both the undergraduate and graduate levels, in an effort to clarify and deepen the educational goals. In October 1968 there were 1377 engineering students in the Co-op Plan, 540 science students, 1265 students from the College of Business Administration, 194 from Home Economics, 21 from the Humanities and Technology Program and 22 graduate students "Co-oping" in physics and mathematics.

In a talk before the Cooperative Education Conference at Houston, Texas, Drexel's President William W. Hagerty said, "Drexel has had the cooperative program as an important way of life ever since the Co-op Plan was introduced by Drexel President Hollis Godfrey in January 1919.

"The Co-op Plan was given great impetus," Dr. Hagerty continued, "when President Matheson came to Drexel from Georgia Tech in 1921. Since that time Drexel has had four presidents, all of whom have enthusiastically supported cooperative education, through war and depression alike. The Co-op Plan has continually grown and in the process has strengthened our institution."

Dr. Hagerty noted, also, that the five-year cooperative business program student "seems to enjoy an advantage of about $80 a month in starting salary upon graduation, in comparison with the salary of the four-year business student."

It is equally significant, Dr. Hagerty pointed out, that "out of every 10 Drexel graduates, four go to work with the company for which they "co-op'd" and four out of the ten go on to graduate school."

Drexel now has full-time day and evening master's programs in all its colleges, doctoral programs in engineering and science and is developing methods to introduce cooperative education at these advanced levels.

The accelerating interest in co-op programs across the country reflects the urgent need for supplemental education towards earlier independence and acknowledges the maturing impact of practical experience on a student who wants to pay his own way.

Harry L. Buck, B.S. in E.E., Drexel 1934, vice-chairman of ITE Imperial and vice-chairman of Drexel's Board of Trustees, said of the Co-op Plan: "I am 101 percent for cooperative education It produces a healthy attitude towards work. It gives the student an understanding of his own capacities and the opportunities in industry. It gives him a five to eight year head start and a valuable insight into the problems of the working man."

Drexel's students have co-oped from Paoli to Peru, and while the majority work on their co-op assignments in the Delaware Valley, an increasing number are being offered co-op positions far from home.

For example, one electrical engineering junior spent a co-op period with a South American expedition under the Lamont Geological Observatory staff. He studied radiation of meteorites in the deserts and foothills of the Andes.

A young physics student worked in conjunction with the Applied Physics Laboratory of Johns Hopkins University and spent four months in the Artic Ocean on a satellite tracking mission.

A business administration major worked as an accountant and assistant manager of a hotel in Antigua, British West Indies. Another spent six months working in London on the complexities of the Common Market.

A fashion merchandiser in Drexel's College of Home Economics did her co-op assignment with La Rinascente, the leading department store in Milan, Italy.

While the number of co-ops in exotic places continues to grow, the majority continues to work close to home base, with such companies as Du Pont, General Electric, Philco, Ford, Pan American World Airways, for agencies of the federal government and departments of the Commonwealth of Pennsylvania.

W. Richard Webster, a business administration major earned "Campus Man of the Year Honors" from Provident Mutual Life Insurance, making him the outstanding Provident college agent in the country. Stephen Palladinetti, an electrical engineer, was named "Co-op Student of the Year" by the Naval Air Engineering Center which employs co-op students from colleges across the country.

Another Drexel engineer, Martin McKinley, earned a special letter of commendation from Pan American World Airways for his outstanding work with their telemetry engineering group, and Barry Block, a Drexel physics major received a commendation plus a monetary award from General Electric for devising an automated data reduction system.

The Drexel Co-op plan offers many practical advantages and many educational opportunities. Perhaps one of the most important is that the student brings back to the classroom new ideas, newly learned techniques, the maturity gained from working in the "real world," the stability that is too often lacking in a "student ghetto."

Alfred North Whitehead, the British philosopher and mathematician, once said: "For successful education there must always be a certain freshness in the knowledge dealt with. It must either be new in itself or it must be invested with some novelty of application to the new world of new times. Knowledge does not keep any better than fish. You may be dealing with knowledge of the old species, with some old truth, but somehow or other it must come to the student, as it were, just drawn out of the sea and with a freshness of its immediate importance."

After fifty years of Co-op, Drexel is convinced that it has the key to a fresh, successful education.

SALUTE TO NATIONAL BUSINESS WOMEN'S WEEK

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mrs. SULLIVAN. Mr. Speaker, 50 years ago this past July, an organization was formed in the city of St. Louis which has grown to be one of the largest groups of business and professional women in the

country. It is the National Federation of Business and Professional Women's Clubs, with a membership of 180,000 in all of the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands.

During this week of October 19 through the 25th, they are observing National Business Women's Week when the members of the federation salute the achievements of all business and professional women in their communities by means of congresses of career women leaders.

During the entire span of its existence, the national federation has sought to elevate the standards of women in the business and professional fields and many of the women leaders of today were the youthful members of a few years ago who received inspiration and guidance from their association with the organization.

It is a privilege for me to salute the members of the National Federation of Business and Professional Women's Clubs and its 180,000 members as they observe National Business Women's Week.

DATELINE: SAIGON

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. DUNCAN. Mr. Speaker, I would like to place in the RECORD a story filed from Saigon and printed in the October 14 Washington Daily News. This item spotlights the two Vietnam wars—the one being fought in Vietnam and the one being carried out in the United States. Especially important here is the American soldiers' feelings about the war they are fighting in the jungles of Vietnam.

The story follows:

As tomorrow's war "moratorium" will demonstrate, there are two Vietnam wars—the one Americans fight in Vietnam, and the one Americans fight in the U.S. Observers here say the decisive battleground is in the U.S.

They point out that short of a highly successful Communist offensive, which is extremely unlikely, or a dramatic allied strategy change, such as renewed bombing of North Vietnam, the killing war in South Vietnam is apt to rock along in its fight-lull-fight rhythm must as it has been, at least until many more U.S. troops are withdrawn.

. . . As the President warns Americans not to buckle and run, protesters prepare to hit the streets, many of them demanding immediate, unilateral withdrawal of all American troops. That translates here as "bugout."

It is difficult to find an American soldier here who wants to leave Vietnam that way, or as one GI put it, "with our tails dragging." It is difficult to find out—even among those most disgusted with the war—who wishes simply to abandon the South Vietnamese to a Communist bloodbath.

It is difficult to find one who thinks the value of the American word would be worth a dime anywhere in the world if they did, or that a humiliating U.S. defeat by a blustering Communist midget would do anybody but the Communists any good.

These consequences are apparent to most Americans here, and they are not acceptable. It is largely a matter of national backbone. Most express hope that President Nixon sticks to seeking a reasonable solution to the war.

Many here feel that some of the protesters would do well to focus their moral wrath less on President Nixon and more on the Communists.

It is the Communists, they stress, who are killing Americans. It is the Communists who butchered, as a matter of policy, the civilians of Hue and so many other places, and it is the Communists who will murder methodically thousands more Vietnamese if the U.S. totally, immediately and unconditionally abandons them, as many protesters advocate.

Many here, eyewitnesses to the war, have become anti-war in the truest sense, but they have also become resolutely anti-bugout.

WHAT IS PURPOSE OF MORATORIUM?

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. CHAMBERLAIN. Mr. Speaker, the controversy over the true meaning and purpose of the recent moratorium will undoubtedly go on for some time. The Jackson, Mich., Citizen Patriot devoted its editorial page on Wednesday, October 15, to this question in a particularly well stated argument and I commend it to the attention of my colleagues:

WHAT IS PURPOSE OF MORATORIUM?

Today is "Vietnam Moratorium Day" in America, which has been billed as massive protest by Americans against this country's involvement in a land war in Southeast Asia.

If it lives up to advance notices, the day will see literally millions of Americans staying away from school or work in a demonstration for peace. Although peaceful methods are embraced by the sponsors of the protest, radicals who are out to destroy the American way of life may find it difficult to refrain from the practical application of mob psychology they have used on many regrettable occasions in the past. If they can bring about the spilling of blood, they will be happy.

The over-riding question as this country goes through a shattering emotional experience is: What is the purpose of the moratorium?

If it is to put the American people on record as favoring peace in Asia—and everywhere else in the world—well and good.

No one can quarrel with that objective. Every American desperately wants an end to the killing in Vietnam (and Laos, Thailand and the Middle East).

But is that the prime objective? Do the sponsors have other purposes, such as the political destruction of President Richard M. Nixon?

Do the architects of the moratorium want to force this government to cut and run immediately, leaving American forces to go through a Dunkirk-type evacuation and leave the hundreds of thousands of South Vietnamese who truly oppose communism exposed to the type of genocide of which the North Vietnamese Communists, under their late leader, Ho Chi Minh, have proved themselves so capable?

Are they determined to refuse President Nixon his chance to implement what is emerging as a plan for phased withdrawal from the war, or are they determined to force Americans out of Vietnam immediately and thus assure a total victory for communism in Southeast Asia; without giving the South Vietnamese a chance to save themselves?

There are of course no pat answers to the above questions. The prominent participants in, and the sponsors and supporters of, the Vietnam moratorium are a mixed bag. They range from high-ranking politicians who long have taken a dim view of the war and see a chance for a free ride on a popular issue, to hard-core revoluntionaries who want nothing more than a humiliating defeat of America in Vietnam. They would rejoice on the day the red flag replaces the Stars and Stripes over the nation's Capitol.

Sorting the revolutionaries from the truly concerned Americans is not easy, especially since they seem to be making common cause today.

Certainly the Vietnam War is a mess. As the pages of contemporary history unfold America's involvement looms as a tragedy of errors, largely due to dominance of political reaction over reality in the decisions made in the White House.

Lyndon B. Johnson and the Congress which generally has become so critical of the war and Mr. Nixon, shared in the mistakes.

When he became President, Richard M. Nixon was faced with an accomplished fact in the nature of the war and the commitment to end it—somehow.

He has moved cautiously, trying to find the formula for withdrawal without disaster. The solution escaped Mr. Johnson and he ran out of time before he could find it.

President Nixon has made some progress toward ending the war. His phased withdrawal of troops and passing of the burden to the South Vietnamese with the understanding that this is their war to win or lose, represent steps in the right direction. The results of his program have not been totally satisfactory, but at least substantial movement toward ending America's participation in the war has taken place.

The Vietnam moratorium unquestionably is an embarrassment for the man who has to make the decisions; who cannot engage in popular rhetoric without considering the actual consequences on the battlefield and in international diplomacy. The buck, as Harry S. Truman was fond of saying, stops at the President's desk.

In the final analysis, a massive expression of American public opinion on behalf of peace is not inherently bad. This would be especially true if its sponsors also would call on the enemy to move toward peace and would attempt to impeach him in the court of world opinion if he did not.

However, a demonstration aimed solely at forcing the President of the United States to take precipitous action in disengaging from an unpopular war can only do incalculable harm.

That may not be the true purpose of the moratorium, but the evidence is disturbing. We can only hope that the events of this historic day prove that good sense and judgment are behind it and that it does not turn out to be an invitation to disaster.

HUNGER HURTS

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mrs. DWYER. Mr. Speaker, hunger hurts. It hurts the child cramped by an empty stomach, the child without energy or interest enough to run and play. Hunger sets him up as the prime target of disease and illness. Chronic hunger cripples him physically and mentally. And chronic hunger cripples our Nation. It cheats the child out of the responsible,

contributing life he could lead. It cheats America out of the contributions he could have made.

President Nixon has asked Congress to help assure that every American family will have a nutritionally complete diet—that the poorest members of our national community be provided with food stamps free of cost. The commitment to end hunger in our Nation is one in which we can all join the President without regard to party. Hunger is beyond politics; it calls for action now, on a nonpartisan level. I urge that the Congress join with the President in moving to end the curse of hunger in our Nation.

NATIONAL BUSINESS WOMEN'S WEEK

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. MIKVA. Mr. Speaker, the week of October 19 through 25 is National Business Women's Week. In connection with this week of national observance, the Business and Professional Women's Clubs has made available to Members of Congress its national legislative platform for 1969–70. The club has 180,000 members in every State of the Union, Puerto Rico, the Virgin Islands, and the District of Columbia.

I support the idea of a fuller and more significant role for America's business and professional women. Recently in Chicago, I released a statement which embodies that thought:

As the father of three women and the husband of one, I have been made very conscious of the fact that women are the only group in this country which manages to remain a minority while comprising a majority of the population.

I am in favor of constitutional guarantees as well as legislation on all levels to deal with discrimination faced by women as a class in education, employment, childbearing and other areas where arbitrary distinctions are made between the sexes. Our laws as well as many of our underlying attitudes and assumptions must be scrutinized closely with an eye towards erasing the unequal and sometimes even insulting treatment women receive in this society.

Women's rights need to be asserted, protected, and guaranteed.

Mr. Speaker, the National Federation of Business and Professional Women's Clubs adopted at its July 20–24 convention in St. Louis, Mo., its national legislative platform for 1969–70. I insert that platform at this point in the RECORD for the benefit of my colleagues. It is a formidable program for action.

The document referred to follows:

NATIONAL LEGISLATIVE PLATFORM ADOPTED BY THE NATIONAL CONVENTION JULY 20–24, 1969, ST. LOUIS, MO.

ACTION ITEMS

Item 1. Constitutional Amendment. Support legislation to amend the Constitution of the United States to provide that equality of rights under the law shall not be denied or abridged on account of sex.

Item 2. Actively work for pending legislation providing for: (a) a broadened head-of-household benefit under the Internal Revenue Code; (b) increased personal exemption and credit for dependents under the Internal Revenue Code; and (c) a more equitable distribution of the tax burden.

Item 3. Propose and support legislation to provide: (a) uniform laws and regulations for men and women as to working hours, working conditions, rates of pay, equal employment opportunity, including retirement for age; (b) equal treatment for working men and women in the area of survivor and retirement benefits; and (c) increased child care deduction under the Internal Revenue Code.

Item 4. Propose and support state legislation to provide for uniform jury service and uniform qualifications in the selection of men and women to serve on grand or petit juries in any court.

Item 5. Propose and support legislation to bring about more effective crime control and law enforcement.

POLICY ITEM

Support measures within the framework of the Constitution of the United States that promote peace and strengthen national security and make more effective the United Nations and such other international organizations of which the United States is a participant, without relinquishment of our basic freedoms.

Special note is called to the United Nations Convention pending before the United States Senate on the political rights of women and to the long-standing support for ratification of this convention by the Federation.

PROCEDURE

State federations and clubs are urged to review the National Legislative Platform as published in *National Business Woman.*

Who May Submit Proposed Changes: National Legislation Committee, Executive Committee, National Board of Directors, State Federations. Clubs may also submit suggestions for changes in the National Legislative Platform, but such proposals must be submitted through their state federations for review and possible recommendation.

Procedure For Submitting Proposed Changes:

State federations shall submit proposed changes to the National Executive Offices within ten days after adjournment of their state conventions. Such proposals shall be signed by the state president and forwarded by certified mail with return receipt requested.

The Executive Committee, National Board of Directors and the National Legislation Committee shall submit proposed changes, properly signed, to the National Executive Offices at least 30 days prior to the date the National Legislation Committee convenes, except in cases of emergency. If such proposals are mailed, they shall be forwarded by certified mail with return receipt requested.

THE LATE HONORABLE ANTONI NICHOLAS SADDLAK

SPEECH OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, October 20, 1969

Mr. ROONEY of New York. Mr. Speaker, I was saddened to learn of the passing of the Honorable Antoni Nicholas Sadlak who for 12 years represented the people of the State of Connecticut here in the House of Representatives. I had the pleasure of knowing Toni quite well during those years and always found him a friendly, diligent, hardworking, and constructive Member. He had many friends here and we shall all miss him. To his dear wife and children and family I express my deepest sympathy in this time of sorrow.

MOBILIZATION FOR REVOLUTION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. RARICK. Mr. Speaker, the National Education Program of 900 East Center Avenue, Searcy, Ark., has issued a special letter having to do with highlights, shocking statements, and activities in the revolutionary conference held in Oakland, Calif. on July 18, 19, 20. The National Education people reduced their report from more than 20 hours of taped speeches and instructions on how to gain control of and replace the present police forces in all of the cities of America.

I include the national program letter, "Mobilization for Revolution":

MOBILIZATION FOR REVOLUTION

With the backing of (and undoubtedly under the direction of) the Communist Party USA, a revolutionary army is being formed within the United States to seize control of American institutions, and, finally, the government itself. This is not a bad dream; it is a shocking reality. It is not fiction; it is fact. The National Education Program finally has the evidence in its hands—the actual voices (and in some cases, the motion pictures) of well-known Communist Party leaders and their comrades, the Black Panthers, Students for a Democratic Society and other elements of the revolutionary force being mobilized.

We had a representative in the auditorium at Oakland, California on July 18, 19, 20, when a unification of revolutionary forces was achieved and a step-by-step program was launched toward the achievement of the violent overthrow of the United States government. We obtained from the central microphone, mounted on the Conference dais, a recording of every word spoken. We have more than 20 hours of taped speeches and instructions on how to gain control of and replace the present police forces in all the cities of America; instructions on "killing pigs" (policemen) from a nationally-prominent "revolutionary" lawyer, and pledges of support from Communist forces in nations around the world.

The highlights and the most shocking statements and activities at the Revolutionary Conference called by the Black Panther Party for the formation of "A United Front to Combat Fascism" in the U.S.A. have been condensed into a 60-minute tape (one 7-inch reel at 3¾ speed) and we are offering this tape for sale at production cost ($10) as a public service. Particularly because the American press virtually ignored the conference, which was attended by an estimated 4,000 delegates representing approximately 300 revolutionary movements within the nation, it is vitally important that every American of high school age and up hear this tape. We have reason to believe that its entire contents is not available anywhere else in America.

Government officials in Washington who have heard it have asked for copies of the tape condensation and of the entire 20 hours of recordings. Acts of treason as revealed in the condensed tape may move the Justice Department toward some penalizing and protective actions.

With the public dissemination of this tape, newspaper editorialists and headline writers (and many "reporters") can no longer say: "Oh, this rioting on the campuses is merely 'student unrest,' the revolutionaries are merely 'dissidents' who want only to reform university and college policies; and the continuing ambushing of metropolitan policemen has no national significance." The tape proves such statements to be false. The two inside pages of this Letter contains excerpts. We are planning for an expected distribution of thousands of copies of the tape.

FROM THE NEP TAPE "MOBILIZATION FOR REVOLUTION"

Herbert Aptheker, Communist

Keynoter of the Revolutionary unification conference was Dr. Herbert Aptheker, the theoretician of the Communist Party USA and considered by top Congressional investigators as the "brains" of the revolutionary forces within the United States. His appearance as keynoter dramatized the power wielded over the assembled 300 revolutionary groups by World Communism, and especially over the Black Panthers, who arranged the conference. Here is an excerpt of Aptheker—from the tape:

"I deeply appreciate the honor of speaking here this evening. For me the honor is multiplied since J. Edgar Hoover has denounced this meeting's main initiator, the Black Panther Party, as, quoting: '. . . without question the greatest threat to the internal security of the country.' If J. Edgar Hoover condemns something, it must be good. And if J. Edgar Hoover condemns something in terms of great severity, then it must be very good indeed. To be attacked by the chief cop of America is a magnificent tribute. May the Black Panther Party in the future continue to merit the diatribes issuing from his foul mouth. In a way, in a distorted way, J. Edgar is right: that is, black militant men and women certainly do represent a decisive challenge to the internal security of the United States—if such security is identified with the interests of its present ruling class." (applause)

Archie Brown, Communist

Archie Brown, one of the most notorious Communists in America, a leader of the Communist attack upon the House Un-American Affairs Committee in San Francisco 10 years ago, commanded celebrity attention at the conference. From the tape, Brown says:

"Thank you, Roscoe. I do want to say, number one, that I'm most grateful to the organizers of this conference for being able to be here—because it's about time somebody realized the need for a United Front against reaction and fascism and it's wonderful that the organizers—the Black Panthers—organized this conference. The point I want to make is that when people see their needs and want to fight they are going to fight—injunctions or no injunctions, police or no police, and this working class is going to organize and fight in its majority, and it's going to win. And it's going to lead the way to take over the government and make it a government for the workers and for the people. I think we can help win the working class and their unions to a program to defeat fascism—and for progress and socialism in this country." (When a Communist calls for progress and socialism, he is calling for Communism as it is practiced in the Communist world today.)

SDS: "TAKEOVER!"

Jeff Jones is the newly elected national Inter-organizational Secretary of Students for a Democratic Society (SDS), which Mr. Hoover has branded "Communist-Anarchist," and which too many newspapers mother and protect with such nonsense as "student unrest." He tells explicitly how SDS works for campus violence as a part of World Revolution in the following statement at the conference:

"We feel that what's happening on the campuses is intricately tied with what's happening to the people who are oppressed within the United States and throughout the world by the system of imperialism and its fascists-terroristic oppression. The fight that's being waged on the campuses, when it's waged solely on the campuses, is a fight that can end up only on the campuses. That's not where we're at (SDS) at all. That's not where we as an organization of young revolutionaries are trying to move the student movement. We are trying to link it up to working class movements with support for the right of self-determination of black and brown people in this country and of all people oppressed and colonized by U.S. imperialism throughout the world as the primary key upon which we're trying to build our movement.

"We don't care that he (Senator McClellan) is activating or proposing new laws. Our response to those new laws is going to be to come back this fall on the campuses after a summer building, organizing projects with revolutionary working class youth throughout this country—our program is going to be to come back on the campuses this fall and hit them harder than they've ever been hit before. We say that people who have been oppressed and colonized by imperialists and fascism have the right to get into those institutions and by doing that are going to change the class nature of those institutions until we've destroyed capitalism."

"THE FINAL STRUGGLE"

Now hear this—the SDS spokesman calling for armed attacked upon the United States:

"The struggle that is going to ultimately defeat United States imperialism, the imperialism that is affecting the people of the entire world, is going to be an international struggle, it's going to be an armed struggle, it's going to be a struggle that's going to have to take place in the Third World against U.S. imperialism and in the mother country (the U.S.) against U.S. imperialism. But we must be clear on how the final struggle will be waged. Students must be opening up the campuses to the working class—must be going into the working class communities, becoming part of the proletariat and must be getting ready for armed struggle." (This is a war cry—from a Campus agitator whom much of the American press describes as "a dissident.")

Pick Up The Gun

Don Cox, Field Marshall of the Black Panther Party (whose hundreds of well-armed cadres wear the trappings of Storm Troopers) exposed the true nature of his powerful forces: "All power to the people! All Power to the people! Huey P. Newton (Black Panther official in prison for killing a policeman) says: 'Any unarmed people are slaves or subject to slavery at any given moment—the racist dog police must withdraw from the black community or face the wrath of the armed people.' The Black Panther Party has a motto—it is a quote by Chairman Mao Tse-tung of the Chinese Communist Party: 'We are the advocates of the abolition of war. We do not want war. War can only be abolished through war. In order to get rid of the gun it is necessary to pick up the gun!' Power to the people!" (great applause)

Sovietizing U.S. Army

Trouble has erupted within the U.S. Armed Services wherever American servicemen are stationed—as never before in history. One of the most chilling statements made at the Oakland Revolutionary conference was that of Andy Stapp, national chairman of the American Servicemen's Union. He expects, with revolutionary cadres, to foment disorder and finally overthrow the officer corp in the services, thus taking over the final U.S. defense against revolutionary overthrow. From the tape:

"In the United States itself and around the world the troops of the U.S. Imperialist army are also learning about how to fight against fascism. The ASU is playing a leading role in this fight, this organizing drive. We have chapters on 60 large military installations in the U.S. and 40 overseas. Just as the Bolshevik Party organized through the Soviets in 1917 against the Czar and the repressions in Russia, the American Servicemen's Union is organizing Soviets within the U.S. Imperialist army. Right now the ASU is building an army within an army, a workers militia inside the U.S. Army, and along with the Panthers and others we're going to make that revolution. Power to the People!" (In the tape, he gives details of successful revolts by GIs, agitated by his revolutionary cadres.)

Comrade Women

Carol Henry, one of the leaders in Black Panther women activities:

"The lines of demarcation have been clearly drawn between the pig oppressor and the people. And as Comrade Mao Tse-tung says: 'Fear no sacrifice. Surmount every difficulty—and win, win, win to victory.' I must remind you that there cannot be a successful struggle against fascism unless the broad masses of women are drawn into it."

Marlene Dixon, Doctor of Sociology, UCLA:

"The radical women's liberation movement was created by an international revolutionary movement and is part of it. As a very great woman, assassinated by the German government as a dangerous revolutionary, Rosa Luxemburg, once said: 'The history of revolutionary struggle is the history of failure, but you only need to win once.' And we shall win. All power to the people!"

Ora Williams, Colorado women's leader:

"Chairman Mao says that: 'A revolutionary must have largeness of mind. He should be staunch and active, looking upon the interest of the revolution as his very life, as subordinating his personal interest to those of the revolution, always and everywhere . . .' We have a five weeks old daughter, who has been instilled with revolutionary principles—this was inborn in her from revolutionary parents . . . She was born a revolutionary and will die one. The Red Book (of Mao Tse-tung) is my bible, the gun is my staff. All power to the people!"

Lawyer Says "Shoot"

William Kuntzler, lawyer defender of Black Panther gangsters and other law breakers of the "New Left" incites the Negro community in America to aggressive armed action against the police:

"If you have the power to defend yourself by weapons that are legal, then you have the power to start to rid the ghetto of the overriding fear of invasion that paralyzes so much action. You have the power to put an end to one of the chief drawbacks of all black communities—the control of the black community by white policemen . . . It is almost worse to be ready and able to defend yourselves, and to freeze on the trigger when the time comes, because then you will have told the power structure that they need not fear you."

Hewitt comments: "You know, we always say, it's a very old saying of all people, that 'the best defense is a good offense.' That's why we dropped that 'self defense' (in the Black Panther Party name) a long time ago. And there's no need for it in the name of the Black Panther Party."

International Mobilization

Communist Parties and Communist organizations throughout the world sent "greetings" to the revolutionary conference. Here is the communication from the Tokyo Communist League, Tokyo, Japan, as read

by Raymond "Masai" Hewitt, "United Front" conference chairman:

"Communist League sends strong solidarity on behalf of Japanese militants, revolutionary workers and students. Today, modern imperialism is rapidly revealing its fascistic nature all over the world. We must together establish our proletarian dictatorship to combat and destroy fascism-imperialism . . . our struggle should be a violent one to resist and destroy the violence of establishment power. We proletariat of the Brown nations must form a practical link with the struggle for liberation in the Third World and eventually to win in the struggle for world revolution . . ."

Hewitt remarks: "We have reliable information that these revolutionary young brothers and sisters in Japan control almost all the major campuses within Japan. They have invited the Black Panther Party to send representatives. Well, we'll be looking forward to that."

SUMMARY

The National Education Program has never before had in its possession a document as important as "Mobilization for Revolution"—the 60-minute tape of the highlights of the Revolutionary "United Front" conference at Oakland July 18, 19, 20. It is my strong belief that if enough Americans hear this tape (and then see our documentary motion picture which features the conference as well as other revolutionary gatherings and activities—scheduled for release late this fall), there will come about a change in the attitude of our government leadership toward World Communism, subversive forces working within our nation, and particularly toward "campus strife"—which is largely traceable to SDS and other revolutionary forces tied in with the world revolution directed from Moscow and Peking. Every reader of this Special edition of the NEP Letter should obtain a copy of this tape and dedicate himself to reaching every person in his community with it. A nation thoroughly informed on the nature of its Enemy, the plans of the Enemy, and the tactics of the Enemy surely can defend itself from the Enemy. The United States is not yet adequately informed or adequately defending itself as the Enemy's strength grows. We are continuing to lose the great battle for man's freedom—a battle we can and should be winning.—Dr. George S. Benson

VIETNAM COMMUNISM'S WAR

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. WYMAN. Mr. Speaker, it is important that Americans understand that Vietnam is a part of communism's continuing war against the West. It is not President Nixon's war.

President Nixon did not send the troops that are in Vietnam to Vietnam. His predecessor did that and much of today's criticism that President Nixon is not getting out of Vietnam fast enough is encouraged by politicians who were gung ho for L. B. J. sending a half million Americans over there.

This war is not a war at all in the sense of offensive action on the part of the West or its allies. When Vietnam was partitioned, the United States committed itself to support South Vietnam if it was attacked by North Vietnam. South Vietnam was attacked. It has been the subject of continuing Communist aggression and subversive infiltration from the North and neighboring states. We honored our commitment.

Now President Nixon is acting to transfer the defense of South Vietnam to the South Vietnamese and to withdraw Americans honorably. He is seeking commitments from the enemy, presumably not only to let the Americans withdraw without attack but to protect South Vietnam from attack after we have gone.

Whether such a commitment will be honored more in the breach than in the observance is a good question, but this is communism's war, not Nixon's war as has been well pointed out in a recent statement by Mr. Wilson C. Lucom, president of the U.S. Anti-Communist Congress, and corroborated by the distinguished columnist David Lawrence in today's Washington Star.

Mr. Lucom's statement and Mr. Lawrence's column follow:

STATEMENT OF MR. WILSON C. LUCOM

Vietnam is communism's war not Nixon's war. Hanoi, Moscow and their faithful allies in the United States are now attempting to pin the label "Nixon's war" on the Vietnam conflict.

Whose war is it and who started it? It was started by Ho Chi Minh, a man who dedicated his entire adult life to the cause of totalitarian communism. It has been perpetuated by the Communist States, U.S.S.R. and Red China, who have supplied the Communist aggressors in Vietnam with all the war materiel needed for the subjugation of the people of South Vietnam.

Peace would have come to Vietnam fifteen years ago if the Communists had not been determined to impose their oppressive system of dictatorship on all the Vietnamese people including those who did not want to live under Communist dictatorship.

Anatoly Kuznetsov, recognized by the rulers of the U.S.S.R. as their leading writer until his escape to freedom has said: "I consider that the war continues in Vietnam only because of the Soviet Union." (CBS interview broadcast 9/2/69.)

The widely-read negro columnist, Carl Rowan has written: "Any fair-minded observer must admit that it is Nixon who has made the concession to peace and it is the Communists who are obdurate." (Washington Star, 10/12/69.)

The true label is Vietnam communism's war not Nixon's war.

The Communists expect to win their war by deluding and confusing the American people. They are doing this through those prominent people in our midst who tell us we are doomed to defeat, that our defense of freedom for the people of South Vietnam who do not want to live under Communism is dirty and unjust.

This is no secret. The Communist Central Committee of North Vietnam on September 2, 1969, sent a telegram, published in the Communist Daily World (9/3/69), in which it thanked the organizations and prominent Americans who had made a "positive contribution" to the defeat of the United States which strongly encourages their people in their struggle.

We urge these organizations and prominent Americans to stop making positive contributions to the Communist cause and to stop giving encouragement to the Communists.

True peace can only be achieved by showing the Communist that they cannot win by their propaganda activities in the United States what they have not been able to win on the battlefield. We further urge all thinking Americans not to be misled by Communist propaganda but to tell it like it is, this is communism's war not Nixon's war.

[From the Washington (D.C.) Evening Star, Oct. 21, 1969]

RED ROLE IN VIETNAM NEEDS AIRING

(By David Lawrence)

How many Americans know who are the real enemies of the United States in the Vietnam war? Two governments have helped the North Vietnamese to kill or wound tens of thousands of Americans in the last five years. So, when an enemy boastfully and officially acknowledges the military assistance it is giving the Hanoi government, the item might at least be expected to make news to our front pages.

This correspondent read many newspapers last Sunday morning and nowhere found printed a dispatch distributed by the United Press International wire on Saturday night which read as follows:

"Moscow.—A North Vietnamese delegation led by Premier Pham Van Dong left Moscow Saturday to return to Hanoi.

"Soviet Premier Alexei Kosygin and other officials saw off the North Vietnamese at the railway station. The North Vietnamese will visit Volgograd, the former Stalingrad, en route to Hanoi.

"The delegation arrived last Monday and during its stay signed a new agreement for Soviet military and economic aid to North Vietnam for the coming year."

Reuters News Service sent over its wires in this country yesterday afternoon the following dispatch:

"HONG KONG.—Russia declared its readiness to give all necessary assistance to the Vietnamese Communists until they achieve complete victory in South Vietnam, a joint Soviet North Vietnamese communique released today said.

"The communique issued at the end of a one-week visit to Russia by a North Vietnamese delegation led by Premier Pham Van Dong said . . . Russia fully supported conditions put forward by the Vietnamese communists for a settlement and demanded the U.S. put an end to its aggression and withdraw its troops from South Vietnam 'completely and unconditionally.' "

Developments of this kind have, of course, been reported in the press hitherto when similar action was taken. But somehow the information has never been given attention inside the United States, especially by dissenters who have been engaging in antiwar "demonstrations" and are supposed to be readers of the news in the press.

Yesterday morning, some papers did print on the front page an Associated Press dispatch on the subject which said that, according to U.S. government sources, the level of Soviet arms aid to Hanoi has dropped considerably in recent months but that this does not mean "any abandonment of Moscow's policy of large-scale material support for Hanoi's war effort."

The North Vietnamese, of ccurse, need less and less anti-aircraft equipment now because the United States has halted the bombing of the North. Also, the ground war in the South has been slowed down. The Associated Press said further:

"According to estimates from U.S. sources, total Soviet aid to North Vietnam reached a peak of about $700 million in 1967, of which about $500 million was military and $200 million economic. In 1968, the year in which U.S. bombing of the North was cut back in April and halted entirely in November, Soviet arms aid is estimated to have dropped to around $300 million."

But while military aid is being cut somewhat, economic aid is climbing. Red China is estimated to be continuing its assistance at the rate of approximately $200 million a year, more than half of which is in military items, primarily small arms and ammunition. Communist East Europe has been providing about $145 million of aid annually to North Vietnam.

Why hasn't this information been emphasized throughout the country? Why aren't the American people told how much the Soviets and the Red Chinese have done to bring about casualties in South Vietnam year after year? Do the critics in Congress approve of a continuance of diplomatic relations with any government that is actively helping the enemy?

What has the Senate Foreign Relations Committee done about this problem? Committee members snipe at their own government for trying to protect American troops in Vietnam by employing certain forces in Laos, but criticism of Russian and Red Chinese intrigue in Asia is being omitted. An open debate on Communist participation in the Vietnam war would be more constructive than the so-called "Moratorium" speeches that have been made in recent days inside and outside of Congress.

BLUEJACKETS GUARD OF THE UNITED STATES OF AMERICA—JUVENILE DECENCY IN ACTION

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. MURPHY of New York. Mr. Speaker, since its inception in 1936, the Corps of Naval Cadets of the Bluejackets Guard of the United States of America has provided patriotic, recreational, and educational youth activities for thousands of youngsters through its "juvenile decency in action" program. New York's leading naval youth organization, headquartered at 5206 Seventh Avenue, Brooklyn, N.Y., is to be saluted for its untiring efforts to alleviate juvenile delinquency, curtail teenage drug addiction, and encourage youngsters to complete their education. Last year the week of November 1–7 was proclaimed "Bluejacket Guard Week" in tribute to this remarkable nonprofit, nonsectarian organization serving boys and girls aged 8 to 18, and June 3 of this year was proclaimed "Bluejackets Guard Day" in the Borough of Brooklyn. I hope similar honors will be forthcoming in the days ahead. In further tribute to these young men and women, I include, under the leave to extend my remarks in the RECORD, the following citations from Bluejacket Day:

WELCOME ABOARD

In sharp contrast to the student sit-ins and youthful rebellion in general against all authority, which seems to be sweeping many of our Nation's youths underscored by their total disregard for personal appearance and good grooming; the parents of our cadets will have the personal gratification of observing their children wearing their uniforms with pride and deep respect for their God and Country.

Over the years our dedicated staff of officers have given their time freely and devoted their energies to inculcate our cadets with the knowledge that they will receive greater satisfaction in life through personal initiative than standing by waiting for a helping hand.

With over three decades of service to American youth, we sincerely believe our program of "Juvenile Decency in Action," exemplifies the immortal words of the late President John F. Kennedy, "Ask not what your country can do for you, but what you can do for your country."

Today, we see the members of the U.S. Armed Forces scattered over the face of the globe, in whose ranks are a number of our former bluejackets. Many of them are in Viet Nam, standing watch on the frontiers of democracy. To these gallant protectors of freedom—"Godspeed."

FRANK W. RICE,
Captain, Bluejackets Guard, U.S.A., Commandant.

BLUEJACKETS GUARD DETACHMENT

The Bluejackets Guard of the United States of America, was founded in 1936, chartered in the State of New York, and is a completely independent, non-profit nonsectarian naval cadet youth organization. Through our much publicized program of "Juvenile Decency in Action," we have devoted over a quarter of a century of leadership and service exclusively to the youth of America—exemplifying the finest principles of good citizenship and character building.

Almost daily, headlines about juvenile delinquency point to the need for a fine and active youth organization that can fill the leisure hours of energetic youngsters. The Bluejackets Guard has accepted this challenge by channeling their interests into wholesome activities and community service. Thus reducing the possibility of them falling into delinquent habits.

During the summer months when both the thermometer and youth crime rate soars, the Bluejackets Guard gives youngsters the opportunity to go to our naval youth center, known as Camp Alert Summer Naval Camp and located in Ulster County in the State of New York.

The Bluejackets Guard, U.S.A. has been commended by many prominent citizens, officials of Federal, State and local government, veterans' organizations, principals and teachers of schools, social and welfare workers.

CHIEF OF NAVAL OPERATIONS.

MESSAGE TO BLUEJACKETS GUARD, USA, ON THE OCCASION OF THEIR 33D ANNUAL REVIEW

The response of our young people to the challenges of patriotism and productive citizenship has never been more important to our country's future than it is today. Courage, loyalty and adherence to principle must be the trademarks of those who will inherit the leadership of our nation in years to come. I know that the young men and women of the Bluejackets Guard accept the challenge of service to their country and community with dedication and enthusiasm.

I extend to you on the occasion of your 33rd annual review my best wishes for success in this most worthy and important endeavor.

T. H. MOORER,
Admiral, U.S. Navy.

The COMMANDANT OF THE U.S. COAST GUARD,

Washington.

DEAR CAPTAIN RICE: On behalf of the United States Coast Guard, I extend my warmest greetings on the occasion of the thirty-third Annual Military Review of the Bluejackets Guard of the United States of America.

In these troubled times, your organization is to be commended for instilling the ideals of patriotism, discipline and service in the minds of the young people who will one day be our future leaders. I congratulate the Bluejackets Guard upon its splendid contribution to citizenship training and wish it many additional years of successful endeavor.

Sincerely yours,

W. J. SMITH,
Admiral, U.S. Coast Guard.

HUE MASSACRE FORESHADOWED RESULTS OF "BUG-OUT" BY THE UNITED STATES

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. PUCINSKI. Mr. Speaker, the Washington Post carried an excellent editorial recently by Mr. Joseph Alsop, which I highly recommend to my colleagues and those engaged in the Vietnam moratorium.

Mr. Alsop quite correctly points out the massacre of a couple of million South Vietnamese that would ensue if the United States would 'bug-out" and leave the South Vietnamese to their fate. On many occasions before this House I have pointed out the similarity between the bloody and brutal Hue massacre with the Katyn massacre in showing that the Communist tiger has not changed its stripes.

Of greater significance would be our eclipse as a great Pacific power which began more than a century ago and became firmly established after the Two World Wars. If we were to listen to those quislings and iconoclasts amongst us and accept a defeat in Vietnam—instead of backing our President to seek an honorable conclusion to this war—we would invite "wars of liberation" all over the world which would have cataclysmic effects.

For those who would endanger our institutions and civilization, I would like to quote Lord Macaulay when he commented on American institutions in a letter dated May 23, 1857, to an American friend, Henry S. Randall, who was preparing a biography of Thomas Jefferson:

> Either some Caesar or Napoleon will seize the reins of government with a strong hand; or your republic will be as fearfully plundered and laid waste by barbarians in the Twentieth century as the Roman Empire was in the Fifth—with this difference . . . that your Huns and Vandals will have been engendered within your own country by your own institutions.

Mr. Alsop's timely and excellent article follows:

[From the Washington (D.C.) Post, Oct. 15, 1969]

HUE MASSACRE FORESHADOWED RESULTS OF "BUG-OUT" BY UNITED STATES

(By Joseph Alsop)

Suppose the vociferous supports of the Vietnam moratorium get what they want. Suppose they are finally able to force what the President succinctly calls a "bug-out." Then what?

For the students who advocate a violent revolution in this country, the foregoing question has no importance, of course. They may be, indeed they are, irresponsible, self-intoxicated young fools. But they are at least more forthright than the senators and college professors and other bug-out advocates who pretend to be responsible persons, yet will not face the predictable consequences of the bug-out they are calling for so loudly.

The first consequence, as anyone can foresee, will be the cold-blooded massacre of a couple of million South Vietnamese who

have put their faith and trust in the United States. If anyone doubts this, he had better study the hideous massacre of about 3,500 old men, women and children that was perpetrated by the Communists when they occupied the city of Hue for a couple of weeks.

The Hue massacre was largely irrational. The people who were killed were not government officials, or soldiers in the South Vietnamese army, or even, in the main, blood relations of such wicked "imperialist lackeys." These people were instead buried alive, or mowed down with automatic weapons, or chained together and brained with mattocks in reprisal for Hue's infuriating failure to produce the "popular uprising" the Communists leaders expected.

A few were Catholics to be sure, and the Catholics in Hue were reportedly treated with particular brutality. There are above a million Catholics in South Vietnam today; and either they or their parents were brought down from the North by the United States in 1954, because it was correctly considered they need a safe haven in the South.

So what of them? And what of the million South Vietnamese who are now under arms for the Saigon government? And what of the hundreds of thousands of members of the People's Self-Defense Force in the villages who are regularly chosen as targets by the Communist assassination squads?

American intelligence has officially predicted that most of these people will be killed out of hand—the conservative predicted figure is about 1,500,000—after an American bug-out leading to a victory for Hanoi. Is that what Sen. Fulbright and Sen. Goodell really want; and if not, how do they propose to avoid it?

As to the wider political consequences of a bug-out they are clearly and very grimly set forth in the responses to the President from his ambassadors, to whom he long ago posed the question. These consequences, too, hardly bear thinking about.

They range from the rapid collapse of the position as a Pacific great power that the United States fought two previous big wars to establish and defend, all the way to a very serious increase in the risk that the Soviets will back the Arabs, whole-hog, in perpetrating genocide against Israel. Is that what Professor Hans Morgenthau wants? Or does he approve of genocide in South Vietnam, while opposing genocide in Israel?

Yet the worst consequences of a bug-out, as President Nixon has kept emphasizing to many people he has talked to recently, will be right here, at home in America. This is his most special, most personal reason for not wanting to be "the first American President to lose a war."

Any fool ought to be able to foresee that the first American defeat in war, followed by the grisly consequences overseas that have been described above, will be enough to poison our political life for a quarter of a century. The inquest after the alleged "loss of China" was poisonous enough. But it will come to seem temporary child's play if we quite needlessly lose the war in Vietnam. there will be a certain substance, alas, to the angry charge that all America's great efforts and sacrifices of these last years have been rendered fruitless by a "stab in the back."

Again, there has been more than a little colloguing with the enemy. So there will be raw material, alas, for those who will howl about a great conspiracy. Then, too, Hanoi's most obviously untruthful propaganda has been faithfully parroted by many Americans in the academic community, in the media and elsewhere, and this will become another topic for dire clamor.

The truth is that a great many seemingly intelligent Americans are now behaving like mindless lemmings. The danger to themselves is of course their own business. But they might at least consider the danger to all the values they pretend to cherish.

A TRIBUTE TO SENATOR PROXMIRE

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. KASTENMEIER. Mr. Speaker, my home State of Wisconsin is extremely fortunate in being represented in the Senate by two exceptionally talented and vigorous men. Increasingly, their strong positions on the vital issues facing our Nation are being appreciated by people throughout the country and, no less, by their own constituents.

Senator BILL PROXMIRE has been at the forefront of congressional attempts to curb needless and wasteful military expenditures. His efforts should be applauded by all Americans who realize that our Nation's real security does not lie in the acquisition of ever-increasing numbers and varieties of weapons, but in working for world peace and by building a more just society at home.

The constructive criticism of our bloated military expenditures expressed during the recent debate in this House and in the other body on the military procurement bill was to a great extent nurtured by disclosures uncovered by Senator PROXMIRE.

What small successes that have been accomplished in exerting greater congressional control over the military can be attributed to the courageous and untiring efforts of a growing number of dedicated Members and Senators who are shedding needed light on what has, until now, been a largely and intentionally obscured area. BILL PROXMIRE stands tall in their midst.

Mr. Speaker, among the many tributes and expressions of gratitude for Senator PROXMIRE's efforts that have come to my attention is one which appeared in the editorial page of my own hometown paper in Watertown, Wis. The Watertown Times of October 11 carried an editorial from the Racine Journal-Times entitled "PROXMIRE Versus Pentagon" which I am pleased to have printed below:

PROXMIRE VERSUS PENTAGON

It may be like a flea attacking an elephant, but William Proxmire is undaunted in his fight against excessive spending of the U.S. military-industrial complex.

The Wisconsin Democrat authored an amendment which cut $117 million in research funds from the $20 billion authorization for an Anti-Ballistic Missile system.

In his continuing efforts to cut down on arms spending and eliminate military waste, Proxmire points out he is not trying to reduce the security of the United States, pull us back into a shell of isolationism or do a disservice to the men and women of the armed forces.

He is convinced that $10 billion can be trimmed from the annual $80 billion defense budget without harming national security and that another $10 billion can be cut after the end of the Vietnam war.

"The Defense Department accounts for almost 80 per cent of the controllable expenditures in the federal budget. Here is where cuts must be made if we ever are to get enough money for our many domestic problems," Proxmire reasons.

Proxmire has been up against fearful odds in his struggle with the military-industrial complex. This enormous bureaucracy includes the armed services, Central Intelligence Agency, National Security Agency, Atomic Energy Commission, areospace and armaments industry, segments of the labor movement and universities with defense research contracts.

Until the fierce debate over the ABM system, the military budget and weapons policies largely were determined by the Pentagon and armed service committees without critical evaluation by Congress or the public. Last year the House Armed Services Committee held months of hearings on the military budget, but of hundreds of witnesses only two were not employes of the Pentagon.

The size and complexity of the military budget make effective review almost impossible once the appropriations measures reach the floor of either house.

In the decade from 1959 to 1968, direct defense outlays of the United States came to more than $551 billion. This is twice the amount spent for new private and public housing and nearly twice as much as federal, state and local governments allotted to education in the same period.

We need more senators and representatives who will question, scrutinize and criticize these huge expenditures for arms.

THE NEW MORALITY—SODOM AND GOMORRAH

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. RARICK. Mr. Speaker, the great deterioration of morality across the Nation is not something which just happened. It is the result of an extensively promoted attack on American values for the purpose of weakening the moral fabric of the Nation.

The rules of decency by which we live did not arise overnight, nor were they devised by some theorist in an ivory tower. Our human experience for centuries, supplemented by our religious teachings, have combined to give us guidelines for living by proven standards of individual conduct.

It is not just a coincidence that serious recommendations are being made by quasi-respectable bodies for permissive abortion, for legitimated homosexuality, for sexual perversion and promiscuity, for legalized marihuana and hallucinogens.

The pushers of so-called new morality find nothing unusual about their bizarre attempts to abolish capital punishment for the foulest murderer while freely encouraging the taking of the life of the unborn. And in both extremes rationalizing their position as being in the interests of an improved society and a progressive morality.

Mr. Frank Capell, editor-publisher of the Herald of Freedom, Box 3, Zarephath, N.J., to whom decent Americans are indebted for the original exposé of the infamous SIECUS, has performed another public service in the publication of his October 17 issue entitled "The New Morality," plus the June 14 issue which follow my remarks, together with several related clippings from this morning's paper:

[From the Herald of Freedom, Oct. 17, 1969]

THE NEW MORALITY

Moral decadence, euphemistically called the "New Morality," has reached the point in the United States where it is legally permissible to depict sex and nudity in a manner that would have brought about immediate prosecution only a few years ago. Even material used in "sex education" would have been subject to prosecution as pornographic only a short time ago. Today movies brought in from Europe, and even those made in Hollywood, contain nude detailed sex scenes, including acts of perversion. Magazines by the hundreds publish nude photographs with unretouched front views and with accompanying copy promoting permissiveness, illicit sex, adultery, homosexuality and various other sex perversions.

It is an established fact that the Communist Conspiracy consistently seeks to weaken the will to resist through the promotion of moral decay. The information in this issue will show the Communist influence in the promotion of what has now become a serious national problem affecting a substantial number of the youth of our country. In the March 1968 FBI Law Enforcement Bulletin, J. Edgar Hoover stated: "The publication and sale of obscene material is big business in America today. . . . It is impossible to estimate the amount of harm to impressionable teenagers and to assess the volume of sex crimes attributable to pornography, but its influence is extensive. Sexual violence is increasing at an alarming pace. Many parents are deeply concerned about conditions which involve young boys and girls in sex parties and illicit relations. . . . Pornography in all its forms is one major cause of sex crimes, sexual aberrations and perversions." (Congressional Record, March 27, 1969, p. 7957.)

Prior to 1958, postal inspectors and other law enforcement agencies were able to make arrests on charges involving the publication or distribution of photographs showing pubic hair or genitals. As a result of a suit originated by the Sunshine Book Company, affiliated with the nudist movement, the U.S. Supreme Court ruled in 1958 that such photographs were permissible. This case resulted in a complete change in standards of what constitutes pornography in so far as nude photographs are concerned. What Barney Rosset and Grove Press did for the printed word, the Sunshine Book Company did for nudity. The barriers on mail pornography have been lifted and the end result has been plays like "Hair," "Che," and "O! Calcutta!" in which sexual intercourse and/or perverted acts are performed on stage by completely nude actors.

Since it was a nudist organization which went into court to break the decency barrier, it is interesting to note that the first nudist camp in America was established through the Communist Party at Camp Midvale, N.J., located just off Snake Dew Rd., Wanaque, N.J. Camp Midvale was operated in the early 1930's by an organization called Nature Friends of America. The Guide to Subversive Organizations of the U.S. Congress cites Nature Friends of America as a subversive and Communist organization since 1935. In the Hearings of the Special Committee on Un-American Activities, House of Representatives, 75th Congress, Volume 1, p. 362, we read:

"Nature Friends" is an international and is a Communist-affiliated movement which has within the past few years swept over our Nation through its appeal to lovers of outdoor life. According to an authoritative source, "Nature Friends" was in 1932 organized in 21 countries, including the United States. It claimed a membership then of 170,000, and maintained over 400 camps. It was founded in Vienna in 1895 as a "hiking club," but, as all left-wing movements, it soon widened its scope of activity to include workers' education, agitation and propaganda, and fund raising along left-wing lines, and to support left-wing political efforts in all countries in which it is organized.

In 1931 Nature Friends maintained branches and camps in New York City, Rochester, Syracuse, Newark, Paterson, Jersey City, Philadelphia, Allentown, Chicago, St. Louis, Milwaukee, Detroit, San Francisco, Oakland, and Los Angeles. Today it has branches in these and many other large cities throughout our Nation. In 1932 the national offices in the East were located at 43 East Eighty-fourth Street New York City; in the West, 143 Albion Street, San Francisco, Calif. The offices in New York City are now located at 11 West Eighteenth Street, while in San Francisco they are located at 121 Albion Street. Headquarters have also been set up in Stamford, Gary, Oakland, Passaic, Midvale, N.J.; Platte Grove, Elka, Park, N.Y.; Boyerton, Pa.; Manilus, N.Y.; Lima, N.Y.; Salt Lake City; Crisman, Ind.; Sierra Madre, Mill Valley, Calif.; and Brooklyn, N.Y.

Nature Friends now refer to themselves as the Workers' International Hiking and Outdoor Organization. All Communist movements claim to be workers' international movements. The New Sport and Play (official organ of the Labor Sports Union of America, section of the Red Sports International, a Communist sports movement) reports that Nature Friends is also affiliated with it. The fact that the Labor Sports Union of America is a full-fledged Communist movement cannot be denied.

Nature Friends, as we have said, maintains many camps in the United States for summer activity—hiking, swimming, tennis, baseball, soccer, fishing, etc. In the winter they also engage in outdoor sports, such as hiking, skiing, skating, and sledding. In addition, they maintain indoor centers where dances are held, plays, concerts, and lectures are given. Nature Friends, like all Communist movements, discourage parents from sending their children to semimilitarist organization camps, and urges them to send the children to Nature Friends for safekeeping under the supervision of trained leaders. The rates at these camps are from $12.50 up a week. Whether or not Nature Friends are in any way connected with the nudist fashion which has been adopted by certain elements is not yet known, but it is common knowledge that nude bathing among mixed sexes is practiced at Communist summer resorts. (Emphasis added-Ed.)

Since the time of this report it has been verified that Nature Friends of America did promote nudity and did operate the first nudist camp in America at Midvale, N.J. Other Nature Friends camps were used for Communist activities as we read in the Hearings of the House Committee on Un-American Activities, 84th Congress, entitled "Communist Political Subversion," in the testimony of Herman Thomas, an undercover agent for the FBI: "I had attended several closed meetings of the Communist Party with Frances (Gabow), but one of the latest occasions I had was after the party went underground in September of 1950 when I met her and another member of the Communist Party at an affair at Nature Friends Camp near Valley, Pa., where I made arrangements with the other person to pick up Communist Party literature in Philadelphia, inasmuch as they weren't using the mails."

In the Hearings of the Special Committee on Un-American Activities, 75th Congress, Volume 1, p. 556, it states: "Nature Friends seem to receive more attention in the official publications for the Communist sport field than any other unit. This organization is also widely organized throughout the country. It not only maintains outdoor activities, but it also operates an 'agit-prop' (agitation and propaganda) section, music groups, film and photo section, chess groups, gymnastic and dance groups, scouts, lecture groups, and summer camps."

Camp Midvale, site of the first nudist camp, continues to attract persons interested in nudity as well as persons interested in Communism, according to an article in the N.Y. Daily News of Thursday, July 14, 1966, by Maggie Bartel:

A summer camp about 40 miles from New York City in a remote area of the Ramapo Mountains has been tabbed by the FBI as a Communist Party training area for W.E.B. DuBois Club recruiters, Rep. Charles S. Joelson (D-N.J.) reported yesterday.

According to the Congressman, FBI Director J. Edgar Hoover told him that Camp Midvale in the West Milford-Ringwood area trained 80 college students last year as recruiters for the club, which the Justice Department has called a Communist-front organization.

Joelson said he was informed that the camp is a permanent establishment maintained by the Communist Party and that top party officials act as the faculty for youths in attendance.

Gus Hall, the Party's top leader in the U.S., is extremely pleased with the accomplishments of Midvale, Hoover also told Joelson.

A News reporter yesterday visited the 76-acre Camp Midvale, off Snakeden Road in Ringwood Borough, N.J., which is described in an entrance sign as a "cooperative interracial camp owned and operated by the Metropolitan Recreation Association." . . . According to Schmidt, the original group was Die Naturfreunde, or Friends of Nature, an outfit founded in 1928.

Three years ago, a group of campers was raided by South Carolina mountaineers who had heard rumors of nudity, free love and integration in their summer camp in the Blue Ridge mountains. A number of the campers then came north to Camp Midvale.

The lawyer who handled the nudist case for the Sunshine Book Company had won dubious fame as the prosecutor in the infamous "sedition" trials of thirty-four American anti-Communists during the administration of Franklin D. Roosevelt. Oetje John Rogge was a left-winger who had been affiliated with the Communist-front Michigan Civil Rights Federation and worked closely with Communists and Communist-fronters. When, in Detroit, a number of citizens were arrested for recruiting Americans to fight in the Abraham Lincoln Brigade on behalf of the Communists in Spain, the organization with which Rogge was connected went to their defense. He put his heart and soul into the "sedition" trials which took place after faulty indictments and two years of jockeying. The original judge, E. C. Eicher, was so biased and prejudiced and dedicated to the conviction of the defendants that it became scandalous. An act of God removed him from the case as he died unexpectedly and he was replaced by a second federal judge who dismissed the indictments and called the entire case a travesty of justice.

Rogge was eventually fired from the U.S. Dept. of Justice by the President of the United States for disclosing confidential information to unauthorized sources. According to the 1969–70 Who's Who in America, Rogge is now a partner in the law firm of Weisman, Celler, Allan, Spett & Sheinberg, 1501 Broadway, New York, N.Y.

An earlier friend of nudism, who died recently, was also an example of the affinity of pro-Communism and nudism. In announcing the death of Dr. Maurice Parmelee in March, 1969, the N.Y. TIMES stated that he had been ousted from his job as a Government economist in 1942 "for his defense of nudity." His book, "Nudism in Modern Life," reportedly advocated "nudism in office and factory" and contained thirty-five photographs which were "all obscene" and the book was described by Rep. Martin Dies, chairman of the Un-American Activities committee, as "an attack upon the moral structure of our society

and upon the church and religion." Parmelee spent several years in the Soviet Union and wrote a pro-Communist book entitled "Bolshevism, Fascism and the Liberal Democratic State."

A study of nudist publications today shows that they are leftwing-oriented; many ridicule patriotism and advocate illicit sex, adultery, wife-swapping and homosexuality. The fact that they are able to operate is the result of the U.S. Supreme Court decision of 1958. One of the largest publishers of pornography masquerading as nudism is Elysium, Inc., 5436 Fernwood Ave., Los Angeles, Calif., which is associated with Elysium Institute of the same address. Among these publications is Nudism Today, official journal of the American Sunbathing Association. This organization has its headquarters at 217 West Main St., Mays Landing, N.J., and has chartered groups in thirty-five states with regional offices in Florida, Indiana, Washington and California. Editor and publisher of this journal is Ed Lange who is also editor and publisher of many other nudist-type publications such as Sunrise, Nude Lark, Sundisk, Nude Living, Nudist Idea, etc., as well as ANKH, publication of Elysium Institute.

Elysium Institute describes itself as follows: "a non-profit organization whose purpose is research and dissemination of information in the behavioral sciences relating to nudity and the 'body taboo' neuroses so prevalent in our culture. The Elysium Institute promotes self-acceptance and acceptance of others through a wholesome attitude towards the human body and its functions, both physical and emotional, and including man's sexuality." The "Elysium Credo" states:

"1. There is an essential wholesomeness in the human body and all of its functions.

"2. Exposure to sun, water, air and to nature is helpful and basic factor in building and maintaining healthy attitudes of mind and in the development of a strong body.

"3. Man and his sexuality are part and parcel of our living, and no separation or division is possible without denying what man is and what he was created for.

"4. The depiction of man in his entirety and completeness in photographs and text requires no apology or defense, and only with such an attitude of mind can we find true modesty—for modesty comes from within."

If one can find anything "wholesome" in the lewd pornographic publications of Elysium, Inc., his idea of "modesty" would have to be warped indeed. The average person would find them shocking. However, Elysium Institute is doing something about this and it promotes nude sensitivity training, the ultimate objective of which is to "overcome sexual myths." A release of Elysium Institute stated that Dr. Gerard Haigh and a prominent associate were to conduct a seminar at Elysium Field, Saturday, January 11, 1969. An Elysium Institute confrontation to understand and cope with changing moral values in our culture, the seminar was entitled, "Exploring the Intimacy Barrier in Sexual Liberal Groups." Dr. Haigh is a practicing psychotherapist who is President of the American Association for Humanistic Psychology. He is a graduate of City College of New York and the University of Chicago. He has taught at Arizona State University, the University of California at Los Angeels and has done human relations training for the Peace Corps and VISTA.

On February 1, 1969 "members, guests and friends" of the Elysium Institute were invited to Elysiums Institute's Winter Rites Festival (1969 Whoopee Wallow Dance!) at Elysium Field-"Costume optional-Dress or Undress." Arrests of nude revelers had previously been made on complaints of nearby residents who said the unclad visitors were visible from their properties but no convictions resulted and so the fun and "education" could continue undeterred.

"The Elysium Instiute Directory" was advertised in its pornographic publication, stating:

"The Elysium Research & Development Institute is in communication with a large and growing number of organizations in this country and abroad which are concerned, as is the Institute, with seeking means to enhance man's physical, emotional and intellectual development in an environment of openness, understanding and tolerance. Some of those with which we maintain an exchange of information and courtesies are: University of Humanism, Institute for Rational Living, Kairos, Human Betterment Association, American Sunbathing Association, Castalia Foundation, Institute for Sex Research, School of Living, SIECUS, Underground Press Syndicate, Pacifica Foundation, Institute for Bioenergetic Analysis, Human Potentialities Research Project, Institute for the Study of Nonviolence, American Psychological Association, Institute for Social Research, Sexual Freedom Leagues, Social Science Institute, Bridge Mountain Foundation, Esalem Institute, Planned Parenthood-World Population. If you have been wanting to learn more about the work being done by any of the above organizations, or others in related spheres of endeavor, we may be able to assist you. The Elysium Institute will attempt to provide the most current information on, or referral to, projects and activities on which inquiries and interest are displayed."

The tie-in between these organizations is not too difficult to ascertain since many of the individuals connected with one are affiliated with others. In addition to promoting illicit sex, homosexuality, adultery, sex orgies, etc., the Elysium publication includes sacrilegious contents, as for example an article which appears in ANKH, Volume One, No. 3, p. 16, 17, 18. Referring to the cross depicted above the article, they state that it is "redolent of the monosexual emptiness of the Christian love concept." It states that sexual intercourse (expressed by a four-letter word) and God are identical.

Prepared after an official investigation, a report to the California Legislature by the Attorney General, Thomas C. Lynch, dated April 6, 1967, shows the various types of pornographic publications available in the State of California and how the impact of nudist publications has not been lost on the publishers of the traditional "girlie" magazines. It states: "The old-style 'girlie' magazine is a drug on today's sex-oriented market, leading its promoters to copy from both the nudist and fetish publications in an attempt to enliven his own material. . . . Any raiment is more likely to be more fetish than feminine in concept and the photo layouts sometimes are slap-stick nudism." Concerning the extension of "girlie" magazines to pander to the interests of homosexuals, it states:

"Taking their cue from the developments in the nudist and 'girlie' magazines, a handful of eastern and midwestern publisher-distributors created still another type of sex publication—this aimed at the male homosexual market. Sometimes referred to as a 'muscle' magazine, it is a cross between nudist and physical culture publications. . . . 'The Advanced Guide to Cruising' is what the title implies, an instructional book in how a homosexual can, or should, go about enticing another male into acts of sodomy and fellatio. . . . It is published in Washington, D.C. by an individual who was successful in having his guilty plea in an obscenity trial set aside in 1962 on the grounds that he was insane."

Having its roots in a Communist-established nudist camp, the sex craze has spread until it is enveloping the country. Nudist publications which originally were oriented toward "health" are now obsessed with sex and have spawned an unknown number of pornographic, girlie, homosexual and perversion-promoting publications. Pornographic material is also presented to students as "sex education" which excites their interest in the subject. The youth of today must be pulled out of the mud of sex and drugs in which they are wallowing if they are to be brought back to reality. Their lack of self-discipline is encouraged by "educators" and "experts" but it will destroy them. The "New Morality" is really no morality at all.

[From the Herald of Freedom, June 14, 1968]

A Look at Sex Education

Sex and Communism are involved in the personnel of a fairly new organization with an impressive board of directors and high-sounding purposes. One of the main targets of its "educating" process is the youth of America which is always a fertile field for such organizations which operate under a cloak of respectability, mixing innocent do-gooders with not-so-innocent plotters. "A voluntary health organization," the Sex Information and Education Council of the U.S. (SIECUS), present address 1855 Broadway, New York, N.Y. 10023, was established during 1964 and in full bloom beginning in 1965 to "create something new in the world: knowledge in depth, and attitudes in breadth, about that part of the human individual that is so central to his total well-being, his sexuality."

An article in The Tustin News (Tustin, Calif.) sounded a warning concerning this organization which is invading the schools and homes of America. It states:

"An organization which purports to 'dignify' man's sexuality has been charged with in fact exploiting it through members of its own board of directors.

"Tustin Elementary District Coordinating Council composed of the presidents of the district's parent-teacher organizations, was presented information linking some members of the Sex Information Education Council of the United States (SIECUS) to a 50-cent magazine which has been labeled 'pure trash' by at least one nationally known college administrator.

"In referring to 'Sexology,' a paperback magazine which contains 'frank and authoritative sex guidance,' Mrs. Arthur Vandenberg, last year's council president, declared, 'It would seem to me that despite one of SIECUS' expressed purposes being to keep "sexuality" from being exploited, this is exactly what its board members are doing.' . . .

"Mrs. Vandenberg pointed to the fact that two editors of the 'Sexology' magazine as well as two members of the 'board of consultants' are also members of the SIECUS board of directors. . . ."

Mrs. Vandenberg listed such prurient titles of articles in Sexology as: "Alcohol Can Solve Sex Problems," "Group Sex Orgies," "My Wife Knows I'm a Homosexual," and "Gangs That Hunt Down Queers," and asks the question; "These are 'educational acts?' " In the latest issue of Sexology (June 1968) are such titles as: "My Most Unusual Sex Case" by Wardell B. Pomeroy (of both Sexology and SIECUS), "Wife Objects to Foreplay," "What Couples Don't Know About Lovemaking" and "The Many Ways to Ask for Sex."

The "respectable" half of the Sexology-Siecus partnership was announced to the public January 8, 1965 although the organization received its charter in May of 1964 and began its "functions" on July 1, 1964. Writing about "Siecus: Its Present and Its Future" in Vol. I, No. 2, of the Siecus Newsletter, Mary S. Calderone, M.D., M.P.H. Executive Director, states:

"The Siecus Board and Executive Committee have met often and actively, and have assumed full responsibility for programs and policies. The work of the organization is still carried on by a single professional, the Executive Director, with 4½ secretarial employees and two volunteers. . . .

"Members of the Board and the Executive Director have been participating in many meetings, symposia, and teaching sessions. . . .

"The Executive Director has been providing consultant services in the production of films, film strips, the preparation of programs, etc., in the field.

"On June 1, 1965 Siecus was given a grant of $25,000 by The Commonwealth Fund, which will be doubled if the organization can raise its year's basic budget by May 31, 1966. A grant of $10,000 from another foundation is already in hand towards this goal . . ."

As of that time the officers of the organization were as follows: Wallace C. Fulton, M.P.H., President; George Packer Berry, M.D., Vice-President; Rev. William H. Genne; B.D., M.A., Secretary; Isadore Rubin, Ph.D., Treasurer; and Mary S. Calderone, M.D., M.P.H., Executive Director. David R. Mace, Ph.D. replaced Fulton as President with the other officers remaining the same. As of February 1968 the letterhead of Siecus lists the officers as: Lester L. Doniger, President; Immediate Past President, David R. Mace, Ph.D.; Vice Presidents, Jesse Bernard, Ph.D., Harrold I. Lief, M.D., J. Noel Macy; Secretary, Fr. George Hagmaier, C.S.P., Ed. D.; Treasurer, Isadore Rubin, Ph.D.; Executive Director, Mary S. Calderone, M.D., M.P.H. So we see that, as others have come and gone in the higher echelons of Siecus, Isadore Rubin and Mary Calderone remain in their top positions.

Dr. Mary Calderone as Executive Director would appear to be the person who is running the organization. She is described in an article by Alton Blakeslee, Associated Press Science Writer, as a "gray-haired, vivacious grandmother." She was born in New York, N.Y., July 1, 1904, the daughter of Edward J. Steichen and the former Clara Smith. Her father is the well-known photographer and her uncle was the famous poet, Carl Sandburg, both darlings of the left.

Mary Steichen graduated from Vassar with a B.A. degree in 1925, from the University of Rochester Medical School with a M.D. degree in 1939, and in 1942 was awarded an M.S. degree in Public Health by the Columbia University School of Public Health. On March 27, 1941 Mary married Dr. Frank A. Calderone and they have three daughters, Linda Martin (now Mrs. Stuart Hodes), Francesca, and Maria.

Dr. Mary S. Calderone was first an intern at Bellevue Hosptial, New York City, from 1939 to 1940, and then became a health officer in training from 1940 to 1942. She was next employed by the American Public Health Association from 1942 to 1943 in their Testing Service Division. Her next employment listed in her biography is as a school physician for Great Neck, N.Y. public schools from 1950 to 1953, after which she became Medical Director of the Planned Parenthood Association in which position she remained until she became involved in the creation of SIECUS.

Mary's husband, Dr. Frank A. Calderone, was formerly Deputy Commissioner of Health of the City of New York and for four years was Chief Administrator of the World Health Organization (under the auspices of the United Nations) the head of which has been Dr. Brock Chisholm whose radical ideas and beliefs have been well publicized.

Dr. Mary Calderone attracted national attention through her work as Medical Director of the Planned Parenthood Association and made many contacts as a result. Informants in the Great Neck area, familiar with the activities of both Doctors Calderone, describe them as "ultra-liberal one-worlders." Stronger words can be used to describe Mary's close associate in the growth and operation of SIECUS, Dr. Isadore Rubin, the treasurer.

Dr. Isadore Rubin was identified as a member of the Communist Party by Mrs. Mildred Blauvelt in public testimony before the House Committee on Un-American Activities on May 3, 1955. Mrs. Mildred Blauvelt was a detective of the New York City Police Department who was an undercover operative for the New York Police Department from April 1943 until November 1951, during which time she was assigned to several different Communist Party groups within the New York area. From her sworn testimony we take the following excerpts:

"Mr. TAVENNER. Mrs. Blauvelt, at the time of the recess we were discussing the Flatbush Club of the Communist Party. Will you name those persons whom you can, of your own knowledge, identify as members of the Communist Party within that group? . . .

"Mrs. BLAUVELT. Yes, If I am able to do so, I certainly will. I have prepared this list alphabetically so that in the course of it we will come across some of the comrades who were the functionaries of the club and those that were more active. . . .

"Mr. TAVENNER. When you speak of clubs, are you referring to clubs of the Communist Party?

"Mrs. BLAUVELT. That is right; yes, sir.

"Mr. TAVENNER. And when you are referring to persons having attended meetings with you, are you referring to Communist Party meetings?

"Mrs. BLAUVELT. Yes, in this instance it would be meetings of the Flatbush Club of the Communist Party. . ."

Mrs. Blauvelt then continued reading her list.

"Isadore Rubin, R-u-b-i-n. In March of 1945 while he was in the Army in Italy, he sent $10 to the party's fund drive. Upon his return from service, he did attend some of the meetings of the Flatbush Club. Now, there was a club bulletin issued under date of November 28, 1944, which gave his name and listed his address as 1030 Ocean Avenue, with the notation that he was the winner of an essay contest which had been conducted while he was in the Army. Isadore Rubin was a teacher in the New York City school system who was dismissed in 1951, after trial.

"I did read some testimony which he had presented to the Senate Committee on Internal Security in September of 1952. At that time he gave his address as 20 Rugby Road, and it was in connection with the teachers union, I believe, that these hearings were being held; and I was particularly interested in reading the testimony because he invoked the privilege of the fifth amendment concerning his Communist affiliations.

"Mr. TAVENNER. I have before me the April 23, 1955 issue of New York Teacher News, and apparently published by the Teachers Union of New York.

"Mrs. BLAUVELT. That is correct.

"Mr. TAVENNER. I notice the name of the editor appears on the editorial board and staff of this issue. Will you examine this issue and state what you see to be the name of the editor?

"Mrs. BLAUVELT. The name of the editor is Isadore Rubin.

"Mr. TAVENNER. Is that the same person to whom you have referred?

"Mrs. BLAUVELT. Yes, sir.

"Mr. TAVENNER. As having been known to you as a member of the Communist Party?

"Mrs. BLAUVELT. Yes, sir, it is the same person. . . ."

The Teachers Union referred to by Mr. Tavenner and Mrs. Blauvelt was expelled from the AFL–CIO because it was found to be Communist-controlled. Isadore Rubin worked for this union after he was dismissed from the New York City public school system by the board of education. He testified concerning this before the Senate Internal Security Subcommittee on September 8, 1952, the testimony being contained in the report entitled, "Subversive Influence in the Educational Process." Starting on Page 146 we read: "Testimony of Isadore Rubin, Brooklyn, N.Y., accompanied by his attorneys, Harold I. Cammer and Royal W. France. . . .

"Mr. MORRIS. Will you give your full name and address to the reporter.

"Mr. RUBIN. Isadore Rubin, 20 Rugby Road, Brooklyn.

"Mr. MORRIS. Are you a school teacher?

"Mr. RUBIN. I was trained as a school teacher. At the present time I am not teaching.

"Mr. MORRIS. What are you doing at the present time?

"Mr. RUBIN. At the present time I am employed by the teachers union.

"Mr. MORRIS. What do you do for the teachers union?

"Mr. RUBIN. I handle publications, the newspaper and some forms of publicity.

"Mr. MORRIS. Now, when did you terminate your teaching career?

"Mr. RUBIN. Well, I didn't terminate it. The board of education terminated it in February 1951, I believe.

"Mr. MORRIS. On what grounds was it terminated by the board of education?

"Mr. RUBIN. On the grounds that I had refused to permit them to inquire into my political beliefs and associations by declining to answer any questions about such affiliations. . . .

"Mr. MORRIS. Are you a member of the executive committee of the Teachers Union?

"Mr. RUBIN. I am

"Mr. MORRIS. Have you ever been a member of the Communist Party?

"Mr. RUBIN. I understand that I was summoned here to testify as the editor of Teachers' News. I am perfectly willing to answer any questions concerning the newspaper, but I am not willing to answer such questions, because I believe that they are not proper, despite the fact that this is a Senate committee, or perhaps, because it is a Senate committee, and I have a very high regard for the Congress of the United States, and also for its Constitution.

"It is my feeling especially that as an editor of a paper, I should not permit any kind of inquiry, because it would interfere with freedom of the press, and also with other freedoms which are associated with it. . . . . .

"Senator FERGUSON. Do you refuse to answer and, if so, what is the reason?

"Mr. RUBIN. My basic reason is that it violates my rights under the first amendment. . . . .

"Senator FERGUSON. . . . we do not recognize it as reason for not answering questions.

"Mr. RUBIN. Not being a lawyer, it would seem to me that the express provisions of the first amendment would forbid such inquiry. But, since apparently the first amendment in some respects has been nullified, I will have to make use of the fifth amendment, which I understand was put there to prevent such inquiry and protect the innocent from such legislation and such inquiry."

An article in the N.Y. Herald Tribune of Oct. 20, 1948 stated:

"Abraham Lederman, president of a New York City teachers' union, refused today to tell a House committee if he is or ever has been a member of the Communist party . . .

"Three other witnesses who, like Mr. Lederman, had been subpoenaed by the committee, testified that they are not and never had been members of the party.

"They were Max Diamond. . . ., Homer Sloane. . . . and Isadore Rubin, a member of Local 555's executive board

"Messrs. Lederman, Diamond and Rubin are teachers in the New York City school system."

Isadore Rubin now resides at 641 Vanderbilt St. Brooklyn, N.Y., Apartment 5C where he has lived since 1965. He is the editor of the magazine Sexology which is published monthly by Sexology Corp. at 200 Park Ave.

S, New York, N.Y. M. Harvey Gernsback is president of this corporation, Mary Gernsback, 1st Vice president, and Dr. I. Rubin, 2nd vice president. The magazine was founded in 1933 by Hugo Gernsback and devoted to "frank and authoritative sex guidance."

Dr. Rubin, who obtained his Ph.D. late in life, is treasurer and a member of the executive board of SIECUS. Another editor of Sexology who has been on the Board of Directors of SIECUS from the beginning is Lester A. Kirkendall, Ph.D., Professor Family Life, Oregon State University and former consultant, U.S. Office of Education. He is the author of "Sex Education as Human Relations" and "Premarital Intercourse and Interpersonal Relationships," and is the "Parent Guidance" editor of Sexology.

Among those listed as the Board of Consultants of Sexology are the Rev. William H. Genne, Dr. John Money and Dr. Wardell B. Pomeroy, all of whom are on the Board of Directors of SIECUS.

Rev. William H. Genne, B.D., M.A. is a cofounder of SIECUS and in 1966 was their national secretary. He is Coordinator, Commission on Marriage and Family of the National Council of the Churches of Christ in the U.S.A. and the author of "Husbands and Pregnancy." A report dated May 22, 1968 of "Information from the Files of the Committee on Un-American Activities-U.S. House of Representatives" on the subject of Rev. William H. Genne shows the following Communist-fronts with which he has been involved:

1949 Committee for Peaceful Alternatives to the Atlantic Pact (C–1951; I–1956): Signer of its Statement Calling for International Agreement to Ban Use of Atomic Weapons (Statement attached to press release of December 14, 1949, p. 15)

1950 World Peace Appeal (C–1951; S–1957): Endorser (Daily Worker, official organ of the Communist Party, August 21, 1950, p. 8; undated leaflet, "Prominent Americans Call for Outlawing Atomic Warfare," received September 11, 1950)

1951 National Committee to repeal the McCarran act (I. 1956): Signer of its Open Letter to Congress calling for the repeal of the McCarran Internal Security Act of 1950 (Letterhead, January 19, 1951)

Dr. John Money (Ph.D) is Associate Professor of Medical Psychology & Pediatrics at Johns Hopkins University and full-time research scientist in medical psychology, as well as editor of "Sex Research-New Developments," according to his listing in SEXOLOGY.

Dr. Wardell B. Pomeroy (Ph.D.) is a sychotherapist and marriage counselor in New York City and former assiciate of the late Dr. Kinsey. From 1943 to 1963 Pomeroy was director of field research of the Institute for Sex Research, financed by the Rockefeller Foundation. He was co-author with Kinsey and others of "Sexual Behavior in the Human Male," "Sexual Behavior in the Human Female," (Kinsey Reports) and other books. In the June 1968 issue of Sexology he describes "My Most Unusual Sex Case" with the subtitle: "Introduced to intercourse by his grandmother and to homosexuality by his father, this man literally tried everything."

The current president of SIECUS is Lester L. Doniger, a publisher. He is listed in Who's Who in Commerce and Industry (1968) as born in Raczki, Poland, 10/15/09, son of Morris Doniger and Celia Jalkut. He came to the United States in 1920 graduated from N.Y.U. in 1931 and married Rita Roth in 1939. He was publisher-editor of The Pulpit Digest, director of the Pulpit Book Club and president of the Pulpit Press. He is listed as having been involved in Protestant Church Administration, president of the Great Neck Board of Education, president of the Religious Book Club, Inc. and with the Book Club Guild, Inc.

In the 1965 edition of Who's Who in World Jewry, Lester Doniger, publisher, appears as the son of Moses Doniger, (rather than Morris) and no reference is made to his publishing Protestant publications. In earlier editions of Who's Who in the East Mr. Doniger gave his place of birth as Vienna, Austria, as compared with Raczki, Poland, which appears in Who's Who in World Jewry and Who's Who in Commerce and Industry.

The Great Neck Record of March 3, 1968 showed Lester Doniger of Wildwood Drive, Great Neck, as chairman of the North Shore Community Arts Center Building Fund Drive. The Great Neck Tribune of February 20, 1960 stated that Great Neck Arts Center had presented as entertainers Pete Seeger (identified as a Communist according to published reports) and Carl Sandburg (uncle of Mary Calderone) who had a long history of affiliations with communist-fronts. The Great Neck News of February 14, 1947 carried an article entitled "US-USSR Committee Announces Meeting" which stated that a forum would be held under the auspices of the Great Neck Committee of the National Council of American-Soviet Friendship, Inc. Among those scheduled to appear was Jessica Smith, wife of Communist John Abt and widow of Communist Hal Ware, and editor of Soviet Russia Today. The article stated that tickets for the affair were available from Mrs. Rita Doniger, telephone Great Neck 1222.

SIECUS publishes a list of "Selected Reading in Education for Sexuality" for adults, children and young people. Listed on Page 7 of this listing is Public Affairs Pamphlet No. 366 entitled "Sex and Our Society" written by Lester A. Kirkendall with Elizabeth Ogg, and on page 16 is Public Affairs pamphlet No. 397, "Sexual Adjustment in Marriage" by Richard H. Klemer and Margaret G. Klemer.

Public Affairs Pamphlets are published by the Public Affairs Committee, Inc. of New York City, the editor of which for many years has been Maxwell S. Stewart, who was identified as a Communist in sworn testimony before the Senate Internal Security subcommittee by Louis Budenz.

Also listed as recommended reading are reprints of articles from Sexology, the book "Teenagers and Sex" by (retired) Episcopal Bishop James A. Pike, books that can be read by children age 4 and up, slides for children age 3–8, as well as Study Guides, written and edited by SIECUS Board members. These Study Guides are: 1) Sex Education by Lester A. Kirkendall; 2) Homosexuality by Isadore Rubin; 3) Masturbation by Warren H. Johnson; 4) Characteristics of Male and Female Sexual Responses by Wardell B. Pomeroy and Cornelia V. Christenson; 5) Premarital Sexual Standards by Ira L. Reiss; and 6) Sexual Relations During Pregnancy and the Post-Delivery Period by S. Leon Israel and Isadore Rubin.

There is need for proper "sex education" but we question whether the kind of "education" one can get from the programs and publications of SIECUS is the proper kind. Local groups—school boards and personnel, PTA's, YWCA's and YMCA's, youth agencies, churches, health personnel, health and welfare agencies, family life consultants, all are being urged to get involved in sex education with a ready-made program available from the "experts" of SIECUS.

SIECUS uses material from Dr. Albert Ellis, Director of the Institute for Rational Living, Inc., who condones perversion, adultery and teen-age sex, premarital sex, author of "Sex Without Guilt" and "The Case for Sexual Liberty." Its director Dr. Calderone is quoted as stating, "We are for the first time in history, at a point where man can separate his sexual life from his reproductive life."

Through the promotion of pornography, drug use and the "New Morality," the will to resist the International Communist Conspiracy is being weakened . . . "situation ethics" and the idea that there is no longer any "right" or "wrong" way to act, along with the downgrading of the influence of the family and religion play right into the hands of the Communists.

[From the Washington (D.C.) Post, Oct. 21, 1969]

PANEL URGES REPEAL OF HOMOSEXUAL LAWS

(By Stuart Auerbach)

A federal task force recommended yesterday the repeal of laws against homosexual activities between consenting adults.

The group of 14 experts, appointed by the National Institute of Mental Health, also recommended changes in government regulations and the policies of private industry that bar homosexuals from jobs.

The task force concluded that these changes would "reduce the emotional stress and improve the mental health" of the nation's 3 million to 4 million adult homosexuals.

"The extreme opprobrium that our society has attached to homosexual behavior, by way of criminal statutes and restrictive employment practices, has done more social harm than good and goes beyond what is necessary for the maintenance of public order and human decency," the task force said.

The group emphasized that its recommendations would not affect sexual behavior that violates public decency or involves the seduction of minors."

The task force recommendations, one of the few government statements on the problems of homosexuality, follows the guidelines set forth by such panels as the British Wolfenden Commission, the Ninth International Congress on Criminal Law and the American Law Institute.

Two years ago, Great Britiain legalized homosexual acts between consenting adults after a 10-year campaign and an acrimonious all-night debate in the House of Commons.

NIMH officials said yesterday they are studying the task force report before deciding which recommendations they will endorse and pass on through the federal government.

The new task force went beyond the previous reports and urged the NIMH to support studies on the legal and social implications of changing laws involving heterosexual behavior, such as adultery and fornication, between consenting adults.

The task force commented that public attitudes toward homosexuality as well as other sexual practices are changing.

"Discreet homosexuality is being recognized as the private business of the individual rather than a subject for public regulation," it said.

Changing laws against homosexual activities, the report stated, would reduce the possibility of blackmail—"a constant hazard to the homosexual under present conditions."

The task force recognized that a change in the laws is not enough to give the homosexual full employment opportunity, security and acceptance in society.

It also acknowledged that the employment of homosexuals may not be desirable in all cases—especially "in highly sensitive" jobs.

The 21-page report calls homosexuality "a major problem for our society" for both homosexuals and their families.

"Homosexual individuals can be found in all walks of life, at all socio-economic levels among all cultural groups within American society, and in rural as well as urban areas," it said.

The task force also recommended studies in the biological and genetic causes of homosexuality, personality factors that characterize homosexuals, and ways to treat them in order to decrease their discomfort and increase their "productive functioning."

Training programs should also be geared to mental health workers and law enforcement personnel who often look upon homosexuals "with either disgust or anxiety," the report said. Information on homosexuality should be included in school sex education courses.

The task force also recommended the formation within the NIMH of a Center for the Study of Sexual Behavior that would conduct a broad study of sexual practices, both normal and deviant.

This center would support research across the country and provide information to policy makers that could dispel "taboos and myths" about sex.

[From the Washington (D.C.) Post, Oct. 21, 1969]

NIXON PROPOSES LIGHT PENALTY FOR FIRST POSSESSION OF DRUGS

(By Rudy Abramson)

The Nixon administration proposed yesterday that first-time possession of all narcotic and dangerous drugs be made a misdemeanor rather than a felony and that marijuana be removed from the legal category covering narcotics.

But it emphasized it wants a clear distinction made between the people who possess illicit drugs for their own use and those who have them for sale.

The position is a much softer one than the administration advocated as recently as last July, although Justice Department officials have been emphasizing they want courts to have the flexibility to tailor the penalty to the individual in drug cases.

New alternate penalty schedules submitted to a Senate Judiciary subcommittee yesterday are much more in line with the recommendations of U.S. health officials, who have been particularly critical of penalties for marijuana violations.

Under the new administration plan, first-time possession of any narcotic or dangerous drug would be punishable by a $5,000 fine and a sentence of no more than a year.

Present federal law sets the sentence at two to 10 years with a fine of $20,000 for narcotics and marijuana. LSD possession is treated as a misdemeanor, a $1,000 fine and a sentence up to one year.

The new penalty schedule, much of which had already been reported in the press, also would lift the mandatory minimum sentence for simple marijuana possession.

While emphasizing that severe penalties and mandatory sentences are not necessary in the case of first-time offenders possessing drugs for their own use, John E. Ingersoll, director of the Justice Department's Bureau of Narcotics and Dangerous Drugs, called for a tough attitude toward the professional trafficker.

"Releasing him back to society, giving him the opportunity to return to commercial crime, clearly is hazardous," Ingersoll said. "The best interest of our citizens is served by locking him up for as long as rationally possible."

Accordingly, the penalties proposed yesterday called for prison terms of up to five years and fines of as much as $15,000 for first-time possession of marijuana if there is an intent to distribute it.

Possession of narcotics, such as heroin, with intent to sell would call for a 20-year sentence and a $25,000 fine in the toughest penalty schedule.

Three different alternative schedules were given to the subcommittee by Ingersoll.

Throughout the alternative plans, marijuana was treated in a category with hallucinogenic substances, sleeping pills, and pep pills rather than with hard narcotics like heroin.

"We believe," Ingersoll said, "that by having such a flexible range of penalties for the illicit possessor, prosecutors will be more willing to initiate cases and the courts less reluctant to sentence these violators of the laws."

The new penalties were proposed as an amendment to the administration's pending bill on drug abuse control after discussions between top officials of the Justice Department and the Department of Health, Education and Welfare.

Dr. Roger O. Egeberg, assistant HEW secretary for health and scientific affairs, helped bring the issue to a head by outspoken opposition to stiff marijuana penalties.

Even after the administration's new drug abuse bill was introduced—without changing the present marijuana penalties—Egeberg called present penalties punitive and vindictive.

Egeberg appeared with Ingersoll yesterday to endorse the new proposal.

"I neither recommend nor condone the use of marijuana by anyone, young or old," Egeberg said. "This drug has no recognized medical value and, as a hallucinogen and intoxicant, it constitutes a clear and demonstrated risk to the user and thus to those with whom he comes in contact. It is scientifically invalid, however, to associate marijuana with more dangerous substances such as heroin and other addicting drugs."

Nevertheless, he said, "I am deeply troubled by our present ill-founded and inappropriate system of classifying dangerous drugs and punishing those who abuse them."

COMMUNICATIONS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. DINGELL. Mr. Speaker, for over 3 years, the Subcommittee on Regulatory Agencies of the Select Committee on Small Business which operates under the chairmanship and with the leadership of the fine gentleman from Tennessee, has been conducting an inquiry into the question of whether the Federal Communications Commission has taken the necessary action to provide an adequate allocation of frequency spectrum for land mobile communications upon which the police, fire departments, and other public safety organizations and local government agencies rely for the protection of the small businessman and upon which the small businessman relies in the conduct of his own business operations.

Two very fine articles dealing with this subject have appeared in EDN, a magazine for designers of electronic products, equipment, and systems, for May 1, 1969. The first of these articles is by James E. Kluge, senior editor of the publication, and is entitled "Frequency-Spectrum Dilemma; Crisis or Opportunity?" In this article Mr. Kluge reviews the problem and suggests steps which may be taken to meet the urgent need for additional spectrum for this form of communications. I might say with some pride that the work and report of the Select Committee on Small Business serves as the basis for much of this article, and it indicates the contribution which congressional committees make in accumulating the information necessary to deal with problems facing the country.

The second article, by William L. Detwiler, is entitled "Something's Got To Give." Mr. Detwiler is a very knowledgeable person in the field of land mobile communications and he describes in compelling language the need for additional spectrum for land mobile communications.

In view of their importance, I include both of these articles in the RECORD at this point:

FREQUENCY-SPECTRUM DILEMMA—CRISIS OR OPPORTUNITY—WE CANNOT TOLERATE A COMMUNICATIONS BREAKDOWN

(By James E. Kluge)

("When man first discovered the resource of the electromagnetic spectrum less than a century ago one—not even Jules Verne—could have predicted that within 50 years of the first applications, man would be wrestling with apparent shortages of the means to accommodate an ever expanding demand. But such is the pace of the information revolution."—*JTAC Report, 1968, "Spectrum Engineering—The Key to Progress."*)

("It is recommended that the Federal Communications Commission press forward with all possible vigor to completion of the proceedings under docket No. 18261 . . . that should the Commission fail to provide adequate relief for land-mobile users, that the Small Business Committee as constituted in the 91st Congress hold hearings at the earliest practicable date to ascertain the cause of such failure . . . that its hearings also address themselves to the recommendation made by The President's Task Force that the spectrum-management function be shifted to another entity within the federal government." *Subcommittee No. 5 of the Select Committee on Small Business, House of Representatives.*)

Spectrum Saturation—Spectrum Utilization—Spectrum Conservation—Spectrum Management—Spectrum Engineering—Spectrum Crowding—Spectrum Congestion—Spectrum Pollution—Spectrum Strangulation—Spectrum Planning—Spectrum Sharing—Spectrum War—Spectrum Reallocation—Spectrum Priorities—Spectrum Clogging—Spectrum Coordination—Spectrum Resources—Spectrum Relief—National Defense—Public Safety—Public Services—Private Interests—Commercial Interests—Industrial Interests.

In one way or another these phrases point up the growing concern and serious need to solve the impending difficulties and acknowledge the seriousness of the matter. While frequencies apparently are becoming scarce, studies, reports, findings and recommendations are accumulating by "heaps and pounds". A solution goes begging while the problem becomes more critical.

The electromagnetic spectrum, as it is used for telecommunications, is an extremely valuable, in fact an essential, but also limited resource. It must be shared nationally and internationally among commercial, private, and public interests. It must be utilized as effectively and efficiently as is practicable.

For nearly 100 years the radio spectrum was considered an unlimited resource. It is unlimited in that in cannot be depleted by use, but its utility can be drastically reduced by misuses and abuses.

In the past 20 years it has suffered from limitations caused by saturation in certain bands. Much of this problem stems from those whose efforts were devoted to spectrum *conservation* rather than *utilization*. Unused spectrum is wasted spectrum. Our goal should be to *use* this spectrum, not just conserve it.

LAND-MOBILE PROBLEM

Although the congestion problem rears its head here and there throughout the frequency spectrum it presently is concentrated

primarily in that segment of the spectrum that includes frequencies between 25 and 890 MHz. In the most critical area of all are those frequencies allocated to the land-mobile services, namely 25–50, 150–174 and 450–470 MHz. Land-mobile services include taxicabs, buses, railroads, mobile telephones, many types of consumer services like plumbing, heating, refrigeration and the delivery of essential materials like fuel oil and emergency oxygen. The public utilities (telephone, gas and electric companies) depend on mobile radio to dispatch their repair crews to emergency situations. Other essential services include state and county highway departments, municipal street and water departments.

PUBLIC SAFETY ENDANGERED

The effectiveness of our police and fire departments definitely suffers during periods of civil disorder and natural catastrophe. During the Watts riots in Los Angeles, for example, police-radio transmissions continued without a break for 5 full days. During this time there was no break in the carrier and no break in the voice transmissions, according to Captain Kirby of the Los Angeles police department. Darwin Nielsen, chief communications officer of the Los Angeles fire department, described similar experiences relative to its use of two-way radios during the Watts riots. He said that at that time the department was controlling 110 companies by radio. "The air," he said, "was completely saturated and a large percentage of the messages were unintelligible or never did get through."

THE SPECTRUM SQUEEZE

The lack of sufficient frequencies in some portions of the spectrum is not in question. The question being debated is "do we simply need more frequencies or a better understanding of how to use those we have?" The Joint Technical Advisory Committee of the IEEE and EIA feels the answer is through more effective spectrum management implemented by a program of spectrum engineering. The President's Task Force on U.S. Communications Policy arrived at essentially the same conclusion and recommended an overhauling of our communication policies.

The plight of the land-mobile users, however, is well documented. Licensed transmitters have increased from 86,000 in 1949 to more than 3 million in 1969 with a conservative projection of more than 7 million in 1980. In 1949, 4.7 percent of the frequency spectrum was allocated to the land-mobile services. Today this same 4.7 percent must somehow serve this mushrooming demand. Certainly, adequate consideration has not been given to their needs.

WHAT ABOUT UHF–TV FREQUENCIES?

After years of being ignored, the land-mobile users finally have gained the ear of a congressional subcommittee. The subcommittee in turn is putting pressure on the FCC.

In its docket No. 18261, the FCC proposed to reallocate UHF–TV channels 14 through 20 to be shared with the land-mobile services in 25 major *urban* areas of the U.S. The Electronic Industries Assn. objects on the grounds that such sharing will generate interference between TV and land-mobile users to the detriment of both. Such a situation, they claim, would help no one and would be unsatisfactory to nearly all concerned. The solution, they feel, is to allocate channels 14 to 20 exclusively to land-mobile services. In many U.S. cities such as Denver, the UHF–TV spectrum is totally unused and therefore wasted.

Another FCC proposal, docket No. 18262, concerns the future use of the frequency band containing 806 to 960 MHz and the amendment of the rules that govern operation in this proposed band. This group of frequencies would include UHF–TV channels 70 through 83. The land-mobile communication section of the Industrial Electronics Division of the EIA has recommended that the frequencies between 806 and 947 MHz should be allocated immediately to the land-mobile radio services. In addition, it feels that this band of frequencies should be developed extensively by the FCC to encourage investment in developing equipment and systems that will meet future land-mobile needs. The EIA went on to say that suballocating some of this band is premature until the results of a developmental program can be appraised.

WAR WITH THE BROADCASTERS

Something of a war is shaping up between the entrenched TV broadcasters and the land-mobile people. At this point, they are grouping their forces and readying for a battle over the UHF–TV frequencies.

The National Assn. of Broadcasters is making every effort to protect its coveted 82 TV channels. The broadcasters argue that the spectacular growth of radio and television broadcasting has been made possible because the broadcast industry had the time and the spectrum space in which to develop. Lack of spectrum space, according to land-mobile people, is hindering the growth of two-way radio. Broadcasters, on the other hand, feel that if it becomes necessary to reallocate the spectrum, some sort of priority of spectrum-user needs, based on both private and public interest, has to be established.

The executive director of the Assn. of Maximum Service Telecasters, a group whose purpose it is to maintain and encourage the growth of an 82-channel VHF- and UHF–TV system, states that in the top 10 markets, namely New York, Los Angeles, Chicago, Philadelphia, Boston, Detroit, San Francisco, Cleveland, Pittsburgh and Washington, D.C., there were three UHF–TV stations under construction and six stations on the air in the lower seven UHF channels. This means reassigning new frequency channels if those seven channels were reallocated to land-mobile users. The cost of shifting a station to another channel has been estimated to be in the order of $100–125 thousand per station. His association also feels that until the FCC limits the free access to land-mobile frequencies by small businesses and other land-mobile users, land-mobile services should not be permitted access to TV frequencies.

Unfortunately, some spokesmen for the broadcasters have belittled the business use of land-mobile, implying that their motives are convenience and profit only. It would be difficult to image that the TV industry is not engaged in profit making.

BROADCASTERS OFFERED A WAY OUT

William L. Detwiler, president of Radio Specialists Co., Denver, Colo., and an engineer, offers a suggestion designed to free space in the UHF-TV band. He believes that the taboos established by the FCC in 1949 are ultra-, ultraconservative and need updating and revising. This, he feels, would free a lot of UHF spectrum space for other uses.

These taboos are rules establishing mileage spacings between UHF–TV stations operating on the same channel, adjacent channels, and channels separated by sound, picture and IF image frequencies.

Initial taboos were based on data available from the operation of VHF–TV (channels 2–6). They do not account for the shielding effects of varying terrain, they assume omnidirectional transmitting and receiving antennas, and maximum permissible effective radiated power and antenna height.

Taboos on IF beat, intermodulation, adjacent channel interference, oscillator radiation, sound image and picture image all are based on *anticipated* characteristics of UHF–TV receiver design as envisioned in 1948.

Detwiler points out that mobile-receiver design has produced equipment that is highly immune to this type of interference, even without taboos as provided for the TV industry. He claims that for a few cents per set, TV-set manufacturers could provide the necessary protection for interference and could relax, if not make unnecessary, some taboos. This, together with more realistic taboos based on today's information from NBS and other research groups, would free many megahertz of UHF spectrum without reducing the total number of UHF–TV channels.

CONGRESS LISTENS TO BOTH SIDES

As might be expected, Congress finally is getting into the act. It is putting pressure to bear on the FCC in the interest of small business. One such congressional committee is the so-called Dingell Subcommittee on Small Business. Last year it conducted hearings in four major cities and in December published a report entitled "The Allocation of Radio Frequency and Its Effect on Small Business". Rep. John D. Dingell of Michigan, chairman of the subcommittee, set forth the purpose and scope of the hearings at the opening session. It can be summarized as follows:

"The frequency spectrum is a valuable economic resource of our nation. It is limited and is subject to competing claims. The apportionment for that part of the spectrum the subcommittee is to consider is the 25- to 890-MHz band allocated by the FCC in 1949. Approximately 60 percent of this band is allocated to FM and TV broadcasting, 34 percent to government, something less than 1 percent for point-to-point radio use and less than 5 percent for land-mobile radio services. Radio-frequency congestion, although only one of the problems facing business today, is a serious road block to business radio users who want to continue to serve the public with the services the public wants and the public needs. Until necessary action is taken to allocate additional frequencies to small businesses, the problem will continue to be one of primary interest to the committee who is interested in the problems of the small businessman."

CONGRESSIONAL REPORT SUBMITTED

The Dingell Committee submitted its report in December 1968. By holding hearings in Washington, Los Angeles, Detroit and Chicago, it heard the testimony of many two-way radio users, both business and public safety, as well as representatives of the commercial broadcasters. The Dingell Committee's conclusions define the problem quite well, and are summarized herewith:

There is no method of communication as effective as land-mobile radio in meeting the needs of a wide variety of small businesses, as well as those of fire, police, national, state and local government services. Despite television's popular attraction, the development of land-mobile radio has had an equal, if not greater, public impact. It affects not only the means by which people communicate with each other, but also the means by which they travel, earn their livelihood, conduct their business, insure their safety and happiness, and obtain efficiently, and at a lower cost than would otherwise be possible, the goods and services they use.

LAND MOBILE SERVES TOTAL PUBLIC

Unlike other spectrum users in the 25- to 890-MHz band, land-mobile radio serves the total public. For example, it is used to dispatch electric, gas, water and telephone repair crews at the time of emergencies and natural disasters. A fuel-oil dealer radios one of his trucks about an urgent fuel-oil delivery; a plumber can be routed from one job to another without having to return to the shop. Police headquarters can deploy the nearest policeman to the scene of the accident or crime that has just been reported, and firemen inside a burning building can communicate with the fire chief outside. Even

the taxi is dispatched from call to call by land-mobile radio. It is thus the means of most efficient use of personnel and vehicles that serve the public directly.

It is clearly apparent that congestion in the small land-mobile radio-frequency-spectrum allocation denies the public many of the benefits that land-mobile radio could provide. Indeed, the committee finds that it is essential, in the public convenience, interest and necessity, for ample, additional, usable frequency spectrum to be allocated without delay for this means of communication.

EMERGENCY NEEDS MUST BE MET

Ample frequency spectrum, in this context, means ample spectrum to meet both the regular and emergency needs of the users of this form of communications. During times of major disturbances such as riots, the need for police communications not only increases in volume, but also is of the greatest importance in reducing and containing areas where trouble is about to erupt or has erupted. At these times, the number of calls the fire departments must meet also increases greatly, and the demands on the gas, water, telephone and electricity repair crews to shut off services to prevent fires and explosions or to reroute service to bypass damaged areas are much greater. A wide variety of businessmen also finds the calls for their services increase not only in number, but also in seriousness at such times. The ambulance company and the plumber who must deal with broken gas and water pipes are but two examples.

The needs of the public not only continue during such emergencies but actually increase. Delivery of milk, food and fuel must be continued, to avoid areas of possible violence. The testimony of the fuel-oil dealer who pointed out the danger of a truck loaded with fuel being attacked by rioters emphasizes the need for adequate communications at such times. Ambulance services, funeral directors and even diaper-delivery services also must be able to carry on their normal work.

HOME DELIVERIES BECOME URGENT

During major disturbances, people may be restricted to their homes. It then becomes increasingly important that goods and services be brought to their homes, not only because they cannot go out to obtain them, but also to reduce the amount of travel in the streets at such times. As the committee learned, taxi and livery companies receive an overwhelming number of calls for transportation at such times, and many users of this type operate in close cooperation with the public-safety officials to utilize their vehicles only for the most urgent calls. The committee wishes to emphasize the fact that the need of the public to be served by the wide variety of uses of land-mobile radio may well be greater during times of civil disturbances and natural disasters than at other times and require an expanded rather than contracted use of communications by land-mobile-radio users if the public interest is to be served properly.

INNOVATION TO BE ENCOURAGED

Ample frequency spectrum also means ample spectrum to allow for innovation, so that the public may have the benefit of such new uses, new equipment and new techniques as may be developed for land-mobile radio. There seems to be little doubt that the public presently is being denied the full extent of the benefits that land-mobile radio could provide today because of a lack of frequency spectrum to encourage such development. If adequate frequency spectrum is made available, these new uses, equipment and techniques will provide better law enforcement for our cities and rural areas, better state and local government services, and better service to the public from businesses at a lower cost than otherwise could be achieved.

Testimony presented to the committee repeatedly has emphasized two points concerning the amount of frequency spectrum that must be allocated to the land-mobile-radio services to serve adequately the public interest. First, witness after witness has said that when he first began using land-mobile radio he had little or no congestion resulting from an overloading of his frequency channel, but that congestion had increased steadily because "not only has my organization grown and my use of radio grown along with it, but also more users are using radio than before." Second, witness after witness said that he could not take advantage of all of the ways he could use radio to serve the public better because the congestion in the portion of the spectrum allocated to land-mobile radio prevented a larger, effective use of his land-mobile-radio system.

In the committee's view, it is essential that newly allocated frequencies be suitable for equipment being used today or that can be made available quickly. As the committee uses the term "without delay", it means that the FCC should take every possible step to insure that its action is not delayed further.

UHF–TV LARGELY UNUSED

It is evident that there is a substantial amount of UHF frequency spectrum allocated to television, which presently is unused for television and would remain unused even if the lowest seven UHF channels were allocated completely to land-mobile-radio use. Indeed, it is clear from the report of Land Assoc., commissioned by the National Assn. of Broadcasters, that any gain in program diversity decreases so rapidly with more than three television stations serving an area that there may be questionable justification for the large number of TV assignments in and around major urban areas. Many of these are in the UHF band and do not contain operating stations. That report also commented:

"What should be noted, in addition, is that the proliferation of similar program types that occurs when stations are added beyond three consists largely of material already seen earlier on the network affiliates, that is, the so-called off-network, rerun programs of the situation comedy, quiz and game, adventure-drama types, along with feature films. The great bulk of the ETV allocations is going begging."

The committee also is aware of the fact that there have been suggestions by reputable radio engineers that it may be possible to narrow the present 6-MHz TV channel to 3 MHz, and thus make a substantial amount of VHF and UHF spectrum available for other uses if it should prove too difficult to provide for the reallocation of the lowest seven UHF channels to land-mobile radio.

FCC COMMENDED FOR ACTING

The FCC is commended for its action in commencing the two proceedings to determine whether that portion of the electromagnetic radio spectrum currently allocated to UHF–TV should be reallocated in part to land-mobile radio (FCC docket No. 18261 and docket No. 18262). While these two proceedings are less than definitive, they do signal at least a commencement of awareness by the Commission of the very serious problems confronting land-mobile users and the public, which is dependent upon their services. It is to be noted that in docket No. 18262, the Commission states in paragraph 9, "The Commission is persuaded that the burgeoning needs of the land-mobile service can be met on a long-term basis only through the allocation of additional spectrum space to that service. . . ." This is undeniably true. It is likewise hard to fault the Commission's statement that ". . . at this point in time it is generally agreed that frequencies below about 1 GHz are most useful for general land-mobile applications. In looking to frequencies above 806 MHz to accommodate land-mobile service, the Commission recognizes that it will not meet immediate requirements and that several years of development may be required to establish a viable service. . . ." Conversely, the relief contemplated as the central strand of docket No. 18261, i.e., the awarding of the lowest seven UHF channels to land mobile, could, if properly delineated, afford immediate relief.

LAND-MOBILE RELIEF LONG OVERDUE

It is the conclusion of this committee, after studying all available pertinent facts, that relief is long overdue for land-mobile users, and that the public interest urgently requires prompt alleviation of this rapidly deteriorating situation. Further, it is clear that the radio spectrum, being as it is a public resource, should be available in an amount ample for their needs, as a matter of right, to the many divergent small-business interests and the members of the public whom they serve, no less than commercial broadcasters. It is recognized that such uses as law enforcement, fire protection and similar public protection must be afforded sufficient spectrum to protect the public. Subject to this qualification, however, it is clear that small business and other land-mobile users are fully entitled to equitable participation in the allocation of this vital resource.

It appears improbable that most spokesmen for the commercial broadcasting interests care to engage in a debate wherein they would argue that even the typical prime-time fare offered over television today better serves the public interest than the more efficient dispatching of an ambulance, a fuel-oil truck, a powerline maintenance wagon or similar unit. Indeed, one would be hard pressed to imagine a more disadvantageous comparison that might be undertaken by commercial broadcasting spokesmen than that comparing the social utility of the second rerun of "I Love Lucy" to the typical land-mobile operation.

COMMITTEE DEMANDS ACTION

In issuing this report at the beginning of this year (1969) the subcommitte notified the FCC that either "it press forward with all possible vigor to completion of the proceedings under docket 18261" or be prepared to answer why the spectrum-management function should not be shifted to another entity within the federal government. The committee said that after studying all available pertinent facts it must conclude that "relief is long overdue for land-mobile users and that the public interest urgently requires prompt alleviation of this rapidly deteriorating situation". It also asked that frequency allocations be made by the FCC without delay, explaining that without delay means that the commission should take every possible step to insure that its action is not further delayed.

A MICROWAVE SQUEEZE NOT FAR OFF

Although not concerned with the land-mobile problem, a saturation problem is shaping up in the microwave spectrum similar to what the land-mobile users experienced several years ago.

In the words of Richard P. Gifford, chairman of the JTAC, ". . . It appears that we have not yet learned the lesson. Recent regulatory action often has resulted in worse, not better spectrum engineering . . . It is time we made spectrum allocation subject to better engineering and management practices rather than a tool for administrative conveniences."

"User" or "block" allocations as an approach to spectrum administration have not produced the desired results in the HF or

VHF bands. There is now little reason to believe that it can succeed in the microwave region.

It is interesting to note that in the HF band, block allocations were completely abandoned many years ago becaus of spectrum crowdwing that occurred even before WW II. Today, no government/commercial differentiation exists in the HF band.

With a saturation problem taking shape in microwave relay, and with data and video communications expanding at a rapid pace, a solution must be found, and soon.

MILLIMETER WAVES EMERGE AS NEW HOPE

Millimeter waves hold forth new hope in providing more usable spectrum. Millimeter waves refer to those frequencies between 30 and 300 GHz. A whole new technology recently has emerged that has opened up these frequencies to potential users. Going higher in frequency, however, poses new operational difficulties, but hopefully they will be surmounted.

Millimeter-wave technology is a whole new ball game. Components are available, but they're expensive. Atmospheric absorption poses an operational problem, but there are frequency windows where absorption is minimal.

Bell Labs. has been doing extensive research on helix and circular waveguide for transmitting hundreds of thousands of voice channels securely and reliably. Experimental millimeter-wave radio links also are being studied as a possible system for relieving crowding in the microwave spectrum. However, such systems may suffer from rain, fog, and other atmospheric effects.

OPTICAL SYSTEMS

Laser communications is another technology being studied. There is much interest in the laser as a medium of transmission. However, in the earth's atmosphere it suffers from the same perturbing effects as millimeter waves. Space and planetary communications offer more promise since atmospheric effects are minimal. But then it wasn't too many years ago that the same skepticism was raised concerning the future of microwaves as a communication medium.

SPECTRUM ENGINEERING—A PARTIAL ANSWER

Spectrum engineering is the technical component of spectrum management. It deals with the maximum effectiveness in using the frequency spectrum.

Three major functions of spectrum engineering are frequency selection, engineering planning and interference reduction.

The JTAC (Joint Technical Advisory Committee) of the IEEE and EIA, working for 5 years and producing a 1200-page report, formulated the development of a spectrum-engineering system founded on two basic principles. First, the system must be evolutionary. Changes in the system must be well thought out and announced beforehand to insure continued support from those concerned. Also, any future planning must consider the capital investment in existing equipment. Second, controlling the spectrum must *not* be accomplished through the application of simple but rather restrictive and rigid administrative rules. Instead, there should be increased technical assessment given to individual users and user applications in a given geographical location. If the block-allocation concept is to continue, then its application should be minimal and flexible. Objective measures should be employed to determine an applicant's need and his ultimate utilization of the spectrum.

SPECTRUM-ENGINEERING FUNCTIONS

The frequency-selection function would be a day-to-day process to determine the applicant's technical requirements. Selection may be done by the applicant himself or a frequency-selection team.

Engineering planning concerns itself with long-term influences on spectrum utilization. These include preparation for international conferences on allocations, setting operating standards, prescribing procedures and criteria for frequency selection, prescribing analytical procedures for estimating potential interference and guidance for interference activities.

The interference-reduction function includes measurement of equipment characteristics for data base, measurement of equipment for performance to standards, monitoring unauthorized or improper spectrum use and fostering the development of new monitoring equipment.

Such a system of spectrum engineering would provide valuable planning data, permit sharing among spectrum users, reduce interference, eliminate many sources of EMI, and offer the objectivity, competence and manpower to evaluate technical proposals.

CONCLUSION

It appears, then, that a fight is shaping up between the commercial interests of the TV broadcasters and the private and public interests of the small businessmen. The small businessmen feel that the radio spectrum is a natural resource that should be available for public use. They see 60 percent of the spectrum tied up by the FM and TV broadcasters, the majority of this space unused and virtually wasted. Another 34 percent is tied up by the government. Their share—4.7 percent—is bursting at the seams. In general they feel that they've been given the "short end of the stick", and they're determined to correct the situation.

JTAC, the President's Task Force and others say that we need a complete overhaul of communication policy and administration—perhaps, even a new administrator. The FCC is under attack. There are seven commissioners—three Republicans and four Democrats. One has been a commissioner for 23 years, one is a former FBI agent, another a former UN ambassador, another a former employee of the National Assn. of Broadcasters and the other three are lawyers. Although the Commission has a staff of technically competent people, the decisions are made by the commissioners. This is where the battles between the broadcasters and land-mobile people will be fought. But regardless of who comes out the victor, the real battle will be won or lost within the FCC itself.

What about the future? Will we see more patchwork and delay or some fundamental policy and administrative changes as recommended by The President's Task Force and the JTAC?

The following article presents the land-mobile users' point of view that there now exists a serious shortage of available spectrum for use by land-mobile users, a shortage that is approaching crisis proportions. The answer, they feel, is to reallocate frequencies that presently are unused, such as UHF–TV.

SOMETHING'S GOT TO GIVE

(In 1949 land-mobile was allocated a mere 40 MHz out of 865 MHz. Since then, licensed land-mobile units have increased from 86,000 to over 3 million—Faced with growing demands and new services.)

(William L. Detwiler)

If the average citizen was asked to name some of the most pressing issues of today in the field of communications, he would most likely reply: CATV, violence on television and the proposed ban on over-the-air cigarette advertising. Few persons would mention the frequency congestion on two-way, land-mobile radio channels, which threatens to choke the communications used by police, fire, forestry conservation, highway maintenance and virtually all public-safety agencies, state and local governments, large and small businesses, utilities, manufacturers and transportation companies.

CONGESTION IS NOT NEW

Congestion really isn't anything new: it's simply unnoticed by the casual observer. With a television receiver in the living room of almost every American family, it's only natural that news coverage, violence and programming are the prime broadcast concerns of the public. But the average citizen does not see the benefits he reaps from the advantages offered by a radio-dispatched service, whether it be public safety, industrial or transportation.

Graphically, frequency congestion has been depicted by the Federal Communications Commission in its 1966 *Annual Report* as a "condition . . . not unlike that of a main highway on a summer weekend, so overcrowded with vehicles that traffic has come to a standstill. Getting it moving again . . . becomes a problem of gigantic proportions." But if each vehicle stuck on that highway were a service vehicle—police, fire, electrical, plumber, power, taxi, truck—the impact on the public would be far greater than just the inconvenience of a crowded thoroughfare. It would be devastating.

Never before has a society or an economy relied so heavily on services to protect life and property, and to serve the public interest, convenience and necessity. A recent report of a House of Representatives Small Business Subcommittee underlined the impact of radio-equipped services on the public. The report described the uses of radio as unending.

ROOM NEEDED FOR GROWTH

In addition to the vast number of services that require immediate frequency relief, innovations in land-mobile-communications technology are on the doorstep of fruition. In the next few years the public will be served by newer and more sophisticated forms of communications, particularly in the area of data-transmission and remote-control functions. For example, police and fire vehicles will receive messages via mobile teleprinter and will be capable of retrieving information over the air regarding missing persons, vehicle and gun registration from a central computerized information system. Special sensors will be employed by ambulances en route to transmit to hospitals a patient's electrocardiogram, pulse and respiratory beat; power services will employ sensors to transmit reservoir water levels to a central reporting station; firefighting equipment will be controlled remotely to operate in areas too hazardous for humans. Truly, land-mobile technology is entering an era of tremendous growth and of applications no one even visualized a few short years ago.

Yet, in spite of the unique and important role that land-mobile radio plays and will continue to play in the future, the lack of frequency space could hinder this new growth. With present land-mobile channels already crowded in the major metropolitan

areas, the technological boom will place an even greater strain on these frequencies as newer applications for radio use come into being. Therefore, the need for spectrum relief for the land-mobile services is twofold: (1) to alleviate the severe congestion on the present land mobile bands and (2) to accommodate the new land-mobile technology that will be upon us in the very near future.

EFFECTS OF CONGESTION FAR REACHING

The necessity for relieving the frequency congestion that exists today cannot be overstressed. It is a vital issue, the effects of which are far reaching. To illustrate, the Associated Public-Safety Communications Officers—a national organization representing the country's police and public-safety radio communicators—recommends a maximum 33-percent channel-loading factor for police radio. This means, in effect, that optimum usage time for a police-radio channel should be approximately 20 min out of the hour to provide for an adequate reserve factor in the event of emergencies. Testimony of witnesses before a Congressional Subcommittee has revealed that in Los Angeles, for example, the loading factor is closer to 60 percent and often more than 80 percent on a normal weekday. During the Watts riots in 1964, the channels were completely loaded for 5 straight days.

The situation in the business-radio service in Los Angeles, while not measured in the same way as the public-safety-radio services, is similar. Public-safety frequencies are assigned by the FCC to police departments on an exclusive basis, as compared to business frequencies, which are shared by varying numbers of licensed business users. A telecommunications advisory panel of the U.S. Department of Commerce reported that in Los Angeles there may be up to 50 or 60 businesses on one radio channel with anywhere from 500 to 600 radio-equipped vehicles using that channel. While the statistics may vary from city to city, the top metropolitan areas—New York, Chicago, Los Angeles and Detroit—suffer from acute congestion of this type to the point where communications are being stifled.

LAND-MOBILE CONTINUES GROWING

The original frequency allocations were made by the FCC in 1949 when there were a mere 86,000 licensed land-mobile transmitters on the air. Of the usable radio spectrum from 25 to 890 MHz, land-mobile services were allocated a total of 40 MHz.

Today the situation is drastically different. Few persons in 1949 envisioned the multiplicity of uses that would develop for land-mobile radio in the ensuing 20 years, and during that time the number of licensed transmitters burgeoned to more than 3 million. In addition, several new land-mobile subservices that did not exist in 1949 were added to the FCC rules. The increasing strain on the 40 MHz allocated to the land-mobile services caused by the growing number of transmitters can be traced in the FCC Annual Reports for the past 10 years:

1958: ". . . the Commission's objective (is) . . . to relieve, to the greatest extent possible, the frequency congestion that prevails in most of these services."

1962: "The various industrial services grow within the confines of a very small portion of the usable radio spectrum. This situation has led to extremely congested operating conditions in many areas."

1964: "One of the most pressing problems faced by the Commission is to find frequency relief for the public-safety, industrial and land-transportation radio services. These land-mobile-radio operations have grown rapidly in the past few years and frequency shortage has become acute in many geographic areas."

1966: "The major problem facing the Land-Mobile-Radio Services, as well as one of the thorniest confronting the Commission, is the congestion in the limited spectrum space available to these intensively populated services."

Existing land-mobile-radio channels already have been split by the FCC several times. The most recent was last June when channels in the 450- to 470-MHz band were reduced to 25 kHz. The FCC admittedly recognizes the splits as short-term measures until a more adequate and comprehensive solution is found. But the industry, in effect, has reached the technological point where channel splitting no longer can be accomplished effectively and economically. What now is required is additional spectrum.

PROPOSED SOLUTION FOR RELIEF

However, while the existence of frequency congestion is obvious, the solution to the problem is not. Numerous and varying proposals are being advocated as the answer. Many of them do not take into account the nature of the land-mobile user, his needs, the area he covers and the importance of his ability to communicate efficiently, rapidly and with timeliness. Engineering solutions have technological limits and, with only a total of 40 MHz to work with, the limits of what can be done in the development of the state-of-the-art have been reached as far as channel bandwidth reduction is concerned.

Some experts in the communications field agree that realistic and immediate relief for the land-mobile services will have to come from the UHF–TV allocation, 470 to 890 MHz. Within this allocation, the FCC has provided for a total of 1098 station assignments across the country. To date, there are only 268 stations on the air, representing an actual operating assignment factor of 25 percent. There is no denying the need for other types of competitive broadcasting systems; however, there is a serious question with regard to the hundreds of idle UHF–TV assignments for which spectrum space is being held indefinitely, but which never may be filled. It is possible and feasible to employ UHF spectrum for land-mobile frequency relief while also permitting the full growth of a UHF–TV system and accommodating all UHF–TV assignments.

The next step, then, is to analyze several of the most current proposals for frequency relief that have been advanced by various agencies and groups concerned with the Land-Mobile-Radio Services.

1. Geographic Sharing—In one of its recent land-mobile Notices of Proposed Rulemaking, docket 18261, the FCC has proposed to reallocate to the land-mobile services in the top 25 urban areas unused channels from the block of UHF–TV channels 14 through 20. This proposal has become popularly known as "geographic sharing". The rulemaking would impose on the land-mobile systems employing these channels geographic, power and antenna-height limitations to protect the UHF–TV table of assignments—whether or not the stations are actually on the air.

Although the concept has a degree of merit, it does not face the realities of the typical land-mobile operation. Geographically, land-mobile users employing these new channels would be confined to the top 25 urban areas as defined by the *1960 census*. Services, however, have no geographic boundaries. Furthermore, the physical limits of the urban area will be changed following the 1970 census and, in fact, will continue to expand as the population densities of suburban areas increase. The 1960 urban limits already are obsolete, and even then have never served to mark the boundaries of commercial zones, service areas or areas of public-safety responsibility.

A second major drawback to the sharing plan is that in a number of urban areas, the power and antenna-height restrictions are so stringent that few, if any, radio users would be afforded relief. In Chicago, for example, the maximum allowable power would be 50W effective-radiated power with an antenna height of 50 ft above average terrain. Under ideal conditions, the range of such a system would be approximately 5 miles. Not taken into account are the high-rise office and residential buildings that will reduce tremendously the range of an already restricted land-mobile system. A 50-ft antenna will be the same height approximately as a 5-story building—a miniature structure in a city where buildings are often more than 40 stories high.

2. 900 MHz—In a companion Notice of Proposed Rulemaking to docket 18261, the Commission has proposed to reallocate 806 to 947 MHz to the land-mobile-radio services. The possibility of offering this region of the spectrum for land-mobile relief has been increased by the returning of 26 MHz of space in this band to the FCC's purview by the Office of Telecommunications Management.

At frequencies above 600 MHz, propagation characteristics become vastly more complex and unpredictable than at, say, 450 MHz. Land-mobile-radio equipment, comparable to that operating now in the present land-mobile bands, does not now exist that will operate at the higher UHF frequencies. If and when the 900-MHz band opens up, it will be best suited for short-range or multiple-base-station-type operations. It will not, however, be a reasonable substitute for 450 MHz because of its inherent short-range-only characteristics.

The 900-MHz region would be suitable for some new uses of land-mobile systems. But because of the long-term nature of 900-MHz band development and the complex engineering processes, additional lower-band frequencies still will be necessary to alleviate the immediate congestion.

TRUNKING OFFERS LITTLE HOPE

Trunking methods often have been proposed as one of the panaceas for mobile-radio congestion. Taking the example of trunking methods used by telephone companies, many outside the mobile-radio industry claim that application of these principles to mobile radio can result in substantial improvement in the utilization of the few channels we have available. Although the economies of trunking are well known, and equations for the advantage gained by trunking are indisputable for telephone-type uses, they cannot be converted directly into mobile radio. Those who believe they can are assuming that the typical mobile-radio exchange of communications is similar in nature to a telephone call, and this simply is not so—the typical mobile-radio communication consists of a rapid-fire, short communication between two vehicles, or between a vehicle and its base station. The trunking arrangements used by the telephone companies in their mobile-telephone systems simply are not applicable to such rapid-fire communications. The time to switch to an unused channel, and meet the other party there, is longer than the typical mobile-radio exchange.

To apply the use of trunking to typical mobile-radio use, therefore, would require entirely new and automatic trunk-switching concepts. These are not impossible, but they certainly would be expensive—adding further and unnecessarily to the cost borne by the mobile-radio licensee. Once such an automatic system were put into operation, the courtesy between users—which now provides for rapid and efficient message dispatch—would be lost because attention no longer would focus on the occasional hogging of the channel by an individual user. The length of messages would tend to increase, and the end result might be even worse congestion.

In the case of public-safety services—such as police and fire—the trunking arrangement would provide absolutely no advantage. How could trunking have helped the Los Angeles

people during their riots when all of their channels already were loaded in excess of 100-percent capacity? Anybody who has attempted to call the police department during a time of major emergency has had a demonstration of how trunking breaks down during such overloads. They just get a busy signal each time they call in.

A logical approach to solving congestion has been offered to the FCC by the Land-Mobile-Communications Council (LMCC), a comprehensive group of land-mobile user associations. In view of the present imbalance in spectrum allocations, the LMCC has urged that the Commission reallocate to the land-mobile services UHF-TV channels 14 through 20 on a nationwide basis.

The advantages of such a reallocation do not at first meet the eye. Television long has been an integral part of the household, the community and, in fact, the nation, and depriving the UHF-broadcast system of seven channels would appear to strike into every man's living room.

But this is not the case. Reallocation does not entail any effort on the part of land-mobile users to curtail the full development of a UHF–TV broadcasting system, but merely acknowledges that there is ample spectrum space for all types of communications services without imposing hardships on one or the other.

Any reallocation plan would be designed to have minimal impact on television service. No television station now operating on channels 14 to 20 would go off the air. These stations would simply move to a channel higher than channel 20. Studies carried out by the FCC's Land-Mobile Frequency Relief Committee and by an outside engineering firm—Earl Cullum & Assoc., Dallas, Tex.—retained by the Land-Mobile Communications Council, show that any stations from channels 14 to 20 displaced by a reallocation can be found operating frequencies above channel 20.

Furthermore, a reallocation could take place over a specified time frame so that all television broadcasting from channels 14 to 20 would not have to be relocated all at one time. The relocation of many of the stations involved could be timed to coincide with their licensing or equipment amortization periods, which would further reduce any inconvenience they would face in changing frequencies.

ADVANTAGES OF REALLOCATION

The advantages of reallocation as a means of frequency relief are numerous. First, the potential for interference inherent in a sharing plan would be eliminated completely. Just as today's land-mobile systems operating on 470-MHz interface with channel 14 (470–476–MHz) in several cities, so under reallocation there still would be only one point of interface, but this time at 512 MHz, i.e., channel 21.

Second, there would be no necessity to impose geographic or power and antenna-height restrictions on land-mobile systems, as in a sharing scheme. At the same time, television stations in large cities, protected in a sharing plan by distance separation, could raise their transmitting power or change antenna sites to adapt to changing market conditions. Once a sharing plan is implemented, their present power output would represent a ceiling because nearby channels would be used by land-mobile units.

Finally, the UHF–TV spectrum shows little promise of being fully activated and could be employed usefully by a needy service. Wasting this public resource is not in the public interest as long as such important services as land-mobile have critical needs.

NEW SPECTRUM NEEDED

Communications of all types are on the threshold of revolutionizing industry, transportation, public safety and literally the entire way in which the American citizen lives. There is no glamour attached to the operations of two-way radio, or the services rendered by a typical user, but they are the unseen underpinning of a vital part of our economy and society. There is ample room in the frequency spectrum for all services to flourish, and there is sufficient space to accommodate present and future broadcast applications. To assure the equitable distribution of frequencies to those services that make our way of life safe, convenient and comfortable, new spectrum is needed for the traditional uses and the newer ones just on the horizon. We need to make sure that they both get the chance to survive.

DATABANK

One of the best indicators of the urgency for solving the spectrum-congestion problem is the number of groups actively concerned with fact-finding and data-gathering. Countless studies have been made in the past 5 years, and thousands of pages of reports have been published. A few of the more significant are summarized below.

1. JTAC 1968, "Spectrum Engineering—The Key to Progress"—The Joint Technical Advisory Committee, comprised of technical and engineering people working under the auspices of the IEEE and EIA, has studied spectrum usage and conservation almost continuously since its formation in 1948. This 1200-page report represents more than 5 years of work involving more than a hundred radio experts. The committee envisages a continuous postponement of a crisis in spectrum saturation through sophisticated engineering techniques in spectrum usage. (JTAC, 345 E. 47th Street, New York, N.Y. 10017.)

2. The Advisory Committee for the Land-Mobile-Radio Services, 1967. An ad hoc committee established by the FCC in March 1964 studied serious frequency-congestion problems affecting land-mobile services. It explores measures to resolve those problems without allocating additional radio frequencies. Composed of more than 200 members representing specialized land-mobile expertise, the committee examined in detail for 3 years the technical, operational, administrative and spectrum-utilization facets of these services. The report made only two major recommendations for relief: (1) that channel spacing in 450-MHz band be reduced and new channels made available be allocated immediately; (2) that expanded interservice sharing of land-mobile channels be permitted to achieve maximum utilization.

3. The IRAC Spectrum-Planning Subcommittee, 1968. IRAC stands for Interdepartment Radio Advisory Committee working jointly with the FCC. Working Group 3 under its Spectrum Planning Subcommittee SPS–3 examined radio-frequency congestion in the first 10 standard metropolitan statistical areas of the U.S. Study was confined to bands of 138 to 174, 406 to 420 and 450 to 470 MHz. It appears that about 787 25-kHz channels in the above mentioned bands are unassigned in the Los Angeles area at this time. The report cautions that for various technical and operational reasons many of these apparently assignable channels are not usable in the area. SPS–3 indicated that the existing frequencies in the Los Angeles area are adequate to accommodate government land-mobile requirements through 1973. But it was unable to predict how long the presently allocated nongovernment land-mobile bands can accommodate expanding requirements in Los Angeles. SPS–3 concluded that the 380 newly derived channels at 450 to 470 MHz plus improved interservice sharing through the frequency-pool concept would suffice for the next 3 or 4 years.

4. "The Frequency-Card Study of the Land-Mobile Services", 1963. The land-mobile section of the Electronic Industries Assn. made a duplicate set of the FCC's 350,000 electronic computer cards relating to authorizations issued to the Public-Safety Industrial Land Transportation Citizens and Common Carrier Services in the 25- to 890-MHz band. The study was to confirm and support the knowledge of the number of land-mobile radio systems and units in specific geographical areas on each frequency assigned to each service and thereby enable all concerned to gain additional information pertinent to the loading of frequencies in any service in any area. Study showed a close correlation between numbers of transmitters and total population, e.g., more than 50 percent of licensed transmitters are concentrated in less than 8 percent of the U.S. land area. The report concluded that FCC should foster expanded *use* of mobile radio in the public interest rather than containing it. (EIA, 2001 Eye St. N.W., Washington, D.C. 20006.)

5. "Electromagnetic Spectrum Utilization—The Silent Crisis"—U.S. Department of Commerce, 1966. The Telecommunication Science Panel (TSP) was established ad hoc by the Commerce Technical Advisory Board with the cooperation of the director of Telecommunications Management, the Federal Communications Commission, the Department of Commerce and the Department of Defense, TSP, composed of recognized leaders in their field selected from outside government, studied the status of research in the U.S. designed to support and improve the utilization of the electromagnetic spectrum. The most significant of the conclusions are as follows:

(1) There exists a variety of natural incentives and consequently adequate research programs to support continuous progress to seek extensions of the usable portion of the spectrum.

(2) On the other hand, there is a clear lack of natural incentives and consequently almost no research to provide an evolutionary optimization of the use of the spectrum among the various functions on the basis of overall value to the nation.

The TSP recommended that the federal government establish or develop a research organization to support, but be independent of, the FCC and the director of telecommunications management in a clearly established responsibility for the allocation of the electromagnetic spectrum in the U.S.

6. "Frequency Management in the Executive Branch of the Government"—Office of Telecommunications Management, 1966. This report contains an appeal for immediate implementation of a major long-range planning program for the future allocation and use of the radio spectrum and to find ways other than radio to accomplish as many communication tasks as practicable.

7. FCC Planned Mobile-Frequency-Relief Committee—FCC, 1967. Report issued a public notice stating that it was undertaking an intensified in-house study of: (1) the feasibility of meeting the needs of the land-mobile-radio services within spectrum space now allocated to UHF television channels; (2) the feasibility of land-mobile use of a large number of TV channels on a geographic basis to minimize the impact on television displacement and growth potential; (3) reallocating the top 14 UHF television channels to the land-mobile-radio services.

The committee examined these three possibilities with two objectives in mind: (1) to afford immediate relief in those areas where the problem presently is acute, and (2) to make long-range plans commensurate with the projected requirements of the land-mobile services to the year 1980.

8. "National Association of Business and Education Radio" study, 1968. A study to discover what avenues might be pursued in providing a measure of relief for the land-mobile-radio services and what impact a possible course of action might have on present and future uses of this spectrum. The study was conducted in conjunction with the radio engineering firm of Molaney & Assocs. It was presented to the FCC staff in January 1968. The report concluded that part of the

solution to the land-mobile-radio problem could be developed through the reallocation of channels 14 to 20 to those services, particularly in major *urban* areas, with minimal impact on UHF TV. (NABER, 1330 New Hampshire Ave., N.W., Washington, D.C. 20036.)

9. "Chicago Land-Mobile-Usage Survey." This is a comprehensive survey of every licensed transmitter in the Chicago area. The survey was conducted by the Motorola Co. of Chicago to evaluate channel loading, interference, service growth rates, etc. The primary objective was to provide quantitative evidence of the land-mobile-service needs as a contribution to encourage better frequency management. Data were obtained from nearly 4000 land-mobile users.

The report points out: (1) The percentage of licensed base stations in operation varied from 60 to 80 percent, with the highest ratio in the 150-MHz band. Corresponding ratios for the mobile equipment could be as low as 50 percent. (2) Although the number of equipments in operation appeared significantly less than equipment authorized, it is difficult to attach any particular significance to this fact other than that the land-mobile services are concerned with their communication problems even though the equipments in operation may be fewer than indicated by the number of licenses issued. (Motorola Communications & Electronics, Inc., 4501 W. Augusta Blvd., Chicago, Ill. 60651.)

10. "A Survey of Public-Safety Telecommunication Requirements and Capabilities", conducted under contract by Kelly Scientific Co. for The President's Task Force on Communications Policy. Its objective was to "identify major U.S. metropolitan areas where lack of adequate radio communications hindered police and fire protection, rescue services or other aspects of public safety." Inadequate frequency resources for public safety were alleged to have contributed to crisis conditions such as recent riots and demonstrations.

11. "Managing the Spectrum Economically—Alternatives and Experiments". The TEMPO study was undertaken by the General Electric Co. for The President's Task Force on Communications Policy to investigate the feasibility of establishing an improved basis for assigning relative values in spectrum allocation. The study compares a number of alternative procedures whereby the federal government might license use of the radio-frequency spectrum. In the course of the study an analysis is made of what should constitute good spectrum management.

The study analyzes three major alternative spectrum-management systems. Namely: (1) the present FCC/OTM system, (2) spectrum engineering as "evolved for the armed forces and by ECAC", and (3) assignment of licenses to use spectrum through the "market" place—in other words, by auctioning.

12. Metropolitan Spectrum Congestion Task Group of The President's Task Force on U.S. Communications Policy. The members of this task group were made available by government agencies having a direct interest in telecommunications. The task group examined spectrum congestion in the Los Angeles metropolitan area.

The task group found that, although complete and accurate data on spectrum usage were not available, there was sufficient evidence to indicate that most present users generally were satisfied and that all current claimants can be satisfied. Application of current state-of-the-art technology and better operation practices, development and use of higher portions of the spectrum, and expanded use of systems engineering would resolve not only the much discussed land-mobile problem but also would satisfy all claimants for the foreseeable future.

THE TRUTH ABOUT THE AMERICAN SOLDIER IN VIETNAM

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. BRAY. Mr. Speaker, there have been a lot of wild, sensational, and completely false charges about the conduct of American troops in Vietnam that sound as if our fighting men in that country were indiscriminate killers.

First Sgt. Robert L. Pruden, of Indianapolis, speaking from 18 years' Army service, including Vietnam duty, has refuted this charge in a straightforward manner. Following is his letter to the editor of the Indianapolis, Ind., Star, which appeared in that paper on July 18, 1969:

AMERICANS DO NOT KILL WOMEN AND CHILDREN, VETERAN SAYS

TO THE EDITOR OF THE STAR: Gene Gardner, in his letter of July 15, gives no reasons why he thinks the war in Vietnam is "politically, diplomatically, militarily, economically and morally wrong."

His second paragraph cannot remain unanswered because it parrots acharge I first heard in 1951.

I have spent 18 years in the army, and I have served in two wars. Both my tours have involved ground combat against an armed enemy; I have never killed, nor have I known anyone else who killed a woman or child. We didn't do it even when we knew they were enemies. I can recall a 12-year-old boy in Binh Phuoc district of Long An province who was captured and told us he had been a member of the Binh Phuoc mortar platoon for a year and a half. The men who captured that boy went out of their way, they risked their lives to take him alive. Because in spite of what you may have been told or read, American troops are not killers of women and children.

Gardner should not be so quick to say that we "measure manliness" by "willingness and ability to murder Vietnamese." I have visited hamlets after the Viet Cong Special Action squads have paid a night call. The results are not pretty. I have seen a man shot 14 times with a pistol, and that required the assassin to reload with the man lying in the road at his feet. His crime? He happened to be bicycling along Highway 4 when a VC squad crossed, and he saw them.

There were some doubts in my mind when I went to Vietnam. There are none there now. The cause of freedom in South Vietnam is just; and if we refuse to help these people who have asked for our aid, then we deserve whatever judgment history has for us.

There are no better judges of Vietnam than those who have been there. I came back as the 1st Sgt. on D Company, 3d Battalion, 60th Infantry. When we paraded in Seattle, the peace at any price demonstrators attempted to disrupt the ceremony. Since we were in ranks, we could not even acknowledge their presence. But it was a different story when we left the Seattle Civic Center and found them on the sidewalk with their signs reading "Bring them all back." A young SP4 right in front of me shouted, "If you want 'em back, why don't you go get 'em?" As we pulled away in our buses, there were some dimes and quarters tossed to them with the admonition to "get a haircut." This from some men I had sent to the barber shop 3 times in Dong Tam to prepare for the parades.

Until you have been there and seen, it's difficult to make an accurate assessment of the actual issues surrounding the Vietnam question. But please remember, the men who have been there, the ones who have seen their comrades die, overwhelmingly support our commitment there. They have sacrificed the most, and they believe they are right.

ROBERT L. PRUDEN.

DEMOCRATS MUST OCCUPY THE MIDDLE

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. TEAGUE of Texas. Mr. Speaker, the editorial director of the Dallas Morning News, Mr. Dick West, has written a thought-provoking column which appeared in the October 19 edition of that paper. It has to do with the outlook of the Democratic Party and I think of great interest to all of us.

The editorial follows:

DEMOCRATS MUST OCCUPY THE MIDDLE

(By Dick West)

The basic lesson of American politics, since the late Franklin D. Roosevelt led a hesitant and isolated nation to war in 1941, is that a national political party—to be effective and victorious—must capture and appeal to the "middle" and not float too far to the left or right.

There are local and regional exceptions, of course—in Dallas County, for instance, it is hard to be a middle-of-the-roader—but nationally the party which can be moderate but progressive, reasonable but firm, has a better chance than one which shifts back and forth from the left and right extremes.

The late Dwight Eisenhower became the only Republican president in a period of 36 years (1933–1969) because (1) he was an attractive personality with a hero image and (2) he somehow brought the Taft (conservative) and Dewey (liberal) wings of the party together in a successful coalition of the middle.

Barry Goldwater had the same chance in 1964—but at the Cow Palace convention in San Francisco he was arrogant, uncompromising and defiant in ordering the moderate and liberal Republicans to go along with him in right field or get out. They got out, and he went down to the worst defeat in history.

Dick Nixon learned the value of the middle in his eight years as Eisenhower's vice-president. He is disliked by most liberals of his own party, but last year he managed to corral enough of them, along with the right wing, to win his party's nomination and a narrow victory in November because he tossed his pitches to the political middle as well as to the "forgotten Americans" of the middle class.

The Democratic Party is in sad shape today nationally because its top leadership is ignoring the middle and the right. Its front line is balanced too far to the left, just as Goldwater wanted his interference forming on the right before he carried the ball.

This was the basic message delivered by Bob Strauss in a significant speech recently to Democratic women at the State Fair.

It was significant, because Mr. Strauss, local attorney, is national committeeman from Texas.

Strauss reminded these ladies that the Democratic party has been strong since the days of F. D. Roosevelt because it followed Sam Rayburn's advice: "There is room under the umbrella for all of us—whites, blacks, liberals, conservatives and middle-of-the-roaders."

Extremism breeds extremism, Strauss warned, adding: "We must remain a party of moderation which encompasses a great collection of religious, economic, cultural, ethnic, occupational and social minorities who have been the backbone of this nation's progress."

The people of America, he continued, "are yearning for the politics of moderation, of progress with responsibility and of strength with sensitivity for every point of view."

Just why, you may be asking, are remarks like these so significant?

Because a few weeks before, Strauss was in Washington for a closed-door meeting of the Democratic National Committee and he warned the committee's top dogs that they were ignoring the party's conservative and moderate wings—and if they continued, the party's immediate future would be bleak.

His remarks were directed primarily to the party's national chairman, Sen. Fred Harris of Oklahoma, who has set up a policy council for the national party and loaded it with liberals. The two representatives from Texas on the council are liberals, and Strauss warned Sen. Harris he is inviting disaster unless he "broadens the base" and invites conservatives and moderates to the dinner table.

Strauss was rough in that secret session, but when he finished there was loud applause. Harris got the message, because the council will be broadened in the future.

It so happens that Strauss, though few people know it, is the best money-raiser the Democratic party has. He is given a big share of the credit for Humphrey carrying Texas last year.

He is part of the brain trust behind the Connally faction in Texas. He remains on cordial terms with Preston Smith, and he long ago became a confidante to Ben Barnes. Some of the liberals like him, too, so Strauss can't be ignored by party leaders because he represents a broad base in Texas and the South and this is the region which the Democrats must regain if they hope to defeat Nixon.

In setting up the "policy council" of liberals which will shape the party's image between now and 1972, Sen. Harris did not even consult Strauss on the Texas appointments.

Strauss mentioned this fact in the important Washington meeting, adding acidly that the party leaders had no trouble finding him four times in seven days toward the end of the 1968 campaign with respect to raising a million dollars for a final push.

In January of 1963, John Connally became governor of Texas and immediately began strengthening the "middle" of the state's majority party. Liberals were gaining on the left, Republicans on the right, and the future of the party was not too good.

But Connally gradually isolated the left and right extremes; he himself became unbeatable and he developed a moderate-conservative image which put the party in every county on a firmer foundation.

That is exactly what Sen. Harris should be doing nationally.

Incidentally, Connally's name is being mentioned by some in the South, the Midwest and Border states as a vice-presidential nominee in 1972.

Connally is showing no interest in politics right now and certainly has not spawned such talks. But candidates and leaders of his type and ideology will have to be given more prominence and stature in the party if it hopes to break Nixon's hold on that vast area west of the Alleghenies.

If the country goes to pot, economically, just about any kind of Democratic ticket can win in 1972. But if times are anywhere near normal, the Democratic party must have balance to win. Its base cannot be out in left field with "doves," Walter Reuther, a scattering of intellectuals and Father Groppi.

RARICK REPORTS ON MORATORIUM

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. RARICK. Mr. Speaker, on October 19 I made a radio and television report to the people of my district on the moratorium.

I include the text of my report in the RECORD:

RARICK REPORTS ON MORATORIUM

I'm John Rarick, your representative in Washington.

Last week, the American people were subjected to a skillfully promoted and well-publicized display of organized contempt for our system of Government and our men in Vietnam.

The small minority that participated, for various personal reasons, never amounted to more than one million—less than one-half of one percent of the two hundred million American people.

The national news media continues to overreact in attempting to glorify this tiny minority of dissidents, dupes, and misguided participants. No publicity or fanfare was given or expected by you, the great silent overwhelming majority. Loyal Americans did not lay out the money for full page ads in big city dailies—or for hours of prime time network T.V. Someone else did. I compliment all of you fine people who still have faith in our country, our constitutional system for your support of decency, morality and patriotism—for backing our fighting men in Vietnam.

I am proud to represent you in Washington, where your Americanism was noticed last Wednesday. The South stood loyal.

Certainly all of us want peace—no one wants peace more than men who have known war. But we also know that slavery is worse than war—that the cost of freedom is high—that we must be willing to pay that cost.

The great decent majority of Americans realize that is why we are in Vietnam. Where diplomacy has failed we must fight to support our allies to protect their homes, their families, their children today—lest we be forced, without friends, to defend our homes here tomorrow.

We, who did not disgrace our heritage, can compliment each other. But as the left-ist-oriented national news media and wire services continue to dignify and extol every maneuver of the so-called moratorium, we can expect them to continue to magnify an incident that most Americans would not even have noticed had it not been blown up in the news—before, during and now after. Even in Washington, more people were interested in the world series game.

Compare the real concern of more than fifty million Americans—more than fifty times the number of the poor exploited peaceniks—concern over the safety and welfare of their children. The deprival of our freedom of choice—the rise of the totally unconstitutional, totally unlawful, doctrine of racial proportions—is being ignored—does not seem to matter to the propaganda machines that cry about democracy. Our petitions—our lawful, orderly protests, receive no extensive publicity in the national media.

Few Americans will be given the full story or even any responsible explanation as to who was running the moratorium circus, its purpose and its real objective.

The truth of the matter is that the whole operation had nothing to do with either Viet Nam or with free speech. It did not even have anything to do with peace.

Americans who have followed communist programs and slogans understand that peace does not mean to the communist what it means to Americans. To the communist there can be no peace in the world until all freedom is destroyed, all constitutional government overthrown and all independent thinkers liquidated. Peace, in other words, to the communists means complete domination under communist tyranny without any opposition—which includes no free speech and no dissent. Have we forgotten Castro's firing squads and the wall in Havana? . . . Or the Katyn forest massacre?—the wall that divides Berlin?—or more recently Czechoslovakia?

The national news analysts have become passionate advocates of disloyalty against the United States Government. It is quite obvious that these so-called reporters fail to understand what the whole moratorium was about . . . unless they understand all too well and are a part of the plot.

Personally, I agree with most of the letters I am receiving from our servicemen in Viet Nam who say that our national news people and T.V. news stars are the voice of Hanoi, and therefore, the "enemy" at home. Hanoi has always boasted it would win this war in the United States.

If you feel bitter about these national disgraces being overplayed by the news media just remember that our men in Viet Nam not only are bitter but they feel betrayed . . . and they look to you and to me here at home to combat the fifth column in our land, while they are fighting the shooting war overseas.

Insofar as leaving Viet Nam is concerned, that decision has already been made. Our allies have already been sold out by the announcement that we do not intend to win—but to make a deal with the enemy . . . if only the enemy will deal.

This means another no-win war, like Korea. This means that our captive fighting men held by the enemy have been abandoned. You do not regain your prisoners if you do not achieve victory. Our men held by the Germans, the Italians, the Japanese, were released. Over four hundred Americans are still held by the North Koreans . . . more than fifteen years after our phony negotiated end to that war.

The only disagreement between the peaceniks and the administration is whether our retreat is to be a rout . . . as demanded by the peaceniks—to further disgrace Americans, or to be disguised as a negotiated withdrawal . . . as peddled by the administration.

Both views ignore the fate of our many anti-communist Asian friends upon our departure from Viet Nam. It is flagrantly dishonest to suggest the further evacuation of these people, many of whom are christian and who were already evacuated by us from North Viet Nam in 1954 to prevent their wholesale slaughter by the communists.

The plain truth is that if we leave Vietnam before our allies are strong enough to protect their homes from communist aggression, these millions can expect the same carnage which befell the christians slaughtered at Hue during last year's Tet offensive.

What was the moratorium all about? It was merely a sensitivity training exercise, designed to condition mindless people in large numbers to blindly follow demagogs in defiance of constituted authority . . . the same sort of operation which recently resulted in tearing down the doors of the assembly chamber in Madison, Wisconsin. It had the further purpose of conditioning decent Americans, with the aid of massive publicity, that there was nothing to prevent such disloyal disorders.

It was a dress rehearsal for next month—November 15.

More ambitious plans for giving aid and comfort to the enemy have already been announced for that date—a further operation in the fall offensive waged in Washington by the enemy.

Let no one be misled—our fighting men in Vietnam are not.

I have on my desk a Washington paper which carried a story from inside of the moratorium operation.

Just listen while I read a few of these shocking comments. "We may get something out of it. Hershey's already been tossed to us. Maybe Hoover'll be given to us next."

I assume they mean J. Edgar Hoover. I didn't know he had anything to do with the war in Vietnam. But I do know he has a lot to do with fighting communism.

Continuing with the news story, "The Government should not be permitted to keep a single soldier in these parts, but to get them out we must do more than today."

"In fact, today is a preparation for more. November the fifteenth is already being planned as a march on Washington. Today is a day of accustoming great numbers of people to the anxiety of standing up to their government.

"We were all brought up trusting the Government; it's hard to shake off the feeling that resistance to it, especially about a war, is a form of . . . treason. The moratorium will make people comfortable in their new roles of resistance. It will make opposition socially acceptable, perhaps even stylist."

". . . An action like the moratorium isn't an event in itself but the preparation and threat of more and wider action. Even now what started out to be a sedate moratorium is inching in the direction of a general strike. It hasn't reached that point yet, but it will unless the Government capitulates . . ."

"By spring, the country may be ungovernable. He says he won't be the first American President to lose a war. What he risks is being the first President to lose America."

Three days before the exercise, Radio Hanoi broadcast its congratulations and instructions. Here are a few of the delighted phrases of the enemy.

"Radio Hanoi—October 6th . . . The heroic struggle of the friends in New York, Washington, Oakland, and Berkeley has been much appreciated. . . . We greatly admire the active and massive participation of the American youths and students in this fall struggle movement . . . we want to take this sincere opportunity to express our sincere thanks to all of you . . ."

On the day the moratorium started, the new dictator of North Vietnam sent a long telegram to those he called his "dear American friends."

His message closed with these exact words—"May your fall offensive succeed splendidly."

Here is one of the handbills passed out to high school students. It calls for them to join . . . "The fall anti-war offensive." . . . The same offensive the enemy is praising.

Your conduct last week was wonderful. I'm sure that you will not be misled or taken in by the next disgraceful exercise . . . let's all of us—especially veterans and veterans' groups—show our men in Vietnam that their enemy can not win here at home. Let's all stand together.

Let's all stand for America.

POLLUTION CONTROL: WHY HAS IT FAILED?

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. DINGELL. Mr. Speaker, the October 1969 issue of the American Bar Association Journal carries an article entitled, "Pollution Control: Why Has It Failed," by Arnold W. Reitze, Jr. So that my colleagues may have an opportunity to read this cogent discusison of a problem whose dimensions are only now beginning to be generally recognized, I include the text of the article at this point in the CONGRESSIONAL RECORD:

POLLUTION CONTROL: WHY HAS IT FAILED

(By Arnold W. Reitze, Jr.)

In recent years nearly every literate person has become cognizant of the "quality" deterioration of our environment.[1] However, this knowledge has not been translated into the meaningful societal actions necessary to halt the fouling of our habitat. At one time the destruction of our environment was merely an aesthetic problem. Now it threatens the survival of mankind as a species.[2]

When compared to the age of the earth, the period of man's occupation of our planet has been very short. While man has been destroying his environment throughout his recorded history,[3] his ability extensively to alter his surroundings to the point of complete destruction has developed during the last century. It is therefore imperative that man's myopic view should not obscure the insignificance of this span of time.[4] Assuming he survives his radiological, biological and chemical war toys,[5] he still must face the long-term effects of pesticides,[6] air pollution,[7] destruction of the soil,[8] and the many other effects of abusing his habitat. War is a danger, but peace too may be deadly. Man should not be sanguine. Why then is he acting against his long-term interests?

The most obvious reasons are the ubiquitous nature of the problem, its complexity and the concomitant cost of combating it. Professor Kenneth Galbraith put it this way: "Pollution may well be the nation's most broadly based and democratic effort." [9]

Today, virtually every identifiable social or economic interest group is actively engaged in the destruction of our environment. The average citizen functioning as the operator of an automobile and as a waste-producing machine is the most significant source of air and water pollution. Industry is a large user of water and a contributor of vast quantities of pollutants. Whether it is the air and thermal pollution of the power industry, the acid pollution of the steel industry or the organic wastes that the food processors discharge, nearly every industry is a significant contributor to the pollution problem.[10] So too is agriculture, with its pesticide residuals, chemical fertilizers, organic wastes and silt.[11] The mining industry is responsible for much of the destruction of Appalachia,[12] while the construction and road-building industries follow practices inimical to soil conservation, adding to our silt pollution problem.[13] The Federal Government is a major polluter from its military installations,[14] ships,[15] and through the activities of agencies charged with other aspects of resource development.[16] With everyone contributing to the pollution problem, it is difficult to assign responsibility.

While the universality of polluters complicates abatement procedures, it would be simplistic to attribute the failure of control efforts solely to the size and diversity of the body to be regulated. Restraints on "aggressive activities" that result in limitation of individual freedom for the benefit of society are common. Traffic laws are an example. As population density increases, these limits on individual freedom continue to become more totally encompassing. The furor over firearm control legislation is an excellent example of the conflict between the necessity for group control in areas of dense population and the individual freedom that could more readily be maintained in a bucolic society.[17]

SPENDING A FORTUNE TO DEFEND WHAT WE WON'T PAY TO CONSERVE

The argument that the high cost of pollution abatement precludes adoption of controls is also unconvincing when one realizes that what is at stake is the livability of our environment. The expenditures from the public sector of our economy for defense and agricultural price supports are examples of the high fiscal commitment to policy goals for needs deemed sufficiently great. But if we consider the vast fiscal resources of the private sector of the economy, the handling of our environmental problem is certainly within our capabilities. The problem is getting the money allocated to the task.

In our society, the traditional controls have been unable to cope with the continued deterioration of our environment basically because of our failure to recognize pollution for what it is: a form of aggression against society as a whole and our neighbors in particular. Existing or possible control methods are of three types: informal (our mores), formal or legal and economic. The informal controls are those most capable of producing a high general level of conformity to the demands of society, while legal controls operate primarily to establish a minimum standard of acceptable conduct. Economic controls hardly exist. The informal controls are the most effective, as the regulated individual conforms as a result of his ingrained socialization. Ultimately, in a democratic society, all control should be based upon this societal consensus of what is permissible conduct. The strength of such mores is aptly expressed in the ditty about

> The young lady named Wilde
> Who kept herself quite undefiled
> Through thinking of Jesus
> And social diseases
> And the dangers of having a child.[18]

IF WE WOULD VIEW POLLUTION AS VICTORIANS VIEWED SEX

If pollution could be regarded as "dirty" in the Victorian sense, then our environmental problems would soon be solved. But this is not likely to happen. In general, polluting is socially acceptable conduct. Many of the wealthiest suburban communities inflict their inadequately treated wastes on their downstream neighbors. Eleemosynary institutions such as hospitals and universities are often major air polluters. The names of the major industrial polluters read like a who's who of industry.[19] Yet the corporate directors and officers who are responsible for these chemical and biological attacks on the rest of us are often considered the leading citizens of their communities.

This acceptance of pollution is deeply embedded in our societal psyche. The Judeo-Christian tradition is a most anthropocentric influence. The man and nature unity of ancient paganism and primitive animism has had no part in our historical tradition. As a society we still believe that man can exploit nature interminably. Our technology and our predominant social institutions have evolved in this tradition, and it is this outlook that is held today by nearly all Americans. Despite Copernicus, our relationship to the environment is still based on a man-centered universe. We reject the Darwinian notion that we are part of nature.[20]

This rejection may have been useful in creating the mental framework necessary for settling the wilderness and developing a nation from a relatively unpopulated frontier.[21] But today, in our densely populated, interdependent, twentieth-century nation, this attitude can lead to our destruction. Man cannot persist in creating an environment hostile to his continued existence.

Economic controls to protect our environment do not exist. The reason is simple: Pol-

Footnotes at end of article.

lution increases profits to individuals and corporations. Conversely, pollution control is expensive. When the environment is defiled by a business, the cost of production includes a harm inflicted on society for which no payment need be made. Air and water are treated as elements of production that are essentially free and are, therefore, abused or wasted with impunity. Pollution controls, when avoided, do not become a cost of production. Although the cost of society of pollution, even in economic terms, may exceed the costs of abatement, the individual polluter making the decision of how to operate his business must decide whether he will abate pollution with his own financial resources or pass the costs and harm on to the public as negative externalities of his business operation. Even if the businessman possesses a highly developed social conscience, his competition is unlikely to be similarly constrained. In a competitive world the lowest level of morality, if consistent with the desire for maximizing profits, tends to become the norm.[22]

IF PRODUCTION DOESN'T POLLUTE, THE PRODUCT DOES

Even if the production of the goods does not cause pollution, the product itself can be designed so as to become a pollution problem. Polaroid film, aluminum beverage cans, detergents and chemical pesticides are some of these. The responsibility of a manufacturer for the environmental problems caused by the use of his product is a subject that must become of increasing concern if we are to protect our water and air. The requirements for controls on automobile emissions are but a beginning.[23]

Pollution abatement is hampered, of course, by the often astronomic costs of control. The capital investment necessary to control industrial wastes can represent a substantial portion of total capital investment. Many businesses, particularly those that are small or inefficient, just do not have access to such capital. It is usually difficult to make pollution abatement financially attractive. Even if a profitable by-product can be obtained through pollution control, the economic return is rarely equal to the return which could be obtained from investing the necessary capital in more traditional investments or else in other polluting industries.[24]

Not only are capital requirements substantial, but operating costs for pollution control are significant. For most communities, proper waste treatment would engender a substantial increase in operating costs as well as a vast increase in capital expenditures. For the Lake Erie Basin, proper phosphate removal alone would double present waste treatment expenses.[25] The costs to industry for abatement programs would have to be passed on to the consumers in the form of increased costs for nearly every item purchased. The cost to municipal government would be reflected in higher water and sewage rates.

The economic cost of environmental protection is so high that a commitment of the citizenry similar to that created by war is necessary if this problem is to be successfully resolved. Environmental protection is an expense that only wealthy nations can afford, but today it is an expense we cannot afford to avoid. The capital accumulation necessary for a modern economy is obtained by exploiting natural resources. But the limits of exploitation for developed economies have been reached.[26] We no longer can afford to allow this exploitation process to continue. Rather, the process must be reversed. Continued expansion of the gross national product, if achieved at the expense of our environment, is irrational. For example, producing gas masks and distilled water for city dwellers will increase the gross national product, but it is difficult to understand how the required use of these products improves our well-being. As the production of goods of dubious value and planned obsolescence continues, it is often at the expense of our environment.

ERODE ENVIRONMENT OR PERSONAL FREEDOM?

Since economic considerations provide an incentive to pollute our air and water, only strong formal constraints have any chance of success, and these can only be considered temporary expedients. If the mental attitude necessary for developing the informal constraints is not developed, the formal regulation in the long run will not be successful. While the continued expansion of governmental powers and the erosion of personal freedom that this implies cannot be welcomed, the penalty for increased population density must be paid. The choice is either *laissez faire* treatment of the environment, followed by its destruction, or governmental regulation sufficient to prevent such destruction. The polluted condition of our air and water makes it clear that efficacious regulatory powers do not exist.[27]

The concept of governmental regulation of our waters is nothing new. From the beginning of our nation, the Federal Government has been concerned with our water resources. Most of its activity, however, was to encourage development and exploitation of these resources. Not until the end of the nineteenth century did the concept of governmental protection of resources enter our political philosophy.[28] Yet this long history of involvement in the various aspects of resource management is significant, for it helps explain the lack of a unified, coherent government policy toward our water resources or toward the larger problem of the management of all our natural resources.

DOZENS OF FEDERAL AGENCIES MOSTLY AT CROSS PURPOSES

Today water resource regulation and development is carried on by dozens of federal agencies. Many of these agencies work at cross purposes: The Department of Agriculture has paid North Dakota farmers to drain land, while the Department of the Interior spends money to create and protect such wet lands for wild fowl breeding; the Department of Agriculture pays to remove lands from agricultural production, while the Bureau of Reclamation spends large sums to create agricultural lands; the Army Corps of Engineers dredges harbors in such a manner as to increase the pollution problem the Federal Water Pollution Control Administration is attempting to abate. Examples of these inconsistent government activities are legion, and they are largely the result of numerous agencies that represent specialized economic interests.[29]

Today, most progress toward pollution control is carried out by the Federal Water Pollution Control Administration (FWPCA) of the Department of the Interior. This is one agency dealing with water resources that does not represent an economic bloc. It has been active for but four years. Its power is limited, and it has a small budget. But considering the limitations imposed on it, it has done an excellent job. Some progress finally is being made, but this progress is inadequate. As the Queen said to Alice: "[I]t takes all the running you can do, to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that." [30] Our growing population and increasing rate of urbanization require an estimated expenditure of $22 billion for municipal sewage systems by 1975 and an additional $10 billion for industrial waste treatment.[31]

We must run to stand still, yet we are barely crawling. The estimated expenditures and net lending for 1968 by the Federal Water Pollution Control Administration are $190 million. Of this a little over $6 million will be allocated to Ohio.[32] The ten largest agricultural subsidies exceed Ohio's allotment.[33] With this sense of priorities, little progress can be expected. Reductions in federal outlays can be anticipated to be taken from natural resource programs out of proportion to their percentage of the total budget.[34] Few economic blocs lobby to protect water pollution control funds. Even without reduction, the present federal expenditure for water pollution is only approximately equal to the interest that could be earned on the interest that would be paid on the defense budget if invested at 5 per cent.

The state governments' attitude toward pollution control parallels that of the Federal Government. A profusion of conflicting state agencies dealing with these problems is common. Even more common are the lack of effective power and minuscule budgets.[35] Under present law the responsibility for enforcing most laws dealing with water pollution is with the states. In Ohio the Water Pollution Control Board operates with a budget of less than $500,000.[36] Though there is danger in making comparisons between systems that are not identical, it is interesting to note that the budget for the German Ruhr District Authority—the district is a fraction of the size of Ohio—is about $50 million.[37] Air pollution control in Ohio is expected to advance with a budget of $150,000. State grants to local governments in Ohio for pollution control have not materialized,[38] and this in turn denies local governments federal matching funds. Expenditures of this nature predetermine the result.

SOCIETY MUST KEEP SCIENCE'S PACE

The failure of our environmental protection program is obvious. The ability of our social organizations to deal with today's problems has lagged substantially behind our science and technology. But the reason for this failure is due largely to the lack of any consensus to effectuate the necessary change. The political pressures that encourage a high level of expenditure by the Department of Defense tend to minimize environmental controls. The general public has had but minimum concern; when its concern grows to the point where it manifests itself in a willingness to approve expenditures commensurate with the task before us, then, and only then, will there be a chance for reversing the deterioration of our environment.

Recent voter approval of bond issues for pollution control is a hopeful sign, but after two centuries of neglect and exploitation, the challenge is so substantial that these sums, while welcome, are but a beginning.[39] We can only hope meaningful recognition develops throughout the nation while the problem is capable of being solved.[40] A danger is that society will adjust to levels of pollution that apparently have only a minor nuisance value, but that this apparent adaptation will eventually cause much pathological damage.[41] Further, the ability of man to adapt to the continuing qualitative deterioration of his environment creates a political climate that makes reversal of this deterioration difficult. After a period of time citizens seem to accept as normal a long journey to areas where fish still live and swimming is safe.

It is the belated recognition that time may not be on our side that is most ominous. The air we breathe is the same as that utilized by Neanderthal man, only now 65 million tons of deadly carbon monoxide are discharged each year by automobiles in this country.[42] The long-term effects of this pollution on man's physical, neurological, and even genetic make-up cannot be determined. What will the 133 million tons of pollutants that are sent into the atmosphere each year in the United States do to weather patterns and eventually to the temperature of this planet.[43] No one can be sure. Water pollution

Footnotes at end of article.

may also become irreversible. The present deterioration of Lake Erie from phosphate—mostly from detergents—that encourages vast algae growth and greatly speeds eutrophication may continue even if additional nutrient inputs are curtailed.[44]

ABILITY TO DESTROY WHAT WE CAN'T CREATE REQUIRES HUMILITY

Our technology is allowing man to upset ecological balances without having developed the degree of technological *expertise* necessary for a new artificial ecological balance to be created that can be predicted and controlled so as to assure that a place remains in our man-defiled environment for man. Until this can be achieved, we must humble ourselves to reinstate a man-nature unity. We must begin to live in harmony with our environment.[45] When this concept is accepted, the necessary money will be forthcoming and social institutions will rapidly provide the means for carrying out the mandate of the citizens. In a democratic society these attitudes can only be created through education and persuasion. Until the consensus of our citizens is that an environment undefiled by man is highly desirable, the reckless abuse of natural resources will continue. The law, particularly when large sums of money must be appropriated, can move only a short distance beyond the desires of the governed. Unless those who are led become convinced of the wisdom of the course of action, even limited leadership will have an ephemeral existence. Until Americans decide they want a livable environment, we cannot have one. Our survival may depend on their decision.

FOOTNOTES

[1] Numerous publications lamenting the destruction of our environment have been written in the past several years. Two general books of value are S. UDALL, THE QUIET CRISIS (1963) and RIENOW & RIENOW, MOMENT IN THE SUN (1966).

[2] In 1952 the London smog killed 4,000 people, more than the number killed in the attack on Pearl Harbor. In late October of 1963, a stagnant air mass over the Northeastern United States caused toxic gases to increase to more than five times the normal level. Only a change in wind direction prevented disaster. LEWIS WITH EVERY BREATH YOU TAKE viii, xvii (1965).

UNITED STATES FAILURES IN VIETNAM

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, October 21, 1969

Mr. FRASER. Mr. Speaker, on September 29, 1969, at pages 27560–27561 I introduced into the RECORD a letter in which a Vietnam veteran wrote:

In the end what I objected to was not so much individual atrocities, for these can be found in any war; war itself is an atrocity. What compelled my stand (disaffection with our effort) was the evident fact that at an operational level most Americans simply do not care about the Vietnamese.

In the past few days, my attention has been directed to three publications which speak to this same issue. The first appeared in the October 17, 1969 Life magazine and is authored by former Supreme Court Justice Arthur Goldberg. He writes of the Green Beret case and what he views as "an appalling, indeed frightening, deterioration in our national standards of morality and law."

The second article appeared in Saturday's Washington Post. In it, Robert G. Kaiser writes:

Open expression of American contempt for Vietnamese is common.

The third and by far most disturbing story appears in the October 18, 1969, issue of the New Yorker. The story of the rape-murder of a Vietnamese teenager by American troops is told by Daniel Lang. The soldier who brought this sordid episode of the war to the attention of higher authorities encountered a conspiracy of silence by his immediate superiors which attests to the deteriora-

tion of morality noted by Justice Goldberg.

What do these articles say to Congress and others in leadership roles in the Nation? They say that war is an atrocity which degrades all those who participate. But, of course, we already knew this. However, we do not always admit to ourselves that those in the front lines are not—or seldom are—the Martin Luther Kings, the Arthur Goldbergs of our society. Rather they are average Americans required by their Government to perform an inhuman job. They are young and they are under great pressures and they do not always have fine moral sensitivities. They live in a world of kill or be killed. And while we should not be surprised at the individual atrocities that each side commits, we should recognize that this struggle for freedom, self-determination and/or national liberation is being achieved by means that degrade those involved.

I cannot speak to the NLF or the North Vietnamese. I recognize that the atrocities they commit are at least as numerous as those committed in our name. In fact, this point is poignantly made in Mr. Lang's New Yorker article. The sister of the girl killed by the GI's was subsequently abducted by the Vietcong. As the narrator of the story said:

Who says we don't get along with Charlie? Between us, we've taken care of that whole family.

The Green Beret case, the rape-murder case, the generally observed contempt our soldiers show for the Vietnamese cannot be ignored by our leaders. When a military lawyer can say before a military court, as he apparently did in defense of the sergeant who precipitated the rape-murder:

There's one thing that stands out about this particular offense. . . . It did not occur in the United States. Indeed, there are some that would say it did not even occur in civilization, when you are out on combat operations—

Our moral deterioration has progressed much further than Justice Goldberg suspects.

I cannot talk to the Vietcong about their moral deterioration, but I can speak to the American public about ours. To that end I introduce into the RECORD the three publications I refer to in my remarks:

[From Life magazine, Oct. 17, 1969]

ARTHUR GOLDBERG WRITES ABOUT THE GREEN BERETS

The dropping of murder charges in the now famous Green Beret case has almost everywhere evoked a widespread sense of relief.

I must confess that I find this reaction—and, even more, the powerful political clamor against prosecution which preceded the dropping of charges—profoundly disturbing. In them I note an appalling, indeed frightening, deterioration in our national standards of morality and law.

Two comments are necessary by way of preface. First, what I say must not be construed as reflecting adversely upon the soldiers who were charged with murder, or as a judgment upon the facts of the case. Although the eight men will now not have their day in court, the old principle that persons accused of crime are presumed innocent until found guilty still lies at the heart of our legal system. The charges that were levied against the Berets were only charges. They were not evidence. Still less were they a finding of guilt.

Second, I do not have access to information which would enable me to judge whether the national security would indeed have been jeopardized by disclosures which might have resulted had the case been brought to trial. Nor, in fact, do I have any quarrel with the general proposition that considerations of national security may sometimes justify a decision by the authorities not to prosecute a particular set of charges.

What does alarm me is the way we have responded as a nation to the grave allegation that one or more of our uniformed soldiers *executed without trial* a foreign national whom they had in their complete control, because they suspected him to be a double agent.

Few of our people, and even fewer of our leaders, have manifested any sense of outrage that such an execution without trial might have occurred, or might have been ordered by American officers. Indeed, General Creighton Abrams, our commander in Vietnam and a brave and forthright soldier who knows the rules of war, has come under sharp public criticism for having insisted on their applicability in this case—to the point of ordering that murder charges be brought.

Of course war is hell. I suppose there has never been a war in which troops under the stress of battle have not commited acts of savagery which they would not think of performing under other circumstances. And I recognize that a counter-guerrilla war in the jungles and rice paddies of South Vietnam is peculiarly prone to instances of misconduct of this kind.

But the Green Beret incident, as alleged, does *not* involve lapses of discipline under battlefield conditions. The charge was that a South Vietnamese agent in our employ and control was simply executed—rather than being detained, or tried, or turned over to the South Vietnamese for trial. No civilized nation can permit individual members of its armed forces to take this kind of action on their own initiative. Down that roads lies anarchy.

Article 106 of the Uniform Code of Military Justice provides that alleged spies caught behind our lines and not in uniform may be punished by death—but not before trial and conviction by an appropriate tribunal. Articles 93 and 118 of the Code make it a crime for an American serviceman to murder or even to practice cruelty toward "any person subject to his orders." The Geneva Conventions to which we subscribe impose similar restrictions.

At the end of World War II we participated in war crimes trials at Nuremberg and elsewhere in which enemy military personnel who mistreated prisoners under their contol were prosecuted, convicted and punished. We sentenced General Yamashita, the "Tiger of Malaya," to death not for his own acts but for his failure to control the conduct of troops under his jurisdiction. We treated as war criminals those German generals who had executed uniformed soldiers and agents whom the Office of Strategic Services had sent into occupied Europe to train partisans, gather intelligence and commit sabotage—despite the generals' defense that Hitler had ordered them to do so. Under international law, as we applied it, an order such as Hitler's was an unlawful one, and therefore not entitled to obedience.

I take great pride in this nation's historic fidelity to the rules which govern civilized societies even when they are at war. Traditionally we have never allowed expedience to justify departures from these rules. In August of 1776, when our nation's very ability to survive was in doubt, the Continental Congress provided that alien spies were to be executed only according to the law and usage of nations, and on the sentence of a general court martial. The rule was followed from the bleak days at Valley Forge to the end of the war.

In 1942, when our struggle against the Axis powers was at its most desperate, the United States Supreme Court interrupted its summer recess for the first time in 22 years to reconvene and review the procedural protections being afforded eight Nazi saboteurs in civilian garb who had been landed in this country by submarine.

Has the time now come, after all these years, to adopt a lower standard of conduct?

The war in Vietnam is a tragic war, marked by events which no human being can applaud. Whether or not the national interests assertedly at stake there warrant our participation in it—at such sacrifice in lives, treasure and morality—the situation in Vietnam cannot justify us as a nation now, for the first time in our history, to tolerate—more, to legitimate—the cold-blooded murder of individuals wholly under the control of our troops. We may jail spies or prosecute them. But individual American soldiers may not take it upon themselves, away from the battlefield, to serve as prosecutor, judge and executioner. That is utterly unacceptable—now, as it was in 1776.

If the price of the war in Vietnam includes our coming to tolerate or applaud this sort of moral breakdown, it is one I am not willing to pay. Nor should any civilized nation. As a great patriot, Tom Paine, once said:

"He that would make his own liberty secure must guard even his enemy from oppression, for if he violates this duty he establishes a precedent that will reach to himself."

[From the Washington (D.C.) Post, Oct. 18, 1969]

MANY GI'S DISLIKE VIET ALLIES—VIETNAMESE RETURN THE ANIMOSITY

(By Robert G. Kaiser, Washington Post Foreign Service)

SAIGON.—"Before I came to Vietnam I wanted a job working with the Vietnamese," the young American lieutenant said, "but now I'm glad I'm in a U.S. infantry outfit. I just don't like Gooks. Right after I got here I went out with one of our companies, one of the first operations I went on. The company got hit—they got mauled, really. Six Americans got killed, 18 wounded. You looked at those guys, dead and wounded, and you had to feel different about the Gook after that."

Gooks—or Dinks, or Slopes—are major figures in the Vietnam war who don't often get their names in the papers. They are, in GI argot, the Vietnamese people. Gooks can be friendly or hostile, ours or theirs. The only good Gook, it is said again and again on U.S. bases throughout Vietnam, is a dead Gook.

Open expression of American contempt for Vietnamese is common. An Army major driving a jeep in Saigon after a heavy rain deliberately drives along the edge of the road so he can keep the outside wheels in the puddles and splash pedestrians. A sergeant in Cantho taunts a Vietnamese girl who operates a PX snack bar with lurid sexual insults, knowing she doesn't understand him, and basking in the laughter his insults evoke from his buddies.

A senior diplomat sneers, "these people are incorrigible." A soldier recuperating in an Army hospital tells a fellow patient about the old man he killed "by mistake," but it didn't matter. "He was just a Gook." One of the eight Green Berets recently accused of murder jokes about the fate of Thai Khac Chuyen: "Just like a Gook to carry more chain than he could swim with."

The American soldier's contempt for Asians is not new. In World War II the Indians were Wogs, the Burmese and Chinese were Slo-

peys. But in Vietnam relations between Americans and "the little people" are more complicated.

Naive young U.S. soldiers are told that their enemy is Vietnamese—small, tough, slant-eyed, wearing black pajamas and lurking everywhere. They are also told that the United States is here to allow the South Vietnamese—small, slant-eyed, many clad in black pajamas—to determine their own destinies.

Enemy and ally don't look any different. Most GIs find it difficult to believe that some Gooks are their mortal enemies while others are devoted friends.

The ordinary soldier's attitude is undoubtedly colored by the Vietnamese he most often meets. Few GIs get to know ordinary Vietnamese people during their 12 months here. Instead the American soldier meets the riffraff of war, the camp-following pimps and bar girls, shopkeepers and hustlers who claw at him whenever he leaves his base.

It would be difficult to convince a 19-year-old American boy that these people are not typical. The Army makes little effort to promote good relations between Americans and Vietnamese.

There have been no polls or surveys to determine how many Americans in Vietnam like or dislike the Vietnamese. One can only report a personal impression: Among soldiers, negative feelings about the Gooks are as common as any openly expressed complaint. The soldier who speaks warmly of the Vietnamese, or who makes an effort to help them in his spare time or on his job, usually makes an impression, because he is an exception.

Soldiers working with the Vietnamese in advisory jobs seem much more likely to like the locals than GIs in American units.

A psychiatric social worker in the Army's 3d Field Hospital in Saigon, Maj. Aaron Dotson, reports that in his experience black soldiers are less prone to prejudice against Vietnamese than whites. But there are certainly blacks who will curse the Gooks. Dotson says anti-Vietnamese feeling is widespread.

Among American civilians hostilility is much more subtle, and admirers of the Vietnamese are much more common. But candid relationships are rare.

An American cannot overhear the unguarded remarks of Vietnamese, but one suspects that they regularly return the insults. The basic slang for Americans is "Meo," which the Vietnamese equate with "Yanks," though they say it is a "funny word."

Vietnamese anti-Americanism seems to come in two strains. One is practical and direct: The Americans shot up my house, dumped my vegetable stand, defiled my daughter—I don't like them. The other is more basic: We were a simple and peaceful society before the Americans came, now we are crass and commercial and our values are distorted, Vietnamese life will never be the same, the Americans have created more needs than they have satisfied.

The undercurrent of the second strain of anti-Americanism is strong in Saigon. It often emerges at the end of long lunches or long conversations, heavily coated with Oriental politeness, but forceful and sometimes bitter.

Only occasionally is anti-Americanism overt, and when it is, Vietnamese assure their American friends that it is just an aberration.

A recent example was a series of editorials in the militant Buddhist newspaper Chanh Dao, organ of the An Quang Pagoda. The editorials were written by a journalist named Viet Bang, a former employee of the U.S. government who was fired from his job in Saigon.

Bang's editorials vilified the United States for seeking to monopolize the Vietnamese economy, for importing foreign labor at the expense of local workers, for promoting black market sales of PX goods to undermine local products, and for many other transgressions. Bang is obviously not a representative spokesman for Vietnamese opinion, but one wonders how widely his prejudices may be secretly held.

There seems to be no single psychological explanation for the hostility between Americans and Vietnamese, but one often senses a common ingredient—resentment.

The Americans are here, they say, to save Vietnam, and they resent the Vietnamese for failing to be appropriately appreciative. Or they are here against their will, because they were drafted to fight a bewildering war, and they resent the Vietnamese for causing it. Or they are Americans who have no patience or deliberate Oriental ways, and they resent the Vietnamese for their stubborn unwillingness to adopt American ways.

For their part, the Vietnamese seem to have always been suspicious about why so many Americans came to their country. Many, including some intellectuals and politicians, are convinced that Vietnam is only a pawn in the grasp of uncaring big powers, and only one big power is available as a target for their resentment.

Some Vietnamese who are deeply grateful for the fact that the United States apparently saved them from a Communist takeover in 1965 (and there are many) nevertheless bitterly resent America's deep involvement in their domestic affairs. Only once in his tenure in office has President Thieu been a genuinely popular leader: when he stood up to the Americans and refused to take part in the Paris peace talks last November. Even Thieu's aides acknowledge to Americans that it was his finest hour.

[From the New Yorker magazine, Oct. 13, 1969]

CASUALTIES OF WAR

(By Daniel Lang)

Like their predecessors in all wars, American veterans of the Vietnamese campaign who are coming home to civilian life have their heads filled with memories that may last the rest of their days, for, no matter how far from the front a man may have spent his time as a soldier, he will remember it as a special time, when, fleetingly, his daily existence appeared to approach the heroic. Former Private First Class Sven Eriksson—as I shall call him, since to use his actual name might add to the danger he may be in—has also come back with his memories, but he has no idea what the future will do to them. Honorably discharged in April, 1968, this new war veteran, who is twenty-four and comes from a small farming community in northwestern Minnesota, isn't even sure that he would care to hold on to his recollections, if it were possible for him to control his memory. Naturally, Eriksson's experiences in Vietnam were varied, and many of them impressed themselves vividly on his mind. Just seeing an Asian country, for instance, was an adventure, Eriksson says, its landscape so different from the frozen plains of his corner of Minnesota; he had never before splashed through paddy fields, he told me, or stood blinking in the sudden sunlessness of lush, entangled jungle, or wandered uncertainly through imprisoning fields of towering elephant grass. An infantryman, Eriksson saw a fair amount of action, so, if he chose, he could reminisce about strong points he helped take and fire fights in which he was pinned down, and one ambush, in particular, in which half his unit was wounded. But, as Eriksson unhesitatingly acknowledges, the fact is that when he thinks of his tour of duty in Vietnam it is always a single image that comes to his mind. The image is that of a Vietnamese peasant girl, two or three years younger than he was, whom he met, so to speak, on November 18, 1966, in a remote hamlet in the Central Highlands, a few miles west of the South China Sea. Eriksson and four other enlisted men were then on a reconnaissance patrol in the vicinity of the girl's home. Eriksson considers himself hazy about the girl's looks. He does remember, though, that she had a prominent gold tooth, and that her eyes, which were dark brown, could be particularly expressive. He also remembers that she was wearing dusty earrings made of bluish glass; he noticed the trinkets because they gave off a dull glint one bright afternoon when he was assigned to stand guard over her. Like most rural women, she was dressed in loose-fitting black pajamas. They obscured her figure, Eriksson says, but he has the impression that she was slender and slight, and was perhaps five feet two or three inches tall. For as long as she lived, Eriksson did not know her name. He learned it, eventually, when the girl's sister identified her at court-martial proceedings—proceedings that Eriksson himself instigated and in which he served as the government's chief witness. The girl's name—her actual name—was Phan Thi Mao. Eriksson never exchanged a word with her; neither spoke the other's language. He knew Mao for slightly more than twenty-four hours. They were her last. The four soldiers with whom he was on patrol raped and killed her, abandoning her body in mountain brush. One of the soldiers stabbed her three times, and when defense counsel challenged Eriksson at the court-martial proceedings to describe the sound that the stabbings made, he testified, "Well, I've shot deer and I've gutted deer. It was just like when you stick a deer with a knife—sort of a thud—or something like this, sir."

Eriksson talked with me at his home in (I shall say) Minneapolis, where, since leaving the Army, he has been earning his living as a cabinetmaker at a local department store. He and his wife, Kirsten, have a neat, modest apartment of three rooms, its walls decorated with paintings by Mrs. Eriksson, a Sunday artist, who was present while we talked; she is twenty-three and is employed as a receptionist in an insurance office. The two have no children. They were married four years ago, shortly after Eriksson was drafted. They had known each other since childhood, their fathers having been neighboring farmers, who both had difficulty making ends meet. This was true of many farmers in the area, Mrs. Eriksson told me, adding that most of its inhabitants were of Scandinavian background. "It's a part of the country where we pride ourselves on not being demonstrative," she said. A small, pretty blonde with an alert, intelligent manner, she offered me coffee and cake the instant I set foot in the apartment. She was pleased, she told me, that I had asked to hear about the episode involving Mao. She herself had thus far been the only person with whom her husband had discussed it since returning from Vietnam, and even with her he had not gone into much detail. "It'll do him good to talk to someone else," she said, her tone lively and teasing. Sitting by himself on a sofa, Eriksson smiled somewhat ruefully, a deep dimple forming in one cheek. He is a short man of fair complexion, blond and blue-eyed, and he is not voluble. In the hours we spent together, there were intervals that may have lasted as long as a minute when he sat silent, a brooding expression on his face, before resuming his account. At the start, he spoke laconically, but gradually his natural reticence thawed out, and there were times—generally after one of his silences—when he produced such a burst of talk that it seemed to cost him an effort to bring it to a halt.

At the very outset, Eriksson told me that the last thing he wished to do was discuss Mao's murder in any legalistic vein. It was certainly possible to do so, as I knew for my-

self from having read the court record of the trials he had brought about: seven bulky volumes in the offices of the Clerk of Courts, U.S. Army Judiciary, in Falls Church, Virginia, which included Eriksson's testimony against the members of the patrol; their convictions and appeals; interminable correspondence between judges and opposing counsel; and depositions concerning the character of individual defendants. Having appeared as a witness before four tribunals in Vietnam, Eriksson told me, he had had his fill of the judicial process—of the dogged grillings of lawyers and the repeated strictures of judges insisting on precise answers to questions that were often vague. As far as he was concerned, Eriksson said, it had all seemed a morass of cleverness, but then, he conceded, he may well have entered the military courtroom in the Central Highlands, where the four trials were held, with unwarranted expectations, for it had been his hope that the trials would help him unravel his reactions to Mao's fate. Unreasonably, he granted, he had come into court with the idea that he and the others on hand would wonder aloud, in a kind of corporate searching, how it was possible for the young girl to meet the end she did. He had imagined that he would be able to ask how it was that he alone of the patrol had come to act as he had. He had wanted to tell of the way the episode with Mao had affected him, and why it was that he had felt impelled to report the others—four young Americans like him, each dependent on the others for survival deep in enemy territory. He had wanted to unburden himself of his doubts about whether he had done all he might have done for Mao in her travail—doubts that gnaw at him to this day. With me, he said he trusted he would be able to go into these matters freely, but he had early discovered that in a court of law they were of little interest.

Launching into his unlegalistic account, Eriksson told me that it seemed clear to him in retrospect that he should have been prepared for Mao's death. It had been preceded by any number of similar occurrences. In one form or another, he said, they took place almost daily, but he was slow, or reluctant, to perceive that they were as much a part of the war as shells and targets were. Eriksson now believes he should have foreseen that sooner or later one of these incidents was bound to strike him with special, climactic force. He had scarcely landed in Vietnam, in October, 1966, when he was made aware of these occurrences, each of them apparently impulsive and unrelated to military strategy. He told me that beatings were common—random, routine kicks and cuffings that he saw G.I.s administer to the Vietnamese. Occasionally, official orders were used for justifying gratuitous acts of violence. Thus, early in his tour of duty, Eriksson recalled, G.I.s in his unit were empowered to shoot any Vietnamese violating a 7 p.m. curfew, but in practice it was largely a matter of individual discretion whether a soldier chose to fire at a stray Vietnamese hurrying home a few minutes late to his hootch—the American term for the mud-and-bamboo huts in which most natives lived. Similarly, it was permissible to shoot at any Vietnamese seen running, but, as Eriksson put it, "the line between walking and running could be very thin." The day after the one on which his squad was ambushed and half its members were wounded, several enemy prisoners were taken, and, in retaliation, two were summarily killed, "to serve as an example." A corporal who was still enraged over the ambush tried to strangle another of the prisoners; he had knotted a poncho, nooselike, around the captive's neck and was tightening it when a merciful lieutenant commanded him to desist.

Needless to say, Eriksson continued, the kind of behavior he was describing was by no means limited to Americans. The enemy did the same thing, and much of the evidence for this came from the Vietnamese themselves. They constantly reported rapes and kidnappings by the Vietcong; in fact, the Vietcong committed these crimes so indiscriminately that the victims were sometimes their own sympathizers. On one occasion that he knew of, Eriksson said, American troops, attracted by the familiar odor of decomposing bodies, had found a pit piled high with Vietnamese men and women who had been machine-gunned by the V.C. But, as Eriksson pointed out, he could not give me many such first-hand accounts of V.C. depredations. Necessarily, he said, he was in a position to speak only of the behavior of American soldiers, since they were the people he fought and lived with.

Ending the first of his brooding silences, Erikson said, "From one day to the next, you could see for yourself changes coming over guys on our side—decent fellows, who wouldn't dream of calling an Oriental a 'gook' or a 'slopehead' back home. But they were halfway around the world now, in a strange country, where they couldn't tell who was their friend and who wasn't. Day after day, out on patrol, we'd come to a narrow dirt path leading through some shabby village, and the elders would welcome us and the children come running with smiles on their faces, waiting for the candy we'd give them. But at the other end of the path, just as we were leaving the village behind, the enemy would open up on us, and there was bitterness among us that the villagers hadn't given us warning. All that many of us could think at such times was that we were fools to be ready to die for people who defecated in public, whose food was dirtier than anything in our garbage cans back home. Thinking like that—well, as I say, it could keep them from believing that life was so valuable—anyone's life, I mean, even their own. I'm not saying that every fellow who roughed up a civilian liked himself for it—not that he'd admit in so many words that he didn't. But you could tell. Out of the blue, without being asked, he'd start defending what he'd done maybe hours ago by saying that, after all, it was no worse than what Charlie was doing. I heard that argument over and over again, and I could never buy it. It was like claiming that just because a drunken driver hit your friend, you had a right to get in your car and aim it at some pedestrian. Of course, I was a foot soldier all this time. I was operating in a forward area and probably seeing the war at its ugliest. In daylight it was search-and-destroy missions, and at night it was setting ambushes for the enemy. I discovered it's not difficult to kill a human being—in combat it's as instinctive as ducking bullets. You never knew whose turn it was to die, and that isn't how it was in rear areas. The farther back you got, the closer you approached the way people lived in civilian life."

On November 16, 1966, the commanding officer of Eriksson's platoon, a Negro lieutenant, Harold Reilly (whose name, like every soldier's name in this account, has been changed), assigned him as one of five enlisted men who were to make up a reconnaissance patrol, its mission to comb a sector of the Central Highlands for signs of Vietcong activity. Testifying later in court, Lieutenant Reilly characterized the mission as "extremely dangerous," and said that to carry it out he had picked members of the best of the four squads in the platoon. Special care had been taken with the operation, he stated, since it had been conceived by the battalion command, a higher echelon than the company command, to which Reilly was ordinarily responsible. Explaining his choice of the patrol, Reilly testified, "These people, I felt, knew what they were doing, and a second reason was because the company commanding officer asked for good people." On the following afternoon, November 17th, the members of the newly formed patrol met in a corner of the platoon's headquarters area, near the village of My Tho, where, relaxed, as they stood or sat on the ground, they listened to a briefing from their leader, who was seated on a low stool. He was Sergeant Tony Meserve, a slim, black-haired man of medium height who was twenty years old and came from a town in upstate New York, near the Canadian border. According to Eriksson, Meserve, who was assertive and confident, was both the patrol's youngest soldier and its most experienced one, being a volunteer of three years' standing who had fought in Vietnam for a year and had been decorated several times; he was due to go back to the United States in a month. The group's second-in-command was Ralph Clark, a corporal who came from a town near Philadelphia. He was twenty-two, a stringbean in physique, and blond, with eyes that were a pale, cold blue. Again according to Eriksson, Clark was given to quick movements and to seemingly abrupt decisions that reflected Meserve's thinking in an exaggerated form. The two other G.I.s in the combat team were a year younger than Eriksson, who was then twenty-two. They were cousins named Diaz—Rafael, known as Rafe, whose home was near Amarillo, Texas, and Manuel, who came from a town some distance north of Santa Fe, New Mexico.

Eriksson remembers Rafe as a tall, swarthy, round-faced man with a disposition that was naturally sunny and amiable. As for Manuel, who was fair-skinned and stockier than his cousin, his manner was on the jumpy side. Like Clark, he was given to quick movements, but his behavior had nothing to do with embellishing Meserve's thinking. Manuel showed no initiative in that regard, Eriksson told me, his attitude toward authority being simple and automatic: he heeded it devoutly. In mild contrast, Rafe was capable of questioning authority, Eriksson said, but he generally wound up by going along with whoever seemed to be the leader—"just to keep from making trouble."

Returning to the patrol's briefing, Eriksson told me that Meserve was all business as he plunged into his talk. Echoing the instructions that a battalion officer had given him earlier, the Sergeant informed the four men of the duties that each was expected to carry out, of the chain of command in the field, and of radio-communication arrangements with the platoon command, and then, consulting the grid coordinates of a map he was holding, the Sergeant described a precise westerly route that the patrol was to follow.

It was to take them, ultimately, to Hill 192—a height, in the Bong Son valley, that overlooked a ravine laced with a cave complex, which was suspected of serving as a Vietcong hideout. But caves weren't all that the five men would be looking for. Bunkers, trenches, trails that were not marked on maps, caches of enemy equipment—these, too, were to be reconnaissance objectives. Naturally, Meserve said, if the men could spot any Vietcong in the open, that would be all to the good, but the patrol's orders—and these had been spelled out in no uncertain terms by the battalion command—were to avoid any shooting matches with the enemy except in self-defense; as a so-called pony patrol, he said, they were out to collect "early-warning" information concerning enemy intentions.

The men were to be gone five days, the Sergeant revealed—a fairly long time for a reconnaissance mission—and on hearing this Eriksson experienced a sense of exhilaration, just as he had at the prospect of far shorter patrols in which he had taken part. He felt that way, he explained, because out in the field, in territory that could turn hostile at any moment, the men in the patrol would be very much on their own, and this would be so even if a high-ranking officer were in

charge. "You could never tell how a man was going to behave under pressure," Eriksson said. "He might turn out to be dumb or brave or to have a wonderful stock of jokes. Sure, there were always advance plans to do this or that, but they didn't often stand up in the field. The only thing you could count on out there was that the unexpected would happen." Usually, Eriksson said, it took time for the unexpected to develop, but now—more than half a day before the patrol was to leave platoon headquarters—it happened with stunning abruptness.

It happened when the Sergeant, having delivered his instructions, concluded the briefing by telling the assembled men that they were going to have a good time on the mission, because he was going to see to it that they found themselves a girl and took her along "for the morale of the squad." For five days, the Sergeant said, they would avail themselves of her body, finally disposing of it, to keep the girl from ever accusing them of abduction and rape—both listed as capital crimes in the Uniform Code of Military Justice. Rafe later testified at his court-martial, "Meserve stated we would leave an hour ahead of time so that we would have time to find a woman to take with us on the mission. Meserve stated that we would get the woman for the purpose of boom boom, or sexual intercourse, and at the end of five days we would kill her." And in Manuel's testimony one finds: "After we were briefed by Meserve, he said that we would take a girl with us on patrol, or that we would try to take a girl with us to have some fun. . . . He said it would be good for the morale of the squad."

The Sergeant had made his announcement with a straight face, leaving his men to interpret it as they would. Clark at once greeted it with enthusiasm. The two Diazes laughed, either out of embarrassment, Eriksson conjectures, or because they thought Meserve was joking, in view of his remark about "the morale of the squad"—an old gag in the platoon. Eriksson told me that he himself reacted silently but that after Meserve and the men had broken up to go their separate ways until morning he sought out his friend Corporal Curly Rowan, a West Virginian, who had been in Vietnam, and with the platoon, just as long as Meserve had. Rowan listened with astonishment as Eriksson apprised him of the Sergeant's plan, but when Eriksson asked his friend whether he thought Meserve's statements should be reported to an officer before the patrol left camp, Rowan immediately shook his head, replying, as the court record shows, "Meserve wouldn't dare do such a fool thing." This incredulity notwithstanding, the news of Meserve's briefing left Rowan unhappy. The two men had arrived in Vietnam at the same time, and he had known Meserve as a considerate, agreeable man. However, in the last month or so, Rowan told Eriksson, the Sergeant, apparently undergoing changes, had exhibited a mean streak toward the Vietnamese; a couple of weeks before, Rowan said, Meserve had shot at and wounded one of them, giving as his reason afterward that he had "felt like it." "The way Curly talked about him, Meserve sounded as though he had become a kind of war casualty," Eriksson told me.

At four-thirty the following morning, Meserve diligently checked his men's gear at the edge of camp, seeing to it that their chow, star clusters, rounds of ammunition, smoke and hand grenades, and other supplies were in order. Once this was done, the patrol filed out of the camp in the faintly humid darkness, the men still uncertain of their leader's intent. Twenty minutes later, they knew what it was. By then, moving unhurriedly in the gray dusk, Meserve's squad had dutifully followed him two thousand metres to the east, which, as Eriksson and the others realized, was a flagrant deviation from the westward route the Sergeant had described so precisely at the briefing. By then, too, the men were approaching the hamlet of Cat Tuong, in the district of Phu My, and Eriksson was cursing himself for having listened to Rowan. In disbelief and confusion, his heart palpitating, Eriksson saw that Meserve was losing no time in carrying out his plan, for, with Clark at his heels, the Sergeant had embarked on a systematic search of the hamlet's hootches. The pair had emerged empty-handed from five or six of the huts when Rafe, ever his amiable, accommodating self, pointed to a white hootch ahead and called out, "There's a pretty girl in there! She has a gold tooth!" Instantly, the Sergeant said, "That's the girl we'll find." Astounded by the enormity of his own suggestion, Rafe looked miserably at Manuel and Eriksson as Meserve and Clark, quickening their steps, made for the white hootch that contained the pretty girl with a gold tooth. While Eriksson, Manuel, and the now wretched Rafe hovered outside, Meserve and Clark entered the hut—Mao's home. They lingered in it longer than they had in the other hootches, but since Eriksson was standing outside the hut he is unable to describe what went on inside. However, Mao's sister, Phan Thi Loc, who was present, has done this at one of the trials. Translating the testimony of Loc, who was two years younger than Mao, an interpreter informed the court, "She said they come in, use flashlight and shone around the house and saw her mother's face and her sister's face and all of them wake up at the same time. It was six in morning and dark." The father was away in Phu My market, the interpreter went on. The mother wept and pleaded, and her daughters, clinging to one another, cowered against the wall. Loc was spared, but Mao was seized by the two soldiers, who bound her hands behind her back with a length of coconut rope. Reporting another of Loc's answers at the trial, the court interpreter stated, "She said her sister have gold tooth, right side in lower jaw."

When Meserve and Clark rejoined their comrades, Eriksson told me, they had the bound Mao well in tow. Clark was holding her elbow, and he pushed her forward when Meserve ordered the patrol to get moving. "Daylight was coming on fast, and he wanted the girl in the light as little as possible," Eriksson told me. "Helicopter crews might spot her." Before the patrol left the hamlet, a swarm of local children materialized, chattering agitatedly in a circle around Mao, and then out of the white hootch came Loc. The two sisters looked at each other. "Their eyes were terrified," Eriksson remembers. Departing from the hamlet with their prize, the soldiers moved west toward the main trail they should have been on. They had gone scarcely twenty metres when a cry of distress halted them. It came from Mao's mother, who was giving chase. Meserve testified at his court-martial, "The mother came out, like they always do, started crying talking. We just tell them to *dee dee*"—meaning to go away. The mother, Eriksson told me, was waving a scarf and laboriously propelling herself forward. Panting, she finally reached the soldiers, indicating to them that the scarf was Mao's and that she would like her daughter to have it; the woman's cheeks were wet and her manner was imploring. It was an awkward moment, Eriksson said, and Clark terminated it. A smile spreading on his face, he took the scarf and stuffed it into Mao's mouth. In an affidavit that Manuel later signed, he stated, "Clark gagged the girl to keep her from yelling out. It was still dark in the area, and no civilians attempted to stop us." Leaving the mother behind, the patrol resumed its march, prodding Mao to match its stride. The hamlet was barely out of sight when Manuel, perhaps competing with Clark, untied Mao's hands, then slipped his pack from his shoulders and loaded it onto the girl's.

The five men and Mao kept up a steady pace. Meserve saw to that, for a brilliant sun had come up, its glare exposing the bizarre party as clearly as it did the landscape. "We were advancing through nice country," Eriksson told me. "We were on a plateau in the Highlands, and all around us were small mountain ranges, hazy and green. Below was a valley with a winding stream, and along its banks were paddy fields with neat little dikes around them. The country we were moving through was mostly all shades of green, but we also passed arid stretches and, here and there, places that had been browned by napalm. The land was very changeable. It would be open for a while, and then there'd be sections so thick with thorny vines tearing at our clothes that we couldn't see each other, even though we were spaced no farther apart than you and I are, right here in this room." Around eight o'clock, Meserve permitted his squad a half hour's break for chow.

Mao was ungagged but was given no food; noticing that she was flushed and coughing slightly, Meserve handed her an aspirin. Only one piece of military action occurred that morning, and it could have been dispensed with. Gazing into the valley below, Rafe thought he spied a Vietnamese in a native type of straw hat standing in the stream. Deciding that he was looking at a V.C., Rafe let fly with a couple of rounds from his M–16 rifle. His target turned out to be the rump of a wallowing water buffalo, the animal raising itself from the shallow stream in clumsy panic and lumbering out of view. Rafe had flouted the order against unnecessary shooting, confirming Eriksson's observation that plans could mean little in the field and that out there any patrol was a unit only in theory. "We were each acting the way we had to," he told me. Meserve said nothing to Rafe; nor did he say anything to any of the others when, as the mission unfolded, they committed similar derelictions. Under cross-examination at his court-martial concerning this disregard of his commanding officer's instructions, the Sergeant stated, "Sir, most of the time everybody agrees with his C.O. Sometimes you have your disagreements, and sometimes you don't voice them, you keep them to yourself."

At ten-thirty, a short distance below the summit of Hill 192, Meserve found what he was looking for—a command post for the day. It was an abandoned hootch, eight feet square and eight feet high, with a window on the east side, a door on the west, and two slits facing north and south; there was a stream a few metres away, giving the patrol a ready source of water. The hootch contained a table, a low bench built against a wall, and tattered remnants of a straw mat strewn in a dark corner, and the dirt floor was littered with scrap metal, rocks, and cans. The structure was in a state of extreme disrepair, and had a number of large holes in its mud walls. However, it was essentially intact, and Meserve quickly converted it into a weapons depot, dumping ammunition stocks, and also food supplies, on its dirt floor. In addition, the hootch served as a place to hide Mao. Ordering Eriksson and Rafe to clean up the hootch, and leaving Mao in their charge, the Sergeant went off with Clark and Manuel to have a careful look around. In the hootch, Eriksson recalled, Mao, now relieved of Manuel's pack, watched him and Rafe heave out junk for a while, and then, unasked, the girl lent the G.I.s a hand. "She had no idea the kind of place she was helping to prepare," Eriksson said.

Meserve and the others returned an hour later, toward noon, and had a hearty snack, eating it outdoors, near the entrance to the hut. Sprawled on the ground after the meal, Meserve, refreshed, glanced at his fellows and then, with a knowing smile, indicated the partly ruined structure. "It's time for some fun," he said. Clark appeared to be beside himself with anticipation, Eriksson

told me, and Manuel and Rafe appeared less so. He himself, he imagines, must have looked glum. "It was the way I felt," he said. "It was impossible for me to have any part of what I knew was about to take place." He suspects that Meserve sensed this, for before anything else happened the Sergeant confronted him, demanding to know whether he would enter the hootch when his turn came. Eriksson shook his head. Incensed, the Sergeant uttered the first of a series of threats. Unless Eriksson went along with the others, Meserve warned, he would run the risk of being reported "a friendiy casualty." Clark seconded this vociferously, and both Diazes concentrated puzzled stares on the difficult member of the patrol. Eriksson shook his head again. "I had had enough of watching beatings and stranglings with ponchos," he told me. Rebuffed a second time, Meserve lashed out with an attack on Eriksson's manliness, deriding him as "queer" and "chicken." The attack didn't bother him, Eriksson told me, but it appears from the court record that it did affect Rafe, who testified that he could not have withstood the epithets he heard Meserve heap on Eriksson; it was his fear of such derision, Rafe stated, that caused him to join those who entered the hootch he had helped make tidy. Manuel gave similar testimony. "I was afraid of being ridiculed, sir," he told the prosecutor. Asked why, he answered, "O.K., let's say you are on a patrol. These guys right here are going to start laughing you out. Pretty soon, you're going to be an outcast from the platoon. 'That guy, he's scared of doing this, he's scared of doing that.' Everybody is going to make fun of you. When you go out on a patrol, you ain't going to be as good as you want to be, because these guys ain't helping you do anything. It is going to be yourself. There is going to be four people on that patrol and an individual."

Once Meserve had delivered his estimate of Eriksson's virility, the ill-fated bacchanal got under way. Just before it did, Eriksson moved away from the entrance to the hootch, where he had been standing, and sat down alone on the grassy turf to one side of the structure; periodically, he raised his field glasses to gaze at distant points. Cross-examined at Meserve's trial as to why he had shifted his position, Eriksson testified, "Well, sir, these gentlemen seemed to me—oh, I should say kind of enthused about what was going on. The whole thing made me sick to my stomach. I figured somebody would have to be out there for security, because there were V.C. in the area."

The Sergeant was the first man to enter the hootch, and soon, Eriksson told me, a high, piercing moan of pain and despair came from the girl. It repeated itself in waves, broken only, Eriksson assumed, by Mao's need to summon fresh breath. After several minutes, the moan turned to a steady sobbing, and this did not cease until, after a half hour, Meserve reappeared in the open. He was shirtless; his face wore an expression of swaggering irresistibility. "She was real good—pretty clean," he said. Pointing to the hootch, he signalled to Rafe to be his successor, and Rafe, sparing himself ridicule, walked in. In court, Rafe said that he found Mao naked, lying on the table, her hands bound behind her back. "The girl looked so innocent, so calm," he testified. But Rafe stayed, and again the moan and the sobbing, slightly diminished, rose from the hootch. Outside, according to the court record, Clark was watching his comrade through a hole in the mud facade and letting out whoops of delight that mingled with Mao's cries. His manner became momentarily subdued when Meserve waved him in as the third man, but Clark was his jaunty self again when he returned. "I held a knife to her throat," he told the others. He displayed a hunting knife. It was ten inches long, and its handle was wrapped with tape that bore a pattern of tiny diamonds. The men were familiar with the knife; it had recently been given to Clark by a close friend in the platoon who had been wounded. As Manuel was going into the hootch, Mao's sounds could be heard, weak and conquered. The four soldiers' visitation lasted nearly an hour and a half, and two minutes after it was terminated the men, to conceal themselves from any Vietcong who might be in the vicinity, reentered the hootch together. Eriksson was now with them, and he saw that Mao had retreated to a corner of the hut, frightened, watchful, her eyes glistening with tears, her presence made known chiefly by a cough that had grown more pronounced since morning. The girl was dressed and her hands had been freed. The men ate, again without feeding her, and reminisced about their communal feat, comparing Mao with other girls they had known, and talking about how long it had been since they had had a woman. After fifteen or twenty minutes, Meserve, as though he were finally bored with the topic, abruptly reminded the unit of its mission; he wanted the men to do some more reconnoitering that afternoon. This time, he said, it would be Clark who would stay behind to guard Mao and the weapons in the hootch.

The day continued eventful. Exploring the mountain further, often making their way through shoulder-high vegetation, Eriksson, Meserve, Manuel, and Rafe pushed on toward the summit. Though the men had to struggle for footing, Eriksson related, they made a point of keeping an eye on the stream that ran near the hootch; it had its source high up on the mountain, flowing down past a number of rice fields. After half an hour, their watch on the stream paid off, producing a more interesting sight than Rafe's water buffalo. Three Vietnamese were spotted walking along the edge of the water, and though they wore no uniforms, Meserve assumed they were V.C., and he and his men, including Eriksson, opened fire on them. None of the four hit anything, and the Sergeant radioed the platoon command for artillery support, which was quickly granted; the coöperation, Eriksson recalled, pleased Meserve no end, since it implicitly conferred an importance on the skirmish. Deciding to close in on the three Vietnamese, Meserve dispatched Eriksson and Rafe to the hootch to pick up a supply of smoke grenades. Arriving on the run, the two explained their errand to Clark, who heard the news eagerly, then pulled rank on Eriksson and ordered him to take his place in guarding the hootch. As Clark and Rafe left, Eriksson told me, he realized that he was about to exchange one kind of excitement for another—the encounter with the three Vietnamese, that is, for the quieter, more complicated ordeal of being alone with Mao. He was uncertain how he would act with her, he said, even though, oddly, he felt he knew her well; her cries, he said, had thrown him into a turmoil he had never before experienced. As he listened to her, he said, it had even crossed his mind to shoot her assailants, but then, he observed to me, "I'd have had the bodies of four men to justify." Asked in court for his thoughts during the period he had sat on the grassy turf, he testified, "Well, sir, I was wishing I wasn't in the situation I was in. I might say I was praying to God that if I ever got out of there alive I'd do everything I could to see that these men would pay for what they did."

Eriksson now lapsed into the longest of his silences with me, and when he spoke again, it was, for him, at great length. "When Mao saw me come into the hootch, she thought I was there to rape her," Eriksson said. "She began to weep, and backed away, cringing. She looked weary and ill, and she seemed to be getting more so by the minute.

"I had a feeling she had been injured in some way—not that I could tell. She had her black pajamas on. I gave her crackers and beef stew and water. It was her first food since she'd been taken away from her hamlet—it had been still dark then, and here it was the middle of the afternoon. She ate, standing, and it was whimper, then eat, whimper, then eat. She kept looking at me, as though she was trying to guess what my game could be. When she finished eating, she mumbled something in Vietnamese; maybe it was 'Thank you'—I wouldn't know. And I told her, in English, 'I can't understand you.' I wanted to tell her other things. I wanted to say, 'I apologize to you for what's happened, but don't ever accept my apology or anyone else's for that. Please don't ask me to explain why they did it. I'll never know. You're hurt, I can see, but how are you? I mean, if I let you go, do you think you can make it home?' I wish Mao and I could have talked," Eriksson said, his voice tightening. "She might have helped me know what to do, instead of my having to figure it out alone—it was her life that was at stake. I stepped outside the hootch to be by myself awhile, and out there I could hear the muffled noise of artillery off in the distance. I had no idea where my unit was. I didn't know then that they were four hundred metres away, at the top of Hill 192, or that it would be a whole hour before they returned. It might have influenced my thinking if I'd had that information, but I'm not sure. As a disciplined soldier, I knew I wouldn't abandon the weapons in the hootch to the enemy, but, just the same, I was dizzy with thinking how to save Mao. I thought again of letting her go, but what would I tell Meserve when he got back? That this weak, coughing girl had overpowered me? Besides, she was in no condition to reach home or anywhere else. Then I thought of taking off together with her. We couldn't have gone very far, I realized, but it was going to be dark soon and we might find a hideout somewhere in the brush. After that, we'd have to stay out of sight until the third day of the patrol's mission—that was the day the patrol was supposed to rendezvous with another unit for fresh supplies. I knew the rendezvous spot, and if Mao and I could show up there at the right time, there was no question in my mind but that the fellows in the resupply squad would help us both. But I couldn't think any of my brainstorms through. I knew I had cut myself off from the rest of my patrol, refusing to go into that hootch, and I had this idea that the fellows were watching the place from the brush, waiting for me to make just one false move with Mao. I had this picture that when we did, they'd fire at us, or, at least, Meserve would have me up on charges of desertion. The guys would back him up, of course. They'd say there had never been a girl with the patrol, and I'd be left looking crazy."

Shifting uneasily on the sofa, Erickson went on, "When I stepped back into the hootch, I saw that Mao had made up her mind that I wasn't going to harm her. She had stopped whimpering, and there was even a little look of trust in her eyes. There shouldn't have been, because I had decided, outside, that there wasn't a thing in the world I could do for her. It was the hardest decision I've ever had to make, and it couldn't have been the best possible one, or Mao wouldn't be gone today."

In the time that elapsed before the patrol's return, Eriksson said, Mao's condition worsened noticeably. The men found her feverish and coughing, and Clark was all for rescheduling her death hour to that evening. Meserve, however, counselled patience. A good night's rest might do wonders for Mao's health, he pointed out, in which case he, for one, wouldn't mind revisiting her in the morning. Rafe subsequently testified that the Sergeant was in an expansive mood, cheerfully observing to his men that it wasn't every day he could rate artillery support and have himself a woman as well. The patrol and Mao shared the hootch that night, the girl spending it in a corner by herself. The soldiers set up a night watch, each man pull-

ing guard duty outside in the moonlight, alert for any lurking enemy. Mao coughed throughout the night, and at one point, Eriksson recalls, Clark again urged that the girl be finished off forthwith. Eriksson said, "He told Meserve her coughing was going to give away our position, but I didn't think it was Charlie he had on his mind. I thought he wanted to destroy living evidence."

In the morning, everyone got up shortly after six, and it wasn't long before Mao's fate was sealed. "Events happened fast that day," Eriksson said. The first of them, he told me, was that Mao woke up less alluring than when she had gone to bed. Her fever and coughing had increased overnight, he said, and that didn't do her cause any good. Meserve, he noted, paid scarcely any attention to her. The Sergeant seemed more attracted by the possibility of military action, to judge by the speed with which he had his charges break camp. His last order before they left was to send Eriksson, Rafe, and Manuel to fetch the day's supply of water from the stream. When they returned, Eriksson told me, they discovered that Clark was no longer alone in advocating Mao's early demise. Meserve was now an ally, he and his second-in-command apparently having arrived at a meeting of minds while the others were filling the patrol's canteens. As Mao stood listening, mute and uncomprehending, Meserve said that she had to be got out of the way; if they ran into action, he pointed out, she would be a hindrance, and even if they didn't, helicopter crews scouting the area might want to know who she was. All that awaited decision, Meserve went on, was the moment and method of the girl's murder, but, whatever was settled on, the Sergeant's thought was to have Eriksson do the job; if Eriksson refused, Meserve said, he would be reported as K.I.A.—killed in action. Manuel later told agents of the Army's Criminal Investigation Division, "Meserve said to Eriksson that inasmuch as he did not do anything to the girl [the day before], Eriksson would have to kill the girl, but Eriksson said that he would not have anything to do with that." Meserve, however, didn't follow through on his threat. To Eriksson's astonishment and deep relief, the Sergeant abruptly shifted his attention to the Diazes, asking first Rafe then Manuel to carry out the murder. "Both refused," Eriksson said. "They were very definite. It excited me." Impatiently, Clark volunteered his services, but Meserve wouldn't have that, insisting that they collaborate, Clark could knife the girl from the front, the Sergeant said, while he bayoneted her from behind; the body would then be tossed over a cliff from the summit of Hill 192, where the patrol had reconnoitered the previous day. Accordingly, at nine the group struck out for the cliff. The climb took longer than it had the day before, the men's pace slowed by the packs they bore. This morning, Manuel carried his own.

Serving as radioman, he was in the vanguard with Meserve and Clark; Mao walked ten metres behind, wearily ascending the rugged terrain, with Rafe as her forward guard and Eriksson bringing up the rear. It took an hour to negotiate the climb, and the group had barely attained the ridge when Rafe, his eyes sweeping the vista below, saw five Vietnamese in peasant dress making their way along a mountain trail toward the paddy fields near the stream. The Vietnamese proved to be V.C., for the moment they were aware that they had been seen they fired at the patrol with small arms, then changed their direction and passed temporarily out of sight. Meserve at once radioed the platoon command, reaching Lieutenant Reilly, to whom he suggested that the V.C. be ambushed. Agreeing, the Lieutenant said that he would order another squad, operating at the base of the mountain, to coordinate its movements with those of Meserve's patrol, and that he would also dispatch two other squads in the area. In addition, Meserve learned that he was again to be the recipient of artillery support; in a short while, Reilly said helicopter gunships—aircraft equipped with rocket artillery and machine guns—would be in the area. "It was going to be a big outlay, considering the few men we were up against," Eriksson said. Ordinarily, he conjectured, the promise of such generous support would have cheered Meserve but Mao's presence seemed to confuse matters. Glancing at the girl with distaste, the Sergeant ordered Eriksson and Rafe to stay with her on the ridge, whereupon he, Clark, and Manuel began a cautious descent of the mountain, their purpose to stalk the Vietcong. Thirty metres down, they came to a curiously shaped rock formation composed of two jutting ledges. Using the upper one as a vantage point, they spied the small band of V.C. making slow progress toward the refuge of the cave complex, which was three hundred metres away, almost at the bottom of the ravine. But the Sergeant did nothing about the escaping V.C., for he was now powerfully distracted from the enemy; in the distance, still inaudible and looking miniaturized, were four approaching gunships. Acting fast, he sent Manuel backtracking to the summit to tell Eriksson and Rafe to report to him with Mao. In ten minutes, they were all together again; by then, too, the helicopters had grown larger and their engines were faintly audible. Rafe later testified, "There were helicopters flying around, and everyone was getting jumpy about having the girl."

Before Meserve could devise any next step, Clark took hold of Mao's arm. "Let's kill her and get it over with," he said, according to the court record.

"All right, go ahead," Meserve said, and he instantly turned his attention to the enemy, ordering Eriksson to the lower ledge of rock while he and Manuel returned to the upper one, with Rafe to their rear.

Rafe was the man closest to Clark and Mao—only a few metres away—and because he was, his testimony concerning the events that now took place carried special weight with the court. He stated at the trial, "From where I was, I observed Clark grab the girl by the arm and take her into the bushes nearby . . . I saw that Clark had his hunting knife hidden in one of his hands." It was in the next seconds that deer-gutting sounds issued from the bushes. "I then heard the girl cry out, but not too loud," Rafe continued. "Clark came back to where we were. Meserve asked him if he had finished the girl." Clark had just replied yes when Mao, like a wounded apparition, was seen crawling rapidly downhill and then disappearing into the thick foliage. As Rafe recounted it, "Meserve saw her and said, 'There she goes.' Clark said, 'Why, that bitch, I stabbed her more than twice.' Meserve told us all to shoot her before she could get away. We were all told to look for the girl." All five men shot, but Eriksson aimed his weapon—a grenade launcher, which looks like a shotgun—down into the valley, away from the general direction of Mao. In addition, Rafe flatly said, "Eriksson could not see the girl," despite which, Rafe also testified, "Eriksson stated, 'Oh, no,' like he regretted that he had fired." Rafe himself let go with a burst from his M–16, which, inexplicably, caused his rifle to jam. However, he did call Clark's attention to a bush directly ahead. It was rustling. "I couldn't tell whether it was Charlie or the girl," Rafe testified. Clark, who was several metres in front of Rafe, yelled back to him that it was the girl. "I saw him raise his rifle," Rafe stated, adding that he then started toward Clark. Moving in on the bush, Clark blazed away with his M–16, and at once the rustling foliage grew still. "You want her gold tooth?" Clark called over his shoulder to Rafe, who was then, he testified, a foot away and was staring, aghast, at Mao. "When I got up to the girl, I saw that her head was partially blown away," he testified. "She was dead, I'm sure."

Immediately after the murder, Eriksson told me, the men appeared to assume a self-protective air of disbelief at what had taken place. Straggling uphill, he said, they gravitated toward their leader, who stood, unflustered, near the jutting rock formation, surveying the combat situation. It had built up sharply. The gunships were now unmistakably in the area, their motors sending up a storm of noise as the machines hovered low and their crews searched out the enemy. Now the V.C., flushed from their temporary hideout, continued to beat a desperate retreat, relying on sniper fire to fend off their attackers, who were converging on them from both sides of the stream. Small artillery spotter planes had arrived, heralding the imminent use of ground-artillery support. The court record attests that it was in the midst of this encircling racket that Meserve chose to initiate radio contact with Lieutenant Reilly, the burden of the Sergeant's message being that he wanted to report "one V.C., K.I.A." Under cross-examination at Meserve's court-martial, Reilly, appearing as a defense witness, testified, "Sergeant Meserve called me up and informed me in the middle of the fire fight that a girl was fleeing up the side of the mountain, and I informed him to get the girl. He called me back in a few minutes, or a couple of minutes, and informed me that he could not catch the girl, that he had had to shoot her. . . . I called him back and commended him on the job that he did and reported it, in turn, to the company headquarters."

Meserve fought well that day. With Mao out of the way, he was able to concentrate on the action at hand, managing his patrol, working in concert with the other squads, and helping to guide the diving gunships, whose presence he now welcomed. Among them, Eriksson said, these sizable elements, advancing toward the cave complex, succeeded in killing one V.C. and wounding another. Two escaped, and the fifth man made to the caves, where he holed up for a last-ditch stand. The man was never captured, Eriksson said, despite the fact that he became the single target of the gunship's rockets and the infantry's bullets and grenades. Moreover, Eriksson told me, the enemy soldier inflicted casualties on the infantrymen deployed around the cave complex, which was some two hundred metres long and had numerous mouths. At the time the fifth V.C. entered the caves, he said, the patrol had long ago left the vicinity of the curiously shaped rock formation, and had descended so deep into the valley that the men were practically able to touch the thick, rough outer walls of the caves. Meserve, Clark, and Manuel, together with members of the other squads, were shooting away at the solitary V.C., who was behind an aperture that measured perhaps six inches wide and a couple of inches high. As for himself, Eriksson told me, Meserve had ordered him to a ledge from which he could overlook the complex as he trained his grenade launcher on two cave mouths in particular, either one of which, the Sergeant thought, could afford the entombed V.C. an exit.

For Rafe, the fighting had ended an hour earlier—well before the patrol reached the cave complex. As the men had raced to get there, clambering and sliding, Rafe had slipped and fallen from a ledge, dislocating an elbow and a shoulder. Evacuated by a medical helicopter, he was flown to a hospital at Qui Nhon. There, corpsmen deposited him on a bed alongside that of a battalion officer he knew and liked. At Rafe's court-martial, it was disclosed that for several days the two patients in the hospital ward seemingly talked about whatever came into their

heads but that Rafe never mentioned Mao. Testifying in his own defense, Rafe stated, "I was afraid to tell [the officer], because I might be the only one who brought it up. I didn't know Eriksson brought it up. I wanted to find out first what Meserve and Clark might do."

The fire fight in the ravine lasted several hours, the attackers finally breaking off after dark. The holed-up V.C. (who escaped the following morning) wounded five Americans, and Meserve displayed considerable courage in rescuing the most seriously injured of them, a G.I. whose ammunition pouch, girding his midriff, had exploded as the result of a hit. "The poor guy's guts were out," Eriksson said. "It was as though he had shot himself with two rounds of his own ammo." The wounded man lay helpless, directly in front of the small opening from which the V.C. was shooting, and Meserve, braving a fusillade of bullets, crept forward and pulled the man out of the V.C.'s line of fire. For this action, Meserve was nominated for a Bronze Star.

Eriksson had no occasion to fire his grenade launcher, and that was just as well, he told me, since his mind was on Mao—on the part of the war that, as he put it, "had got to me." Perched on the mountainside, listening to the gunfire and the helicopters, he found his thoughts returning repeatedly to the fact that Rafe and Manuel had refused to kill the girl. Transitory though their show of character may have been, he said, it encouraged him in reaching a private resolve, for as he kept watch above the cave complex, Eriksson told me, he was suddenly seized with the overwhelming realization that unless he took it upon himself to speak out, the fact of Mao's death would remain a secret. "No one would ever know what had become of her!" he exclaimed. "Who else would tell but myself? All the others in the patrol had raped or killed her. I knew I wouldn't rest until something was done about Mao's murder. It was the least I could do—I had failed her in so many ways. The only thing that could stop me was if I became a friendly casualty."

Looking back, Eriksson thinks that the small band of V.C. may have rescued him from Meserve. The outmanned, outgunned enemy put up so strong a fight, he said, that the Sergeant, Clark, and Manuel ran out of ammunition, and the patrol had to interrupt its five-day mission long enough to go back for fresh supplies of bullets and grenades. This meant going to platoon headquarters—the home of four squads, and only a few minutes' walk from company headquarters, where there were officers who outranked Reilly, the platoon's lone lieutenant. Arriving at the platoon area, Eriksson told me, he felt as though he had reached the promised land; the anxiety in which he had lived the past two days yielded to what he described as an almost tangible sense of safety. Since the patrol would be going out again, Eriksson said, he knew he had to act fast, but that seemed no big deal. In the first place, he wanted to act fast, and, besides, he had no doubt that once he did act, there would be fast results. Once he was inside the camp perimeter, he assumed, it would be a simple matter to bring Meserve and the others to judgment. All he need do, he believed, was report that they had committed rape and murder, and the military authorities would investigate with the same alacrity that civilian authorities are expected to show in such situations. During his first hour back in camp, he recalls, no one could have persuaded him otherwise.

In any event, Eriksson went on, he lost little time in seeking out his friend Curly Rowan to tell him the story of Mao. He had barely begun it, however, when Clark, seeing the two in conversation, descended on them, demanding to know what they were talking about. "We made up something to get him to go away," Eriksson told me. "He had a wild manner—he couldn't stand still, and his eyes looked every which way. All of us in the patrol had long ago stopped pretending nothing horrible had happened. All of us had come back scared and upset, but Clark, I thought, showed it the most." Once Clark had left them, Eriksson continued with his story, feeling an immense relief when he had finished telling it. "At last, someone outside the patrol knew of Mao," he said. He had no illusion, though, that Rowan himself could do much about what he had just learned, but at that, Eriksson said, his friend did what he could, immediately relaying news of the murder to the sergeant of his own squad. In turn, the sergeant passed the news on to Lieutenant Reilly, who sent for Eriksson.

Arriving at the austere hootch that Reilly used as a command post, Eriksson told me, he imagined that the Lieutenant, if only conversationally, would express dismay over the murder. No such dismay was expressed. Instead, to Eriksson's astonishment, Reilly chose that moment to offer a reminiscence. Calmly and easily, he told Eriksson about an experience that he had undergone three years earlier, when he drove his wife, also a Negro, to an Alabama hospital to have their first child. She was in an advanced state of labor, the Lieutenant related, but she had been refused admittance to the hospital, on racial grounds, and she had eventually had her baby on the floor of its reception room. Wild with rage, Reilly had tried to wreck the place, whereupon hospital orderlies summoned the police, and the new father was arrested and jailed. In his cell, Reilly went on, he had made plans to shoot various officials at the hospital, but when he was finally released he gave up the idea of vengeance. "By the time I got out of jail," he told Eriksson, "I was saying to myself, 'What's happened is the way things are, so why try to buck the system?' And take it from me, Eriksson, it's even more hopeless to try to buck it in the middle of a war—there's more of a system then than ever. Better relax about that Vietnamese girl, Eriksson. The kind of thing that happened to her—what else can you expect in a combat zone?" His recollection out of the way, the Lieutenant informed Eriksson that the patrol, having replenished its ammunition stocks, would be leaving camp at any moment to resume its five-day mission. Eriksson wouldn't be going along, though; the Lieutenant had assigned another G.I. in his stead. Acknowledging the danger in which Eriksson had placed himself, the Lieutenant told him, "If I sent you out with that patrol, you'd never make it back."

As the court transcript shows, Reilly didn't let matters rest there. The atrocity that Eriksson had reported was too big for that. Reilly was aware that if it came to public knowledge it would tarnish the image of the officers commanding the platoon, the company, the battalion, perhaps even the regiment; the officers might be made to appear incapable of controlling the conduct of the men in their commands. Reilly's immediate superior, Captain Otto Vorst, as was later brought out in court, was out in the field at the time on "a tactical problem." He was not due back until November 22nd, the day Meserve's patrol was scheduled to conclude its mission. The Captain—a "lifer," or career Army man—had left instructions that he was to be sent urgent messages only, but shortly after Eriksson took leave of Reilly, the Lieutenant, confident that the murder merited his superior's attention, radioed word of it to Vorst. As it happened, the Captain heard about it from a second source as well—from Eriksson himself. Out on a search-and-destroy mission the morning after leaving Meserve's command, Eriksson told me, he encountered a small group of American military men reconnoitering the vicinity of the cave complex, Vorst was in the group, and Eriksson, detaching himself from his unit, went up to the Captain and told him about Mao.

"Leave it to me, I'll handle everything," Vorst said. A moment later, the two groups went off in different directions.

On November 22nd, Meserve, Clark, and Manuel, weary from their five-day stint (Rafe was still hospitalized), had scarcely dropped into their foxholes back in the platoon area when they were ordered to appear at Captain Vorst's command post—a hootch somewhat larger than Reilly's but equally bare. They found the company commander, who had himself only just returned, waiting impatiently to confront them with Eriksson's report. In his affidavit for Army investigators, Manuel gave what is probably a comprehensive account of the confrontation that took place in the Captain's quarters. "This was about 1400 hours," Manuel stated. "Captain Vorst handed Meserve a piece of paper with three words printed on it—Kidnapping, Rape, Murder. We all looked at the paper, and he asked us what this was all about. At first, we all denied any knowledge about it. He first asked Sergeant Meserve, 'Do you know anything about this?' To which Meserve said. 'We don't know what you're talking about.' He then directed the same question to all of us, 'Do you people know what you've done up there?'

"Captain Vorst then asked me did I know what would or could happen to me. I said, 'Probably the firing squad, sir.' He then said something to the effect, 'I could send you all back to the States for courts-martial,' or he could court-martial us out here and still have a firing squad. Then the C.O. said something to the effect, 'You people acted like animals up there and do not deserve to live.' He said he would have never learned about this but one man had the balls to tell [the officers] about it. Then he proceeded to tell us that if anything happened to Eriksson, our souls would belong to him." Possibly to help them retain their souls, Vorst announced that he was breaking up the patrol. Rafe, hospitalized at Qui Nhon, was already accounted for; Clark was to take a relatively rear-area post, at battalion headquarters; Meserve was to be shifted to another platoon. Only Manuel would remain anywhere near Eriksson; he was being reassigned to a different squad in the same platoon.

Eriksson saw Vorst shortly after the three soldiers left the company command post. At the time, Eriksson told me, he had no idea that the Captain had chewed them out. If he had known this, he thinks, he might have realized then, as he did later, that the Captain was in a bind; that is, he was torn between the dictates of his conscience, which condemned the crime, and concern for his Army career, which, Eriksson later discovered, the battalion commander—who outranked Vorst, and who was also a "lifer"—was in the habit of admonishing the Captain to bear in mind. Initially, however, Eriksson discerned no signs of inner conflict in Vorst. As far as he could make out, the company C.O. held a clear, uncomplicated view of the crime, and that view was that its repercussions should be kept to a minimum. "That word 'handle'!" Eriksson said reminiscently. "Three times I saw the C.O. about Mao, and three times he used it—'I'll handle everything' 'I'll handle everything,' 'I'll handle everything.' Maybe he did, but not in a way that had anything to do with anyone's making amends." At his meeting with Vorst the day of the Captain's return, he went on, he noticed that—like Reilly, who was present—the company commander failed to deplore the murder, and instead stressed its potentialities as a scandal. Reilly later testified in court, "Captain Vorst stated to Eriksson, 'I guess you realize how serious this incident is, and that it could cause an international issue.' Eriksson stated that's why he reported the incident—because he knew it was serious.

"Eriksson also stated that the entire taking of the girl, the rape, and killing of the

girl were pre-planned . . . that he [had] thought [at first] the men were just joking about really completing the acts." Throughout, Eriksson told me, he had the distinct impression that his position and Vorst's were at variance. Despite Vorst's generally negative tone, Eriksson said, he believed that the company commander would eventually take steps to bring Meserve and the others to justice. At one point, Eriksson recalled, the Captain warned him that if the incident did result in courts-martial, he might face rough going on the witness stand. When Eriksson replied that he was prepared to take his chances on that, Vorst asked whether Eriksson might not care to transfer out of the company—or, for that matter, out of the infantry altogether. Eriksson replied that he wouldn't mind a change—not that it would deter him from pressing charges. He wouldn't mind being a door gunner aboard a helicopter, he told Vorst, citing as his qualifications for such a post that he had been trained as a machine gunner and that he was fond of flying. Vorst filled out transfer forms, and Eriksson signed them. As he was leaving, he told me, the Captain called out reassuringly, "I'll handle everything!"

When Eriksson heard nothing from Vorst for four days, he sought an interview, which was granted. It was the final talk between the two men. They were alone this time, Eriksson told me, and when Eriksson inquired what progress there had been in the murder case, the Captain seemed not to hear but posed a series of questions. He was merely asking, Vorst said, but had Eriksson really thought through what he was doing in pushing his charges? Had he taken into account the amount of suffering that Americans had already undergone in behalf of the Vietnamese? Had he stopped to think of the consequences to himself of accusing four fellow-G.I.'s—thereby adding to that suffering? Besides, what if the four were court-martialled and found guilty? Did Eriksson know that military judges and jurors were notoriously lenient in their sentencing? Unlike their civilian counterparts, Vorst said, the law officers (the term by which military judges were known) and members of the court (as jurors were known) had a sympathetic understanding of the pressures a combat man faced in risking his life daily; military jurists didn't expect foot soldiers to be on their best behavior in a war zone. Here, the C.O. went on, it was mild sentences that were the order of the day, and, what was more, they became even milder when they were up for review; safe and professionally idealistic back home, he said, the legal experts of military appellate bodies invariably looked with suspicion upon the administration of justice in war zones. Thus, Vorst concluded, coming to the last of his questions, if the men in the patrol were actually convicted, Eriksson could anticipate their being freed in short order, and when that happened Eriksson himself might not feel so free—for was it really inconceivable that one or more of the exconvicts would seek revenge? And wasn't it just possible that the victim might not necessarily be Eriksson himself but, rather, his new bride? Eriksson stated in court, "Captain Vorst said that the men would get off with hardly any or no sentence at all, then myself and my family would really have something to worry about."

In the weeks immediately following Mao's death, Eriksson's home continued to be the platoon area, and his routine consisted of patrols—search-and-destroy by day, ambush by night. These were always demanding and hazardous, yet they could not distract him from the intense feeling of frustration that now beset him. After his last talk with Vorst, he told me, that frustration was always with him—eating at him, keeping him remote from his fellow-G.I.s, costing him sleep. Lying awake nights, listening to Asian birdsong and the squealing of monkeys in the jungle nearby, he said, he found himself constantly mulling over the phenomenon of military discipline—the chain-of-command system. As in all armies, he believed, it pervaded every facet of military life, embracing officers and enlisted men, volunteers and draftees, and, for that matter, men with college degrees, like Vorst and Reilly, and men with meagre educations, like Meserve and him. He was at his wit's end for a way to circumvent the system, Eriksson told me, because he was convinced that it was this system that lay at the heart of his difficulties. He saw now how wrong he had been in thinking that a report of rape and murder would evoke instant action, as in civilian life. In the Army, he had discovered, that kind of action depended entirely on the discretion of one's superior—unless it was possible to figure out some way of bypassing him. It was maddening, Eriksson said, to realize that military discipline threatened to make Mao its victim again, just as it had on Hill 192, when all that certified Meserve's orders was his rank as sergeant. "They scare that discipline into you in basic training," Eriksson told me. "It's obey the man over you, follow the chain of command, or into the stockade you go." Something that added to his feeling of frustration in those trying weeks was that he could not find it within himself to single out Vorst as the arch-villain, from whom all evil flowed. Eriksson said to me, "It only looked as though he was the one out to do everything in, but the C.O., I knew, had someone over him, and *his* superior had a superior. That was the thing about the chain of command—you couldn't tell who was to blame for what. It had nothing to do with a man's being responsible for his own behavior. Just as long as he stayed in line, just as long as he kept the setup going, he could do whatever he wanted."

Perhaps the most jarring of all the discoveries he made during this unhappy period, Eriksson told me, was that his fellow-G.I.s took a dim view of his efforts in behalf of Mao. To be sure, there were a few individuals, like Rowan, who shared his outlook, but the great majority saw things the way their officers did. Time and again, at chow or during a break out in the field, someone would tell him (as Vorst had told him) that it was pointless to throw good lives after bad by having Meserve and the others up on charges, since (as Reilly had said) violence was the language of war, and, naturally, it could not always be controlled. Continually, Eriksson recalls, he heard the familiar argument that the V.C. also kidnapped, raped, murdered. "Hey, Sven, how do you know that girl wasn't a V.C.?" an Oklahoma rifleman asked one night as he and Eriksson were settling down to sleep in their foxholes. Each day, Eriksson said, he felt as though he were at war with war, a troublemaker out to undermine some careful, desperate code of survival. When he first got back from Hill 192, he said, he had imagined that it might have been his peculiar misfortune to draw a patrol made up of psychopaths, but now each time a new G.I. rallied to the patrol's defense that idea seemed less tenable. "Listening to the fellows, I had the feeling there might be any number of Meserves and Clarks around me," he said. "It was like living in an overorganized jungle—full of names, ranks, and serial numbers but not much else."

Dispiriting though he found the atmosphere in the platoon area, Eriksson went on, there were traces of conscience there. It took him a while to realize this, he said, and, curiously, he became persuaded of its prevalence as a result of thinking about Vorst's negative "handling." As he went over it in his mind for the hundredth time, he began to suspect the existence of cracks in the Captain's seemingly certain, untroubled façade. If there weren't any, Eriksson asked himself, why hadn't the C.O. simply told him to bug off from the word go? Why had he bothered to discuss Mao with him three times? Nor could the concern that the C.O. had shown for Eriksson's safety be explained unless those cracks existed. Why else had Vorst seen fit to reshuffle the patrol, leaving only Manuel within shooting distance, so to speak? And then there was Vorst's invitation to Eriksson to transfer out of the company. It seemed like a deal, but why was it, Eriksson asked himself, that a captain should feel constrained to bargain with a lowly enlisted man? Why make all this effort to dismiss the death of an unknown peasant girl if it weren't that the C.O. recognized that there were forces of conscience that might have to be contended with? Thinking along these lines, Eriksson said, he arrived at a kind of strategy in regard to Mao. "Whatever I could do about her depended on finding someone with both the rank and the conscience to help me," he told me. "Otherwise, I'd stay boxed in by the chain of command."

On the last day of November, Eriksson was in a patrol that was chasing two or three V.C. down a trail between two hedgerows when the patrol was suddenly fired upon from one side. "Hit it!" the patrol leader shouted, and his men hit the ground, the bullets from the still invisible attackers raising columns of dust all around the flattened G.I.s. In a matter of seconds, the shooting broke off, and another patrol, consisting of another squad in Reilly's platoon, emerged from behind the hedgerow. Eriksson's patrol leader delivered a tongue-lashing to his counterpart, who apologized. It had all been a mistake, he said—he and his men had been dozing when the sound of running feet aroused them, and instinctively they had assumed it was the enemy. He had stopped the shooting as soon as he heard an American voice yell "Hit it!" Still fuming as the two patrols stood facing each other awkwardly, Eriksson's sergeant declared that in all the time he had spent in Vietnam he had never before experienced any such "mistake." As Eriksson waited for his sergeant to cool off, he idly scanned the men in the other squad, his eyes stopping abruptly when they met the expressionless gaze of a familiar face. "It was Manuel," Eriksson told me. "We just looked at each other, without saying hello. Seeing him made me think at once of two questions I would have liked to ask him or his sergeant. Just who, I wanted to ask, was the man in Manuel's patrol who started the shooting? And who was the man who fired the last shot? I couldn't even guess at the answers—not without knowing what kind of jam Manuel thought he was in."

Whatever the answers, Captain Vorst saw to it that Eriksson left his command early the following morning, sending the enlisted man seventy miles away to Camp Radcliff, the 1st Cavalry (Airmobile) Division base, near the small city of An Khe, Eriksson was to remain there until his reassignment as a door gunner came through, Vorst having sent his transfer papers on for official approval by the helicopter command. In the meantime, Eriksson's orders placed him on temporary duty with a carpentry detail that was constructing additional housing for the base, whose population came to twenty thousand. Eriksson was delighted with this duty, since he had had a passion for carpentry all his life, However, he welcomed the shift to Radcliff for a more important reason. He was confident, he told me, that he stood a better chance of finding help there than in the confines of the platoon area. Far from where the daily, relentless fighting was going on, he pointed out, Radcliff was probably less disposed to take gratuitous violence in stride; besides, there were infinitely more people at the division base, and that gave him a better chance of finding the effective ally he needed. "From the minute I got to Radcliff, I was on the lookout for him, whoever he might turn out to be," Eriksson said.

His break came after just a week—by accident, which was the only way it could come.

Late one afternoon, when he and about twenty other G.I.s putting up a barracks were about to knock off for the day, he saw a fellow-carpenter, Boyd Greenacre, detach himself from the crew to have a talk with a passing chaplain, a blond, long-nosed six-footer wearing a captain's bars; the two men, Eriksson could see, were on cordial terms. Eriksson had never laid eyes on the chaplain before. For that matter, he said, he knew almost nothing about Greenacre—only that he was a cowboy from Arizona, a wiry type, who put in a good day's work as a carpenter and didn't have much to say. Now, watching the chaplain depart, Eriksson decided that Greenacre was very much worth cultivating. Eriksson was determined to meet the Arizonan's friend, he told me, for he had a feeling that the long-nosed chaplain was the man who would help him bring Mao's case to light. Seeing him and Greenacre chatting together, Eriksson went on, had made him realize that the only chance he had of escaping the chain of command was through a chaplain. Actually, Eriksson told me, he had once asked Reilly for permission to discuss Mao's murder with a chaplain, but the Lieutenant had discouraged the idea. Perhaps, Eriksson said, he remembered that idea just then because of his recent stewing about Vorst and conscience. At any rate, he felt that he was on the right track, since chaplains were professionally concerned with conscience. "Conscience was one thing that crossed over from civilian life to war," he said. "It was as much a part of us as our legs and arms."

His spirits on the upswing, Eriksson set about trying to meet the chaplain. "It had to be him, and no other chaplain," he recalled, smiling. "And it had to be Boyd Greenacre who would introduce me. That was how my hunch went, and I didn't dare change it in any way." Eriksson moved cautiously. He didn't see how he could just walk up to Greenacre and state his business. Greenacre might react disapprovingly, as the fellows in the platoon had—or, for all Eriksson knew, Greenacre might turn out to be Meserve's best friend. As a result, Eriksson spent the next two days surreptituously doing a kind of security check on Greenacre's character. "I needed more of an impression of Boyd than I had," Eriksson said. "What if he refused to arrange an introduction for me? I had to know whether he could at least be trusted to keep quiet about what I was up to." As indirectly and offhandedly as he could, Eriksson sounded out various members of the work detail about Greenacre—none of whom, he remarked, he knew any better than he knew the Arizonan.

He remembers that he talked with one of them while they were both shaving, and that in shooting the breeze with another he led the conversation around to Greenacre when the man mentioned that Arizona was where he dreamed of spending his first postwar vacation. Before long, Eriksson told me, his sleuthing established that Greenacre was well thought of, and one evening, after the carpenters had finished eating, he invited Greenacre to take a walk with him. Even though the two were alone, Eriksson remained cautious, revealing nothing about Maos murder. He did, however, speak of her abduction and rape, and that, it turned out, was quite enough to make Greenacre propose that he and Eriksson walk over to the chaplains quarters immediately. On the way, Greenacre told Eriksson that the chaplain, Captain Gerald Kirk, came from Ogden, Utah; he was a Mormon, Eriksson learned, and so was Greenacre.

Mrs. Eriksson, who was once more plying her husband and me with coffee and cake, put in "Sven and I are Lutherans. In our part of Minnesota, just about everyone is."

It was ten at night when Eriksson sat down to talk with Kirk, and he found he was able to speak more freely than he had even to Curly Rowan. Eriksson remembers having a deep feeling of ease and calm, as though he were at long last ceasing to be a fugitive from injustice. Greenacre was present throughout the talk, at Eriksson's insistence. "Boyd had been a big help," he told me. "I hadn't let out anything to him about the murder, but as long as I was with Chaplain Kirk, I thought he was entitled to hear everything." The gesture impressed him, the chaplain has since told me. "With Greenacre there, it meant that Sven was waiving his right to my silence," he said. Impressed though he may have been, he heard Eriksson out with some skepticism, for before Kirk entered the Mormon priesthood he had spent ten years as a policeman on the Salt Lake City force. "I listened to Sven's story with a cop's ear," the chaplain said. "I wanted to be very sure that he himself hadn't taken part in the rape. Coming to me, the way he did, he might have been trying to save his neck by turning state's evidence, so to speak." Kirk therefore interrupted Eriksson frequently, challenging him to tie together details that at first seemed contradictory. Gradually, though, the cop's ear gave way to the chaplain's.

"I decided I was hearing an individual who wished he could have saved that girl but hadn't been able to," Kirk told me. "I can assure you he wasn't being paranoid in thinking he might be shot in the back for seeing me. In war—at least, the war we were in—it was nothing unusual to hear shots that were unexplained, to find a body that might or might not have been shot in combat. Where we were, it was a time and place for thousands of men to play for keeps, and that certainly included Meserve and the others in the patrol, because if they wanted to eliminate Sven as a potential witness they had the M–16s to do it with."

Eriksson finished telling his story to the chaplain toward midnight, whereupon Kirk pressed him closely, as Vorst had done earlier, to determine whether he was certain in his mind that he was prepared to endure not just the cross-examinations but the risks attendant upon appearing as a government witness in open court. When Eriksson reaffirmed that he was, Kirk picked up his phone and called the Criminal Investigation Division office at Camp Radcliff. "I'd never known the Army had any such unit," Eriksson told me. In ten minutes, a pair of agents entered the chaplain's quarters, and Eriksson, as his affidavit shows, told them, in a signal example of understatement, "This [the rape and murder] has been bothering me since it happened, and I went to the chaplain tonight and told him what had happened." The agents interrogated him with a cool, neutral competence. "They weren't shocked, or anything like that," Eriksson recalls. "They were just doing their job." Once the pair had assessed the gravity of the crimes being charged, they moved swiftly. "The next thing I knew, I was in jail," Eriksson told me. "They locked me up in a steel box, in solitary. For protective custody, they said.

From that point on, Eriksson's life in the Army was radically changed. Released from jail in a few hours, he found himself no longer a lone, underground accuser but, instead, a cog in an elaborate law-enforcement machine, whose purpose was to gather evidence, question suspects, and generally determine whether "a case" existed. Once the investigation of Mao's murder had been set in motion, Eriksson was frequently consulted by a variety of experts, among them pathologists, C.I.D. agents, lawyers, and ballistics and firearms specialists. Even his routine duties as a G.I. now had to do with law enforcement, for he was reassigned to the 545th Military Police Company at Camp Radcliff, in which outfit he guarded high-ranking officers, pulled gate duty, made periodic "sweeps" of the base area for signs of infiltrating V.C., and, every day at 4 p.m., climbed into "the drunk wagon," which was an M.P. bus that collected G.I.'s who had fallen on hard times in "Sin City," a section of bars and bordellos in An Khe, two miles away. "The C.I.D. wouldn't let me become a door gunner," Eriksson told me. "They put a hold on my transfer forms. They said that door-gunner duty was too dangerous—that if I was going to be any use as a witness I had to stay alive."

Eriksson recognized the abrupt transformation of his military life the morning after his meeting with Kirk. Almost before he was awake, M.P.s escorted him from his cell to the Provost Marshal's office, where he underwent a further interrogation. "Technically, I myself was a suspect," Eriksson told me. "The C.I.D. carefully explained that to me, informing me of my legal rights, one of which was to shut up." When the interrogation was over, he was asked to lead a search party to the spot on Hill 192 where he had claimed that Mao's body could be found. Accompanied by a squad of armed enlisted men, as a precaution against an enemy ambush, the search party set out early the following morning, December 9th, flying from An Khe to an airstrip near Captain Vorst's company headquarters. In charge of the group were a colonel, a major, and, after they reached the airstrip, Captain Vorst himself, who maintained silence toward Eriksson. Among its members were C.I.D. agents, photographers, a firearms expert, and a ballistics man. The group walked from the airstrip to Hill 192. It was a six-hour trek, over difficult terrain, and when the men finally stood just below the summit, several of them, who were unaccustomed to tramping so long, were near exhaustion. Eriksson himself stood scanning the landscape intently, looking for the curiously shaped rock formation where the stabbed girl had been shot. Eriksson had considered the jutting and twisted rock a highly unusual one, but now, refamiliarizing himself with his surroundings, he saw, to his surprise, that it had a practically identical twin close by. It had to be on one of the two rocks that the girl lay, Eriksson knew, and to spare the others in the party unnecessary exertion he screened out the nearer rock by himself, doggedly plunging through formidable brush to reach it. Mao wasn't there, and Eriksson, rejoining the waiting group, pointed to the other rock.

"That's where she is," he said, with certainty. After the others fell in behind him, he walked silently to the second rock, seventy-five metres away. In due course, they came upon Mao, her remains a rigid crescent settled grotesquely in a half nest of soil and rocks and matted foliage. She had lain moldering there for three weeks and her body was badly decayed. As the others clustered around it, Eriksson withdrew to the fringes of the circle, made uncomfortable by everyone's purposeful curiosity. "It was another case of people doing their job," he told me. "They hadn't ever heard Mao's voice or seen her carrying Manuel's pack.

Going about their tasks with unrelieved efficiency, the men staked out an area thirty feet square in which to conduct their operations, soon gathering a harvest of clues, among them lead fragments of spent bullets, for the ballistics and firearms men, and parts of Mao's remains, for the pathologists. The corpse itself was placed in an Army "casualty bag"—a rubberized olive-drab shroud, originally designed for fallen soldiers. There was to be an autopsy at the United States Army mortuary in Saigon, by a Japanese anthropologist, Professor Tadao Furue, of Toyko University, and Colonel Pierre A. Finck, commanding officer of the 9th Medical Laboratory. (Dr. Finck, a well-known Army pathologist, was one of the team of three physicians that performed the autopsy on the late President Kennedy.) Throughout, Eriksson recalls, dozens of pictures were taken, for possible use as trial exhibits, the flashes of the photographers'

bulbs pale in the afternoon sun. Additional pictures were taken a week later, when Eriksson led a second pilgrimage to Hill 192. The search party was a smaller one this time, Eriksson said, its assignment to make certain that nothing of any conceivable courtroom value still lay hidden in the area around Mao's body; eventually, a C.I.D. agent, poking through leaves with a bayonet, found teeth, finger bones, and yet more bullet fragments, all of which he deposited in a plastic bag.

The evidence gained as a result of the two field trips played an important part in the judicial procedings, Eriksson told me. For example, the ballistics and firearms specialists, working together, were able to analyze the lead bullet fragments as having come from an M–16 rifle and to offer it as their judgment in court that Mao had been shot at close range—a judgment that afforded a presumably objective basis for incriminating Clark, at least, as one of her assassins. Professor Furue and Colonel Finck also appeared as witnesses, to offer information based on clinical studies they had made of Mao's skeletal parts in Saigon. The experts' findings established conclusively that Mao had been stabbed three times, in the rib cage and the neck, and that her skull presented a "crushed" appearance, "showing the shattering effects of two high-velocity-missile wounds." Classifying her "racial stock" as Mongoloid, Professor Furue placed Mao's age at between eighteen and twenty and her height at five feet four and a half inches—somewhat greater than Eriksson had estimated it to be in talking with me. A veteran of thirty-five thousand autopsies, Professor Furue told the court, "Compared with other female Mongoloids, Mao's remains were well developed, a well-balanced body build."

Meserve, Clark, and the two Diazes were taken into custody the day after the first search party made its visit to Hill 192. Arrested by military policemen at scattered points, the four soldiers passed through Vorst's area in the late afternoon and saw the Captain briefly. His farewell to them was succinct. Recalling it for investigators later on, Manuel stated, "He told us he had attempted to keep the incident quiet but that now he couldn't give us any further advice or help." The M.P.s took the enlisted men to the Provost Marshal's office at An Khe, where they were given an initial interrogation before being remanded to the stockade at Long Binh. It didn't take many further interrogations to convince the law-enforcement officers that they had "a case," for Rafe and Manuel readily signed affidavits whose substance supported Eriksson's account of "the incident on Hill 192"—the name by which Mao's murder became known among the military. (Asked by a C.I.D. man, "Who raped or had sexual intercourse with the girl?," Manuel replied, "Sergeant Meserve, Clark, R. Diaz, and myself. Eriksson did not have sexual intercourse or harm her in any way.") Meserve and Clark denied any wrongdoing, and the leader of the misbegotten patrol insisted that his motives had been misconstrued. He had only been fooling, he testified, when he talked of having "fun" on the reconnaissance mission. As he recalled his briefing, he had told the men, "It'd be nice if we could pick up five women for the five days up there and have an orgy," and then, he said, "everybody had made comments and laughed." As for going to Mao's hamlet, the Sergeant said that he had led the patrol there to look for V.C., and that he had captured the girl because she had behaved suspiciously inside her hootch. When Meserve ended his testimony, the prosecutor inquired how many times and to whom he had "told the story you just told on the witness stand."

"Numerous times, sir," the Sergeant replied. "Mostly to my lawyer."

The four courts-martial took place in the winter of 1967, within a period of about ten days in the middle of March. The trials were held in a courthouse at Camp Radcliff, a frame structure measuring thirty feet by thirty and roofed with tin. The weather had turned hot and dry, Eriksson remembers, and the interior of the courtroom throbbed with the whirr of electric fans. Outside, a diesel generator, the base camp's source of electricity, made a constant racket, causing the law officers frequently to request witnesses to raise their voices. The participants in the cases, including lawyers, witnesses, law officers, and members of the court, lived in tents near the courthouse, and often at night the vicious thump of artillery shells, enemy-bound, from the edges of the division base disturbed the quiet of the legal encampment.

Throughout each trial, Eriksson said, the exponents of military law strove diligently to apply judicial rules largely borrowed from civilian law, as though they were seeking to re-create a semblance of civilian life. Eriksson found it impressive that these procedures should be so punctiliously observed within easy artillery range of the enemy—which, he added, was not to say that he was unaware of various shortcomings. Uninitiated though he was in the ways of jurisprudence, Eriksson said he found it odd that defense lawyers could freely engage him in conversation during court recesses, questioning him on subjects that he was later asked about under oath when the court session was resumed. And, in fact, Eriksson told me, a C.I.D. man attending the sessions assured him that this was highly improper. "But then I don't know how much the C.I.D. fellows knew about law," Eriksson said. "One of them, I know, goofed on his interrogation of Manuel—he forgot to read off one of Manuel's rights before he started asking questions." In addition, Eriksson told me, he would have appreciated it if the prosecutor—whom he looked upon as his lawyer—had tutored him slightly in how to conduct himself in court; despite his status as the Army's chief witness, Eriksson said, he took the stand practically cold.

However, he acknowledged that the prosecutor did warn him, as Vorst and Kirk had previously, of the possible consequences to him and his wife of his testifying for the government. "He said for me to think that over again very carefully," Eriksson recalled. "He sounded genuinely concerned." Something else the prosecutor did was to advise him to see a psychiatrist before the trials started. The prosecutor, it appeared, counted it a safe bet that the defense attorneys would attempt to portray Eriksson as some kind of repressed nut for having failed to join in the festivities on Hill 192. To counter any such strategy, the prosecutor wanted to have on hand a statement attesting to his chief witness's mental stability. Thus, a couple of weeks before the first court-martial opened, Eriksson found himself sitting in a cubbyhole office at Camp Radcliff face to face with a stocky medical captain with an extremely close crew cut who wanted to know whether the young infantryman loved his mother and whether he heard from his wife. Recalling the interview, Eriksson said, "I'd answer a question, then he'd wait and I'd have to wait along with him, then he'd ask another question real fast, and in I'd come with my next answer. His questions didn't take long—maybe twenty minutes—and when they were over he wrote down on a piece of paper, 'Has no speech defects, steady manner.'" Offering an evaluation of his own, Eriksson added, "He seemed like a nice guy. When he stopped asking me questions, he started talking about Meserve and the others, sort of thinking aloud what it was that came over fellows in wartime. He sounded as though the war would have to come to an end before his work could make much sense."

For Eriksson, the trials were totally unlike anything he had anticipated. He had thought of them uneasily, imagining that the act of testifying might force him to relive the macabre episode on Hill 192. No such thing happened. From his point of view, as he had indicated at the beginning of our talk, the legal consideration of the crime was a field day of fencing and distortion, of quibbling and traps. No matter how close the questioning, and no matter how detailed the testimony he gave, or heard, it all seemed related to Mao's murder in only a surface sense. "The lawyers were playing a game," he said. "To listen to them, and to the testimony that the guys in the patrol gave, Mao was probably living happily in her hamlet." As early as the opening day of Rafe's trial, which was the first one held, he realized that it was idle to consider whether the G.I.'s punishment would, or could, fit the crime. Throughout, he told me, the single belief that sustained him was that in serving as the defendants' principal accuser he was carrying out the resolve he had made as he trained his grenade launcher on the cave complex; namely, to let the world know of Mao's fate.

Enacting the role of chief government witness was not an edifying experience, Eriksson went on. Just as the prosecutor had foreseen, the defense attorneys did try to make Eriksson look odd, but that was among the milder of their insinuations. By the time he concluded his last appearance on the stand, he had been accused of lying, of cowardice, and even of Mao's murder. One of the defense lawyers hammered away at the point that Eriksson had killed the girl when, in obeying the Sergeant's command to shoot her, he fired his grenade launcher. But the assertion was a hard one to prove, for Rafe was on hand to testify that Eriksson was so situated in that feverish moment that Mao wasn't even in his line of vision. Besides, as the defense could not dispute, the jacket containing the explosive charge of a grenade launcher is made not of lead but of copper, and the search parties' experts had found only the lead of numerous bullets from an M–16 rifle littering the immediate vicinity of Mao's body.

In all four trials, the court records show, defense lawyers made a studied effort to depict Eriksson as less than lion-hearted, presumably on the theory that proving him to be craven would automatically exonerate their clients. "Are you afraid of Sergeant Meserve?" Eriksson was asked at one point, and he replied, "That's affirmative, sir. . . . I am not afraid of him if he has no weapons." Eriksson answered, "That is negative, sir," when a defense counsel, taking up the pre-Hill 192 patrol in which half of Eriksson's squad had been wounded, inquired, "Isn't it true, Eriksson, that you allowed the squad to walk into the ambush area without warning, because you were hiding in the bushes?"

Undeterred by Eriksson's denial, the lawyer persevered with his line of questioning.

Q: How did you react to this particular ambush, Eriksson? Did you fire your weapon?

A: I was in the rear of the column, and didn't have a chance.

Q: Were you afraid?

A: No, sir.

Q: You were not afraid?

A: No, sir.

Q: Isn't it true you were so afraid you could hardly move?

A: No, sir.

Q: You think your fear was apparent to anyone else?

A: No, sir.

Another defense attorney repeatedly taxed Eriksson with having "fabricated" his charges against Meserve and the others in order to escape further assignments to hazardous infantry missions. When Eriksson was able to state that he had put in for door gunner aboard helicopters, which could hardly be considered safe duty, the lawyer persisted in reminding him that "you testified you wanted to get out of the platoon."

Eriksson agreed, "I wanted to get out of the platoon," he stated. "I wanted to get out

of the whole company, because I could not see staying in a company that would do anything such as here. I realize that we are over here fighting a war, but to go out and kill an innocent person has nothing to do with the war."

Accused of shrewdness in seeking to evade infantry duty, Eriksson found himself also accused of a lack of shrewdness in failing to let Mao escape when he was alone with her in the hootch. He was asked, "Couldn't you have thought up a story [for Meserve] to the effect that you heard some noises or heard some V.C. and went out to check, and she got away from you, right out of the hootch?"

"No, sir," Eriksson replied.

"You traded the girl's life for your well-being," he was told.

At times, Eriksson displayed a certain poise on the stand. Asked whether Meserve might not have been searching the hootches of Mao's hamlet for the strictly military purpose of finding "strange faces," he answered, "I wouldn't say this, sir. They were all strange faces." Asked whether Mao's continued presence on Hill 192 might not ultimately have "endangered the lives of the members of the patrol," Eriksson said, "Sir, this girl wasn't supposed to be on this patrol."

Before Eriksson was through, even his possession of a sense of humor became an issue. This arose when a defense witness, a sergeant in the platoon, said that Eriksson had none. "He didn't laugh and joke as much as the other guys did; he was much quieter," the sergeant said.

Cross-examining, the prosecutor asked, "When you say he didn't have a sense of humor, you mean he wasn't a jokester, running around making or seeing the funny side of everything?"

A: Yes, sir.

Q: Did he endeavor to actively join in with the free-time activity of the rest of the people, or did he have to be coaxed . . . or did he just refuse at all times?

A: Oh, no, sir, it was not that he was disliked in any way. It was just that he was less than average as far as being one of the guys, should we say? He was just more serious-minded.

Mao's sister, Phan Thi Loc, appeared as a prosecution witness, her very presence irrefutable evidence that Mao was not in fact living happily in her hamlet. Through an interpreter, Loc related that after the patrol finished with their hamlet, she and her mother had searched desperately for Mao. Accompanied by troops of the South Vietnamese government, the two women had eventually come to the hootch on Hill 192, where they had found Mao's brassiere, flecked with blood; the troops had burned down the hootch. Loc's mother was now missing. The Vietcong, Loc said, had abducted her, accusing her of having led South Vietnamese forces to a V.C. munitions cache on Hill 192. Loc and her father had moved from their native hamlet; they now lived in a village several miles from there.

Though Eriksson testified at greater length than anyone else, most of the witnesses who appeared in the close, noisy courtroom spoke in support of the defendants, extolling their gallantry, their sense of duty, and their other soldierly virtues. With few exceptions, these witnesses had fought alongside the defendants, and it was a powerful camaraderie they shared, forged, as it was, in combat, where they had all saved each other's lives more than once. Recurrently, the court records show, witnesses found it deplorable that the defendants should have to fight for their survival in a prisoner's dock when they might be far better employed doing that on the battlefield; in their every utterance these witnesses reflected the view that losing soldiers of Meserve's calibre could result only in gaining a stronger enemy.

Perhaps because Meserve had been the leader of the four accused, he came in for particularly heavy praise. In a sample encomium, Lieutenant Reilly declared that the Sergeant's "character and reputation are the best I have seen, and [he is] one of the best combat soldiers I have known." Reilly also called him "a fine soldier," and went on to say. "He never failed to accomplish the mission. I give him 'max' rating as a soldier." In other connections, it was brought out that the Sergeant had not waited to be drafted, that he was currently in line for the Bronze Star, and that in the course of his overseas duty he had been awarded five medals, of varying importance, and had a conduct rating of Excellent. It was adduced that even before Meserve left for Vietnam he was regarded as an exemplary soldier, since he had been selected to march in President Johnson's inaugural parade—an honor limited to two hundred men with unblemished records. Inevitably, though, the defense witnesses were unable to confine their remarks to Meserve's service record, for—almost tactlessly, it seemed—the prosecutor would inject the topic of Mao's murder, the implications of which had less to do with the conquest of an enemy than with the requirements of an ordered civilian life. Given this confusion of values, the legalistic consideration of Mao's death sometimes bordered on the incongruous. Thus, defense lawyers raised no objections when the prosecutor asked the defendants and the defense witnesses whether a soldier who was condemned for having committed civilian homicide, such as the killing of Mao, should be kept on as a member of the armed forces—that is, should be permitted to go on committing military homicide. Needless to say, the question was not examined philosophically in the Camp Radcliff courthouse; instead, it was employed narrowly as a government gambit for stumping a witness. If he said no, he would appear to be disowning the defendants, his comrades-in-arms; if he said yes, he would in effect be telling the jury that he regarded the war as a public-works project for criminals. The trial records make it clear that the question left the witnesses uncomfortable, for their responses were reluctant and tortured. Of those who were asked the question, only Captain Vorst, "lifer" though he was, stated that if Meserve was guilty of rape and murder, then he did not care to have the Sergeant in his command.

Vorst's executive officer, by contrast, could not countenance the thought of Meserve's being cashiered. Here is the interchange between the executive officer and the prosecutor:

Q: Do you feel there is a place in the United States Army for murderers?

A: Sir, Sergeant Meserve, he joined the unit in approximately February of last year, and he served under me when I was a rifle-platoon leader, and the reason he is a sergeant today is because we put the duties of squad leader upon him—

Q: I didn't ask you for a long elaboration. I simply asked, do you think a murderer should be retained in the United States Army? Yes or no?

A: Well, no, sir, until they've—not until they serve their sentence. Then, of course, after rehabilitation—I think there's a difference, sir. . . .

Q: You would suggest some minor form of punishment, in other words?

A: Well, in general, sir, [but] in this specific case—

Q: For a murder. I'm talking about a murder. I'm not talking about any specific case.

A: Well, yes, sir, I think if someone has been found guilty of murder, they should be punished, but, knowing Meserve as an individual, I would accept him back in the unit, yes, sir.

As for the defendants themselves, only Rafe showed contrition, the most striking manifestation of which was his decision to testify against Clark. The decision was not easily arrived at, for two days before Clark's trial was to begin, and when Rafe had already been convicted, Clark approached Rafe in the stockade at Long Binh, where both were jailed, and, appealing to Rafe's conscience, told him that if he gave unfriendly testimony against his comrades, "he would have it on his mind the rest of his life." Troubled by this, Rafe sought, and heeded, the counsel of a Catholic chaplain at Camp Radcliff in resolving the dilemma of choosing between his "moral obligation," as Rafe put it to the chaplain, and "loyalty to the patrol." Summoned to the stand by Clark's lawyer, the priest said he had advised Rafe that, as opposed to defending Clark's interest, he had "a greater obligation to his wife and his child and the young woman who, supposedly, I assume, was killed, and to justice and society." The priest also said he was asking a Franciscan brother in Texas to break the news of Rafe's conviction to his wife, "to help her absorb the initial shock."

By contrast, the general demeanor of the other defendants was that of incredulity at being tried; the impression they gave was that they thought only the sheerest, most improbable sort of accident could explain their being haled before a tribunal. Their testimony indicates that they were so inured to the epidemic, occupational violence of war that they found it hard to recognize their judicial plight as a type of retribution. In the case of Manuel (the father of a three-month-old girl), this attitude of mystification became so palpable that the prosecutor finally inquired, "Do you feel you are involved in any way in this rape and murder?" To which Manuel replied "No."

Q: You feel that the government has done you a grave injustice in bringing you here today for trial?

A: No, sir, I've got nothing against the government.

Q: Well, you feel you are not involved in any way?

A: Yes, sir, I feel that way.

Q: You shouldn't be on trial?

A: Well, yes, sir.

Q: As a matter of fact, you have complained [from the stockade] that your promotion is being held up?

A: I wrote my senator. I told him I was being wrongly brought to trial.

Manuel admitted to C.I.D. investigators before the trial started that he had committed rape, but when the subject came up in the courtroom, it appeared to be Manuel's judgment that he had taken part in a reasonable enterprise, and the justification that he gave for doing so was military discipline. Confirming Eriksson's ruminations on this subject, Manuel testified that at a special ten-day camp in Vietnam where G.I.'s were trained intensively to cope with combat situations "it had been knocked into our heads, practically, to obey orders and . . . they said if you were fortunate enough to get in a group where you had an old-timer who had been in Vietnam like six months longer than you had, if you followed what he said, you would live longer." Besides, Manuel testified, if he had not gone into the hootch he would have risked becoming an outcast. Asked by the prosecutor why he thought Eriksson had stayed out of the hootch, Manuel answered, "Eriksson was different. He was brand-new. I'd been there a month or three weeks longer."

When he went on to imply that Eriksson might be "chicken," the prosecutor asked, "How come he stood up to Meserve? Do you consider yourself braver than Eriksson?"

A: I don't think I'm braver than Eriksson I'm not going to say that, sir.

Q: Why did you want other members of the squad to think you were a rapist?

A: Better to go into the hootch, sir, and keep contentment in the squad, and keep a better—well, how can I explain it—keep the thing running smooth. It makes for an easier mission and no problems.

Q: You don't believe the military gives a choice between rules, orders, and conscience?

A: The Army expects you to do it the Army way, and that's follow orders.

In the end, the four juries sitting at Camp Radcliff found the defendants guilty of one crime or another. All were dishonorably discharged, reduced in rank to private, and deprived of all pay, with the exception of Rafe, who was to go on receiving pay but forfeit fifty dollars monthly for eight years. All four soldiers were sentenced to hard labor at the United States Army Disciplinary Barracks, Fort Leavenworth, Kansas. There was little pattern to the verdicts, each of the juries indulging in its own vagaries. Possibly because of his cooperative attitude at the trials, Rafe was given the lightest term—eight years, for the crimes of rape and unpremeditated murder. Clark, convicted of rape and premeditated murder, was to serve for life. Manuel received a sentence of fifteen years, his punishment for rape. To Eriksson, Meserve's was the most surprising of the verdicts, for the Sergeant was found innocent of the charge of rape but guilty of unpremeditated murder, for which he was sentenced to a term of ten years. When Meserve had been convicted but not yet sentenced, he was asked by the law officer, "Is there any particular thing that you would like to tell the court?" Standing before the bench, Meserve replied, "Well, sir, I've seen a lot of killing, which it is our duty to do, because it's kill or be killed. Sometimes you hate the enemy so bad. Well, during this Operation Thayer II, which started [last October], we ran into a hootch that was burned down. Some Vietnamese people were bringing children out of . . . the bunker in the hootch. They suffered from smoke inhalation. I had to give one small child mouth-to-mouth respiration and bring her back to life.

"That just shows you it isn't all combat over here." Meserve's lawyer, pleading for his client immediately after this, spoke of the pressures on "twenty-year-old sergeants . . . leading men on fifty, sixty, seventy patrols," and gave it as his opinion that "this incident did not occur as the normal incident." Making his chief point, Meserve's lawyer told the court, "There's one thing that stands out about this particular offense. . . . It did not occur in the United States. Indeed, there are some that would say it did not even occur in civilization, when you are out on combat operations."

Two weeks after the trials ended, one of the court interpreters, a Vietnamese schoolteacher, with whom Eriksson had made friends, brought word to him that Mao's sister was missing. Eriksson said to me, his voice urgent, as though he had just heard the news, "Charlie kidnaped her, just as he did Mao's mother. So now it's only the father who's left—or is he? Who says we don't get along with Charlie? Between us, we've taken care of that whole family."

Eriksson never did become a door gunner. Since the verdicts would automatically come under review and the government might again need him as a witness, he was kept on in the post of military policeman at the division base. Fortunately, he said, his assignments involved no murder or rape cases. Only minor infractions came his way, but even such a routine chore as driving the drunk wagon down to Sin City could make him conscious of the sense of justice in himself that had been so tumultuously aroused the preceding November. It was a consciousness he could have done without, he remarked, for its effect was to remind him of Mao, and, following the trials, he was in a mood to try to forget her. "I just wanted to feel quiet," he said. He had no impulse to talk about Mao—certainly not with his fellow policemen. To do so, he believed, might only invite their censure, enforcers of the law though they were. As it turned out, they required no invitation to talk about her—particularly in the summer months, when the torrential monsoon rains drowned all possibility of outdoor routine. In that season, Eriksson told me, when the M.P.s yakked the hours away together in their quarters, one or another of his fellow cops would periodically recall what Eriksson had chosen to do. Invariably, Eriksson said, he found himself reproved for the deed. "But they weren't as sure about it as the guys in the platoon had been," he said. "One M.P., I remember, told me he could have understood it if I'd gone to bat for a G.I. who was murdered, but how could I do it for a Vietnamese? But he was very tolerant about it. He said it was only human to make mistakes."

Eriksson's attempt to forget Mao proved futile, as he had really known it would. In addition to the occasional remarks he heard in the police barracks, a train of other developments served to remind him of the girl. In the late spring, for instance, he learned that a change of sentence might be in the making for Clark, whose lawyer, it appeared had asked the jurors who convicted him to approve a petition urging clemency; all but two of them had agreed, and Eriksson was given to understand that this augured an almost certain reduction in sentence. Commenting on this, Eriksson told me, "I realized that nothing definite had happened yet, but I had the feeling it was the first sign that things were going to work out the way Captain Vorst had warned me they would—I mean, that the sentences would get shorter and shorter, maybe even disappear."

Late in July, Eriksson was handed a communication from the commanding officer of his division, the 1st Cavalry (Airmobile). It turned out to be a letter of commendation. Mrs. Eriksson fetched it for me from a bureau drawer, and I read:

"1: You are to be commended for the important role you played in seeing that justice was done in the recent court-martial cases involving four soldiers charged with the rape and murder of a young Vietnamese woman. Your prompt reporting of this serious incident to your superiors and subsequent testimony in court were essential elements in the apprehension and trials of the men responsible for this brutal crime.

"2: The great pressures you were subject to during those critical months are appreciated. Yours was not an easy task, but you did your duty as an American soldier. You should know that the courage and steadfastness you demonstrated make me proud to have you a member of this division.

"JOHN J. TOLSON,
"Major General, U.S.A. Commanding."

Eriksson's tour of duty in Vietnam came to an end on November 28, 1967, a year after the patrol paid its visit to Mao's hamlet. He thought of her as his plane, full of singing soldiers, took off from Cam Ranh Bay and he had his last look at the unhappy land below. "She was the big thing that had happened in the war for me," he told me. His plane was a commercial airliner, the Army having chartered it for a flight to Fort Lewis, Seattle, from which point the men, all of whom were going on leave, would be on their own. Eriksson was bound for Minnesota, for a month at home before his discharge in the spring, but when his plane put down at Seattle he found that he was ten dollars short for the final leg of his journey. Fortunately, he ran into a fellow-Minnesotan at the airport, an artilleryman with whom he had gone off to Asia thirteen months earlier; the artilleryman, also homeward bound, unhesitatingly lent Eriksson the ten dollars. When the two men were aloft and sitting side by side, the artilleryman suddenly glanced at Eriksson with fresh interest and said, "Say, weren't you the guy who turned in that patrol? That was a bum rap." Smiling, Eriksson remarked to me, "We were thirty thousand feet up by then, or he might have asked for his money back."

In Minnesota, Eriksson returned to the small apartment in Minneapolis where we were sitting, his wife having maintained it while he was gone. During his month's leave, he was always with her and with relatives and friends and, in a way, Eriksson said, with Mao. Mao seemed to figure constantly in his thoughts, he said, which were concerned mostly with how he would earn his livelihood after he left the Army, the following April. The ideas that came to him, he said, had less to do with jobs than they had to do with life, and he attributed this to the incident on Hill 192. Sounding as though he felt he would be years mining its lessons, he told me, "I decided that whatever jobs I'd get, they weren't going to be as important to me as the way I lived. That had to have some purpose. If it didn't, then coming back from that patrol meant nothing."

Recalling her husband's arrival, Mrs. Eriksson said that when she went out to the airport to meet him, she could tell at once that there was a stronger kindness in him than when he had left. "The girl was very much with us when Sven came home that day, and maybe she always will be," Mrs. Eriksson said. "We'd had to support each other in a new way after she was killed. I made sure I wrote to him every day, and in each letter I put a packet of Kool-Aid, so that at least his water would be tasty. He was upset and frustrated—it was in all his letters. He had no one to talk to over there. Of course, I never bring up the girl now, because I know how much she's still on his mind, but Sven brings her up, and usually when I don't expect it." Eriksson and his wife spent Christmas of 1967 with members of their families in the small farm town up north that they both came from, and while they were there, an uncle of Eriksson's asked him about Mao. Eriksson was fond of his uncle, Mrs. Eriksson said, but, reluctantly, he answered, "I'm afraid I don't want to talk about her."

When Eriksson's leave was over, he finished out his two-year hitch at Fort Carson, Colorado, where many of the men were either completing their service, like him, or departing for war. Eriksson continued as an M.P., his duties generally less onerous than they had been in Vietnam, and his existence certainly more relaxed, since, as he observed to me, he was waking up every morning not only in his own country but in the presence of the Rockies. Besides, Eriksson said, none of the M.P.s at Fort Carson asked him about Mao—very likely, he assumed, because they didn't connect him with her. He made one particular friend at Fort Carson, a Marine captain who had seen eighteen months of combat in Vietnam and was also about to become a civilian. Perhaps as an earnest of his friendship, Eriksson told the Marine about Mao one afternoon, and the captain was shocked to hear what had happened to her. "His reaction interested me," Eriksson said. "There had been times when I'd thought that if I had been in Vietnam longer than just a month when the incident took place I might have felt differently about it—had the same attitude, that is, as most of the fellows. But here was this Marine, who had put in much more combat service than Meserve or Clark or anyone else I'd met, and he felt exactly as I did about the crime."

Eriksson now fell into one of his silences, and I imagined he was contemplating the mystery of human character. When he spoke, however, it was about his friendship with the Marine. He told me that their bond was religion and that the interest each of them took in it had been heightened by their experiences in the war. No doubt, Eriksson said, the close brushes that he and his friend had been through had something to do with this, but in his own case he had been deeply impressed while he was overseas by what he called an upside-down mentality, which he believed explained the general unconcern

there about incidents like the one he had taken part in. He said, "We all figured we might be dead in the next minute, so what difference did it make what we did? But the longer I was over there, the more I became convinced that it was the other way around that counted—that *because* we might not be around much longer, we had to take extra care how we behaved. Anyway, that's what made me believe I was interested in religion. Another man might have called it something else, but the idea was simply that we had to answer for what we did. We had to answer to something, to someone—maybe just to ourselves."

Before Eriksson saw the last of Fort Carson, he again acted as a witness for the government. That occurred in February, 1968, when Manuel was granted a retrial on the ground that although his C.I.D. interrogators had apprised him of various rights he had, among them the right to remain silent and to have a lawyer, the interrogators had neglected to mention that he was entitled to have an "appointed" lawyer, meaning one whose services would be free of charge. In fact, it would have been difficult to find any other kind in Vietnam, since the Army was dispensing such benefits all over the place. And, in practice, neither Manuel nor any of the other defendants (nor Eriksson, for that matter) paid a cent for legal services. However, a board of review in Washington, made up of three senior officers, had noticed the C.I.D.'s oversight, and it had resulted in a second chance for Manuel. "He got a break. Another board might have found differently," a colonel in the Judge Advocate General's office told me. As a result, Eriksson left Colorado for Fort Leavenworth, where Manuel, serving his time in the Disciplinary Barracks, was to be retried. Eriksson told me that he felt weary at the mere prospect of reappearing as a witness a year after the Radcliff trials. He felt even wearier on arriving in Kansas, when he learned that there was little point to his presence. Because of the C.I.D.'s slipup, it appeared, practically all the pretrial information obtained by the investigators could be successfully challenged in court by the defense—which meant that Manuel's confession of guilt would be inadmissible as evidence, and without that the government's case was as good as emasculated. Even the prosecutor predicted defeat, Eriksson told me, and during a short break Eriksson heard the judge remark to the court reporter that the trial was a waste of the taxpayers' money.

Eriksson himself helped Manuel's case by testifying briefly as a defense witness, corroborating the fact that Manuel had refused to obey Meserve's order to kill Mao. (Eriksson had done the same for Rafe at his trial in Vietnam.) The *pro-forma* proceedings at Leavenworth took two days, at the conclusion of which the jury came in with a verdict of acquittal. Grinning, Manuel approached Eriksson, stuck out his hand, and said, "No hard feelings." Before Eriksson could say anything, Manuel turned and left the courtroom, a free man. "I couldn't tell who was supposed to have the hard feelings—Manuel or myself," Eriksson told me. "Flying back to Carson, I thought to myself. So Manuel's out. That leaves three to go."

In April, Eriksson received his honorable discharge from the Army, and in April, too, he heard of further judicial developments. In Vietnam, the jurors' petition urging clemency for Clark had been acted upon, with the result that the G.I.'s life sentence had been commuted to a sentence of twenty years. Now, six months later, Clark's case, forwarded from Vietnam, had been gone over in the United States by a board of review, which had reduced his term to eight years. At about the same time, other boards of review had dealt with Rafe's and Meserve's convictions. Rafe's sentence of eight years had been cut to four, and Meserve's ten years had been trimmed to eight. These varying decisions, it seemed, were attributable to a variety of factors, among them considerations of the defendants' character and background. Thus, it assumed pertinence that Meserve came from an impoverished home and that his father had deserted his mother, and the members of his board of review learned, further, through material furnished them by the commanding general at Fort Leavenworth, that the former sergeant had gone through the ninth grade, had no police record, was a lapsed Roman Catholic, had worked in a cannery in upstate New York, and had saved five thousand dollars while he was in the Army, and that he was confident that "even though war was a brutal business . . . he could control his aggressions in the future, like a professional prizefighter." In Clark's case, the commanding general, who was responsible for deciding whether the evidence supported Clark's conviction and whether Clark's sentence should be lowered, was informed by a staff lawyer who had interviewed Clark that the soldier in the Disciplinary Barracks was "articulate and above average in intelligence," and that, if given a chance to reënter society, he hoped to earn a college degree in either English or philosophy. It was also noted that, like Meserve, Clark was the product of an impoverished and broken home.

"As if Sven had it so easy!" Mrs. Eriksson said to me when she heard of these findings. "As if his family had any money! He was all of seven when he was driving a tractor on the farm. He was ten when his father suddenly died. Or maybe it's our winters that make Sven so different from those other men—our Januaries, when it's fifty below and the snowdrifts are so high you can't get from the house to the barn without pulling on a rope."

Since returning to civilian life, a year and a half ago, Eriksson has been concerned primarily with what his wife calls "sorting things out." Once he had been separated from the service at Fort Carson, he came back to Minneapolis determined to find employment at something other than carpentry. Much as he loved it, he told me, it was what he had been working at before he was drafted, and, as is often true of new war veterans, he felt restless and in need of a change. The idea that came most easily to his mind was to continue in police work, in which he had been engaged since his days at Camp Radcliff, but on applying to the State Highway Patrol for a post as motorcycle cop he discovered that this was impracticable. "My height," Eriksson said. "I was an inch too short." Somewhat gratefully, he went back to his prewar, and well-paid, job of cabinetmaking at the small department store. For a number of months, though, he found it less than exhilarating to pick up where he had left off. Everything around him, he said, impressed him as pointless and arid—his fellow-workers, the monotony of clock punching, and even, at times, his beloved carpentry. His discontent abated when he managed to remind himself of the plan he had made during his leave to reach out beyond his jobs, whatever they might be. Acting on this, he enrolled in a non-credit course at the University of Minnesota designed to teach adults with an inadequate education how to study.

Speaking matter-of-factly, Mrs. Eriksson said, "Out in the boonies, where we come from, you get an A if you don't throw erasers."

His interest in religion still strong, Eriksson took part in church activities, he told me; he had recently supervised a group of high-school-age boys and girls making a two-week retreat on an island in a lake between Minnesota and Canada.

"Sven wasn't raised churchy," Mrs. Eriksson remarked. "His parents stayed home plenty of Sundays."

Eriksson expects that such steps as he has taken will be succeeded in time by others, though he has no idea at the moment what these may be. He hopes to open a small carpentry shop of his own in several years, but, ideally, he would like to be a farmer—a career that he doubts he will ever be able to afford. He has yet to come to terms with the incident on Hill 192, Eriksson told me. He still has a tendency to fight off its memory, he said, and he thinks the reason for this is that although the experience he had may have revealed certain strengths in himself, he is far more concerned with the limitations it exposed. The thought of them, he said, makes him feel discouraged at times about his future, which, he pointed out, could be a long one. "I'm still young," he said, and it took me a moment's effort to recall the fact of his youth, and the youth of Meserve and the rest of the patrol. Eriksson was confident, though, he told me, that the older he grew, the more accepting he would be of his memory. "Things will get sorted out," he said.

Rafe's case, I learned, had taken a fresh turn in recent weeks. Last winter, members of the Military Appeals Court—the military's highest appellate body—had decided that the admissions Rafe made in Vietnam were "tainted;" that is, like Manuel, he had made a confession without being fully informed of his rights. The judges had ordered that the incarcerated Rafe be given a new trial, which, like Manuel's was held at Fort Leavenworth. Eriksson was not called upon to testify this time, and this was a vast relief, he told me, not only because he was eager to get on with his civilian life but because it looked to him as though Rafe's rehearing would be a duplication of Manuel's second trial; that is, with Rafe's "tainted" admissions thrown out, the government's arguments would be undermined and a verdict of acquittal brought in. To Eriksson's surprise, the trial, which occurred in June, 1969, resulted in Rafe's second conviction, an inevitable finding, in view of the fact that Rafe pleaded guilty to the charge of unpremeditated murder. Rafe received a punishment of four years' imprisonment, plus a monthly forfeiture of fifty dollars in pay.

It was the same sentence he had been serving, but now, having been transformed into a new verdict, it was subject to another review, the effects of which soon worked to Rafe's advantage, for in August, 1969, the commanding general at Fort Leavenworth shortened his term to twenty-two months. The G.I. already had more prison time than that to his credit, so the force of the general's ruling was to bring about Rafe's immediate release from confinement. He is now on duty as a soldier in the United States while awaiting further word on his case, which since September has been in the hands of a board of review. Inasmuch as the board may only affirm or reduce Rafe's sentence, any changes that it makes will necessarily fall under the heading of good news for him; for example, the board may decide that Rafe served too long a sentence by five or six months, in which event it will be incumbent upon the Army to restore back pay for that period; it is also within the board's power to reverse Rafe's dishonorable discharge.

Eriksson told me he has no qualms about Rafe's being at large, because Rafe's remorse over the criminal episode had been evident to everybody in the Radcliff courtroom. Eriksson conceded, however, the the prospect of Meserve's and Clark's freedom did disturb him. As far as he knew, he said, no legal developments were brewing in their behalf—not that it made much difference, he added, since he had learned just a few weeks earlier that Meserve and Clark stood to be declared eligible for parole before they had served even half their time at Fort Leavenworth. "They may be out in a few months," he

said. "It will even be possible for them to join the Army again."

"Sven had to do what he did," Mrs. Eriksson said. "If he'd kept quiet, he would have been impossible to live with."

Regardless of when Meserve and Clark get out, Eriksson thinks, the atmosphere of civilian life may exert a moderating influence on their outlook. He has no idea to what extent that may operate, however; nor is he prepared, he said, to bank on anything so abstract. "Kirsten and I have talked about the day of their release," he told me, "and our realistic hope is that Meserve and Clark have been able to see for themselves what they've done."

"What else can we hope?" Mrs. Eriksson asked. "We would be fools to think those men couldn't do again what they did before."

He would never cease to condemn the members of the patrol personally for their crime, Eriksson said, but that didn't mean they were beyond pity. Other soldiers, he said, might just as easily have betrayed the weakness that the four men had betrayed on Hill 192, but it had fallen to Meserve and Clark and Rafe and Manuel in particular to act as they had. Speaking evenly, Eriksson said, "They were among the ones—among the few—who did what everyone around them wanted to do." Nor was he himself free of blame, he went on, without pausing—once again referring to the limitations within himself that he had glimpsed in Asia. He had yet to exonerate himself from the self-imposed charge of having failed to save Mao's life. He had no idea how long this feeling would continue, but for the present, he knew, he lived with the charge daily, often wondering how Mao might have fared in a time of peace. Six months ago, he said, he had taken a Minneapolis bus home from work and, being very tired, had dozed off. When he opened his eyes, a new passenger was sitting directly opposite him—a young Oriental woman. Still in the process of waking, and not yet thinking clearly, he said, he had transformed her into a peasant woman on her way to do a day's farming, such as he had seen many times in Vietnam; he had envisioned the passenger in a broad, peaked straw hat and black pajamas, carrying the traditional stick across her shoulders, with baskets at either end for holding crops. "Those baskets could get awfully heavy," Eriksson recalled. "Sometimes I didn't see what kept the stick from snapping. They were hard workers, those Vietnamese women, picking little bananas, shinnying up palm trees for coconuts. But on the bus the peasant woman across from me was going to work in paddy fields that were near Mao's hamlet, from which it was a nice walk downhill to a stream that flooded the rice fields. That's where the woman was going in the early morning, but it was peacetime and it wasn't necessary either for her or for the peasant women she was with to smell the bodies that were always rotting for miles around, no one knew where, when I was in the Central Highlands. The only thing these women had to do on their way to the stream was breathe pure mountain air."

LIFESAVING HEART OPERATION

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 22, 1969

Mr. SCHWEIKER. Mr. President, I recently had the opportunity to be of assistance in bringing a 10-year-old boy from Calcutta, India, to the United States for a livesaving heart operation. The operation was performed free by the Deborah Hospital, Browns Mills, N.J., and the boy and his father were transported free to this country by Pan American Airways.

All private citizens involved in arranging this step of international good will are to be highly commended, and I am pleased officially to recognize their efforts by recording them in the RECORD.

Mr. President, I ask unanimous consent to have printed in the RECORD a statement from my office outlining what was accomplished and an editorial published in the Philadelphia Evening Bulletin.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Evening Bulletin, Aug. 29 1969]

THE LIFE OF A BOY

Where a boy's life is concerned, red tape can and will be cut.

At Deborah Hospital, Browns Mills, N.J., a team of surgeons operated on an eleven-year-old Indian boy, to close a hole in his heart. The boy and his father, a physician, arrived from Calcutta last week on a flight made possible by the cooperation of four governmental agencies, the Civil Aeronautics Board, the U.S. State Department, the Government of India and the office of U.S. Senator Richard S. Schweiker.

Dr. A. K. Basu-Mullick wrote to Deborah Hospital, telling of his poverty, even as a doctor, and pleading that an effort be made to save his son, which could not be done in India.

Hospital officials offered all surgical and medical services without cost, if the boy could be brought from India. The Defense Department could not furnish transportation for a private citizen on military aircraft, but Mr. Schweiker appealed to CAB and the State Department to permit Pan American Airways to carry the Basu-Mullicks free.

It is true that even mountains can be moved to meet the needs of the young.

A 10-year-old Calcutta India boy will arrive at Kennedy Airport in New York Tuesday night for life-saving open heart surgery, Senator Richard S. Schweiker (R-Pa.) revealed today.

Sabyasachi Hullick, desperately ill with a hole in his heart, will be taken to Deborah Hospital, Browns Mills, New Jersey, which will perform the operation without charge. The boy's father, Dr. A. K. Basu Hullick, will accompany the boy and stay with him at Deborah Hospital.

Schweiker said hospital officials notified him in June that in response to a letter from Dr. Hullick, they had agreed to perform the operation, but that they had no funds for transporting the Hullicks from India.

"I inquired with both the Defense Department and the State Department, but found out that regulations prohibited free transport on military planes," Schweiker said. "However, I discovered that private air carriers can provide free transportation if the Civil Aeronautics Board approves and if it is in the 'national interest.'"

Schweiker said Pan American Airlines took the necessary action, and is flying the boy on flight number one from Calcutta to New York, arriving at 8:10 p.m.

The Hullicks will be met at the airport by Jack Lesser, President of Deborah Hospital, and Dr. Henry T. Nichols, Chief of Cardiac Surgery, who will perform the operation, assisted by a team of leading heart specialists in the Greater Philadelphia area.

"I want to commend Deborah Hospital and Pan American Airlines for their efforts to bring about a significant step of international good will, and I am pleased that I could be of assistance in coordinating the transportation problem."

Deborah Hospital was founded in 1922, and is a non-sectarian charitable hospital.

A PROVOCATIVE LETTER

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. ASHBROOK. Mr. Speaker, the Ohio State Lantern of April 10, 1969, carried a letter which is of interest to me for its author, Walter W. Seifert, now at Ohio State University, is a good friend of mine. The caption introducing the letter was especially eye catching: "A Letter From a Skeptical Son to His Bald-Headed Dad." The letter read:

DEAR DAD: Last time I was home, you said some significant things about my interest in radical proposals for a new social order. When you told me I was too young for sane opinion on such matters, you insinuated that your generation is better qualified to find "the way out" than mine. I question this assumption. I do not believe that those who led us into this mess are capable of "leading" us out.

Dad, believe me when I say that I am indebted to you for paternal love and protection, but believe me also when I say that my generation holds in contempt the colossal social, economic, and political blunders which you perpetuated. As we survey the worthless heritage of crime, war, poverty, and greed, we unite in shouting, "We will have none of it. There must be a second Renaissance!" And we scrutinize our entire inheritance to find the true value of these institutions. If you say our sin is lack of respect, then we can answer, "Veneration was your sin."

"Our capitalistic democracy is the ultimate in modern government," I have heard you brag. May I call your attention to the metropolitan editor who recently said, "I support this man because he is the least crooked of the three." "Trust our economic leaders," you assure me. I answer, "Men are starving today in the shadows of your rotting granaries and hog-butchering establishments, Dad. Under your system privation increases in proportion to the increase in production." "Hold fast to the religion of your fathers," you warn, and I cannot help wondering, "Has that religion lessened hatred, crime, war, and suffering in its Twentieth Century trial? Are its fundamental concepts philosophically sound?"

Dad, our young people are admittedly a skeptical crowd. What we have lost in the comfort of blind faith, we have gained in the assurance of empirical, scientific reasoning. If this fact-facing attitude be heresy, you may style us "heretics." If we worship reality instead of sublimity, you may say that we are fools. If science has altered our moral convictions, and if our new freedom conflicts with your age-old prohibitions, then you may consign us to your fiery hells.

But one thing is certain. Win or lose, right or wrong, we are beginning to think through these things. We are trying to see "beyond our noses"; we are striving to build a better world. In that struggle we ask your co-operation, realizing that our youthful ambition, coupled with your aged perspective, is the one combination which can solve the riddle of these times.

Well—how about it, Dad?

A word of explanation is in order. It is true that Walter W. Seifert, age 55, is at

OSU—as an associate professor of journalism. Concerning the letter, Walter commented:

The more things change, the more they stay the same. This editorial could have been written by any of our young rebels just yesterday.

The letter also appeared in another campus newspaper, the Kent Stater, though under different circumstances.

The author? Walter W. Seifert, student editor.

The year—1934.

NATIONAL BUSINESS WOMEN'S WEEK

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, October 22, 1969

Mr. SCOTT. Mr. President, I am delighted to have this opportunity to pay tribute to the National Federation of Business and Professional Women's Clubs, Inc. Since 1928, 1 week each year has been designated as a tribute to business and professional women. This year National Business Women's Week is being observed October 19 to 25.

Today the NFBPWC has over 180,000 members. Membership is open to all women who are actively engaged in business or the professions, upon invitation from a local club. BPW clubs are in operation in every congressional district with more than 3,800 local clubs under 53 State federations.

The emblem of the organization is the Nike because it symbolizes progress to which the federation is dedicated. The emblem also includes the Staff of Mercury, the Torch of Wisdom, the Scroll, and the Ship of Commerce.

Since its founding in 1919, the National Federation of Business and Professional Women's Clubs, Inc., has worked to elevate standards for women in business and the professions. It is an articulate and well respected voice speaking out in the interest of business and professional women everywhere. Among its activities are the publication of a monthly magazine, National Business Women, and a Congress of Career Women Leaders held yearly.

I am sure that I speak for many of my Senate colleagues in calling the Nation's attention to this worthwhile organization and to the goals it seeks to promote. I believe that the legislative aims of this organization are especially worthy of note and commendation. They are:

To elevate standards for the employed woman, to promote her interest, to create a spirit of cooperation, to expand opportunities through industrial, scientific, and vocational activities, to secure equal consideration under the law, and to establish conditions which assure both men and women the fullest opportunity and regard for the development of their capacities to the maximum potential.

In our advancing complex society, women must continue to assume more and more of the top career positions. I am proud to salute the National Business and Professional Women's Clubs, Inc., for their fine contribution in this area.

As a sponsor of Senate Joint Resolution 61, I applaud its purpose. The joint resolution proposes an amendment to the Constitution providing a constitutional guarantee of equal rights under the law for men and women. I was pleased to note that the National Federation of Business and Professional Women endorsed this legislation at its 1969 national convention.

I invite Senators to join me in commending our Nation's career women and their determined efforts for a better America.

A NATIONAL MARCH OF CONFIDENCE

HON. JOHN M. SLACK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. SLACK. Mr. Speaker, since the Vietnam Moratorium Day marches and demonstrations of October 15 and the subsequent announcement that there would be a recurrence of such demonstrations in November and perhaps December, there has been proposed by a prominent police official in my congressional district a countermovement which I would like to call to the attention of my colleagues. Briefly, it has been proposed by Chief of Police Dallas W. Bias of my home city of Charleston, W. Va., that November 10 be declared the date for a national march of confidence, built around the active participation of the policemen and firemen of each community.

The following letter which I received from Chief Bias gives a summary of his experience in connection with the events of October 15, and I believe this experience reflects about what took place in any typical medium-size American community. It is now suggested that there be a counterdemonstration to permit the expression of convictions by those who do not agree with the philosophy of the Vietnam moratorium marchers.

As a supporter of fairplay and freedom of expression for all, therefore, I feel it proper to call his proposal to your attention, in the belief that you may wish to pass the information along to officials in your communities:

CHARLESTON, W. VA.,
October 18, 1969.

Hon. JOHN SLACK,
House of Representatives,
Washington, D.C.

DEAR SIR: On October 9, a young, oddly dressed, bearded male and a similarly dressed willowy type female, obviously of a beatnik group, came to my office and asked for a parade permit to parade a number of youths to stop the Viet Nam War. They had no organizational name and did not know how many would be in the parade. I advised them that normally a group of people parading had some name and a parade marshal, etc. and outlined some information I needed. The following day three youths applied in a handwritten letter under the name of the Charleston Peace Coalition for a permit. I denied the permit for the reasons outlined in my memorandum of that date (copy enclosed).

Suit was brought against me in Federal Court which I answered on October 13, 1969. Attorneys representing the American Civil Liberties Group were John L. Boettner, Jr. and A. Andrew MacQueen III. Among the exhibits was a sheet headed Viet Nam Moratorium Committee, Suite 806, 1029 Vermont Avenue, N.W., Washington, D.C. 20005, telephone number 202-347-4757, which started with "Dear Congress Participants:" and called for a generally pressure demonstration if the United States had not surrendered the war by October 15, 1969. The Court ordered a parade permit be issued and I complied with that order.

I have asked for a National Parade of Policemen and Firemen, who are the first line of defense within the boundaries of the United States against crimes and treason, to show strength inside America and demonstrate confidence in Congress and our government to handle affairs in the Viet Nam War for the orderly, peaceful and honorable bringing home of our troops with safety and to protect them on all other fronts.

Being one aroused Chief of Police concerned with the safety of our Nation within the infiltration of communistic influences on gullible politicians, unsuspecting clergymen and undirected youths, I feel that it is time for the silent Americans, red-blooded patriotic Americans of all ages, to stand up and be counted and let our fighting men and women guarding all fronts know that their Mother Country is very much alive for them to fight for and come home to. I have received hundreds of phone calls, telegrams and letters locally and from as far as Seattle, Washington, endorsing this parade. People here are asking me to hold a mass rally in the ballpark in the evening. One attorney who suggested it feels that if the enthusiasm continues the response from our plea locally will fill two ballparks. I have every indication that here in Charleston we will fill the streets. I think a parade of confidence followed by rallies in some cities will show these "rebels without a cause" that red-blooded America has a purpose in this world.

Hitler overthrew Germany by starting with some radicals in a beer hall and the world stood by; Castro overtook control of Cuba with a handful of propaganda from outside the country and zealous youths; last year we got some inkling of the youth in Red China running amuck, arresting government leaders, etc. and I feel that if we do not take a national stand to show our strength and confidence in the government we will sit by apathetically and fall from within.

One newspaper today, seemingly as a slur, called me a "Fierce Patriot". I see nothing wrong with being a fierce patriot particularly when three of the speakers from the Moratorium sought audience with me yesterday and during an hour's conversation of disagreement with newspaper stories, one youth said he did not see that the National Anthem with the American Flag was necessary and that it was out of style with this date. I became rather fierce in my speech and it caused one of them, an ADA leader, to say that with my determination they would like to have me on their side (whatever side that is).

I believe if you would use your influence through the International Association of Chiefs of Police and The Fire Fighters and other patriotic citizens throughout the nation to participate in this parade of confidence, it would be successful. I want you to know that I absolutely do not belong to any organizations of lodges, secret or otherwise, except the International Association of Chiefs of Police. I am only Dallas M. Bias, a cop, a veteran and an American. I hope you will consider lending your support to this movement.

Respectfully yours,

DALLAS W. BIAS.
Chief of Police.

CHARLESTON POLICE DEPARTMENT MEMORANDUM, OCTOBER 8, 1969

To: Persons concerned.

Subject: Anti-Vietnam war parade permits.

The United States is at present in an armed conflict with the Communist elements of the Viet Nam Government, a defacto war. This conflict is under the orders of the President of the United States with the sanction of Congress.

Anti-Viet Nam War marches and demonstrations tend to give aid and comfort to the common enemy of the United States in this conflict. Notwithstanding the Constitutional right of the people "to assemble in a peaceful manner, to consult for the common good, to instruct their representatives, or to apply for redress of grievances." It is my belief that to authorize a permit would appear to endorse such a protest and I, therefore, will not issue a parade permit to any person or group protecting against the United States' involvement in the Viet Nam War as it may tend to increase the resistance of the common enemy in this conflict and endanger or cause the loss of life to American soldiers in the field.

Nothing herein shall contravene the right of assembly in a peaceful manner as provided by the State Constitution to instruct their representatives, which, in this case, would be the members of Congress and I believe they should be present to hear the grievances.

DALLAS W. BIAS.
Chief of Police.

[From the Charleston (W. Va.) Daily Mail, Oct. 17, 1969]

TO SUPPORT GOVERNMENT, MILITARY—CHIEF BIAS ASKS NATIONAL MARCH OF POLICEMEN AND FIREMEN

(By Jim Johnson)

The nation's fire and police department members were called on by Chief Dallas Bias of Charleston to participate in a Nov. 10 "National March of Confidence" to support the federal government and its fighting forces all over the world.

"Since the police and fire departments throughout the nation are the first defense line of interior America," Chief Bias said, "I will request them to set aside a day and march in support of our government and our boys in Vietnam as well as those stationed throughout the world."

He said contact with the members will be made by police network and other means.

"If the protesters got the word passed throughout the nation, I'm sure we will find a way.

"I want it known right now," he added, "that I'm applying for a city parade permit for Nov. 10 and that it will be useless for other groups to apply."

The chief's comments were made during his observations this morning on Wednesday night's parade held in connection with the nationwide Vietnam Moratorium. He had previously refused to issue a permit to the Charleston Coalition for Peace until ordered to do so by a federal court order. His reason for refusal at that time was that the march and nationwide demonstrations gave "aid and comfort to the enemy."

Today he reiterated those views and asked for the nationwide March of Confidence.

"My observation last night," he explained, "leads me to believe that middle age Americans—25 and up—had better get off their behinds and get their bodies and spirits in condition to lead this nation back to a democracy under the flag of the Republic and not let it decay under the hands of misguided, non-directional beatnik youth, who I believe are being led by Communistic influences or leanings.

"I think it is a national disgrace (the Vietnam Moratorium). I do want to commend U.S. Senator Robert Byrd, and U.S. Congressmen John Slack and James Kee for their stand in supporting the U.S. President against these forces. They are men with strength who are needed in our government at this time."

Asked why he chose Nov. 10 as the day for the March of Confidence, Bias said: "The tentative date of Nov. 10 was chosen because people are always parading in honor of the dead on Nov. 11 and I want to parade for living."

He said he would suggest that the red rose, worn by his men and the city fire department would also be used in the March of Confidence "to show that the mother country is still very much alive."

The participation of between 300 or 400 area youths was termed as being "unreal" at times by Chief Bias.

"As to my personal feelings concerning the demonstration," he said, "I have some rather knotty stomached feelings mixed with sadness.

"The loud, raucous music played around the flag in beatnik rhythm made me hear the silent strains of our National Anthem. I felt like I was looking at a strange group of people—somewhat like a scene found on a movie set—or an old "Mutiny on the Bounty" movie.

"I saw some familiar faces of speakers which looked as though they didn't fit the scene's setting. I heard, I suppose, but didn't hear, the people speaking. Somehow it didn't seem real, but it was there.

"One of the leaders, Morgan Anderson, who is with the Civil Rights Commission, looked, by his mode of dress and clean shaven face, like a Patrick Henry, who should have been talking for his country, instead of against it."

The marchers were orderly as were most of the 200 to 300 onlookers, according to Bias. He said he had to restrain several of his men on one occasion.

"I had to caution two or three of my men—war veterans and one young man—about their conduct towards an older man whom I understand works for a high state government politician.

"He was acting cute and making derogatory remarks towards me and my uniform."

After the parade was over, Bias said most of the speakers came over to him to congratulate his men and him on a job well done.

"They came by to shake my hand after the demonstration was over and congratulate me for taking a stand on what I believed in and for my official protection of the protesters.

"I could not help but advise them that I was acting properly under the same orders of the same government that they were generally opposed to. The same one they are asking the people of the United States to revolt against."

ADDRESS BY GENERAL PALMER

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. HÉBERT. Mr. Speaker, Gen. Bruce Palmer, Jr., Vice Chief of Staff of the Army, delivered some most interesting remarks at the ROTC luncheon of the annual meeting of the Association of the U.S. Army.

His comments are most timely and worthy of being repeated so that all of us who are concerned about the problems of youth may have the benefit of his thinking.

I am inserting General Palmer's speech at this point in the RECORD:

ADDRESS BY GEN. BRUCE PALMER, JR.

I welcome this opportunity to talk to you today, in particular those of you representing our youth, because our hopes for the future ride on you. Moreover, I have the feeling that those of us here representing the older generations should be listening to you. In fact, one of my recommendations to the AUSA for future sessions will be just that—have a senior ROTC cadet talk to the convention and tell us "like it is" as to life in our universities. In any event, I hope that we will all listen and learn something from each other . . . for listening *is* the art of communicating. Taken together, we present represent at least three generations of men who are serving our country, and we have much to learn from each other.

Why this accent on youth? There are many reasons. I can cite a few:

Roughly 75 percent of today's Active Army is made up of selectees and first term enlistees, most of whom will return to civilian life after two or three years of service. Our median age including everyone is 23.4 years.

As it has always been, young men are the ones who fight and win our battles. Age, experience, great leadership and outstanding training cannot make a fighting Army if the basic human material is lacking in heart, character and moral fiber.

The President is seeking a basic reform in our current draft law. The result will be even a younger Army. The President would also like to move toward the goal of all Volunteer Armed Forces. If and when such a goal is reached or approached, I suspect that it will continue to mean a relatively young Army.

Youth is troubled world-wide. Our schools and campuses are scenes of doubt, disagreement and disavowal. The old traditions and values are being challenged. Our way of life . . . our society as we know it seems to be in question. Our government and institutions—the so-called Establishment—are under attack.

Thus it seems only prudent to examine our society as objectively as we can and see wherein we are failing our youth.

Discipline, obedience, self-control, strength of character—these old-fashioned virtues are as fundamental as ever. But how to instill them and get the willing allegiance of those being led—the followers—has always been the essence of leadership. This is a good deal more difficult today. There was a time when you could be physically tough with men and demand their instant obedience with no questions allowed, but this won't do today. Youngsters of this day and age are too well educated and intelligent to accept something without a rational and logical explanation. Even our football coaches are finding this out. College and professional coaches are bemoaning the good old days when all a coach had to say was, "Do it my way—or else." The opportunity for leadership is still there—but it is of a distinctly different nature.

To complicate matters, we now have a new dimension on the scene which is of major significance. This is the question of racial tension and conflict. I need not tell you young college men what I'm talking about. You know far more perceptively than I. We now see this tension in the Army . . . in the young black soldier and the young white soldier. It is there—we cannot avoid it, walk away from it, hide our heads in the sand and pretend it's not there.

Our young black soldier is a justly proud man. We must not confuse rightful and dignified pride in his race for black militancy and belligerence.

Our young white soldiers must also understand and recognize this just pride and not react defensively or fearfully. This pride channeled in constructive directions is a good thing.

There is much room for mutual under-

standing and, above all, perceptive leadership. Again, this burden will fall on you—our youth.

Many of you have come from the firing line—college campuses across our Nation where you may have been confronted by dissidents—people who question your participation in the ROTC and even attempt to humiliate you in front of your contemporaries. And yet in all honesty, I must say that some of the people who confront you are actually sincere, thoughtful individuals, searching like most men for answers to fundamental questions about themselves and their country.

Daily we read in the newspapers and see on TV sensational antimilitary arguments to the effect that:

Military spending prevents us from solving our social ills . . .

Military advice prevents solutions to problems of foreign affairs . . .

The defense establishment undermines our democratic values . . .

The so-called military-industrial complex is too big and powerful and wields more influence in national affairs than it properly should.

As citizens, taxpayers and thinking, free men in our own right, we must all give these very pertinent questions the attention they deserve. We must also look at the other side of the coin:

Military efforts and achievements have made great contributions to our society, in many positive constructive ways. Engineering, aviation, medical advancement, scientific research in numerous fields are good examples.

Military factors are essential to any sound and balanced analysis of foreign policy.

Our defense establishment under firm civilian control is the very guardian of our democratic values. To keep this concept viable requires enlightened, broadly based and balanced military leaders . . . in other words, the products of a liberal education and a diversity of experience.

Our military-industrial complex is what we used to call the "Arsenal of Democracy." Teamwork between defense and industry is necessary if we are to get the most for our defense dollar and give our men first class weapons and equipment. So long as these relationships are lawful and proper, they are a strength, not a weakness.

The real trick is to get a dialogue going—to get people to discuss all sides of a question and not close their minds to all views except their own. In other words, communications rather than confrontation.

I am sure that we all have thought, "Where do I . . . where do we go from here?" "Where do I stand?"

Is my country right? Or is my country wrong?

What is right? What is wrong?

What is moral? What is amoral? What is immoral?

Am I right? Am I wrong?

Last June, President Nixon asked us as a people to address three fundamental questions:

"What is America's world role?

"What are the responsibilities of a great nation toward protecting freedom beyond its shores?

"Can we ever be left in peace, if we do not actively assume the burden of keeping the peace?"

In my opinion, it is not for the military or defense to answer these questions alone. These are questions which must be answered by every individual citizen—questions which the public as a whole must consider—questions which, in the final analysis, our political civilian leaders must face up to. I would say only this . . . there are more than just 200 million Americans involved. There is the whole Free World at stake. If the United States does not lead, who can? Who will? Honest reflection will tell you that there is no other country capable of leading. Either the United States will lead or there will be no leader.

Your role as an ROTC cadet on almost any college campus across the Nation today is what you personally make of it. You will have to stand up for what you believe in. It may take a lot of courage to join the ROTC and wear this uniform on campus. But I am sure that you are a better man for it.

Why are you in ROTC? Why is it that on a day-to-day basis you are required to justify your beliefs?

If you are sincere in desiring to serve your country, unlike those who harass you, you owe your allegiance to others than yourself. You can ask them what they are doing for the betterment of mankind . . . a better country . . . a better world.

Now if you are still bothered by questions of service to your country after having thought the problem over, and if you find you don't believe in dedicated service or you cannot accept decisions which you can't agree with, then you are of no use to the Army. But if you haven't made up your mind, don't turn us off . . . don't close your minds to what the Service has to offer.

And it is not pay; it is self-satisfaction . . . the satisfaction and reward which only come from dedication to a cause or ideal greater than oneself. Beyond this we still have room for the outdoorman—athlete, hunter, fisherman—as well as the intellectual, the writer, the card-player, and even the idealist and romanticist. The soldier can pursue practically unlimited avocations.

The Army will not ask you to be a crusader, but rather that you understand what the majority of our citizenry has asked the military to do through legally elected constitutional authority. While you are in the ROTC, we hope that you will let people see that the ROTC cadet is someone who is knowledgeable, articulate and willing to stand up for what he believes.

When we think of military courage, we most often think of the soldier under fire, closing with the enemy. This is characteristic of the American soldier. But other kinds of courage are a part of our military tradition also.

The real courage which is more than ever in demand is moral courage—to have faith in your own convictions—and to fight for them . . . and to be able to articulate your position.

On our part, we will support you in every possible way. We are making extraordinary efforts to upgrade and reorient our ROTC Program in tune with the times. But it will not be at the expense of a sound, solid, curriculum; nor will it degrade the stature of the program.

Earlier I spoke of dissent against ROTC on some college campuses across the Nation. Unfortunately, we have closed and are closing some fine ROTC units . . . at some prestigious institutions. Gentlemen, it is to your credit, however, that we still have a large, strong ROTC Program across the Nation and that many colleges are seeking to join the ROTC Program.

Your predecessors have established an unparalleled precedent of professional excellence and dedication in the Army. They are continuing those traditions today . . . all over the world. In the Army, we care not where a man came from, or what school he attended. We simply want to know how well he can perform. If he has the capacity, he can and *will* go all the way to the top.

Gentlemen, our Army, as it has been for nearly two centuries, is dedicated to nothing more simple and noble than the defense of our homeland and the preservation of our way of life. I know that we can depend on you . . . and countless other fine young men who have preceded you . . . to serve your country well.

GEN. CASIMIR PULASKI, FATHER OF THE AMERICAN CAVALRY

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. HELSTOSKI. Mr. Speaker, October 11 marked the 190th anniversary of the death of Gen. Casimir Pulaski, the great Polish soldier and patriot who gave his life in the struggle for American independence. Without his superb leadership of the first American cavalry forces, the poorly organized and ill-equipped colonial troops would have been seriously weakened and possibly defeated. I believe we should recall some of the details of the remarkable career of this man who did so much and finally made the supreme sacrifice to help us win our independence.

Pulaski was born in Podolia, Poland, on March 4, 1748. He became interested in military affairs before he reached his majority and served in the guard of Duke Charles of Courland before he reached the age of 20. In 1768 he joined his father, Joseph Pulaski, as one of the eight original associates of the Confederation of Barr, a national Polish movement against the Russian oppression. He and his father pledged themselves to freeing Poland. Casimir carried on a partisan warfare against the Russians after his father's death, and in 1769 raised a revolt in Lithuania. He finally forced the Russians to withdraw from the fortified monastery of Czestochova to which he had been driven and took an active part in forcing them across the Vistula.

Subsequent military reverses caused Pulaski to leave Poland. He went to Turkey to seek, unsuccessfully, the aid of the Sultan against the Russians. He then went to Paris in 1775. It was in the French capital that he made the acquaintance of Benjamin Franklin. After his talks with Franklin he became interested in the American struggle for independence and came to this country in March 1777. He immediately joined General Washington's staff in Philadelphia. In the battle of Brandywine, in company with Greene, Wayne, Sullivan, and La Fayette, he struck his first blow in behalf of the American cause. His great service in this engagement was to defeat the attempt of the enemy to cut off the line of retreat. He executed his task so successfully and promptly that, upon the recommendation of Washington, he was commissioned a brigadier general by Congress and assigned to command the newly organized American cavalry. General Washington, in his letter to Congress recommending Pulaski for this place, said:

> This gentleman has been, like us, engaged in defending the liberty and independence of his country and has sacrificed his fortune to his zeal for these objects. He derives from hence a title to our respect that ought to operate in his favor as far as the good of the service will permit.

Pulaski later saved the Army from a surprise at Warren Tavern, near Philadelphia, and took part in the battle of Germantown. In the winter of 1777–78

he participated in the operations of General Anthony Wayne and helped defeat a division of British troops at Haddonfield, N.J. Subsequently, he was assigned to special duty at Valley Forge.

Congress, upon General Pulaski's suggestion and upon the recommendation of General Washington, authorized the formation of a corps of lancers and light infantry to be commanded by Pulaski. This corps, which was recruited mostly in Baltimore, later became famous as "Pulaski's Legion."

Performing garrison duty at Minisink, N.J., during the following winter, he expressed a wish to return to more active military service in Europe, but Washington persuaded him to remain. On May 8, 1779, he entered Charleston, S.C., and 3 days later, May 11, the city was attacked by 900 British troops. Pulaski's forces were heavily outnumbered, but he held the city until the arrival of reinforcements on May 13.

In the siege of Savannah, where he met his death, he rendered distinguished service. In the assault of October 8 he commanded the entire cavalry, both French and American. During the battle he received a wound which eventually proved fatal.

For the account of General Pulaski dying in the arms of Col. Richard Clough Anderson, we have the word of Colonel Anderson's grandson, Edward Lowell Anderson. The biography of Colonel Anderson, published by his grandson, in 1879, contains the following:

> The attack (on Savannah), though at several points successful, was, in the end, repulsed. Upon his way back to camp, my grandfather met Pulaski. The unhappy Pole was mounted upon a rough-moving pony, at whose every step the blood from a mortal wound churned up in the long boots of the rider. Until death released Pulaski from his sufferings, at some hour during that night, Major Anderson remained with him. He received from the dying man a sword, in memory of the sad service.

There is no further mention of Pulaski's sword in Mr. Anderson's book.

The details given in other historical accounts differ, but there is general agreement that Pulaski was carried from the battlefield after the conflict to the American brig *Wasp* for transfer to Charleston. Two days later, in the company of his close friend and subordinate Captain Bentalou, he died of the gangrene which had set into his wound. He was buried at sea, but, when the French fleet reached Charleston, a memorial procession and service was held. Pulaski's empty coffin was followed by his horse bearing his uniform and cavalry accouterments.

Casimir Pulaski was not the only brave Pole who left his native land to help America win her independence. Those who served under the General in the Pulaski Legion included Joseph Baldeski, Maurice August Beniowski, Baron de Botzen, August Christian Elholm, Jerzmanowski—first name unknown—Kotkowski—first name unknown—Michael Kowacz, Kraszewski—first name unknown—Charles Litomski, Matthias Rogowski, and John Zielinski, a cousin of General Pulaski and one of the first three officers of the Legion.

Americans have not forgotten the contributions of General Pulaski. There are eight towns named after him, located in the States of Georgia, Illinois, Iowa, Mississippi, New York, Tennessee, Virginia, and Wisconsin; and seven counties, located in the States of Arkansas, Georgia, Illinois, Indiana, Kentucky, Missouri, and Virginia. No national forest yet bears his name, but the Pulaski Highway in Maryland runs from Baltimore through Aberdeen and Elkton to the Delaware line and the Pulaski Skyway in New Jersey is a wonder of highway engineering.

General Casimir Pulaski spent more than $50,000 of his private fortune to maintain his cavalry. In a letter to Col. R. H. Lee in 1778 he wrote:

> Honor and a true desire of distinguishing myself in defense of Liberty was the only motive which fired my breast for the cause of the United States.

His example of sacrifice and devotion to our Nation's cause is a model of patriotism for all times. Truly, Casmir Pulaski stands as one of history's greatest protagonists of human freedom.

ANALYSIS OF OUR PRESENT POLITICAL CRISIS

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I wish to include an open letter to President Nixon, written by Mr. Edward C. Smith, owner of La Galeria of California, in La Jolla, a constituent of mine.

In this letter there is much food for thought. There are parts of it with which I am in full agreement, and parts of it which I would reject as being impractical.

I recommend a careful reading of Mr. Smith's analysis of our present political crisis.

The letter follows:

AUGUST 30, 1969.

President RICHARD M. NIXON,
White House West,
San Clemente, Calif.

DEAR MR. PRESIDENT: The contents expressed herein will most likely not be brought to your attention, but the fact that this paper was written will bring much satisfaction to myself, my family and numerous fine and loyal friends across the country.

Presidents come and go and certainly leave their mark on the land, unfortunately, in some cases, for years to come. The judicial branch of our government has its duties in that it is supposed *to interpret and nothing more* the law of the land, i.e., the Constitution; and then we have the legislative branch—and herein lies the rub!

The Congress of the United States is most adept at regulating the lives of the American people and although repeated attempts have been made, the Congress will *do nothing* to regulate itself!! There has been a *very weak* reform bill before the Congress, which if brought to a vote *would not pass.*

CONGRESS IS THE PEOPLE

The inability of the Congress of the United States to properly represent the American people is fast, if not already so, bordering on criminal neglect. Various and sundry politicians who are most talkative, but saying little, wildly proclaim that America is not sick! Maybe not—but she sure has one helluva belly-ache!

Let us cite just a *few* examples:

Federal intervention from the *early 30's* to date in the farm problem has produced nothing but dissatisfaction for the farmer and the taxpayer. The farm subsidy program as we know it today is a financial "foul-up". The small farmer is not benefited as was the original intent; big business is the receiver of this unfair and senseless waste of the taxpayer's money. Witness these figures, recently released. In 1967, 42.7 per cent of the nation's agrarians with an income of less than $2,500 a year received only 4.5 per cent of total farm subsidies, while the top 10 per cent, many of them farm corporations or vertical trusts in food processing, received 54.5 per cent of total payments!! Five (5) farm operations received subsidies of over $1 million last year with two California companies topping the list. One (1) company received $4.09 million and another $2.86 million. Payments of between $500,000 and $1 million each went to 15 farms and 388 got payments between $100,000 and $500,000. Mark Twain once remarked, "Reader, suppose you were an idiot. And suppose you were a member of Congress. But I repeat myself."

The question, Mr. President. How much longer do you suppose the American people are going to tolerate the rotten injustices of the Farm Program which the Congress of the United States has had thirty-seven (37) years to rectify?? Our republican form of government is supposed to exist for the protection of the rights of the minorities and not for big business, the loved and the wealthy—they have many friends and few enemies. But—the Congress simply will not get off their "prats". Let us go further with this corrupt and vicious "political foot ball". Is it not dumbfounding and downright puzzling that we live in a Nation of universal plenty and yet general poverty exists in various portions of the land? What a strange paradox! Ask any Congressman why aid in money and produce is being distributed to foreign lands when our own go hungry; if he be the timid politician that certainly predominates in our Congress today, he will respond with the answer that our Country is capable of being "all things to all men"; this is mental masturbation of the highest degree. Firstly—charity certainly should begin at home. Secondly—the past warns us that all governments which attempt to perform more than their constitutional intention, ended up *by performing less!*

The State of Mississippi reports that upwards of one-half of the population lives in dire poverty; $28.7 million in subsidies went to 1,438 landowners in 1966 while only $4.7 million was spent for food assistance to the poor. Subsidies totalling $35.8 million were paid to 4,375 farm operators in Nebraska in 1966, while during the same interim less than $1 million in food aid was provided for the 368,000 Nebraskans combating poverty. The past 10 years has witnessed the Federal government blissfully handing out $55 billions of the "long green" to large and well-to-do landowners, for keeping acreage *out of production*!! The list of these recipients reads like the "Who's Who" of American farming and big business. I believe it was May of 1968 that an Amendment to the agricultural appropriation bill appeared before the Congress; this amendment advocated placing a ceiling on farm subsidies, be it a corporation or an individual, of $10,000; this bill was overwhelmingly defeated. Henry Adams said it in 1818, "You can't use tact with a Congressman. A Congressman is a hog. You must take a stick and hit him on the snout."

Mr. President, there is an old Southern expression which reminds us that, "if you

want to clean up the stream you gotta get the hog outa the spring." The streams of America are heavily polluted; there are too many hogs wallowing around in the springs of Washington. Our biggest problem is in your own back-yard, Mr. President!

Let us take a "running-kick" at the Post Office boondoggle. Why is the Congress of the United States so reluctant to straighten out this mess of all messes! Are these people so reluctant to lose some of their precious authority? Excellent suggestions have been made to completely revamp the Post Office Department and operate same in a business-like manner, but it appears that the greed and avarice of Congress will prevail. What a pity—but the American people are fuming and in the long-run, God willing, it is the people who will triumph.

On October 2nd 1969 Carl Hayden of Arizona will be ninety-two (92) years of age! Mr. Hayden entered the Congress of the United States on 19 January 1912, the year Arizona became a State; he was elected to the U.S. Senate in 1926 and served in that capacity until 1968; he did not choose to run for re-election! This man served in the Congress of the United States for a total of fifty-six (56) years. If one will simply read "The Federalist Papers," he will note that our founding fathers did not intend for a person or persons to make a life's work of serving the people in our Nation's Capitol. They call it seniority, Mr. President, and both major parties are grossly at fault in maintaining that a man stay at his post regardless of his capabilities in the performance of his tasks. Can you imagine any of our great corporations who have done so much in making what this country is today, allowing a man to remain in a seat of power past the age of 70!! Absolutely not—the gold watch is presented, a pat on the back is given, and new blood that understands the *changing times* is brought into the ball game.

Senator Hayden is merely an example, for the Congress is loaded with individuals who are far past their prime. The average politician in Washington, where factions run high, is interested not for the whole people, but for his own section of it. The rest are in his own view, strangers, enemies or rather, let us say, pirates!! And as the Government has become a trade and is managed solely on commercial principles, these men plunge into politics to make their fortunes and only hope that the system shall last their days. Is it any wonder that the word politics, as understood by the American people, means nothing but corruptions?

Why are the directors of the most immense and extravagant business the World has ever known, i.e., the Federal Government, allowed to operate in such an unbusinesslike and archaic manner? Does it make any sense that 535 directors of the fate of 200 million people should be immune from the revealing of their business and financial interests? Congressional immunity — my foot!! Yet, every effort, and it may be noted that such efforts have been rare, to demand that the Congress pass judgment on itself, has met with an overwhelming veto. Referring to "conflict of interest", the late and outspoken Senator Robert Kerr of Oklahoma, remarked, "Hell, if everyone abstained on grounds of personal interest, I doubt if you could get a quorum in the U.S. Senate on any subject".

It is now high time for the stockholders in this most giant of corporations to demand a new and completely reoriented board-of-directors. The country can no longer tolerate these hunters of popularity, men of ambition, interested only in profit and forgetting honour, men of deception and wily cunning, who, while in office follow not what is right for a constitutional country, but what is expedient to being re-elected!

The average *thinking* American today does not give a tinker's "dam" for either the Democratic or the Republican parties. Theodore Roosevelt put it so very well in 1912; he said, "The two (2) major parties are husks, with no real soul within either, divided on artificial lines, boss-ridden, and privilege-controlled, each a jumble of incongruous elements, and neither daring to speak out wisely and fearlessly what should be said on the vital issues of the day". Things have not changed since 1912—the situation has simply worsened!

The Point—One of Mr. Humphrey's senatorial supporters during the course of the last election stated that he saw no reason to be concerned over a third political party. Now just how naive can one get? It may be true that Governor Wallace is a controversial figure, but he cut a fairly "wide swath" because of the *universal unrest* in the land today! Many folks feel that if the two (2) major parties do not shape up—and fast—there must be a change. By what name a new entity is known is unimportant in the chaotic circumstances that face the United States today. Do we, as so many maintain, have a weak government in a disordered society?

Our system of government contains numerous imperfections. However, it is without comparison the best system that now exists or ever did exist. But—what next, Mr. President? When the power of the governed ceases to exist, when the trustees charged with adhering to the principles of our Constitution fail to perform their position of trust, when the Federal government infringes on the "constitutional rights of the States" and does not permit said States to control their own domestic institutions according to their own judgment, when the Federal government gets involved in private enterprise, a function for which it is notoriously inept, when the Federal government advocates a foreign policy which it not only does not understand, but is a complete reversal of the intent of our "founding fathers," and when you have an evasive political party in power which manages the government solely on commercial principles and surrenders its convictions strictly to party objectives—the inevitable result is a government by oligarchy which masquerades as a democracy; the central government becomes a police state; the nation becomes a mob!

CONGRESS MUST BE REFORMED

Back to the Congress—what in heaven's name can be done? In *1850* a senator whose name is lost to history, stated, "We are in a horrible state—No one will resign and they are not dying off fast enough!"

Mr. President, for a starter the answer is with us and quite simple. We should put a limitation on all office holders as we do the Presidency, thanks to the foresight of President Washington. *No* representative in the Congress should serve over six (6) terms, which is Twelve (12) years. No Senator should serve over two (2) terms, which is Twelve (12) years, and no governor should be allowed to serve over eight (8) years! By doing this, we would eliminate the politicians and have some of these men turn into statesmen. The difference—a politician lives for the next election—a statesman for the next generation! Too often an elected officer, the moment he goes into office, does everything in his power to see that he will be re-elected, and, although his position may be the popular position, so often the popular position is the *wrong* position. Let us all be reminded of the words of Artemus Ward, voiced in 1865, "Congress, you won't do. Go home, you mizzerable devils—go home."

"No taxation without representation" was the predominant slogan of the thirteen (13) original colonies, prior to gaining their independence. There is a parallel here! At this time the American people are heavily and sorely taxed, i.e., morally, mentally and above all where our strength lies, financially. But are we as a people being properly represented? A look at the record will show we are not!! We must be shed of this albatross around our necks. In short—the Congress must be reformed—the survival of this country depends on it.

On Viet-Nam:

The Revolutionary War lasted for six (6) years and six (6) months to the day, and ended with the surrender of Cornwallis at Yorktown on the 19th of October 1781; this had been the longest war in our history; we lost approximately 4,500 men; however, upon the death of Specialist 4th Class James Thomas Davis of Livingston, Tennessee, on 22nd December 1961, the Viet-Nam war now has the dubious honour of being the longest conflict in the annals of our times; we should not be proud of this horrible, grossly immoral and undeclared debacle!

And here, Mr. President, the record should be set straight, for it is a thorn in our side and is cutting deeper, it is afflicting humanity; it is destroying religion; it is destroying families; it is dividing the Nation!—War is an act of violence which has only one (1) purpose; that is the total and complete destruction and/or containment of the enemy. Nothing more—nothing less! And any Nation blessed with the armament and finances who does not seek a hasty and final conclusion to this "scourge of humanity" must and will be recorded as immoral and rejecting mankind. War is not a popularity contest. Few nations ever fought an honourable war. But here lies the big rub.—Any novice student of armed conflict knows that he who preaches peace in the midst of war is wasting his time. Washington constantly hammers at the American people that we are striving for an "honourable peace". This is pure and unadulterated baloney! An honourable peace is only attainable by an efficient war and by all that is holy and moral. Viet-Nam is a far cry from an efficient war! In short, these "armchair generals", of which there are far too many in Washington, are seeking a compromise. Poppycock!—a compromise makes for a good umbrella but a damn poor roof. Regardless, at this writing, in whatever manner the Viet-Nam War is resolved, it is a war of infamy which will surely blot the pages of our history.

"Viet-Nam is not a military necessity—but a *geopolitical* gamble."

When the gauntlet is thrown down and one picks it up he must be prepared to go all out, but by the same token one must not forget the oldest axiom as regards mortal combat, namely, "A great country can have no such thing as a little war".

Starting with two-hundred and fifty (250) advisors in 1954, and now with over five-hundred thousand (500,000) troops in Viet-Nam, who are fighting a war they cannot possibly win under the *initial* program as set forth in Washington, is without parallel in the History of Mankind. This horrendous situation cannot possibly be won—but there was a time when it could have been *contained* and the door is possibly still open!

Why has the harbour of Hai Phong not been mined as the Navy many times in the past has officially requested? This act can be carried out in a swift and efficient manner without the loss of any planes which we can ill-afford to lose under the present circumstances. Why do we allow supplies to flow into the hands of the enemy and above all delivered by our friends and pseudo-friends?

Why have we not blown the billy-be-jesus out of the many dams checkering north Vietnam? Cut off his food and cut off his armament—this is the way to bring a foe to his knees—and then—and only then do you go to the peace table! This is the procedure that history reveals to us and yet the United States persists in violating the well-known and obvious "modus operandi." Is it any wonder that the American people are confused, dumbfounded and fast becoming downright volatile, as regards this intolerable mess?!!

On Russia, China, and the United States:

In Washington there are many so-called astute individuals who appear to be deathly afraid of the Chinaman. It is true that the populace of China is tremendous; however, future conflicts will *not be decided* by the "ground-pounder" or "gravel-agitator"—I speak of the Infantry. To fight the Chinese on a man-to-man basis would be suicide!! Nor is it agreed that the next conflict will be entirely nuclear in its aspect. Nuclear cannon, possibly, but not necessarily the big bomb. A point in case—Gas was introduced by the Germans at Ypres, Belgium in World War I with much destruction; the Hun did not take advantage of this action, but that is another story. Anyhow—other than isolated cases which were never proven, no gas was utilized in World War II. However, there was enough gas stockpiled to destroy the World. The next conflict would possibly follow a similar pattern, i.e., various nations having nuclear capabilities *but reluctant* to completely destroy each other.

Mr. President—W. Winwood Reade said it in 1872, "It is not probable that war will ever absolutely cease until science discovers some destroying force so simple in its administration, so horrible in its effects, that all art, all gallantry, will be at an end, and battles will be massacres which the feelings of mankind will be unable to endure."

But regardless—the Chinaman is certainly in no position *at this time to* take on the might of the United States. Five (5) to ten (10) years from now might be another story. But rest assured, if the situation was reversed at this time, i.e., the Chinese in our position, this country would be levelled! However, there is much in our favour if we will only play our cards correctly. It seems to be evident that Russia is quite concerned with the Chinaman. And justifiably so—the Chinese are in the Russians' back-yard. Russia's immediate and future concern will be with the Chinaman—not with the United States. An old Mexican friend, living in Zapata, Texas, who had no benefit of education, told me in 1948, "The day will come when the last white man will be shooting dice with the last yellow man for the last white woman on earth." Could he have meant that some day we and the Russians would be allies? I have often wondered.

On Foreign Relations: There is a homely adage which runs, "Speak softly and carry a big stick; you will go far. If the American Nation will speak softly and yet build and keep at a pitch of the highest training a thoroughly efficient Navy, the Monroe Doctrine will go far." Theodore Roosevelt, 2 September 1901.

"The refusal of the British and Russian people to accept what appeared to be inevitable defeat was the greatest factor in the salvage of our civilization", George Catlett Marshall, 1 September 1945.

Napoleon attempted to cross twenty-two (22) miles of Channel and defeat England; he was unsuccessful and turned to Russia. Hitler attempted the same feat; he was unsuccessful and turned to Russia. Napoleon was not defeated at Waterloo; Hitler was not defeated in Germany. On the contrary, the *backbone* of the armies of both Napoleon and Hitler were *severed* and broken on the steppes of Russia. As Napoleon so aptly put it, "Waterloo is cast in my teeth; I ought to have died in Moscow." St. Helena, 23 April 1816.

The history of the Russian people over the last sixty-five (65) years is quite informative and revealing.

"As soon as classes have been abolished, and the dictatorship of the proletariat has been done away with, the Communist party will have fulfilled its mission, and can be allowed to disappear." Joseph Stalin, April, 1924.

Nicholas II, Czar of all the Russians, lived in a dream world of pomp, ceremony and the Divine Right of Kings. The people under this unfortunate monarch were secondary; the inevitable overthrow was just a matter of time and circumstance. "Any people, anywhere, being inclined and having the power, have the right to rise up and shake off the existing government and form a new one that suits them better." Abraham Lincoln, 1848.

In 1904 the Japanese commenced the Russo-Japanese War with a *sneak attack* on the Russian Fleet. Outgunned and with inferior leadership the Russians were soundly defeated both on the sea and the land; the Russian Fleet was completely destroyed and after a short duration Russia came to terms with the nefarious Japs. The United States should have done its homework on this action—but did not; Pearl Harbor might have been avoided.

At the beginning of World War I, the Russian was ill-prepared, ill-equipped and without leadership. In 1914 the mighty German Army engaged the hapless Russian Army at Tannenberg, a small village in Poland. The German carried the field and completely destroyed the Russian forces. The destruction of lives and property was complete and for the Russian, World War I was over!

World War II cost the Russian people over twenty million (20,000,000) souls! The Russian knows all too well the abject horrors of war. He has been massacred, his women raped, his old and young people brutally murdered, his cities levelled, his crops and livestock destroyed. Yes—we can say of the Russian—he knows war—he has been there! War is sweet to those who don't know it.

The Russian values life; the Asian does not. The Russian is educated; the Asian is not. The Russian knows all too well that the only way *to prevent a global war is to be constantly and always prepared for war.* One wolf will not fight another wolf.

Therefore, considering the past History of Russia, none of us should be surprised when the Russian proclaims and loudly, "Don't tread on me".

Conversely—let us regard the United States and its attitudes of the past.

"Against the insidious wiles of foreign influence, I conjure you to believe me, fellow-citizens, the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republican government." George Washington, 8 July 1796.

"The less we have to do with the amities or enmities of Europe or Asia, the better." Thomas Jefferson, 1815.

Consider the above quotes well.—The United States has a record of taking a "laissez-faire" attitude as concerns the political intrigues and squabbles of European nations. However, circumstances, possibly beyond our control, have seen us globally involved on and off for the past fifty (50) odd years. And—when confronted with total war we have *consistently never been in combat readiness.* If our allies had not given us the time to get militarily ready, we would have been over-run, or at least contained economically and politically. Let us hope that we are fully prepared now—and always remain so; we cannot let our military guard down at any time, as the next world aggressor will concentrate on and attempt to inundate the United States at the outset. Everlasting peace is a dream, and not even a beautiful one.

With the exception of the Civil War which is forgotten by the layman, the United States has never experienced death, destruction and complete and final holocaust such as Europe and Asia have witnessed in the last century. In a way, this is a sad situation, for if one has not been down the glory road—he knows not what it is all about! War is the usual condition of Europe and Asia. A twenty (20) years' supply of causes of war is always on hand!

On the Monroe Doctrine: "We consider the interests of Cuba, Mexico and ours as the same, and that the object of both must be to exclude all European and Asian influence from this hemisphere." Thomas Jefferson, 1808. Why the "Bay of Pigs", Mr. President? The intent of the Monroe Doctrine was for the U.S. to stay on this side of the pond—Europe and Asia are to stay on their side of the pond. Why did we not intervene in Cuba? And yet—we leave our shores to fight a war that makes no sense—and we travel 10,000 miles to do it! We should forget this hawk and dove debate and rely on the one entity that has never failed us—the American Eagle!

Our forefathers settled America for the express purpose of quitting Europe and making for themselves a better way of life. Why then do we persist in leaving our shores with masses of men, machines and propaganda, and attempt to interweave our destiny with that of any part of Europe or Asia? Why do we entangle our peace and prosperity in the toils of European and Asian ambition, rivalry, interest, humor or caprice? Their political interests are entirely distinct from ours; their mutual jealousies, their balance of power, their complicated alliances, their forms and principles of government are all foreign to us.

Isolation has become a dirty word and grossly misunderstood, i.e., the definition as President Washington intended it to be. We should promote and carry out trade with foreign lands; we should exchange cultural entities; we should encourage travel among the peoples of the world; we should aspire to cohesive diplomatic relations—but we should not send masses of men, machines and propaganda to foreign shores for purposes of becoming involved in their never-ending political intrigues and squabbles.

On Internal Conflicts: "Either some Caesar or Napoleon will seize the reins of government with a strong hand or your republic will be as fearfully plundered and laid waste by barbarians in the Twentieth Century as the Roman Empire was in the Fifth; with this difference, that the Huns and Vandals who ravaged the Roman Empire came *from without* and that your Huns and Vandals will have *engendered within* your own country by *your own institutions.*" T. B. Macaulay, 1857. History reveals to us that governments which have fallen, have done so, not *from external pressures* but *from internal unrest, complacency* and *chicanery.*

This country is on the verge of a social, economic and political revolution the likes of which the world has never witnessed before! All should pray that this revolution is bloodless, but let us get our heads out of the sand and not count on it. When a man takes the road to destruction—the gods help him along.

Maybe we should all take note—We have had periods of external strife; we have had periods of internal strife—but never, in our history, have we faced *both* internal and external strife—*concurrently.* A dictatorship or autocracy thrives on such a situation. But—could it not be fatal to a democracy? We should all think about it.

It would appear, Mr. President, that it is high time we clean up our own back yard socially, morally, physically, economically, financially and intellectually.

Why is it that we are so critical of the political interests, forms and principles of government of foreign nations when our own system is in such dire trouble? And no government can remain stable in an unstable society and an unstable world. We can go further—the deterioration of every government begins with the decay of the principles on which it was founded.

This is about all for now and the surface has only been scratched. This paper will be printed and distributed to our *Committee of One Thousand* (1,000); this is a non-dues-paying organization of dedicated Americans who are concerned not for party or politicians but for God and Country.

Political Washington appears to believe

that the American people came down with yesterday's rain. The natives are restless and if one listens closely he will detect the beginning of a rumble. This rumble has just started and long before the next national election it will hit a crescendo. Something has got to give; political parties and *timid politicians* with this, "you scratch my back and I will scratch yours", attitude had better shape up or ship out!

In closing:

"If you establish a democracy, you must in due time reap the fruits of a democracy. You will in due season have great impatience of the public burdens combined in due season with great increase of the public expenditure. You will in due season have wars entered into from passion and not from reason; and you will in due season submit to peace ignominiously sought and ignominiously obtained, which will diminish your authority and perhaps endanger your independence. You will in due season find your property is less valuable, and your freedom less complete." Benjamin Disraeli: Speech in the House of Commons, 31 March 1850.

To the above quotation I can only add, Amen!

The writer has been a student and an observer of history, geopolitics and political science for the past thirty (30) years. No doubt there will be definite disagreement as concerns portions of this epistle. But obviously, if two (2) folks always agree, one of them is unimportant. So, in closing, if any small segment of this paper makes sense, then my efforts have not been in vain.

May God bless and keep you and yours, Mr. President, and may your tenure in the office of the "splendid misery" bear the necessary fruit that the American people so desperately need at this most crucial of hours.

Vaya con Dios, and with best wishes, I am,

EDWARD C. SMITH.

ADMINISTRATION'S MARINE SCIENCE ACTIONS—FIVE AREAS OF EMPHASIS

HON. HOWARD W. POLLOCK

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. POLLOCK. Mr. Speaker, I would like to take this occasion to welcome the recent announcement by the Vice President, as Chairman of the National Council on Marine Resources and Engineering Development, of the administration's determination to accelerate the Nation's marine science program.

We now have new ocean technology to unlock the resources of the seas. The oceans cover 71 percent of the globe and are assuming a much greater role for strengthening our economy and promoting the welfare of our people. Each of the areas of the announced program has a special signficance in this connection:

Coastal zone management can strengthen the States' role in managing and in promoting development of our costal areas;

The establishment of coastal laboratories will spur environmental research for effective management of coastal activities;

A pilot study of lake and estuary pollution will help us restore our Great Lakes and other estuarine regions;

Environmental research in the Arctic will enable us to prevent man's degradation of this newly opening northern environment; and

A firm U.S. program for the International Decade of Ocean Exploration will give the needed thrust to this important program for scientific cooperation and our use of the oceans.

I, for one, have great hope for the ocean's potential benefit to society, and I am encouraged by these recent initiatives toward realizing this important potential.

ILO AWARDED 1969 NOBEL PEACE PRIZE

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. THOMPSON of New Jersey. Mr. Speaker, I call the attention of my colleagues to the unique honor that has come to the International Labor Organization with the announcement yesterday of the ILO being awarded the 1969 Nobel Peace Prize. The ILO is celebrating its 50th anniversary this year. Its director-general is David A. Morse, a native of my State, who has done such an outstanding job over the past 20 years.

I am joined in this statement of congratulations by my colleagues from the House Education and Labor Committee who were privileged to serve as official observers at the ILO meetings in Geneva—the gentleman from Michigan (Mr. O'HARA), the gentleman from Ohio (Mr. AYRES), and the gentleman from Ohio (Mr. ASHBROOK).

Mr. Speaker, as our delegation has reported to the House on previous occasions, the ILO has been working diligently to raise the minimum standards of employment and the standard of living of workers and their families throughout the world. It has also worked with the United Nations on projects to assist the developing nations. The vital importance of the link between better labor conditions and world peace has long been recognized by the nations which make up the membership of the ILO. One of the most inspiring experiences of the members of our U.S. delegation to ILO meetings in Geneva is the opportunity to learn, firsthand at the various committee sessions, of the magnitude of the labor problems which confront nations around the globe. It is gratifying to see how these countries of widely varying economic, political, and social backgrounds, represented by delegates from industry and business, of workers, and of governments can and do work together to seek solutions to international problems that affect us all.

The ILO richly deserves the coveted Nobel Peace Prize for its 50 years of unheralded service to mankind and the cause of peace. ILO's distinguished director, David A. Morse and his dedicated staff deserve special praise for the effective work that has been accomplished to improve the working standards and conditions of many hundreds of millions of workers throughout the world.

We congratulate them for the signal honor that is symbolized by the Nobel gold medal, diploma and cash prize and wish the ILO many more years of successful work and progress to help build world peace on the solid foundation of decent and productive labor opportunities that will contribute to the dignity of working people everywhere.

Mr. Speaker, I include at this point the articles from the October 21, 1969, issue of the New York Times which describe the Nobel award and the work of the ILO:

NOBEL FOR PEACE GOES TO THE ILO—ITS 50 YEARS OF INTERNATIONAL SERVICE ARE CITED BY HEAD OF COMMITTEE IN NORWAY

OSLO, NORWAY.—The International Labor Organization was awarded the 1969 Nobel Peace Prize today.

Mrs. Aase Lionaüs, a Labor member of Parliament and chairman of the five-member Nobel Peace Prize Committee, said tonight: "It is the international activity of ILO through 50 years that in my opinion makes it a worthy Peace prize winner."

"Until World War II," Mrs. Lionaüs said, "ILO concentrated its activities on reducing social barriers between peoples in an effort to make nations work together in peace. After World War II ILO had a wider perspective and has become a global institution in the work of peace.

"The organization is now deeply engaged in the enormous problem of solving unemployment in the poor world combined with the birth explosion. This is a gigantic challenge to ILO and a task that calls for a concentrated effort of all its talents and powers."

LINKED TO LEAGUE OF NATIONS

The prize money this year amounts to about $75,000 plus a gold medal and a diploma. These will be presented to an I.L.O. representative at a ceremony at Oslo University December 10 on the anniversary of the day that Alfred Nobel, the Swedish inventor of dynamite, died in 1896. The awards were set up by his bequest.

The I.L.O., with headquarters in Geneva, and the International Court of Justice in The Hague are the only organizations established after World War I with links to the League of Nations that are still in existence. The organization had an independent status, which enabled states that were not in the League to become members. Germany and Austria, for instance, were members from the beginning.

In 1946 the organization established a link with the United Nations, becoming its first specialized agency. The director general since 1948 has been David A. Morse, an American. The members include government representatives and labor and employer organizations.

The Peace Prize Committee, which is appointed by the Norwegian Parliament, met for 40 minutes. Mrs. Lionaüs said that 35 individuals and 10 organizations had been nominated for the award.

DUBCEK WAS PROPOSED

Among these were Alexander Dubcek, the deposed leader of the Czechoslovak Communist party, whose name had been put forward by the Rev. Dominique Pire, winner of the Peace prize in 1958, who died in January.

The I.L.O. was sponsored by Scandinavian parliamentary leaders from all parties. In Norway, the recommendation was signed by Einar Gerhardsen, former Labor Premier; Halvard Lange, former Labor Force Minister; Trygve Bratteli, leader of the Labor Opposition in Parliament, and by Liberal, Conservative and other party leaders.

Under the Nobel will, the peace prize is to go to those who have worked most for brotherhood among nations, the abolition of standing armies and the furtherance of the

peace congress. The first award was made in 1901, five years after Nobel's death.

The interest from a fund set up under the will is divided into equal parts for prizes in physics, chemistry, literature, medicine, peace, and, since last December, economic sciences. All but the peace award are made in Stockholm.

Organizations that have won the Peace prize are the Red Cross, 1944; the United Nations High Commission for Refugees, 1954, and the United Nations Children's Fund, 1965.

The I.L.O. has extended its activities to cover technical assistance to developing countries only in recent years. The organization was founded under the Treaty of Versailles with the purpose of bettering labor conditions as a means to securing world peace.

MORSE, AT U.N., HAILS AWARD

UNITED NATIONS, N.Y.—The award of the Nobel Peace prize to the International Labor Organization was called a tribute to the World's common man today by the agency's chief.

David A. Morse, who was Under Secretary of Labor in the Truman Administration before he became director general of the organization in 1948, is here for consultations with other leaders of United Nation agencies.

Mr. Morse said that the organization, which is celebrating its 50th anniversary this year, was looking ahead to the challenge of helping to find productive labor opportunities for the people of poorer countries.

"There is a labor force of one billion in the developing world," he said. "In this world are 300 million people who are unemployed or underemployed. This is a sleeping giant and our problem is to cope with this giant, which is beginning to rise up."

Mr. Morse said that the labor organization saw its role in the coming decade as one of helping governments to find productive employment for the increased number of jobless. He said this was the main aim of the World Employment Program initiated by the organization this year.

Under the program, the I.L.O. will assist governments by encouraging them to focus on employment as they formulate their economic development plans. The agency is prepared to offer help in making manpower surveys, in setting up training programs and in developing placement services.

Some of the more affluent countries with labor problems will get assistance as well as the developing countries, it was emphasized.

I.L.O. ACTIVITIES KEYED TO PEACE SINCE WORLD WAR I

GENEVA.—The appearance of Pope Paul VI before the 50th anniversary conference in the International Labor Organization last June underscored the organization's dedication to the promotion of social justice as a way of furthering the cause of world peace.

The goal was written into the I.L.O.'s constitution, an integral part of the 1919 Treaty of Versailles, which ended World War I.

It is a goal that the organization has pursued by bringing trade unions and employer organizations together with the spokesmen or the representatives of the governments of its member countries, which now number 121.

Each of the three pillars of what the I.L.O. likes to call its "tripartite system"—unions, employers and government—has a separate identity on niches at the organization's conferences and committee meetings, and each has a right to vote.

The United States joined the organization in 1934 its employer delegates at first were named by the National Association of Manufacturers. In recent years, however, United States employers have been nominated by the United States Chamber of Commerce.

Until many new nations came into being after World War I, the organization concentrated its effort on the conclusion of international conventions that set minimum standards of employment and living conditions for workers and their families.

But in recent years it has given increasing attention to the problems of developing lands. This is a matter of major concern to David A. Morse, a 62-year-old New Yorker who has been the director general since 1948.

U.N. AIDS IN FINANCING

Of the organization's budget of $27.5-million this year, only $2.4-million was alloted directly for technical aid. But the I.L.O. is also carrying out aid projects this year financed with nearly $22-million provided by the United Nations Development Program.

All member governments contribute to the budget according to an agreed scale. The United States pays 25 per cent of the total. The I.L.O. staff consists of more than 2,000 persons of 100 nationalities employed there and in many other parts of the world.

The American Federation of Labor and later the merged A.F.L.–C.I.O. have supported the I.L.O, but there have been times of strain in the relations between the organization and the A.F.L.–C.I.O. president George Meany. Mr. Meany has charged that the organization's secretariat tended to be too accommodating to the Communist countries.

In 1966 Rudolph Faupl, the A.F.L.–C.I.O.-nominated United States worker delegate to the organization's conference, walked out with his delegation when a Communist representative, the Government delegate of Poland, was elected president of the annual assembly of member states.

While the United States worker delegation did not return that session, the A.F.L.–C.I.O. has nevertheless continued to participate in the activities of the ILO. Mr. Faupl is still a member of the organization's 48-member governing body, or executive council.

At the annual general assembly, member states are represented by two government delegates, one trade unionist and one employer representative, each with the right to vote.

EACH ELECTS 12 REPRESENTATIVES

The employer and worker delegates, meeting in separate caucuses, each elects 12 representatives to sit on the governing body. The 24 other members of this executive group represent governments.

Much of the I.L.O.'s work for improving working and social conditions is done in its industrial committees, where government, employer and trade union representatives meet to discuss the problems of specific industries and suggest solutions in which the need of the workers is given particular attention.

In a tabulation prepared for its assembly last June, the I.L.O. listed a total of 128 conventions as having been completed and submitted to governments for their ratification. The United States, however, has approved only seven of these. All but one of the seven deal with working conditions for mariners.

The United States' problem with I.L.O. conventions is constitutional. United States minimum wages, hours of work, vacations with pay and other such standards are almost always higher than those that the organization establishes, but they do not usually come within the province of the Federal Government.

More often they are set by collective bargaining or by state law. This means that Washington cannot legally make most of the conventions the law of the land.

TO OUR PRESIDENT

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Joliet Herald-News, Oct. 14, 1969]

TO OUR PRESIDENT

(By Dumitru Danielopol)

WASHINGTON, D.C.

President RICHARD M. NIXON,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Don't feel lonesome on Wednesday—Vietnam Moratorium day—when anti-war demonstrators attack you and try to force you to do something you know is wrong.

There are hundreds of millions of people here in the United States and around the world who know that you are right. They know that freedom is indivisible, that it cannot accomodate tyranny in one corner of the world and survive in another.

People like myself whose birthplaces are now behind the Iron Curtain are wholeheartedly with you. We have learned about communism at first hand. Poles, Czechs, Hungarians, Bulgarians, Albanians, Romanians, Lithuanians, Latvians, Estonians, Yugoslavs, Urkanians, Cubans, Chinese, Jews, Christians, Mohammedans—no matter what color, race or creed—we have suffered indiscriminately at the hands of the Communists. We know their ruthlessness and their perfidy.

The tens of millions who have taken refuge from communism in free lands stand by you.

We don't want to see what happened to us happen to the people of Vietnam, if it can be prevented.

And you know, and we know, that it can be prevented.

The great majority of native-born Americans back you, too, Mr. President, especially those sent overseas to fight the Nazis and the Fascists because governments in democratic countries in Europe in the 1930s failed to understand totalitarianism and failed to do what America is dong right now—stopping aggression while there is still time.

Every major national veterans organization in this country is on record in support of U.S. involvement in Vietnam.

No one wants to prevent free discussion, free opinion and even dissent—but on the condition that our rights are respected, too.

It seems incredible that so many people in high places advocate appeasement and the abandonment of a country fighting for its inalienable right to self determination.

Never in history have the aims of the Communists coincided with those of free people. Never have they voiced any policies that did not try to destroy freedom somewhere in the world. Yet today they seem to have so many articulate allies.

We know, Mr. President, that should the the Americans abandon Vietnam—as the dissenters insist—America will cease to be the greatest country in the world.

There are times in the history of great countries and of great men when they have to stand up—even if alone—for what is right.

I witnessed some of those moments in the House of Commons when Winston Churchill tore his government and his party to shreds for the shameful Munich agreement of 1938. He was powerless, but he knew he was right.

From London, I heard Col. Charles de Gaulle, an unknown, call on his fellow

Frenchmen who had been shamefully defeated, to rally against overwhelming odds in the summer of 1940. He, too, was powerless, but he knew he was right.

Mr. President, you are in a much more favorable position than those leaders. You have the power, you have the time, for you are our President and our Commander in Chief, and you have an arsenal that can bring an honorable conclusion in Vietnam.

And, Mr. President, you have us on your side. We don't march or demonstrate, but that doesn't mean we aren't ready to help you.

Sincerely,

DUMITRU DANIELOPOL.

ANGELA BUTTERFIELD—INDIAN LEADER

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. HANSEN of Idaho. Mr. Speaker, one of Idaho's best known and most respected women is attracting national attention for her leadership among American Indians. Angela Butterfield is vice chairman of the Shoshone-Bannock tribal council in Idaho. She is an attractive, energetic, and articulate spokesman for Indian interests.

To better acquaint my colleagues with the activities of this remarkable woman, I include as a part of my remarks an article from the Portland Oregonian reprinted in the Power County, Idaho, Press:

INDIAN WOMAN BEATS POLITICAL DRUMS

(EDITOR'S NOTE.—The following article appeared in the Sept. 6 issue of the Portland, Oregonian. Mrs. Butterfield served three years as executive director of the Affiliated Tribes of Northwest Indians. Tandy Wilbur was elected to that position at the meeting referred to in the article.)

(By Yvonne Rothert)

What does the governor of a Girls' State grow up to be?

Angela Paniogue, a Shoshone Indian from the Fort Hall Reservation in Idaho, was a delegate to Idaho Girls' State and elected its governor while attending high school in American Falls.

She is now Mrs. John Butterfield, executive director of the Affiliated Tribes of Northwest Indians, holding its annual meeting in Portland this week.

Through all her activities as a wife, mother, bridge player and square dance enthusiast, the thread of politics is woven, American Indian politics.

"It's like a disease—it's in your blood. You never know what is going to happen next," she said.

"It's so exciting that I'd almost put it ahead of playing bridge." She laughs when she says that, because she knows how much of her busy life is spent working for legislation to benefit her people, "to get results that are beneficial to all and not detrimental to any."

Mrs. Butterfield is vice-chairman of the Shoshone-Bannock tribal council, elected to that position with "overwhelming victories, even though I have three strikes against me.

"I am a woman; I am married to a non-Indian; I don't speak the language."

Mrs. Butterfield has turned these drawbacks into political assets. The fact that her husband is a non-Indian helps her, she feels, to see both sides of questions, to understand the non-Indians even though her feelings are with the Indians.

COMMON LANGUAGE USED

The language lack is no problem because in dealing with other tribes, as she must in her position and as a delegate to the National Congress of American Indians, she uses English, the common language of all tribes.

The Butterfields live on a cattle ranch within the Fort Hall Reservation. It has been owned by her family for three generations.

Mrs. Butterfield follows in the footsteps of her parents in her involvement with tribal and community affairs. Her mother was for five years the chief judge of the tribal court, and her father was the only Indian member of the American Falls school board, which elected him chairman.

There are four children in the Butterfield family: Mike, a senior in high school; Rebecca, 10; Teresa, 5 and Linda, 3. Another son, between Mike and Rebecca, was killed when the horse he was riding was struck by a car.

All members of the family enjoy riding—"It's a good thing they do, because they have to!"

Square dancing has been a favorite pastime of the senior Butterfields. "It's really fun—that music! When they play 'When the Saints Come Marching In' I can't sit still, even if I'm playing bridge."

Women are becoming more active in Indian affairs, Mrs. Butterfield says, though "they still do the things women should do, raise their families, do beadwork, tan hides."

More and more, however, they are serving on tribal committees, because, "like all women, they are competent."

She tells a story of her mother, who, when she was serving as tribal judge, was told by a non-Indian "You think like a white man."

"I think like an Indian woman!" was Mrs. Paniogue's indignant reply.

A "really enjoyable thing" for Mrs. Butterfield is the opportunity to do lobbying in Washington, D.C. Asked when she does this, she replied, "Every chance I get!"

At the moment her chief concern is her tribe's opposition to the erection of a dam at American Falls which would inundate the bottomlands of the Fort Hall Reservation.

She was also eager for the appointment of a qualified Indian to the Indian Claims Commission—"Nixon promised and has done this."

She has had some opposition from non-Indians. One in Washington was heard to say, "Things were just fine till that old squaw started shooting off her mouth." She is able to laugh about this sort of unpleasantness.

NATIONAL BUSINESS WOMEN'S WEEK

HON. BEN REIFEL

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. REIFEL. Mr. Speaker, October 19 through 25 is National Business Women's Week. During this time it is fitting to salute the achievements of all business and professional women in America.

Women are increasingly becoming more involved in setting the direction of the country. Through continued persistence they are achieving their goal to become an integral part of the business and professional world.

The working women, who were once a small minority in this country, organized and promoted the value of their resources to America. They were not satisfied with mediocre employment or token job opportunities. They sought and achieved performance, not merely pledges or platforms.

The efforts of the business and professional women are not limited to pecuniary gain. They seek involvement in the community, assist with charitable activities, and debate social issues.

Every woman is a professional. Some bear the burden of the office. Some accept the responsibilities of being wife and mother. Some do both.

To salute professional women is not to applaud the female commuter only. It is a salute to all women who do their job and do it well.

AMERICAN CAN CO. OFFERS NEW OPPORTUNITIES FOR BLACK AMERICANS

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. McCLORY. Mr. Speaker, a striking example of the way black Americans may benefit in our private enterprise system is presented in Bellamy, Ala. This community, which was purchased in 1960 by American Can Co., has experienced many improvements in physical appearance. I have been particularly impressed by the many human advantages which have been gained by its citizens through the cooperation and initiative of American Can Co.

In a recent article, which appeared in the October 1969 issue of News for Farmer Cooperatives, published by the Farmer Cooperative Service, U.S. Department of Agriculture, a part of the success story is dramatically and graphically described. In addition to recounting the benefits to citizens in the form of improved homes, jobs, and community advantages, the author describes the establishment of a new modern retail store promoted and financed principally by American Can Co.

Too often, American industry is the object of unjust criticism. Even in the area of Bellamy, it has been popular for some both in private and public positions to ascribe conditions of want and discrimination to actions by American Can Co.

Mr. Speaker, in my opinion, the American Can Co., as a benefactor of black Americans, is cast in its true light in this article. Operating in a community where 80 percent of the population is black, American Can Co. has spurred economic and social progress—and has been a vital force in promoting human equality. The leadership which has been demonstrated by William F. May, chairman of American Can Co., in promoting equal rights and job opportunities for all Americans, is translated into effective action in American Can Co.'s activities in Bellamy, Ala.

Mr. Speaker, I commend the following

article to the attention of my colleagues and to the citizens of the Nation:

A COMPANY TOWN GOES CO-OP

(By Bert W. Kenyon, Farmer Cooperative Service)

From company town to cooperative complex is the transition now going on in Bellamy, Alabama—an unincorporated village on the Western edge of the Alabama black belt populated largely by blacks—hard by the Mississippi border.

And the transition is being accomplished by a triple play in cooperation!

—The people themselves who have set up a cooperative to provide housing and other supplies.

—The American Can Company, former owner of the town, for its help to the village people in taking over their own business affairs.

—The Farmer Cooperative Service, USDA, for guidance on setting up and operating the cooperative complex.

Today the people have their own cooperative general store, air conditioned and modern, and a service station, and they are organizing a credit union.

Not all is easy during this transition period, of course, nor have all the problems of assuming greater responsibilities been solved by the people.

But some long strides have been taken—as a brief recap of the town's history will show.

HOW IT WAS

Located in Sumter County, Bellamy dates back to the 19th century. It was then the headquarters town of a family-owned and operated sawmill and lumber enterprise, the Allison Lumber Company.

Before the days of telephones and other modern communications media, automobiles and other transportation developments, the town had to be self-sustaining. Workers were well cared for but on a paternalistic family-like basis.

In keeping with tradition, the lumber company laid out streets, erected homes, built a hotel, a hospital, and a moving picture house.

It rented homes to families of individual workers for nominal sums. It saw that medical care was available—frequently on credit or no fee. A store operated by the lumber company provided groceries and other family supplies, including clothing, hardware, and durable and semi-durable items.

As times changed, some homes were provided modern plumbing, all homes were furnished electricity, and lights were installed on the busy streets. Recent years saw the closing of the movie house and the hospital. However, the operating company continued to maintain an infirmary with a registered nurse on duty during all working hours.

In 1960, American Can Company purchased Bellamy—along with other selected Allison interests. American Can Company continued to operate the company store until 1963. In that year it leased the store, including the service station, to independent operators. The company continued to deduct from wages of sawmill and other employees for purchases at the store until early 1968. As could be expected, sales at the franchised store and service station then declined precipitously. About the same time, the company discontinued furnishing heating gas on credit to local residents.

HOW COOPERATIVE COMPLEX BEGAN

On July 10, 1968, representatives of the Bellamy citizens committee (12 persons elected by workers from each of the 12 operating departments of the sawmill) formally requested Farmer Cooperative Service (FCS) to explore the feasibility of converting the grocery, drygoods, and service station operation into a cooperative.

About the same time, officers of the American Can Company approached FCS with a similar request. As the study progressed, the can company people were working to improve the lot of Bellamy people. They sold individual dwellings to worker-occupants for $1 each.

In addition, the company provided each family a $500 tax-free grant to upgrade the family housing. This involved payment by the company of nearly $50,000 of Federal income taxes to cover taxes on the income of workers occupying the newly owned homes.

When FCS completed its study, it found that converting the various merchandising facilities into a cooperative showed promise. FCS worked with the Bellamy people to get this done and the cooperative officially started March 1, 1968, under the name Bellamy Enterprises, Incorporated.

The can company subscribed to $25,000 of non-voting preferred stocks as a cornerstone for financing the cooperative. It also underwrote a substantial loan at a local commercial bank to carry on operations and provide air conditioned, modern, up-to-date facilities at an annual rental of $1 a year. The cooperative owns the inventory and fixtures.

It obtained additional financing by selling membership shares for $10 a share. Each shareholder has one vote regardless of how much stock he might own. Dividends will be paid on the basis of patronage rather than on a basis of investment. Sheerer Brothers, former owners of the franchise store, also provided some of the initial financing to help the cooperative start operations.

Their confidence in the people of Bellamy was such that not even a note was signed by the officers of the newly formed cooperative or any other persons. From its inception, all phases of the cooperative have shown a small margin each week. Sales have gradually increased.

The seven man board of directors of the cooperative did not attempt to operate a sophisticated business with projected volume of nearly half a million dollars by themselves. Instead, they wisely chose to hire competent professional management.

Pride of Bellamy citizens in their new cooperative and in their newly owned homes is evident on every side. Highly polished wooden floors are the rule rather than the exception, and Bellamy citizens are eating well, favoring high quality brand-named foods from their store.

PLANS AND PROBLEMS

The board of directors in cooperation with State and county officials is endeavoring to get additional paving around the cooperative complex facilities.

The cooperative members are also exploring the possibilities for forming a credit union. They see need for an organization where they can save on a regular basis and get loans.

Efforts are also being made to get additional industry into the Bellamy area.

Bellamy has an abundant supply of water. It is probable that some day a cooperative water and sewer system will be added.

The income in Bellamy is above average for many southern communities. With a stabilized population of approximately 1,000 people and 200 wage earners, the town is, with one or two exceptions, inhabited by employees of the sawmill.

Over 80 percent of the employers are black, with the town population in the same proportion. Most have lived in the Bellamy area most of their lives. Median income in 1968 exceeded $4,000 a year, with workers earning an average hourly rate of $1.85.

Most sawmill employees are men. It is anticipated, therefore, that efforts will be made to attract additional industry into Bellamy requiring the high degree of manual dexterity found in women. This would further increase the income in Bellamy.

Bellamy still has problems, of course. The main one was succinctly summed up by a substantial black citizen, prominent in the affairs of the town and of the citizens' committee.

He said: "The major problem is not one of race. It is one of getting the citizens of Bellamy to realize that while they have gained substantial amounts of income and rights and privileges, they now have new responsibilities."

For generations, Bellamy citizens always found groceries, clothing, heat, housing, medical attention and, if necessary, cash (at no interest to the employee) available, regardless of how much work time the individual employee might be due from the company.

Now, the workers net more money per hour and more income per week. But it is no longer possible for them to go to the company store and get their groceries, clothing, television, refrigerator, automobiles, gasoline, and other items on credit. Neither can they go to the company hospital and get medical attention at low cost, or in many instances, at no cost at all.

It is believed that the new cooperative complex can substantially help members learn how to shoulder the responsibilities which must of necessity in present society go along with increased earnings and rights and privileges.

Thus, hopefully, the cooperative complex will not only meet an economic need for these people, but will provide a training ground for greater self-sufficiency.

ADMINISTRATION'S MARINE SCIENCE PROGRAM

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. LIPSCOMB. Mr. Speaker, I want to call attention to the Vice President's recent announcement that the administration has chosen five priority marine science projects for immediate emphasis. The announcement spells out the administration's efforts toward coastal zone management, establishment of coastal laboratories, Great Lakes restoration, Arctic environmental research, and the International Decade of Ocean Exploration.

This emphasis placed on the oceanic environment is to be applauded. Each day that passes brings us new reminders of the need to take immediate steps to preserve our natural environment as a heritage for coming generations. The oceans, which covers 71 percent of our globe, are by far the largest area of that environment. The global waters of the earth significantly influence and are correspondingly influenced by man's actions. While we have done great harm to our land, through wise and urgent action we can still preserve most of our oceanic environment.

The program's initiatives would assist the State governments in their ability to manage their coastal resources. They would broaden our scientific understanding of the coastal zone through establishment of marine laboratories. They provide for a pilot study to guide restoration of the Great Lakes. And they will expand our knowledge for preserving the oceanic environment as part of the International Decade of Ocean Exploration. These are all important and praiseworthy steps.

I applaud this breakthrough in our na-

tional marine science program to preserve our oceanic resources, and I look forward to additional measures in this direction in the future.

RAPE OF A RIVER

HON. ROBERT T. STAFFORD

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. STAFFORD. Mr. Speaker, when the House acted recently upon the public works appropriation bill for fiscal year 1970, I opposed the inclusion therein of $500,000 for planning and design work in connection with construction of a flood control dam at Gaysville, Vt.

I offered an amendment to strike the money in question from the bill, but it was defeated on a division vote.

I have since been encouraged to note that a very perceptive editorial supporting the position taken by me has been printed in the North Adams Transcript of North Adams, Mass.

Since the Commonwealth of Massachusetts would be one of the principal beneficiaries of flood control construction in Vermont, I am particularly pleased to note that the North Adams, Mass., Transcript, in its editorial, comes out strongly in opposition to construction of the Gaysville Dam.

The editorial follows, appropriately titled "Rape of a River":

RAPE OF A RIVER

"They're killing me with kindness," sadly observed Congressman Robert Stafford of Vermont last week.

His remark was prompted by his failure to convince the House of Representatives that it should not give the Corps of Army Engineers $500,000 for the planning of a mammoth flood control dam at Gaysville on the lovely White River in Vermont.

Rep. Stafford pleaded with his conferees in the House to withhold the funds which will transform the White River, beloved of trout fishermen and lovers of unspoiled Vermont beauty, into a vast reservoir by damming the stream at Gaysville.

He reported that residents of the towns which lie upstream from the proposed dam—Stockbridge, Pittsfield and Rochester—are overwhelmingly against the dam, despite the rosy picture of a speedboat and water ski-filled resort lake that the army engineers see as the principal by-product of their sentence of death on one of the most beautiful streams in New England.

Thousands of acres of Vermont farmland will disappear forever as the waters of the proposed manmade lake rise, hundreds of people who live on these farms will lose their homes.

But area protests against the heartless technicians who want to dam the river are supplemented by the agonized cries of the countless number of non-Vermonters who look on the White River valley as a heritage that should be preserved not only for Vermont residents but for all people who love Vermont as it is.

The economic folly of pouring $27 million—the estimated final cost of the dam—into this sparsely settled area of Vermont is obvious. Nothing that the dam will save from occasional high water can equal the cost of the dam.

And in the process of stemming the rushing river, with its sparkling water and silvery rainbow trout, the government will be drowning a natural asset that every year attracts many tourists and fishermen, all of whom spend money in the area.

True, the resulting lake will become a sort of attraction—a sizable lake upon which boating and allied water sports can be enjoyed.

But if the engineers are not stopped, a shameful violation of what nature intended the White River Valley to be will have been committed by men.

Books have been written about the beauty and the joys of the White River. Artists have painted unforgettable scenes of the river coursing through its lovely valley.

The people of Vermont do not want the kind of protection the single-minded army engineers offer.

It should not be forced on them by Congress.

Perhaps the Senate or the White House will undo the damage done by the House and kill this unwanted and unneeded project now, once and for all.

JAMES ANDREW McDONALD, DETECTIVE

HON. MASTON O'NEAL

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. O'NEAL of Georgia. Mr. Speaker, the older we grow the more friends we bury. The older our friendships the sadder are our partings.

J. A. McDonald, chief investigator of the sheriff's office in Dougherty County, Ga., was a true friend of mine, but in addition, he was the kind of police officer who brought credit to the much-abused profession.

Mac and I worked closely together for many years and on hundreds of cases while he served as detective and I as district attorney. In this relationship you get to know one another mighty well. Perhaps you even get to know the other fellow better than you know yourself.

The long association with Mac intensified my respect for his character, his courage, his devotion to duty, his fairness and astuteness in dealing with violators, and his tirelessness in protecting the public.

It was a shock to me to read of his death, but a consolation to read the editorial in the Albany Herald that stated so well what those who knew him best would like to say. A news account of the funeral from the same newspaper reflects the community's reaction to Mac's untimely death.

The editorial and news item follow:

JAMES ANDREW McDONALD, DETECTIVE

Those of us who have spent a great deal of time on the police beats (and what reporter worth his salt has not?) are aware of the fact that there are a great many good and earnest men in policing. Just occasionally, from their ranks, will rise a man who is so extremely talented that he becomes the pride of his profession, a man of merit recognized throughout the community.

Such a man was James Andrew McDonald—policeman, detective, Dougherty County chief investigator, to cite the rungs on the ladder of his career.

It pains us, who so many times, in so many stories, have written of "Mac" in the present tense, to be compelled to employ the past tense. For "Mac" was an activist. Crime worried him. Not crime in general, but crime in particular. And, most particularly, the cases that were assigned him, first at the Albany Police Department at old City Hall, and later as the chief investigator for his boss and old friend, Sheriff D. Lamar Stewart, who also (it all seems so long ago now) knows from experience the tedium of patrolling beats and endless interrogations.

In investigatory work, J. A. McDonald was a bulldog. He never quit. If no solution were impending, he probed, he prodded, he penetrated into every aspect of the matter at hand. He drove himself, not because his superiors were heartless but because he could not rest until he had met the challenge before him. Not once, in all the years that we knew him, did we ever hear "Mac" admit there was even the faintest possibility that a case could remain unsolved. His sole concession, and this only rarely, was that it might be "tough."

Because of his dedication, because of his excellence, Investigator J. A. McDonald had few of these. His average of successful prosecutions was fantastically high because he prepared his cases meticulously.

Detectives of his stamp are never really replaced. Let us hope, for the sake of the community, that his colleagues among the peace officers will pay him the ultimate final tribute of emulation.

FOR "MAC"—TOUGH COPS SHED TEARS AT FUNERAL

Lawmen are not the insensitive clods that they are depicted by their enemies.

Sunday, when they gathered to pay tribute to one of their own, Dougherty County Chief Investigator James Andrew McDonald, dead of a heart attack at the grievously young age of 51, tears flowed from the eyes of tough cops.

The chapel of Kimbrell-Stern Funeral Directors was jammed with mourners. So was all other available space. And the cortege to Floral Memory Gardens contained more than 200 automobiles.

That was what his friends and his colleagues thought of "Mac," generally recognized as a "tough cop" but an eminently fair one—and beyond that, a compassionate cop.

When the conductors of the funeral service, the Rev. J. Clyde Harvard, pastor of Avalon United Methodist Church, and the Rev. Louis E. Gholson of Americus referred to Investigator McDonald as " a man's man who could be as iron-fisted as necessary, but yet a kind and compassionate man," the lawmen in the chapel nodded in recognition of a large truth.

And so, they laid Chief Investigator James Andrew McDonald to rest yesterday. And when they had done, the skies joined his family and friends to weep.

PRAISE FOR PRESIDENT NIXON

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. BERRY. Mr. Speaker, I am today in receipt of a letter from an individual in my district whose sentiments I applaud. While I do not know whether or not he may object to the use of his name, I shall not take advantage of it, but I wish to insert in the RECORD his letter which is as follows:

Hon. E. Y. BERRY,
Congressman,
House Office,
Washington, D.C.

DEAR CONGRESSMAN: Now that the United States has experienced the recent Moratorium, and since there seems to be more in the future, I wish to comment on this.

Our President deserves much praise in the statesmanship way he dealt with this situation, in standing steadfast while huge crowds gathered around his office building. I wish to say that I for one agree wholeheartedly with Mr. Nixon's conduct of each and every situation. Our great Nation is being subjected to the actions of many agitators, who are trying to influence the people for subversive reasons or for private gain.

All true Americans must show that they are behind our President in the successful termination of the current Vietnam situation. All Senators, Congressman and individuals alike, have a great responsibility to keep our Nation strong by complete unity.

Will you, Honorable Congressman, please see that Mr. Nixon receives a copy of this letter.

———— ————.

A MARINE SPEAKS OUT

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. WYMAN. Mr. Speaker, Mr. Robertson Page, formerly of New Hampshire, presently of Douglaston, N.Y., and a U.S. marine, has written eloquently of recent incidents on the domestic scene. In this day of mixed-up values I commend Mr. Page's message to the thoughtful reflection of all citizens.

The message follows:

A MARINE SPEAKS OUT

(By Robertson Page)

Hey you!

Yes, you with the beard and long hair and marijuana!

Sorry, I didn't know they called it "grass" these days.

You see, I just haven't been around much lately. Not since I was killed more than twenty-five years ago at a place called Wake Island.

You might say I'm on temporary leave from my grave. I've heard a lot of things about you and I wanted to see you for myself.

For example, I understand you accuse my generation of hyprocrisy. Therefore, I assume you mean me.

Could be, Long Hair, I really don't know.

What I do know is that I was plenty scared when that Jap lunged at me with a fixed bayonet. Because that was end of everything for me.

I also admit to being a little scared when I enlisted in the Marine Corps in wartime. But I did enlist—because I loved my country.

Now I learn that you don't care much for my country! I hear you have a demeaning word for it—something about "the Establishment". And that some of our newspapers support you in your infamy.

Fifteen thousand tides have washed over my sandy grave at Wake, and twenty five years is a long time. But I never expected this. Not in America!

I further understand that you burned your draft card and ran for the sanctuary of a church. That others fled to Toronto to escape the draft.

All in the name of *Idealism!*

It also has come to my attention that some of your bearded friends burned the American Flag in Central Park. That must have been a real blow at hypocrisy!

Perhaps I'm too severe on you. It just so happens that my grave is quite shallow and I hear many things.

For one, I understand you have led violent demonstrations for the right to use four-letter words. That's a joke, pal! We Marines invented them! But, I'll tell you one thing Beardo. We never regarded them as a constitutional right.

And I hear you demanded a voice in running the universities. Gosh! I guess you must be plenty smart to know more than the professional educators!

I also hear that in the summer of 1969 more than 400,000 of you went to a "rock festival" in the Catskills living off narcotics and group sex and having a real ball, while your peers were getting killed fighting Communists in Vietnam.

You know, it used to be that people back home rolled bandages for the men up front.

What were you *Idealists* doing in the Catskills?

You want to know something, Long Hair? I don't think I like you very much. But forget that. I knew so many dedicated, wonderful guys who died for their country at Wake—and at Anzio and Iwo Jima and Omaha Beach and Bastogne—that I can't get very upset over a draft card burner like you.

But I'll tell you one thing that I find repulsive.

In all of the disruptive protests you have fomented on the campus, you have consistently tried to destroy those institutions that have made the United States strong against its enemies—R.O.T.C., military recruitment and research to strengthen our national security.

It makes me wonder about you, Long Hair. Are you an unwitting pawn of the enemy? or just a plain *Stinker?*

That's for someone else to decide. Right now, my moment is up and I must get back to Wake Island . . . this time forever.

In parting, I like to think that my death was not a waste . . . that in supporting my country on this narrow strip of sand I defended something worthwhile for a new and better generation of Americans.

But now that I've seen you, I begin to wonder. Perhaps I should have fled to Toronto!

On second thought, I'm glad death came when it did.

You see, Long Hair, when I left this world I held a special belief, something you idealists would call square. It consisted of a deep-seated reverence for my God, for my heritage, for my parents . . . and for my country.

No one can take this from me. Not even in death. I pity the fact you choose not to share this belief, to express this simple faith in America.

Oh, how I pity this fact.

FOREIGN AID PROGRAM

Hon. PETER H. B. FRELINGHUYSEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. FRELINGHUYSEN. Mr. Speaker, when a constituent urges me to support a cut in foreign aid appropriations, I try to find out why. I ask him whether he knows that the trend in foreign aid costs has been sharply downward in recent years. He usually does not. I ask him what his estimate is of the foreign aid share of the Federal budget. His estimate, more often than not, is many times what it actually is.

It surprises most people to learn that the AID appropriation represents about nine-tenths of 1 percent of the Federal budget—as against 11 percent of the Federal budget during the Marshall plan aid in 1949. They are no less surprised to know that the aid program proposed for 1970 will come to one-fifth of 1 percent of the gross national product, whereas 20 years ago it was 2.78 percent.

The President's request for the fiscal year 1970 foreign aid program reflects his concern for economy in Government operations. The total $2.7 billion he seeks is the lowest ever requested under the Foreign Assistance Act or any of its antecedent legislation. The $2.21 billion intended for economic assistance programs of AID is less by some $138 million than the appropriation requested by President Johnson.

This is a modest budget for an effort that the President feels is "vitally needed to maintain our relationship with the developing countries." We may not feel able to afford more. We cannot afford to provide less.

POINT REYES NATIONAL SEASHORE

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. COHELAN. Mr. Speaker, I am pleased to bring to the attention of my colleagues a series of resolutions I recently received from several different cities and civic associations in California urging the completion of Point Reyes National Seashore.

These resolutions are indicative of the broad-based support for this project. They represent just one more bit of evidence that the administration and the Congress should act and should act now on this project. The resolutions follow:

RESOLUTION BY ALAMEDA COUNTY, CALIF., TO URGE COMPLETION OF ACQUISITION OF POINT REYES NATIONAL SEASHORE

Whereas, the Point Reyes National Seashore is the only such facility on the West Coast of the United States; and

Whereas, although the Point Reyes National Seashore was authorized by the Congress of the United States in 1962, only 22,540 acres out of a total 53,480 acres have been acquired for park purposes to date; and

Whereas, the present park ownership within the boundary is hopelessly disjointed and inoperable as a park unit; and

Whereas, the remaining private lands within the Park's authorized boundary are unduly burdened by uncertain Federal intentions of future acquisition and by rising prices, and also have been subject to constant trespassing by park visitors; and

Whereas, existing large privately owned parcels including some of the most valuable potential park land are in imminent danger of being divided into smaller ownership and developed; and

Whereas, the people of the United States have been promised the use of this great national resource, and its preservation is vital to present and future generations of Americans; and

Whereas, the present and potential recreational value of the Point Reyes National Seashore may be best measured by the more than 600,000 visitors which visit the Seashore each year;

Now, therefore, be it resolved that this Board of Supervisors of the County of Alameda, California, urges the President of the United States and the current administration to do everything within their power to

complete this acquisition project at the earliest possible opportunity; and

Be it further resolved that the Clerk of this Board is hereby directed to send certified copies of the within Resolution to the Honorable Richard M. Nixon, President of the United States; the Honorable Ronald Reagan, Governor of California; the Honorable Walter J. Hickel, Secretary of the Interior; Mr. George B. Hartzog, Director of the National Park Service; Mr. Robert P. Mayo, Director of the Bureau of the Budget, and the California Congressional delegation.

Attest:

JACK K. POOL,
Clerk of the Board of Supervisors.
CAROL S. DALTON.

SAN RAFAEL, CALIF.,
October 13, 1969.

Re Point Reyes National Seashore.

Hon. JEFFREY COHELAN,
Rayburn Building,
Washington, D.C.

DEAR SIR: The Board of Directors of the Strawberry Recreation District, a public agency, in the County of Marin, State of California, deeply concerned with the present status of land acquisition in the Point Reyes National Seashore, at its last regular meeting adopted its Resolution No. 139 urgently requesting your good offices for the completion of the land acquisition in the seashore.

At the request of the Board of Directors of the Strawberry Recreation District, I am enclosing herewith a certified copy of the District's Resolution seeking your personal assistance.

Respectfully yours,

STEPHEN H. KAUFMAN,
Counsel, Strawberry Recreation District.

RESOLUTION NO. 139 BY THE STRAWBERRY RECREATION DISTRICT

(Resolution urging completion of acquisition of Point Reyes National Seashore)

Whereas, the Pt. Reyes National Seashore is a unique facility on the West Coast of the United States and located in the County of Marin; and

Whereas, only 22,540 acres have been acquired since 1962 out of a total authorized purchase of 53,480 acres; and

Whereas, existing privately held parcels are in imminent danger of being subdivided and developed into residential developments; and

Whereas, the completed Pt. Reyes National Seashore will represent a material recreational asset not only for the residents of the Strawberry Recreation District, the County of Marin and the State of California, but also to all of the citizens of the United States to whom such seashore has been promised; and

Whereas, the preservation of the seashore is vital to the protection of present and future generations of Americans;

Now, therefore, be it resolved that the Board of Directors of the Strawberry Recreation District, a Recreation and Park District, Marin County, California, urges the President of the United States and the current administration to make every effort within their power to complete the acquisition of the remaining lands to complete the Pt. Reyes National Seashore at the earliest possible moment.

Resolved further, that the Secretary of this Board is hereby directed to send certified copies of the within Resolution to the Honorable Richard M. Nixon, President of the United States; to the Honorable Ronald Reagan, Governor of the State of California, the Honorable Walter J. Hickel, Secretary of the Interior of the United States, Mr. George B. Hartzog, Director of the National Parks Service, Mr. Robert P. Mayo, Director of the Bureau of the Budget and also to the California Congressional Delegation.

Passed and adopted at a regular meeting of the Board of Directors of the Strawberry Recreation District on the 1st day of October, 1969.

A. R. SENTER,
Chairman of the Board of Directors.

Attest:

J. K. GARNER,
Secretary of the Board of Directors.

RESOLUTION NO. 1332, CITY OF BELVEDERE

(Resolution of the City Council of the City of Belvedere urging completion of acquisition of Point Reyes National Seashore)

Whereas: The Point Reyes National Seashore is the only such facility on the West Coast of the United States; and

Whereas: Although the Point Reyes National Seashore was authorized by the Congress of the United States in 1962, only 22,540 acres out of a total 53,480 acres have been acquired for park purposes to date; and

Whereas: The present park ownership within the boundary is hopelessly disjointed and inoperable as a park unit; and

Whereas: The remaining private lands within the Park's authorized boundary are unduly burdened by uncertain Federal intentions of future acquisition and by rising prices, and also have been subject to constant trespassing by park visitors; and

Whereas: Existing large privately owned parcels including some of the most valuable potential park land are in imminent danger of being divided into smaller ownerships and developed; and

Whereas: The people of the United States have been promised the use of this great national resource, and its preservation is vital to present and future generations of Americans; and

Whereas: The present and potential recreational value of the Point Reyes National Seashore may be best measured by the more than 600,000 visitors which visit the Seashore each year.

Now, therefore, Be it resolved that the City Council of the City of Belvedere, California, urges the President of the United States and the current administration to do everything within their power to complete this acquisition project at the earlier possible opportunity.

Be it further resolved that the City Clerk is hereby directed to send certified copies of the within resolution to the Honorable Richard M. Nixon, President of the United States; the Honorable Ronald Reagan, Governor of California; the Honorable Walter J. Hickel, Secretary of the Interior; Mr. George B. Hartzog, Director of the National Park Service; Mr. Robert P. Mayo, Director of the Bureau of the Budget, and the California Congressional Delegation.

THOMAS S. PRICE,
Mayor of Belvedere.

RESOLUTION NO. 505

(Resolution of the city council of the City of Saratoga urging completion of acquisition of Point Reyes National Seashore)

Whereas, the Point Reyes National Seashore is the only such facility on the West Coast of the United States; and

Whereas, although the Point Reyes National Seashore was authorized by the Congress of the United States in 1962, only 22,540 acres out of a total 53,480 acres have been acquired for park purposes to date; and

Whereas, the present park ownership within the boundary is hopelesly disjointed and inoperable as a park unit; and

Whereas, the remaining private lands within the Park's authorized boundary are unduly burdened by uncertain Federal intentions of future acquisition and by rising prices, and also have been subject to constant trespassing by park visitors; and

Whereas, existing large privately owned parcels including some of the most valuable potential park land are in imminent danger of being divided into smaller ownerships and developed; and

Whereas, the people of the United States have been promised the use of this great national resource, and its preservation is vital to present and future generations of Americans; and

Whereas, the present and potential recreational value of the Point Reyes National Seashore may be best measured by the more than 600,000 visitors which visit the Seashore each year,

Now, therefore, be it resolved that this City Council of the City of Saratoga, California, urges the President of the United States and the current administration to do everything within their power to complete this acquisition project at the earliest possible opportunity.

Be it further resolved that the Clerk of this city and ex-officio clerk of the City Council is hereby directed to send certified copies of the within resolution to the Honable Richard M. Nixon, President of the United States; the Honorable Ronald Reagan, Governor of California; the Honorable Walter J. Hickel, Secretary of the Interior; Mr. George B. Hartzog, Director of the National Park Service; Mr. Robert P. Mayo, Director of the Bureau of the Budget, and the California Congressional delegation.

Passed and adopted at a regular meeting of the City Council of the City of Saratoga, State of California, held on the 1st day of October, 1969.

SAMUEL L. TYLER,
Mayor.

Attest:

J. R. HUFF,
City Clerk.

PERALTA COLLEGES,
Oakland, Calif., October 15, 1969.

Hon. GEORGE E. BROWN, Jr.,
Cannon Building,
Washington, D.C.

DEAR MR. BROWN: The attached Resolution 69/70–26 expresses the concern of the Board of Trustees of the Peralta Junior College District in connection with early acquisition of the additional 31,940 acres of land for Point Reyes National Seashore.

It is urgently requested that these lands be acquired as authorized by the Congress in 1962.

Sincerely,

JOHN W. DUNN,
Secretary, Board of Trustees.

RESOLUTION NO. 69/70–26; PERALTA JUNIOR COLLEGE DISTRICT

Whereas, the Point Reyes National Seashore is the only such facility on the West Coast of the United States; and

Whereas, although the Point Reyes National Seashore was authorized by the Congress of the United States in 1962, only 22,540 acres out of a total 53,480 acres have been acquired for park purposes to date; and

Whereas, the present park ownership within the boundary is hopelesly disjointed and inoperable as a park unit; and

Whereas, the remaining private lands within the Park's authorized boundary are unduly burdened by uncertain Federal intentions of future acquisition and by rising prices, and also have been subject to constant trespassing by park visitors; and

Whereas, existing large privately owned parcels including some of the most valuable potential park land are in imminent danger of being divided into smaller ownerships and developed; and

Whereas, the people of the United States have been promised the use of this great national resource, and its preservation is vital to present and future generations of Americans; and

Whereas, the present and potential recreational value of the Point Reyes National Seashore may be best measured by the more than 600,000 visitors who visit the Seashore each year.

Now, therefore, be it resolved that this Board of Trustees of the Peralta Junior College District, Oakland, California, urges the President of the United States and the current administration to do everything within their power to complete this acquisition project at the earliest possible opportunity.

Be it further resolved that the Secretary of this Board is hereby directed to send certified copies of the within Resolution to the Honorable Richard M. Nixon, President of the United States; the Honorable Ronald Reagan, Governor of California; the Honorable Walter J. Hickel, Secretary of the Interior; Mr. George B. Hartzog, Director of the National Park Service, Mr. Robert P. Mayo, Director of the Bureau of the Budget, and the California Congressional delegation.

Passed and adopted on this 6th day of October, 1969.

JOHN W. DUNN,
Secretary, Board of Trustees.

RESOLUTION No. 3-69-70, WHISMAN SCHOOL DISTRICT, MOUNTAIN VIEW, CALIF.

(Resolution of the board of trustees urging completion of acquisition of Point Reyes National Seashore)

Whereas the Point Reyes National Seashore is the only such facility on the West Coast of the United States; and

Whereas, although the Point Reyes National Seashore was authorized by the Congress of the United States in 1962, only 22,540 acres out of a total 53,480 acres have been acquired for park purposes to date; and

Whereas the present park ownership within the boundary is hopelessly disjointed and inoperable as a park unit; and

Whereas the remaining private lands within the Park's authorized boundary are unduly burdened by uncertain Federal intentions of future acquisition and by rising prices, and also have been subject to constant trespassing by park visitors; and

Whereas existing large privately owned parcels including some of the most valuable potential park land are in imminent danger of being divided into smaller ownerships and developed; and

Whereas the people of the United States have been promised the use of this great national resource, and its preservation is vital to present and future generations of Americans; and

Whereas the present and potential recreational value of the Point Reyes National Seashore may be best measured by the more than 600,000 visitors which visit the Seashore each year: Now, therefore, be it

Resolved, That this Board of Trustees of the Whisman School District of Mountain View, California, urges the President of the United States and the current administration to do everything within their power to complete this acquisition project at the earliest possible opportunity.

Be it further resolved, That the Secretary of this Board is hereby directed to send certified copies of the within Resolution to the Honorable Richard M. Nixon, President of the United States; the Honorable Ronald Reagan, Governor of California; the Honorable Walter J. Hickel, Secretary of the Interior; Mr. George B. Hartzog, Director of the National Park Service; Mr. Robert P. Mayo, Director of the Bureau of the Budget; and the California Congressional delegation.

Passed and adopted at a regular meeting of the Board of Trustees of the Whisman School District, held on the 25th day of September, 1969.

ROSS M. CARTER,
Secretary.

AIR POLLUTION IS KILLING TREES

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. ANDERSON of California. Mr. Speaker, the need for alleviating air pollution grows with each day. Much discussion is being exchanged about the harmful effects air pollution has on our health and on its adverse, long-range effects to animal and plant life. Two articles, one appearing in the Friday, October 17, issue of the Los Angeles Times, and the other from the Sunday, October 19, issue of the Washington Post, indicate that even tree life, on both the east and west coasts, is being killed and threatened by smog caused by air pollution. The articles show how widely the problems of pollution have spread and indicate the urgent need for action that will clear our skies. Both articles are well worth reading and I urge my colleagues to do so.

The articles follow:

[From the Los Angeles Times, Oct. 17, 1969]

SMOG KILLING 1.3 MILLION FOREST TREES, UNITED STATES SAYS—SURVEY DISCLOSES THAT MOST ARE LOCATED IN AREA NEAR LAKE ARROWHEAD, CRESTLINE

(By Lee Dye)

Nearly 1.3 million trees in the San Bernardino National Forest are dying from the effects of smog, according to a study by a division of the U.S. Forest Service.

Most of the trees are in the lush areas around Lake Arrowhead and Crestline, among the most frequented mountain resort regions in Southern California.

Some ailing trees also were found in the Angeles National Forest.

Results of the survey were announced Thursday in Ann Arbor, Mich., during the sixth International Symposium on Remote Sensing of Environment.

Dr. Robert Bega, a plant pathologist with the Pacific Southwest Forest and Range Experiment Station in Berkeley, which conducted the survey, said the trees are scattered over 161,000 acres in the San Bernardino Mountains.

FOUR TIMES GREATER

Bega said 46,000 acres of ponderosa and Jeffrey pines showed heavy damage, and 115,000 acres showed light to moderate damage. Of nearly 1.3 million trees which he said are "dying from the effects of smog," 82% were moderately damaged, 15% were severely damaged and 3% were dead.

The number of acres where the trees were affected is four times greater than forestry experts had estimated just one year ago, accordng to Steven L. Wert, research forester who discussed the survey during the Ann Arbor meeting.

Bega told The Times during an interview that many of the trees that are dying are more than a century old.

He said topography is probably the main reason for the "major problem" in the San Bernardino Mountains. The mountains form the eastern rim of the Los Angeles Basin. Much of the smog originating in the basin is trapped against the mountains by winds from the coast.

In effect, the smog is "suffocating" the trees, Bega said.

"The ozone breaks down the chlorophyll (the green coloring matter in the plants which converts carbon dioxde and water into carbohydrates), and it destroys the food producing systems," he said.

One of the first indications, he said, is a yellowing of the needles, which is already apparent in many of the trees.

"They stand out quite prominently among the healthier trees," he said.

Officials are not certain why some trees are bothered and others aren't.

"There is evidence of greater tolerance among some trees, but we don't know why," Bega said. "It could be genetics, but that's probably a simplified answer."

In their weakened condition, trees affected by the the smog also are less resistant to insects—a growing problem in the San Bernardino National Forest.

TAKE 5 YEARS

"The insects thrive on the weaker trees and then move on to the healthier trees," he added.

Bega estimated that it takes about five years for the smog to kill a tree once the process begins.

Thus, he said, it is possible at least 1.3 million trees in the San Bernardino National Forest will die within the next five years.

Bega said the only hope is that enough trees will be able to resist the smog.

"But that's not very realistic," he said. "Some of those trees have been there for more than 100 years. They will be missed."

The survey, most of which was conducted during June and July, was done primarily by aerial and ground survey teams, plus remote-controlled electronic sensors. This was the first time sensors have been used to detect forest damage, he said.

This also was the first survey of this magnitude in California, although one of similar scope is under way in North Carolina to determine the effects of industrial air pollution.

"But our problem is gretater than theirs," Bega said, "because this land is used for recreation in a heavily populated area.

"These aren't lumber trees," he added, "they're people trees."

[From the Washington Post, Oct. 19, 1969]

POLLUTION BLAMED FOR CAUSING TREE ILLS

"Acute sulfur dioxide damage" has been found by two government air pollution scientists who examined Christmas trees that allegedly were stunted by emissions from a generating plant in West Virginia near the Maryland line in Garrett County.

Leighton Price, director of the Office of Educational Information of the Air Pollution Control Administration, said the investigation by two department scientists confirmed earlier findings.

Dr. Francis Gouin, a horticulture specialist at the University of Maryland, brought the situation to light after two Christmas tree growers complained about the Virginia Electric Power Co. plant at Mount Storm, W. Va.

Gouin said he told the men to sell as many trees as soon as possible because he was "convinced that your trees could only be suffering from having grown in a polluted atmosphere."

The company has hired an air pollution specialist from Pennsylvania State University to look into the charges, which also are being examined by air pollution officials in Maryland and the West Virginia Department of Natural Resources.

Virgil Steyer and Dr. F. D. Custer, both of Oakland, Md., said they have a total of about 300,000 trees on six farms threatened by the blight. The trees are worth about $1.50 each "on the stump," they said.

The damage began to show up when the first unit of the generating plant went into operation in 1966, they said, adding that the situation has grown worse as the plant expanded.

UNEMPLOYMENT FIGURES

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. HALL. Mr. Speaker, the recent news from the Department of Labor concerning the jump in the rate of unemployment from 3.5 to 4 percent, has been met with a variety of reactions. This is not unusual since Labor Department figures have traditionally been misunderstood and misinterpreted.

Milton Friedman, writing in the October 20 edition of Newsweek magazine, has offered an interesting and revealing analysis of just what the 4-percent unemployment figure really signifies.

The article follows:

UNEMPLOYMENT FIGURES

(By Milton Friedman)

Few figures are watched with more fear and trembling than those reported each month on the percentage of the labor force unemployed. The jump from 3.5 to 4 percent reported last week has been seized on by some as the first real sign of success in the battle against inflation, by others, as a portent of economic collapse.

Yet few figures are more misunderstood and misinterpreted.

The unemployment percentage is currently 4 per cent. This corresponds to roughly 3.2 million unemployed. Does this mean, as one might suppose from most news stories on unemployment that more than 3 million families are wondering where the next paycheck is coming from?

WHO ARE THE UNEMPLOYED?

Not at all. Roughly 1 million unemployed are teen-agers, about half of whom are looking for their first job. Of the remaining unemployed, half are females, many of whom are not regular earners. Of the million unemployed males 20 years and older, only about half are married men.

More important, unemployment is mostly a brief period between jobs—or between school or housework and a job. Nearly two-thirds were either working in the prior month, or not looking for a job. Only slightly more than a million were unemployed.

Put differently, fewer than half of the currently unemployed have been unemployed for as long as five weeks; only 5 per cent—about 150,000—for as long as six months. This is the hard-core group that leaps to mind when we talk about "the unemployed." Their plight is certainly serious—but 150,000 persons in that position is a far cry from 3 million.

Many persons are unemployed by choice. Some quit one job to look for a better job—more than a third of those who leave jobs in any week do so voluntarily; others have refused a job offered in the belief that a better one will be along; still others left an earlier job some time ago to go to school, or to make a home for their husbands, or to have or raise children and have only just re-entered the labor force. A rise in unemployment may be a good thing as well as a bad thing—if it means that people have so much confidence in finding another job that they do not hesitate to leave one they do not like.

In some ways, a more meaningful figure than the number of persons unemployed at any one date is the average length of time that persons who become unemployed remain unemployed—the average time between jobs for those who change from one job to another, or the average time it takes to get a job for those who go from school or home to the unemployment rolls. Until the most recent jump in the unemployment rate, that average has been about five and a half weeks—hardly a period long enough to cause acute distress.

What this meant was that each week about 530,000 people started to look for work—because they left or lost a job or because they had just entered or re-entered the labor force. Simultaneously, about 530,000 people each week found jobs or stopped looking. Of the 530,000 people who started to look for jobs each week, about one-fifth found a job within a week; about three-quarters, within a month; and all but about 1 per cent, within six months. During a year as a whole, not 3 million people but around 20 million separate individuals were unemployed at some time or other—the bulk for trivial periods.

TIME BETWEEN JOBS

Cries of horror go up when it is suggested that the slowing down of the economy as a by-product of policies to stop inflation may mean a rise from 3.5 per cent to around 4.5 per cent in the unemployment percentage. What, it is said, throw more than a million additional people out of work?

In fact, the number who each week start to look for work would be raised very little—from 530,000 to perhaps 560,000. But these job-seekers would spend on the average an extra week or so finding an acceptable job—the average duration of unemployment would go from about five and a half to about six and a half weeks. The most serious effect would be to raise the number of persons unemployed at any time for more than six months from 180,000 to perhaps 300,000.

These changes are not desirable. But they are not a major catastrophe. They do not spell acute distress. And their avoidance does not justify letting inflation run rampant—which would in any event only postpone higher unemployment temporarily. We badly need less hysteria and dogmatism and more perspective, proportion and balance in judging these matters.

THE FUTURE ISN'T WHAT IT USED TO BE

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. GUBSER. Mr. Speaker, one of California's leading educators, Dr. A. Robert DeHart, president of De Anza College in my congressional district, recently addressed the college faculty. I believe Dr. DeHart's comments will prove valuable and interesting to readers of the RECORD, and am submitting the text of his address for insertion at this time:

THE FUTURE ISN'T WHAT IT USED TO BE—A PAPER ON INSTITUTIONAL PURPOSES

(By A. Robert DeHart)

It is not often that I have the opportunity to talk to all of you at one time. Usually it happens when we are faced with a crisis that needs discussing, so I welcome these infrequent occasions when we have an open agenda, and I prepare carefully for them. I won't waste a lot of time by reminding us how good we are, how much we have accomplished, or how many nitty-gritty problems still lie ahead. You know that we are a very good college, that we have accomplished an enormous amount and that face almost insurmountable problems that can be solved only by the keen, analytical minds that all of us De Anzans possess in such abundance.

What I find myself wanting to do at times like this is talk about what we *should* be doing, what we *should* be like, and how we *should* be organized. Last year you may remember that I talked to you about Theory X and Theory Y organizations and how I feel we *should* be organized. (And I might add parenthetically that I am pleased with most of our movement towards a Theory Y organization and the accompanying build-up of open communications, mutual trust, and mutual support during a tough year when these characteristics might have diminished rather than increased.) Today you will find a great many *shoulds* in my talk. I will discuss something that has bothered me for a long time, mainly because I feel it is of overriding importance and has received so little attention from me or anyone else. I will present to you what I believe the goals—or as some would say, institutional purpose at De Anza—and to some degree all education—*should* be.

I have put off getting myself together on this topic for several reasons: in the first place, there has been no pressure from anyone to do it—a going concern like ours, with many forces working to keep it alive, tends to be very means oriented and avoids the task of defining purposes; secondly, I think I have been unconsciously evading the conflicts with those in and out of the college who would be threatened by a sharp definition of purpose and the attendant responsibility of practicing what we preach; and, lastly, it is just plain hard intellectual labor that most of us find so easy to evade.

While there has been no external pressure, I must confess that as President of the college I have felt a lot of *internal* pressure to clarify—if not *the* mission of our college—then at least *my* mission for the college. I often find that I am running very hard, but don't know where I am running to, and don't know who is running with me. This may be alright for a jogger (like Crampton) but for someone who is supposed to be leading the pack at least most of the time, this can be a most uncomfortable feeling. So the time I have put into clarifying for myself what the purposes of De Anza College should be have been very worthwhile. But the main practical import in asking the staff to consider this topic with me is that I hope desired ends and means will be sustained and furthered, not through continuous command, but as a free expression by the staff of truly accepted principles.

SOME BASIC CONSIDERATIONS

At the outset, let me make it clear that what we call "The Objectives of De Anza College" as listed on Page 8 of our current catalog, are, in my opinion, not objectives at all but *functions* we perform. Let me remind you what they are:

1. The counseling function.
2. The general education function.
3. The transfer function.
4. The vocational training.
5. The developmental (remedial) function.
6. The co-curricular function.
7. The community service function.

I have no quarrel with these as functions of the college—indeed, I think every college should be performing them in varying degrees. The engineering student who enters Cal is not going to need remedial arithmetic as do some junior college students, but he may need some remedial humanities which the University has come to recognize. I also think we recognize that the junior college auto tech major and the university dentistry major are both taking terminal vocational training. One simply takes longer than the other. Where my quarrel does lie is in calling these functions "objectives." They are means and not ends and we should not confuse the two even though they are interrelated. I should add that I think we often treat these

functions as isolated identities where ideally they should operate together with each function gathering a strength from the other. I know this would result in a whole greater than the sum of its parts.

So let us return to the goals, rather than the functions of De Anza College. I know you will recognize that I am really thinking about *my* goals for De Anza. I have spent a good deal of time working with some groups on the campus in discussions that would hopefully lead to consensus about institutional purposes. But I have backed off from that approach for I have found that I was looking for my own personal answer through the group when what I really needed to do was clarify my own position first before I could effectively work with groups. I recognize now what seems so obvious, but I only dimly saw before: it is *individuals* who have guiding philosophies and purposes—not *institutions*. I know we can reach some form of censensus, but I do not expect, or want, some watered-down statement that might achieve universal agreement. I consider some diversity a strength, not a weakness.

I plan to start with my fundamental assumptions, expand on those to reach my basic philosophy of education, and then develop some guiding principles that I hold for De Anza College. I clearly recognize that my thought on these matters is grounded on assumptions and beliefs. It is necessary to make these as a framework for my thought. I think you will find me humble about my assumptions—because they may be wrong. Most of them are not presently subject to proof. But if what I say lacks as much precision and elegance as you and I might like, I do hope that by placing my philosophy and goals for the institution on the dissecting table and opening them up for your examination, you will recognize "what makes Bobby run" and where he hopes to run to.

I have done a lot of homework attempting to find statements that might already exist. Actually the field abounds with them. It seems that everyone pays lip service to the importance of education, but, in my estimation, very few seem to get at the very basic—rather than superficial—rationale for education. At any rate, I haven't found a ready-made statement that fits me. The closest I have come to, I have found in the writing of Charles Collins, a California junior college educator. Some of you may know him and I commend his work to you.

SOME FUNDAMENTALS

So let me begin at the beginning and explore some very basic beliefs and assumptions on which I build not only a personal philosophy but one that carries into education. First, I will sum up my assumptions and then give a brief rationale for each of them:

1. All behavior is caused.

2. The cause of behavior depends on the way a person perceives the world around him.

3. Appropriate behavior will depend on the accuracy of the individual's perception.

4. The determinants of perception are:

A person's sensory equipment and the complex neural connections to the brain;

Stored knowledge accessible through memory;

Emotional coloration caused by interests, prejudices, attitudes, temperament;

Conscious and unconscious values;

A philosophy or world view.

Now let me expand a little on that brief summary:

1. *Behavior is caused.* This is, of course, a basic assumption for me, but it seems obvious enough when behavior is simple: a child runs away from a snarling dog. But behavior is not too apparent when it is complex: an upper class young man goes hippie and rejects all material advantages because of a father he hates. To assume that behavior does not always carry its own internal causation is to assume that behavior can be random—pure chance—or that some external force—gods or devils—intervene and use the behavior's body to work their good or evil purposes. I prefer my assumption here—as indeed all of those must who believe a science of human behavior is possible.

2. *Cause is determined by perception.* A fundamental distinction should be drawn between what the sense organs bring in and what is perceived. Perception is the meaning which is attributed to the neural impulses brought to the brain. The brain is not a tape recorder or a camera which, with great fidelity, records the sounds and sights of the external world, or the sensations and emotions of the internal self. The brain is an interpreter; it strives to make sense out of the welter of sensations which it experiences. It has no built-in lie detector. As a matter of fact, it will often distort sensation to see what it wants to see, hear what it wants to hear, feel what it wants to feel. Thus, the shimmering heat waves on the desert are perceived by a thirsty man as a watery oasis. A paranoid personality hears people whispering and perceives that they are plotting against him. A sexual response to the sight of the contours of a girl's body is perceived by a young man as true love.

The whole perception process is analogous to a radar system. The sensory organs record the blips on the screen but the blips take on meaning only when they are interpreted. Perception is the meaning which total consciousness interprets from the blips which the sensory system brings to the internal radar screen. The moron with 20:20 vision may get a better blip than the astigmatic genius, yet the genius will perceive much more accurately than the moron.

3. *Appropriateness of behavior will depend on the accuracy of perception.* I have said that each person will behave in the way in which he sees his world. I want to make that statement stronger: each person can *only* act on the basis of how he perceives reality. A person has no alternative but to rely on reality as he perceives it, and the reality he perceives may or may not correspond to what is objective reality. And when we talk of objective reality, we cannot do that in any absolute sense that is independent of man. It is only the consensus of those best qualified to judge. What is consciously experienced seems so vivid to the perceiver, he is inclined to view it as absolute reality and to react accordingly. That is understandable. The meaning that his mind makes of all the sensations coming from the external world is the only reality he can possibly know. Each person has to depend on his own perception of reality for he has no other basis on which to act.

4. *The major determinants of perception.* So far, my argument has said: all behavior is caused; the cause of behavior has to lie in perception of reality; appropriate behavior depends on the accuracy of perception. It is crucial then that we know as much as possible about what the determinants of perceptions are. Each of the determinants I discuss below could easily fill a book in itself, but I can only give them a cursory treatment here.

Sensory equipment and its complex connections with the brain are obviously very important. Blind eyes and deaf ears connected to an idiotic brain will only constitute a non-perceiving mass of protoplasm. But the most psychological evidence today points to only a fractional use of the astounding capacity of the human brain by most people. If *optimum* conditions prevailed, the person with average brain power would be able to perceive, comprehend, and remember almost any subject now taught in undergraduate college courses. There have been many cases of people with average mentality earning Phi Beta Kappa honors.

Stored knowledge recoverable through memory has a great influence on the richness, vividness, and the accuracy of perception. Those who have taken the trouble to learn something about music and have listened to a great deal of it will actually hear sounds that others do not hear and will be moved to laughter or melancholy or joy while the musically untrained are experiencing nothing but confused noise. The sight of a digital computer would evoke only the foggiest perception in the mnd of an aboriginal Australian. Those with a knowledge of Elizabethan England will find the perception of the plays of Shakespeare infinitely enhanced. The accrual of knowledge greatly enhances a person's perceptions.

Emotionally weightings that each person gives to that which he perceives is a third major factor influencing perception. Interests, prejudices, attitudes, temperament are mostly learned in childhood and so incorporated into the unconsicous, that the adult is hardly aware of the subtle—even distorting—influence they have on his perception. The son, whose beloved mother was fair, finds he prefers blondes. The daughter, whose immigrant parents worked hard for their middle-class status, cannot see why there should be welfare programs.

The *conscious and unconscious values* which a person may or may not be able to spell out are a fourth major factor which tends to shape every and any perception a person has. Values are the priorities which are given to traits, qualities, ideas, things, events. They are the weightings given to all that crosses the perceptual field. Those with materialistic values will be attuned to any prospect for material reward. They are able to smell money as the hungry animal smells his dinner. People with aesthetic values will tune in on these sensations which will bring them the pleasure of beauty. Persons with strong humanitarian values will see their personal welfare as part and parcel of the general walfare, and their behavior will reflect their concern for the other guy, and by progression, concern for mankind.

Philosophy or world view is the last determinant I will discuss. The philosophical frame organizes and, to a large extent, predetermines how the person will perceive his own life, his relationship to others, and his relationship to the world. If such philosophical projections prevade a society, the child growing up within that culture will take philosophic premises as given, as immutable truths, as unconscious assumptions. Nazi youth had little alternative but to have Nazi perceptions. A believer in racial superiorities sees the Negro riots as a Communist conspiracy. The Black Nationalities see the intransigency of the Whites as proof of the White men are congenital devils. It takes a pluralistic society with real academic freedom in its educational system to avoid built-in distortions in its perceptions.

To summarize: I have said that all behavior is caused; that the cause depends on perception; appropriate behavior depends on accurate perception of reality; accurate perception, in turn, is determined by a person's physical and mental health, his accrued knowledge, his conscious and unconscious values, and his philosophy or world view. Now I can hear you say, "That's fine, Mr. President, as a personal outlook, but what does it have to do with education?"

The carryover of my personal philosophy to an educational philosophy goes something like this: education should perform the most important role in developing the individual's ability to perceive reality. Most of us today recognize physical health, emotional health and stored knowledge as legitimate educational objectives—and so do I. But *I would place my emphasis* on exploring values, formulating a philosophy, and making the concept of self congruent with the reality of self. The outcome of this kind of emphasis should result in an individual who would not only

follow the Socratic dictum to "know thyself" but could "choose thyself." Education becomes crucial because it provides the best process by which an individual can learn alternative courses of action open to him in choosing what he will become. If a man is physically enslaved, he has little choice to act. If a man is economically, socially, or psychologically enslaved, he has little choice to act. If a man has no knowledge, or only vague knowledge, of the alternative courses of action open to him and the consequences of each alternative, his freedom (choice to act) has been grossly abridged. Man is not born free; he is made free by the process of education and by his own insistence. He has to learn the choices which are open to him and what the consequences of these choices will be, and by character development he must learn to make the mature judgments and to accept the consequences. Education, formal and informal, gives the individual an element of control over what he is and what he will be. Whether through reading, through counseling, or through thinking, if a person gains insight into the values which are motivating his behavior, he can achieve self-conscious choice. Higher education provides the opportunity to see the options which are open and should force the person to be a choice-maker. In such a way, a person can, in considerable measure, create himself out of his life experiences and the thought he gives to those experiences. Hopefully, continued education will provide him with the background, knowledge, the thinking process, the insights, and the intergrated value structure by which he can best profit from his experience.

But if we are to reach our students effectively at the value level, if we hope to gain their trust in what we say and what we stand for, then we faculty must stand before them as whole men, who know who *we* are. They must know us emotionally as well as intellectually. We can no longer successfully assert that our discipline justifies itself alone, nor that the culture that surrounds us unites teacher and student, parent and child in an unstated but accepted set of values. What we offer the young, if it is to be trusted and valued, must come from us in a personal way, as our own unique expression of ideas, knowledge, feelings, and beliefs. Only through such honesty can we hope to reach our students. If this sounds a little too liberal to you, let me quote President Nixon in a speech he gave just last June when he said we must ". . . pay more heed to one of the great cries of the young today, I speak now of their demand for honesty: intellectual honesty, personal honesty, public honesty. Much of what seems to be revolt is really little more than this: an attempt to strip away sham and pretense, to puncture illusion, to get down to the basic nub of truth. *We should welcome this.*" (Emphasis mine).

I have emphasized the importance of the development of a person's potential and his ability to make value judgments, but I don't want to emphasize it to the exclusion of everything else. I would not want our graduate to feel that his only duty was to himself. In the past, higher education has been seen largely as a means of improving the graduate's position in life: one went to college to "get ahead." That is still true but I believe there is an emerging awareness that one person can't "get ahead" unless the whole society "gets ahead." When a student asks me, "Who am I?" I have to answer, "You are a unique creature—*but* tied by a Gordian knot to your fellow man." When a student asks me. "What am I doing here?" I have to answer, "You are trying to better yourself—*but* you will find you cannot without working for the betterment of others." And when the student asks, "What is worth studying?" I have to answer. "Those things that enhance you as a unique creature—*but* in the context of those things that will enhance the world of which we are a part."

GUIDING PRINCIPLES

As I have attempted to summarize and condense this long discussion into Goal I, II, III, . . . for De Anza College, I find such a list sterile and my rhetoric of little use in guiding specific behavior. But there is no question in my mind as to where my priority for us lies: we should be producing choice-makers—people who know themselves and their society and can then, in effect, choose and develop the kind of person they would be and the society they would live in. But rather than expand on this, I would rather turn to guiding principles that I believe will be of more help in giving us direction. These "guiding principles" could be called goals I know, but I find guiding principles more helpful in evaluating existing and proposed programs.

I. Each student should be accepted and treated as an individual

All staff members, in whatever function they are performing for the college should recognize the worth and dignity of the individual and his activity. We should strive to provide real educational opportunity where each person has some hope of becoming "whatever thing his manhood and his vision can combine to make him." Opportunity does not consist in merely allowing the student to enter; it means matching the student with a suitable pattern of learning and other developmental experiences. If that pattern does not exist, or the means for assisting the student into that pattern does not exist, *then the opportunity does not exist*, even if the student is officially enrolled. Exploring values, formulating philosophy, and development of a concept of self congruent with the reality of self should be striven for with all students, no matter what other goals the student may have.

II. The primary focus of the college should be on learning

Please note: learning, not teaching. The two, of course, are closely related, but it is important to place the emphasis in the right place. We want directors of learning who produce as well as perform. Individual student learning and growth then would become the measure of success of our college. We must strive to produce that environment for learning where there is active student involvement in the process, an up-to-date, relevant curriculum, and a flexibility in meeting student needs. Teachers and counselors—as directors of learning—should always be key participants in the policy-making process that shapes this "place of learning."

III. Academic freedom should be a right of faculty and students that is diligently defended by all

I have heard some students and restive faculty accuse our college of being careful in the minutest detail of our public image, unwilling to indulge in any conversation, gesture, or nuance of behavior learned later than 1900. On the other hand, some have accused our alma mater as being a wanton of the most indifferent character who seduces the youth of our community to strange and unhealthy practices and heedlessly sows disorders in a hitherto orderly society. Of course, neither of these positions describes us accurately.

One of the early milestones established by the Foothill District was a policy on academic freedom adopted jointly by the faculty and the Trustees. It stresses the right of faculty and students to pursue teaching and learning with full freedom of inquiry bound only by the responsibility to avoid bias and to respect the opinions and conclusions of others in the academic community. I recommend you read again Policy 4141—I would find it difficult to improve on that statement.

IV. Education should be a right not a privilege

For each individual the most important life, the only life he can sense directly, is his own. There is no way ethically, and only questionable ways pragmatically (our ACT tests included), to judge that one man's life is more important than another's. The white, Anglo-Saxon, upper-class, male child has no more inherent right to the achievement of personal potential than the daughter of a Black Alabama sharecropper. Soico-economic class, ethnic origin, level of aspiration, and previous performance should not close our door to students. And once inside, the student should meet only those barriers to courses and programs that have been well-tested for their validity.

V. Responsibility to his society as well as himself should be a characteristic of our graduate

Our college shares, along with other educational institutions, a responsibility both to the individual and to society. We can provide the means by which the individual strives to realize his potential and at the same time provide a means by which society can perpetuate and improve itself. We must do this in a democratic society because these two responsibilities ideally become one. For upon the standards and achievements of the individual, all our organizations and institutions are based; upon his character rests the quality of our society. I want our graduate to be socially, economically, and esthetically competent, but more than that, to be sensitive to his responsibilities to himself and to his society. He should feel his education is never complete but that he is engaging in a continuing process that co-extends with his duty as a human being and as a citizen.

VI. Governing rather than administering should be emphasized

In our relations among ourselves and with our students, consent of the governed should be sought whenever possible. The quality of human relationships among faculty, administration, staff, and students will to a major extent determine the quality of the college. Open communications, mutual trust, mutual support, and management of conflict—rather than its suppression—should be the values observed in the interaction of people at this college. The example we set for young people in the way we operate our college should serve as a model for other institutions of our society.

VII. Change with a purpose should be a commitment of this college

Continuous planning, development, and evaluation should permeate our activities. Institutional criticism should be sought and considered as an ongoing means of improving. Imaginative and creative approaches to the many problems facing higher education in the years ahead should be encouraged.

VIII. Community outreach should be one of our services

Some two-year colleges have become the most important single means for improvement of their communities. They seem most effective when they reach out to people, involve them, and identify with them. While I believe we should not blunt our main thrust of meeting the educational needs of our community, I want us to remain flexible enough to explore many avenues of service to the people of our area. As we develop, I hope we will remain sensitive to the several ways in which our capabilities can be uniquely utilized by our community.

Are we presently being guided by these principles? I don't want to put us down, for by any measure of a traditional college program we do better than most. In fact, I've never read a more complimentary accreditation report than the one we just received last spring. But I wish I could say that our

college did embody all of the principles and purposes I have enumerated. Those of us in this room know how great the educators' shortcomings are. And when I look at us in the terms of what we *could* be, I am struck by the long way we have to go in measuring up to the principles and purposes I hold for a good college.

But we are moving, and I think we are gaining momentum. Let me briefly describe some of the projects for next year which I think will make a difference.

PROJECTS FOR 1969–70

1. The *further development of the Ethnic Studies Division and the Multicultural Program* will continue to receive a high priority with us. We laid the groundwork for a major thrust last year and I expect to see the effort reach maturity this year.

2. *The Mini-College Project* is in a feasibility stage of study under the leadership of Sandy Hay, Jim Luotto, and Walt Travis. There are several directions such a plan can take, but the basic idea is to associate a small number of students and faculty in a continuing and close relationship for as much as a year or two studying under a new curriculum plan. A counselor and a librarian will probably also work with the group. If such a plan proves successful, we might well find several mini-colleges evolving.

3. *Off-campus programs* of several kinds are going now and we are studying some others. We presently offer courses at local business and industrial plants, we teach a calculus class at Homestead High School to advanced students, we offer a credit class that goes to the Shakespeare Festival in Ashland, Oregon for several days, we have a drama appreciation class that travels to several plays throughout the Peninsula, and we have several special field trip courses. We are planning to expand off-campus programs, especially during the summer. We are thinking about the purchase or lease of a lodge in the Sierra where we can hold many kinds of credit and non-credit classes ranging from music camps to recreation program classes, to botany classes, to philosophy classes. We want De Anza to go to Mexico, Europe, Africa, South America, Japan, with classes for credit. We are working with several Bay Area junior colleges for the combined use of Channel 14 at the College of San Mateo. By the winter quarter, we should be offering some Evening College Classes as an experiment in community outreach. You should be hearing more from Dick Wright, Florin Caldwell, and Marj Hinson about all of these off-campus programs.

4. *Some new approaches for us in our instructional program* are being tried under the direction of Don Fraser and Dick Kent:

The Independent Study Program now has a new home and we plan to put more faculty development time into this than we have been able to do up until now.

EROS is a project now underway and on the schedule for the fall quarter. A counselor, a reading instructor, a composition instructor, and a philosophy instructor will be working with about 25 students who have been identified as having acute learning difficulties. We hope to find out if this kind of concentrated and coordinated effort will pay off for students.

The Total Immersion Programs in Spanish and History 17ABC were very successful this summer. We plan to try this same idea during the regular quarter to see if this approach should be tried in other disciplines.

Teacher Aides are something we feel we owe to ourselves and we want to develop a program for them. We feel that if we can provide paraprofessionals for so many other professions, then why not develop a curriculum to produce that same help for our own profession?

5. *New faculty evaluation procedures* are being tried by the Language Arts Division and by the counseling staff. These two groups will be placing more emphasis on improvement of instruction and counseling—with evaluation as a by-product. More colleague involvement is proposed in both their new plans.

6. *There are two projects underway that directly affect students* that I know you will be interested in. We are expanding our Financial Aids Office. We presently administer large sums of money available to needy students through National Defense Student Loans, Work Study Funds, Educational Opportunity Grants, and from several other specialized sources. We plan to better coordinate that kind of financial aid, as well as develop a Job Placement Office on-campus. I know Mr. Javid, our new Financial Aids Officer, will be seeking faculty advice in the development of this new office. The other student project is the development of a student Bill of Rights. We have done some developmental work in this area and you will be hearing more about it during the year.

There are some other projects of importance but of less wide-spread interest that I won't go into. You will have a chance to discuss them in those areas where you might have special interest.

WHAT CAN YOU DO?

Probably all of you will be participating in one or more of these projects in one way or another. But regardless of the extent of your involvement in these, I hope each of you will examine his own values and goals and hopes for this college as a special individual project for the year. We are not going to take any big strides forward unless *teachers* are stimulated and excited, and that won't happen until each of us become involved in what and *why*—I repeat—*why* we're teaching and what we teach.

I don't know how much of what I've said here today you buy; my guess is that most of us think a great deal alike on these basic ideas. I have had copies of this speech made and I invite you to read it again and give me some feedback either in writing or over coffee someday for I *really do* want to sharp up my own thinking on these matters, as well as sharpen institutional purpose. And where we don't agree, I hope you have developed your rationale for *why* you are doing it your way and that your beliefs are based on personal convictions. The time is past when our actions can be based solely on something that is happening at a university or a high school. In my experience they know less about what they are doing—and especially why—than we in the community college do. Not only must we become our own men, but we must unite in becoming our own college.

THE FUTURE ISN'T WHAT IT USED TO BE

One of the greatest advantages of education as a profession lies in the definite way in which our working year has an ending and a beginning, with a few weeks in between when we can think about last year and plan for the new ahead. At times like these I feel both satisfactions and disappointments with what I have accomplished. But even in the midst of these conflicting feelings, there is an important one that has never wavered—my satisfaction with the profession I am in. There is no more important way to spend one's life if we will but bring to it the dedication it deserves.

I am 45 years old and I have just completed 20 years as a professional educator—presumably I have another 20 years to go. I have reached middle life and have watched the previous generation pass. I have learned much from that generation—most of it is good and a lot I intend to forget. I have explored many blind alleys searching for purpose and meaning in my life, I have been disabused of the notion that the world revolves around me. I have futilely sought some great and mystical reason for living. I have come to the simple and stark realization that for me the life process carries its own intrinsic reward. Not to live it fully is the worst kind of folly. To deny *another* the fullest and richest life possible is to deny him a portion of his life potential and, therefore, to commit a most grievous act, I believe a quality education is crucial in living the full and rich life, and, indeed, becomes a human right that cannot be limited to a few. In my remaining years as a professional educator, I want not only to live up to my own potential, but to help education realize its great potential.

A few short years ago I would have thought that the future I am experiencing today could hardly be improved upon, *but the future isn't what it used to be.* There are so many things happening in our society that point to the need for evaluating our traditional approaches and searching for more viable means for accomplishing our ends. Each of us in our work, experience some small victories with some of our students and they are very satisfying to us, but when I look at the potential that exists in this room here today and the possibilities that might be realized if we but had the purpose and the will, then I can't help feel that the really significant victories still lie ahead. And so I leave you with the words of Horace Mann in an address he made to the last graduating class he spoke to as president of Antioch College—and others must have been as touched by them as I for they are inscribed on a monument there on the campus—his words to these young people were: "Be Ashamed of Dying Until You Win Some Victory for Humanity."

SACRIFICE NOT MADE IN VAIN

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. DOWNING. Mr. Speaker, at the time last week when the names of our servicemen who have lost their lives in Vietnam were being read aloud at many sites throughout the country, the name of one of my constituents who gave his life appeared in the "View of Our Readers" column of the Newport News Daily Press, our hometown newspaper. His name appeared there through the proud efforts of his parents, Mr. and Mrs. Harvey A. Oxendine, who wrote a letter to the editor of the newspaper.

Harvey and Alice Oxendine have been good friends of mine for years. They are typically wonderful American people. They have produced four sons, three of whom respectively are veterans of the Navy, the Air Force, and the Marines. Their youngest son was Army Pfc. Rodney G. Oxendine about whom his parents wrote.

The letter is far more eloquent than would be any words of mine. I am proud to include it in the RECORD so that it may speak for itself and that Americans everywhere may benefit:

SACRIFICE NOT MADE IN VAIN

EDITOR, DAILY PRESS:

Recently we suffered the greatest loss a parent can experience—the loss of a child. Our son, Private First Class Rodney G. Oxendine, was killed in combat in Vietnam. Prior to Rodney's death and like many American parents we had never felt any great commitment to the struggle in Southeast Asia or

really given the issues involved serious thought and consideration. It would perhaps be accurate to say that prior to his service in the Republic of Vietnam Rodney hadn't thought seriously about what is involved in this far away war.

It is the purpose of this letter to share with you, my fellow citizens, our belief that our son has not given his life in vain. Our purpose is to try in some small way to help clear up the confusion which plagues our country today as to the validity of our country's efforts in Vietnam. If with this message, we can reach some of our fellow Americans and bring about the realization of the necessity of this struggle and its successful conclusion then our sacrifice will not have been made in vain.

The change in our own attitudes toward the War in Vietnam began to take place after Rodney via letters shared with us his conviction and reasons why he felt that the job the American Armed Forces are doing in Vietnam is necessary and in the interest of freedom and justice of men everywhere—why he felt that the job he personally was doing in Vietnam was worth risking his life—that he was proud to be part of this fight for freedom.

The sincerity of our son's convictions is pointed up in his last letter written a few days before his death. We should like to quote from it.

"Mother and Dad, I guess you're wondering what I'm doing, etc. Well you know I'm infantry, and that's the M. O. S., that does the fighting, believe it or not I'm proud of it, and also what I'm doing here. What we're doing now is pacification, i.e., help the people help themselves, give them weapons, teach them how to use them, build their schools, trying to get them on our side. Some of the people we give the weapons to are our enemy, so you always have to watch yourself. The people at home, a lot are against this war, if they only knew how they're hurting the boys over here, after you get here you sorta forget your support of your country, there's no glory here.

I know I'm fighting for my country, and there's plenty of reason for being here, just as much so as any other war we have been in, and there's not a guy here that wouldn't give his life. What I'm doing is dangerous, but could be a lot worse, and I know I'm going to be safe, and return home, there's no worry in my mind. Here I'm not depressed as much as when I was in Germany. It's about fifty times worse here, but I believe it's just that I'm doing something with a purpose. Just remember I'm doing fine and like what I'm doing, but can't wait to come home."

Our son was not alone in his convictions as to the "rightness" of the cause for which he was fighting or that he felt that he was fighting for our country. As he stated in the excerpt quoted above from his last letter, "there's not a guy here that wouldn't give his life in the struggle going on in Vietnam." Our loss has been assuaged by a letter from his battalion commander who expresses so beautifully the dedication of the men in our armed forces in Vietnam and I quote:

"To those of us with whom your son served so closely and who will continue in this crusade after him, his loss has special implications. To us his death is not simply a tragic fact of war, nor do we view it as a fateful concession to a cause of doubtful virtue. We have witnessed the plight of the Vietnamese people and having done so, it is difficult indeed, almost impossible, to withhold from completely dedicated, personal commitment to their deliverance. I cannot conceive of a cause more worthy of the precious gift of life."

To many Americans such as ourselves who have not seen or experienced the War in Vietnam first hand; to those of our fellow citizens who's loved ones have made the supreme sacrifice; and to the young people who may face military service in the defense of our country and our freedoms, we thought we would like to share with you our belief that our son did not give his life in vain but rather in the service of his country and in the cause of freedom. We believe that all of us should unite behind our President and support our government and our armed forces in the war effort in Vietnam in the belief that such support will hasten the day of peace by convincing the Communists in Vietnam that we are a united people in our defense of freedom.

Mr. and Mrs. HARVEY A. OXENDINE.
NEWPORT NEWS.

NATIONAL FAMILY HEALTH WEEK

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, October 20, 1969

Mr. CARTER. Mr. Speaker, on October 15, 1969, President Nixon signed a proclamation officially designating November 16 through 22 as National Family Health Week.

On May 12 of this year, I introduced House Joint Resolution 712 to authorize such a week. Identical legislation—Senate Joint Resolution 46—was introduced in the other body by the late senior Senator from Illinois, Mr. Dirksen.

The passage of this legislation focuses national attention on one of the most meaningful developments to take place within our health care structure in recent years, the recognition of the role played by the family doctor in the delivery of health care services to the American public.

In February of 1969, the advisory board for medical specialties and the council of medical education of the American Medical Association approved family practice as the 20th primary medical specialty. At that time, the American Board of Family Practice was created and empowered to conduct examinations and grant certification to family physicians who met its qualifications and passed its examinations.

During the past months we have also witnessed the development of new programs in medical schools and hospitals throughout the Nation to train young doctors to become family physicians.

The medical community looks to this new type of doctor as a primary contact between the public and the increasing complex of medical specialties, clinics, and hospitals that comprise our growing medical system.

I strongly feel that the family physician, by combining the warmth and humanity of the time honored general practitioner, with the highly sophisticated training of modern medicine, will contribute to better health for American families from every walk of life.

This special observance, supported by the American Academy of General Practice, should receive the attention and interest of all Americans concerned with the health and welfare of our citizens.

At this time, on behalf of the thousands of family physicians and general practitioners who serve the American public so faithfully, I thank my colleagues in this body and my colleagues in the other body for their support in making National Family Health Week a reality.

COHOES MODEL CITY STRATEGY

HON. DANIEL E. BUTTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 22, 1969

Mr. BUTTON. Mr. Speaker, I have strongly expressed my support in the past for the model cities approach to solving the problems of our cities, and would like to underscore that commitment once again. Model cities encourages and requires a strong local alliance between citizen, city government, and business to get the job done. I feel the city of Cohoes, in my district, exemplifies these key ingredients in its strategy for implementing the model cities program.

I recently received from Mrs. Virginia B. McDonald, vice chairman of the Model Cities Social Service Planning Committee, a letter informing me of the progress of the Cohoes model cities program. Cohoes is one of 150 cities that has completed its model cities plan. Mrs. McDonald, widow of the late mayor of Cohoes, Mayor James E. McDonald, under whose guidance the model cities program got its start, also enclosed a copy of the program strategy statement which I feel gives an excellent example of how one model city is doing.

Because this program strategy statement makes such good sense, and because it raises questions critical to the direction our country is taking in facing up to the problems of our older, core cities, I am inserting Mrs. McDonald's letter and the accompanying statement in the RECORD at this point and commend it to the close attention of all Members of this House:

OCTOBER 10, 1969.

Hon. DANIEL E. BUTTON,
Longworth House Office Building,
Washington, D.C.

DEAR CONGRESSMAN BUTTON: In keeping with your request to keep you informed of the progress and activities of the Cohoes Model Cities Program, the Director, Paul Van Buskirk, has asked me as Vice-Chairman of the Social Services Planning Committee, to forward to you a copy of the Program Strategy Statement.

This statement will give a brief, but concise, insight to the approach which the City of Cohoes wishes to use in implementing the program. We would appreciate your review and comments, and opinion as to whether the statement is in general agreement with the policies of Congress and the U.S. Department of Housing and Urban Development.

Yours truly,

VIRGINIA B. MCDONALD,
Vice Chairman, Social Services Planning Committee.

STRATEGY STATEMENT

The CDA Planning Committees, Planning Board and Governing Body, as a result of the Workshops, Pilot and Comprehensive Survey and background studies, selected five program components in which the long range goals are addressed to the following five categories listed in order of strategy sequence:

1. Human Resources
2. Relocation
3. Housing
4. Economic Development
5. Physical Environment

The program components were selected for a number of reasons: they provide convenient "packages" for specific identified prob-

lems (see Part I); they form reasonable bases for the development of overall strategies and approaches to problem-solving; and they are easily translated into statements of long-range goals as formulated by the CDA committees and boards.

Because of strong interrelationships and interdependencies among selected program components, the CDA planning committees and boards found it very difficult to arrange goals strictly according to problem severity. (Each of the broad program components contains specific high-priority problem areas.) Hence, strategy programming or sequencing of activities, as reflected in the order of the above listing, became a very significant and sensitive undertaking.

The reason for the selection of the order of long-range goals was:

Since the development of MNA human resources is considered without question to be the most important objective of the entire program, it would be necessary to provide MNA residents with improved social and health services, educational opportunities, counseling, etc. These resources will provide the MNA residents with necessary services and assistance which is needed to improve their quality of living. This program will enable MNA residents to call upon the many resources which are needed to support and maintain the physical improvements they desire in their neighborhoods; such as housing, open spaces and employment opportunities. A secondary benefit of the Human Resources Component is that MNA residents could rely on their resources for assistance to protect their investments, and community investments, of money for physical improvements and prevent the recurring deterioration, which would require further investments for corrections in the future.

Another reason for giving primary attention to development of human resources is to allow an alternate approach to solving MNA problems, should financing or other problems preclude other needed programs. In other words, since human resources can be improved independently of other planned improvements, residents would be given the necessary social tools to instill initiative, and create the ability, desire, and awareness of a decent quality of living. An objective of the program is to develop human resources for a resident who may have to rely on his resources to improve his neighborhood regardless of the success or failure of other planned programs.

The reason for selecting relocation as the second item in the sequence of Model Cities activities is the demonstrated necessity to have a well-established relocation program functioning before critically needed physical programs (which require displacement) are undertaken. The relocation program would be carefully coordinated with the social services cited above and would provide sensitive and efficient relocation services for MNA families, individuals, and businesses. To build new houses and rehabilitate existing housing units without properly planned and coordinated relocation services could result in a completely ineffective overall program. The object of the Cohoes Model Cities Plan is to look upon relocation not as a necessary evil but as an opportunity to serve MNA residents, provide social services, and upgrade the quality of living.

Housing was chosen as the third item in the strategy sequence. Once the human resources and relocation programs are formulated and delivering services, relocation could commence with the assurance that new or rehabilitated housing is decent, safe, and sanitary and that it meets residents needs and preferences. Furthermore, as a result of the human resources development program, residents would have available financial assistance and services needed to acquire, or rent and maintain, decent and safe housing. The housing program is viewed as a logical extension of both the human resources and relocation activities.

Economic Development is placed fourth in the sequential order of activities. In order to obtain adequate housing, provide physical improvements and enjoy the benefits of improved health, education, etc., there must be sufficient economic activity to increase individual income levels and to broaden and reinforce the city's tax base. This program would help provide future revenues as well as the industrial and commercial facilities and services necessary to sustain residents.

It seemed logical to the CDA planning committees that the physical environment can be maintained and upgraded only after proper social services are provided, relocation services are firmly established, housing is available, and activity in the economic sector has been stimulated. Specific physical improvements which would support each of the other strategic activities would include additional and improved parks and open spaces, better streets (including sidewalks, street trees, lighting, etc.), a reduced level of structural and environmental blight, and major improvements in sewage and waste collection, treatment, and disposal.

STRATEGY AMONG GOALS

Housing, especially for low and moderate income families, was ranked by the CDA Workshops as the Model Areas most serious problem and the CDA attaches greatest importance to this goal.

The objective of the Housing Goal is to provide 1,000 new housing units, to rehab 500 substandard houses, to remove 600 dilapidated units, and to increase homeownership in the MNA by 428 families. In order to achieve this goal, it will be necessary to accomplish the objectives of the following goals:

Human Resources Goal: To have in effect the necessary home management and home maintenance programs and other social programs related to housing.

Relocation Goal: To have the Central Relocation Agency established and a Relocation Plan formulated.

Economic Development Goal: To have programs formulated to raise income levels above the Cohoes CPIC.

Physical Environment Goal: To begin to establish and administer an effective system of regulatory controls and to demolish "dilapidated" housing units (vacant ones first).

One of the greatest concerns of the MNA residents is in the area of economic development. This was brought out in the CDA Workshops, Comprehensive Survey and Pilot Survey. The Economic Development Goal would be of greatest concern, next to the Housing Goal.

The objectives of the Economic Development Goal are to implement a comprehensive employment program, to bring all MNA households above the CPIC income level, to rehabilitate non-residential structures, redevelop and develop land for industrial expansion and to have in effect, a long range industrial and commercial development program. In order to reach this goal, it would be necessary to develop the following:

Human Resources Goal: To have effective education programs; such as vocational and skill training, adult basic education and adult education.

Relocation Goal: To have, in operation, a Central Relocation agency and relocation plan for industries and businesses.

Physical Environment Goal: To redevelop 26 acres of industrial land.

STRATEGY AMONG PROGRAM APPROACHES AND CHANGES WITHIN A GOAL

Human Resources: The strategy among program approaches within the Human Resources Goal will be described according to the sub-components for the sake of clarity. With reference to related program approaches among the sub-components, the program approaches of the Human Resource Component are geared to the family as a unit. Programs, projects and activities have their objectives formulated to the family.

Social Services: The activity for this program approach would provide for the development of social services under a "single roof" concept (Human Resources Center) for delivery to identifiable families. The initial action would be to commence a Comprehensive Social Services Study to identify MNA families, their characteristics and need and to evaluate existing social services, gaps and program development. While the study is being undertaken, the recruiting of the initial core-staff of the Human Resources shall be underway. This core-staff's purpose will be to develop the administrative structure and work program, as well as program activities for operation in the second year, when the Human Resource facility will be leased or purchased and then occupied. The core-staff shall develop a recording system (IBM data processing) of services needed and rendered identified families. Programs that are directly geared to family management, such as home management, will commence early in the program.

Health: The lack, or disorganization of, health data shall be corrected by developing a collecting and reporting system on health statistics. The delivery of existing health services to MNA residents shall be accomplished in the first year by training project aides. The approach for needed health facilities will be accelerated by the fact that the local hospital has developed plans for expansion and need financial assistance for carrying this out. Construction of these facilities can convene in the first year with financial assistance from the CDA, and be completed by year two. Necessary changes, site selection, etc., will be completed in the first year for construction of a nursing home to begin in the second year and be completed by the third year. Recruitment for needed professional medical personnel will be formulated and concluded the first year for results in year two.

Education: The program approaches under this sub-component revolve around three basic areas; pre-K, adult education and reinforcing the academic program by beefing up the guidance counseling, curriculum and remedial reading. The first year would consist of developing and conducting a head-start program. In conjunction with the employment program, a day-care center will be developed. An effective adult and basic education program, leading to a high school equivalency, will be established and closely coordinated with the comprehensive employment program. Curriculum gaps, such as remedial reading for elementary students, will be filled in the first year. Special activities, such as the development of new curriculum and a comprehensive guidance counseling program for secondary school students, will be initiated during the first year and be fully established by the second and third years.

This will complete the thread of educational programs beginning with pre-K thru to adult basic education.

A study will be completed in the first year for needed educational facilities in the MNA and a program to maximize the availability and uses of existing school facilities for education, recreation and cultural purposes.

Recreation and Culture: To expend MNA acreage to meet national standards would be the first objective. This would be done by developing, approving and implementing new park and recreational areas to meet the needs of all MNA age groups especially focusing on specialized "social nodules" or areas of activity. On-going planning and action would take place over the five year period for the gradual requisition of land and establishment of more specialized recreational and

cultural areas culminating in the Old Erie Canal Trail Parkway following the historic canal route. However, recreational activities for all age groups must be developed and conducted as physical facilities are completed.

The development and implementation of new programs and facilities would be carried out the first year with the immediate erection of the Cohoes Community Center providing social, cultural and recreational services and programs to MNA families. In addition, innovative plans have been submitted for a joint historic preservation, educational, recreational and cultural venture which would restore the Old Opera House and connect it into two greatly needed facilities; namely, a theatre and a library.

Crime and Delinquency: To combat adult crime, a comprehensive survey will be made the first year for the purpose of improving systems for maximizing the security of residents regarding their persons and property and developing new programs to meet these ends during the second and succeeding program years. Juvenile delinquency will immediately be attacked by supporting community youth programs and facilities while developing improved and innovative systems and programs. The Juvenile Aid Bureau will be established and the Youth Bureau expanded through supplemental funds during the first year. A police and community relations will be developed in the first year, including the conducting of police training programs.

Relocation: First program approach would be to initiate a Comprehensive Housing and Relocation Study to determine specific relocation needs by characteristics of households. This approach would also include the monitoring of the Economic Base Study to determine specific relocation needs of industry and business.

While this study is under way, the city should then create, through new legislation, a Central Relocation Agency; recruitment of a staff to administer an effective city-wide program and provide supplemental funds to organize the agency.

Relocation standards and policies should be adopted by the City government and the administrative machinery would go into full operation.

Housing: First program to be initiated would be the Comprehensive Housing and Relocation Study, cited in the Relocation Goal. Next, the development of open sites by installing needed utilities and the establishment of a Housing Development Corporation. This would be followed by development of programs for construction of new housing on open developed sites or redevelopment sites.

Vacant dilapidated units would be demolished early in the program.

Rehabilitation of sub-standard housing could take place that would not cause major dislocation. Upon completion of new housing units, families and individuals from dilapidated housing, major rehabilitation projects and those dislocated from major improvement projects could be relocated. Simultaneously the program for assistance toward homeownership could be in effect.

Economic Development: The immediate need under this component is to provide redevelopment land (land that is currently occupied by vacant, obsolete, and deteriorated structures) for existing industries whose facilities have become obsolete for the construction of new facilities. Therefore, the program approach to develop blighted land and install facilities would be of first priority.

While this action is being initiated under an NDP program, a Comprehensive Economic Base Study would begin which would include an employment study, an update of the 1965 economic base study, and long range industrial and commercial development plans.

A Comprehensive Employment Program would be organized and implemented. This would be followed shortly by the program to identify characteristics of MNA households below the CPIC, and the development programs, according to household needs, to boost incomes above the CPIC.

The demolition of dilapidated non-residential buildings would begin under the NDP program along with demolition under the Physical Environment Component.

Restoring of industrial and commercial buildings would begin with the reorganization of the Cohoes Indsturial Development and Redevelopment Corporation as a Community Development Corporation.

A long range CBD plan and industrial development plan would begin to be implemented through a Community Development Corporation.

Physical Environment: The program approach to which the greatest attention should first be given is the adoption and enforcement of the necessary regulatory controls. This approach also serves as an alternate approach, in the event that sufficient financial resources are unavailable, or other problems arise, which might prevent the implementation of other program approaches under this component. The strategy behind this is that if an effective system of regulatory controls is established, individual, corporate or other organized initiative could be marshaled to correct deficiencies in the physical environment.

The execution of various planning studies under the above approach would begin early in the program. These studies are described throughout the plan and include historic preservation, thoroughfare plan, Erie Canal trail development, housing, and relocation, commercial and industrial development, etc.

During the first year of the program, engineering studies, drawings, specifications, etc., would be completed for the development of 60 acres of recreation and open public spaces.

The construction of sewer intercepts would begin in the first year to eliminate the open polluted canals, and would continue through and be completed by the end of the five year period, including sewer treatment facilities.

The selection of alternate sites for solid waste disposal would be completed by the end of the first year with sites available by the second year for the removal and disposal of various solid wastes.

Comprehensive Studies: Several comprehensive studies will be conducted during the first year action program.

The following studies will be conducted under the "701" Program:

Housing and Relocation.
Open Spaces.
Historic Preservation.
Economic Base Study.
Thoroughfare Plan.

These studies are necessary for the following reasons:

1. To obtain detail and sufficient data, presently not available, for program planning and implementation.

2. To obtain data in order to establish proper measures for program evaluation.

3. To determine projects and activities, their priorities, feasibility, cost estimates, cost benefits, analyses required to properly achieve the long-range goals and five-year objectives of this plan submission.

However, projects and activities will be undertaken during the first year which are related to the comprehensive studies.

These projects have been selected because sufficient information is presently available to require completion of these programs, financial resources are available and the need is apparent.

Examples of such programs are the Neighborhood Development Program as part of the Economic Development Component, Restoration of the early American Theater, as part of Culture and Recreation of the Human Resources Component. As these studies are being conducted, other projects and activities will be formulated.

Other studies coinciding with the strategy herein described will be:

Social Services and Activities.
Health.
Police Services.

These studies will result in a sound program development for the entire community.

In conclusion, the overall strategy and goal of the Cohoes Model Cities Program, as visualized by the CDA, is the elimination of social and economic problems so common to our many cities, the elimination of physical blight and the sound development of the entire city. When we realize that the City of Cohoes is a small city of 20,000 people, and its problems can be defined and are controllable, this goal is not impractical or unrealistic. The attainment of this goal depends on the commitment of the community. The CDA believes that the people of the City of Cohoes will fully dedicate themselves to this goal and show the nation that the problems of the cities can be solved through total community effort.

HOUSE OF REPRESENTATIVES—*Thursday, October 23, 1969*

The House met at 12 o'clock noon.

Rev. Baan Vitez, O.F.M., Holy Trinity Roman Catholic Church, Barberton, Ohio, offered the following prayer:

Lord God, grant us the courage, we pray, to love our heritage. This is the day when Your children lit the flame of freedom on the streets of Budapest, Hungary, in 1956.

The fire they lighted, if kept alive, will spell the doom of any oppressors' enforced darkness. The fire within them, and thanks to Your graciousness, within us, is a fire that brightens and warms all men of good will.

May the flames of love of God and national consciousness leap forever in our hearts till we leap with joy into lasting freedom and peace. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Leonard, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On October 17, 1969:

H.R. 3165. An act for the relief of Martin H. Loeffler;

H.R. 3560. An act for the relief of Arie Rudolf Busch (also known as Harry Bush);

H.R. 11249. An act to amend the John F. Kennedy Center Act to authorize additional funds for such Center; and

H.J. Res. 851. Joint resolution requesting the President of the United States to issue a

proclamation calling for a "Day of Bread" and "Harvest Festival."

On October 20, 1969:

H.R. 9825. An act to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes.

On October 22, 1969:

H.R. 13194. An act to authorize special allowances for lenders with respect to insured student loans under title IV–B of the Higher Education Act of 1965 when necessary in the light of economic conditions in order to assure that students will have reasonable access to such loans for financing their education, and to increase the authorizations for certain other student assistance programs.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed with an amendment in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 4293. An act to provide for continuation of authority for regulation of exports.

A CEASE-FIRE NOW

(Mr. KOCH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KOCH. Mr. Speaker, on May 15 I introduced House Concurrent Resolution 256 which proposed that the President call for an immediate cease-fire in Vietnam. Fifteen of my colleagues ultimately joined in cosponsoring this resolution. On July 23 the White House responded by informing me that—

A cease-fire is a sensitive and complex question that hopefully will be addressed to (at) an appropriate time in the Paris talks.

Since that time, many of us have despaired that President Nixon will not be moved to call for a cease-fire. Consequently, I have advocated an immediate and total withdrawal of American troops in order to avoid the continuing loss of American lives in Vietnam.

Now there appears to be a decline in enemy-initiated action. Now we are told that American troops no longer pursue offensive military tactics. Now perhaps the Nixon administration will finally consider the "appropriate time" has come for a cease-fire.

Since May when I introduced the cease-fire resolution, approximately 4,000 American men have been killed in Vietnam. If the President will not be committed to the total and immediate withdrawal of American troops, let him call for a cease-fire. First, and foremost let our policy be committed to saving American lives.

PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE REPORT ON JOINT RESOLUTION MAKING CONTINUING APPROPRIATIONS, 1970

Mr. MAHON. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a report on a joint resolution making further continuing appropriations for the fiscal year 1970.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING AND DIRECTING SECRETARY OF AGRICULTURE TO EXECUTE SUBORDINATION AGREEMENT WITH RESPECT TO CERTAIN LANDS IN LEE COUNTY, S.C.

Mr. McMILLAN. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 9946) to authorize and direct the Secretary of Agriculture to quitclaim retained rights in certain tracts of land to the board of education of Lee County, S.C., with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 1, line 5, strike out all after "assigns," down to and including "to" in line 9 and insert "an agreement subordinating all right, title, and interest of the United States of America in and to the land hereinafter described to a lien or liens to be executed by the said Board of Education of Lee County, South Carolina, its successors or assigns for the financing of consolidated public school improvements on the said land, which consists of".

Amend the title so as to read: "An act to authorize and direct the Secretary of Agriculture to execute a subordination agreement with respect to certain lands in Lee County, South Carolina."

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON THE DISTRICT OF COLUMBIA TO FILE REPORT UNTIL MIDNIGHT FRIDAY

Mr. McMILLAN. Mr. Speaker, I ask unanimous consent that the Committee on the District of Columbia may have until midnight Friday to file a report.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

CALLING FOR A CEASE-FIRE IN VIETNAM HOSTILITIES

(Mr. VANIK asked and was given permission to address the House for 1 minute.)

Mr. VANIK. Mr. Speaker, while the debate continues on the schedule for American withdrawal from Vietnam, why not stop the killing now?

The most horrible and unexplainable deaths of war are those which so needlessly occur while governments and their leaders make up their minds on the format of peace. It is imperative to stop the hostilities so that no more of our young men are lost as the talks proceed. I therefore call upon the administration to implement an immediate cease-fire to prevent further loss of life.

The timetable for cease-fire is critical, Our Government should announce a unilateral plan for cease-fire by region or by military unit directed toward a total cease-fire.

If we take this action on an announced schedule, the entire world can bear witness to the validity of the offer and the sincerity of the response—and lives can be spared.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman from Ohio yield?

Mr. VANIK. I am happy to yield to the distinguished minority leader.

Mr. GERALD R. FORD. Is the gentleman advocating that the President should order a unit, a group, or all of our forces in Vietnam to stop firing and stand with their guns behind their backs while the enemy can shoot at them?

Mr. VANIK. I did not suggest that.

Mr. GERALD R. FORD. The gentleman said "unilateral cease-fire."

Mr. VANIK. If the gentleman will permit, I suggested that what we do is announce a cease-fire by unit or by region so that we can see what the response is to such action by our Government. I believe I have made that very clear in the basic part of the statement.

Mr. GERALD R. FORD. Let me ask again a simple question. Does the gentleman want the President to tell one unit to stand with their guns behind their backs while the enemy has the right to shoot? Is that what he is advocating?

Mr. VANIK. I did not suggest that at all.

Mr. GERALD R. FORD. The gentleman said a unilateral cease-fire, and that is what it means.

Mr. VANIK. I suggested that by region and by unit we give an expression of our intention. Certainly I do not expect our people to go out and be shot. I expect that they are going to protect themselves and stay behind protective enclaves and not expose themselves to fire.

I believe if we announce a unit-by-unit cease-fire that we can see what the reaction will be on the other side to that kind of action.

It is precisely in line with what Senator SCOTT suggested in the other body. I do not believe our suggestions are very different. I believe there is a great deal of merit to what he has suggested.

Mr. GERALD R. FORD. Senator SCOTT did not say that we should implement ourselves a unilateral cease-fire. He urged that the enemy join with us in a cease-fire and I believe a mutual cease-fire is sound and desirable. The gentleman went one step further however and said a "unilateral cease-fire," which would expose American GI's to the enemy, if the enemy has not agreed to a cease-fire.

Mr. VANIK. Senator SCOTT is quoted in this morning's Washington Post as saying that:

One side has to take the initiative, and to that extent it would be a unilateral action.

Of course, I do not believe in exposing any of our people to a needless exposure

to death. I suggested that we cease fire by a region or by a unit so that we can have an expression of how this kind of action will be treated by our adversary.

Mr. GERALD R. FORD. If we expose one unit to a unilateral cease-fire, then we are exposing x number of defenseless Americans to be shot by the enemy.

Mr. VANIK. My suggestion does not expose a single person needlessly. It is an effort to save lives.

DECLARING NOVEMBER 11 A DAY OF NATIONAL CONCERN

(Mr. DICKINSON asked and was given permission to address the House for 1 1 minute and to revise and extend his remarks.)

Mr. DICKINSON. Mr. Speaker, on September 17, I arranged a special order on the floor of the House of Representatives, and over 150 Members of the House joined in speaking out on the problem of our servicemen who are prisoners of war or missing in action in Southeast Asia. I introduced a concurrent resolution, cosponsored by approximately 200 of my colleagues, which calls upon the President, the Departments of State and Defense, the United Nations, and the people of the world to appeal to North Vietnam and the Vietcong to abide by the Geneva Convention relative to the treatment of prisoners of war. Several hundred wives and family members came to Washington to be present for this occasion and they sincerely appreciated the efforts by the Congress.

Mr. Speaker, the purpose of my taking this time today is to request help again by further emphasizing the problem—in hopes of securing the release of our POW's. I have called upon the President and today I call upon my colleagues to assist me in urging the President to, by Presidential proclamation, declare November 11 a "Day of National Concern" for American prisoners of war, concurrent with our Veterans Day observance. I respectfully urge each of you to seriously consider my request. Such a proclamation would pay tribute to our servicemen, their wives and their families, many of whom have been waiting for over 5 years for information regarding their loved ones.

Once again, your serious consideration for a "Day of National Concern" will be appreciated.

A DAY OF NATIONAL CONCERN, NOVEMBER 9

(Mr. SCHADEBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHADEBERG. Mr. Speaker, in view of the fact that the President has been requested to make a proclamation for a day of concern on November 11, may I tell the Members of the House that the Chief of Chaplains of the Navy has been requested by the National League of Families of American Prisoners of War to commend to our Navy chaplains the 9th day of November as a day of prayer for the brave men being held prisoners of war by the North Vietnamese. I would suggest to Members of the House that they might use that day, also, the 9th day of November, to offer their prayers in behalf of prisoners of war.

Mr. Speaker, I include at this point a prayer:

Almighty Father, who suffers in the affliction of your children we call upon you now from the depths of our anxiety and great concern for our countrymen and loved ones who have fallen into the hands of the Nation's foes. In the face of the evils that these brave men endure and before the grim burdens they are forced to bear, give them courage and hope, and a never failing confidence in you.

But most of all, O God, we ask that the day will soon come when we can all celebrate their release and safe return to their homes and kindred.

Give to all of us who wait and hope in the face of every disappointment the will to persevere in the cause of peace and the wisdom to conquer hate with love and every doubt with a renewed faith in you. Amen.

VIETNAM WAR MORATORIUM

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, an article in the Washington Daily News of October 22, 1969, reveals what the leaders of the Vietnam war moratorium group are really up to. They indicated that a cease-fire in Vietnam is unsatisfactory. Yet, the whole pretext of their movement has been to "stop the killing." A cease-fire is to all practical purposes an end to active warfare. This group does not want an end to killing so much as they want total U.S. troop withdrawals and this I submit would unleash a wave of Communist bloodshed and killing across the whole of South Vietnam. Their hand has been tipped. They are working for the defeat of the United States and victory for the Communists. These out and out Leftists have ill-used millions of sincere Americans who want an end to the shooting war. If the measure of my mail is any indication of public opinion, the great majority of Americans want an end to the war, yes, but they do not support a policy of complete and immediate withdrawal with no regard for the consequences.

The Communist training of the New Left is showing up, and those who support their cause from now on must do so with the knowledge that they are working with sworn enemies of the United States. They must realize that they could possibly be used as dupes in a Communist-inspired plot to notch up a major victory in Asia. Rejection of the idea of a cease-fire has uncovered the peace march leaders' real purpose—military defeat for the United States and handing over South Vietnam to their Communist brothers.

AMENDMENT OF THE SECOND LIBERTY BOND ACT TO INCREASE THE MAXIMUM INTEREST RATE PERMITTED ON U.S. SAVINGS BONDS

Mr. MILLS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H.R. 14020) to amend the Second Liberty Bond Act to increase the maximum interest rate permitted on U.S. savings bonds, which was reported unanimously by the Committee on Ways and Means.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. BYRNES of Wisconsin. Mr. Speaker, reserving the right to object—and I shall not object but do so in order to ask the gentleman from Arkansas for a brief explanation of the bill, and I yield to the gentleman from Arkansas.

Mr. MILLS. I thank my friend from Wisconsin for yielding.

Mr. Speaker, the purpose of the bill before the House, H.R. 14020, is to increase the maximum interest rate permitted on U.S. savings bonds.

The bill raises the maximum allowable interest rate ceiling on savings bonds to 5 percent from its present level of 4¼ percent. The Department of the Treasury has indicated that just as soon as this legislation is adopted it will raise the interest rate paid on series E and H bonds to the new 5-percent ceiling rate, and under the provisions of the bill, the new ceiling may apply to all savings bonds issued on or after June 1, 1969, and also to outstanding savings bonds for interest periods beginning on or after June 1, 1969.

Mr. Speaker, the increase in the ceiling rate that would be authorized under H.R. 14020 is needed for two reasons. First, it is needed because the rates of interest on other forms of savings substantially exceed 4¼ percent. As we all know, interest rates generally have risen rapidly in recent years, and as a result, the yields on Government savings bonds are now significantly lower than those on alternative forms of savings. This situation has reduced the incentive for individuals to buy savings bonds, and redemptions of these bonds have substantially exceeded sales in recent months. The excess of redemptions over sales has amounted to $1,516 million in the first 8 months of 1969 compared to $1,219 million in the whole of calendar 1968.

A second reason why prompt enactment of this bill is necessary is for purposes of sound management of the national debt. There are about $52 billion of series E and H bonds outstanding, and this dollar amount is almost one-third the size of the total outstanding privately held marketable debt. The average maturity of the outstanding privately held marketable Treasury debt is only 3 years and 11 months. In contrast, the $52 billion of outstanding savings bonds will remain outstanding for 7 years, if past experience continues into the future. An effective savings bond program thus helps to reduce the problem of refunding the national debt.

Mr. Speaker, the Committee on Ways and Means was firmly convinced that the increase in the ceiling rate on savings bonds to 5 percent, provided in H.R. 14020, will help make savings bonds more attractive to savers and will thereby both increase bond sales and reduce redemptions. I, therefore, urge approval of the bill by the House.

Mr. Speaker, to clarify a point respect-

ing the new interest ceiling, let me say that the Treasury Department has asked me to note that the mechanics of the issue and redemption of the series E bonds may make it impossible to achieve an exact yield of 5 percent. This is due to small discrepancies, before rounding, which result from the administrative necessity of using maturities stated at monthly intervals and maintaining established issue and redemption prices.

In these circumstances, I believe it should be clear that this body, in establishing a new ceiling rate for savings bonds, contemplates that the Treasury, in setting the precise terms of new issues in accord with established procedures, should remain within the new ceiling when rates are stated with the degree of precision that accords with common practice in the securities markets. Accordingly, this ceiling is not intended to prohibit sales of bonds at a rate of 5.00 percent rounded to two decimal places.

With this understanding, Mr. Speaker, I urge approval of H.R. 14020.

Mr. PATMAN. Mr. Speaker, will the gentleman from Wisconsin yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman.

Mr. PATMAN. Mr. Speaker, I would like to ask this question of the chairman of the Committee on Ways and Means. This bill does not include the 4½ percent interest on long-term Government bonds; does it?

Mr. MILLS. It only applies to the series E and H bonds which are not the type of bonds the gentleman is referring to.

Mr. PATMAN. I would have no objection to that, but I certainly would of course object to the repeal of the 4¼-percent interest rate on long-term Government bonds.

Mr. MILLS. It does not involve any other bonds.

Mr. PATMAN. It does not involve any other bonds?

Mr. MILLS. No, sir.

Mr. PATMAN. I thank the gentleman.

Mr. BYRNES of Wisconsin. I yield to the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Speaker, I wonder if the chairman of the Committee on Ways and Means has considered the possibility rather than increasing rates which obviously the Government is going to have to raise someplace, and pay it—has the committee ever considered making the interest on these series E and H bonds tax exempt to make them more attractive, the way we did with the municipal bonds?

Mr. MILLS. Yes, we have considered it over the years. We have done that. We did not consider it in this recent discussion on this bill but it has been considered.

Mr. PUCINSKI. Why not? Why would it not be considered as an alternative to raising the rates?

Mr. MILLS. Very frankly, one of the main considerations we had in mind in connection with tax reform was to prevent further shrinkage of the base of income subject to taxes. The tax reform bill, as we passed it in the House some weeks ago, had for one of its principal purposes to make more income subject to tax in order to avoid the possibility of people having $200,000 or $1 million of some type of income and paying no taxes on it. This instant bill is a much better approach to the problem of interest rates on these bonds.

Mr. SMITH of Iowa. Mr. Speaker, will the gentleman from Wisconsin yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman.

Mr. SMITH of Iowa. The series E bonds and H bonds in a decedents estate have not been treated fairly in comparison with other property of the decedent. In other words, upon death, the entire value of the bonds including accumulated interest is included, yet there is no advantage in arriving at a new basis later on. Has anything been done about that?

Mr. MILLS. This bill does not deal with that.

Mr. SMITH of Iowa. Do you intend to do something about that?

Mr. MILLS. I know of the problem that the gentleman is referring to, but it is only one aspect of an overall problem, the problem of how Government bonds are treated in connection with one's estate for tax purposes. For example, there is a certain series of Government bonds which cannot be used to pay the inheritance tax, which I think is also wrong. But these are matters which I think can be more appropriately reviewed when we get to the question of estate taxes and gift taxes.

Mr. BYRNES of Wisconsin. Mr. Speaker, I withdraw my reservation of objection.

Mr. Speaker, I support H.R. 14020, a bill to amend the Second Liberty Bond Act to increase the maximum interest rate permitted on U.S. savings bonds.

This bill, endorsed by the Treasury Department, will permit the interest rate paid on series E and H bonds to be raised from the present 4.25-percent interest ceiling to a new 5 percent for savings bonds.

Inflationary pressures have pushed interest rates of other forms of comparable savings to levels that are significantly higher. Redemptions of savings bonds have substantially exceeded sales in recent months, thus impairing the role that savings bonds have played in the sound management of the Nation's debt. The $52 billion of series E and H savings bonds outstanding represent a dollar amount that is almost one-third the size of the total outstanding privately held marketable debt and provide a payroll savings plan for about 11 million people.

The excess of redemptions over sales has grown to $1.5 billion in the first 8 months of 1969. In calendar year 1968 the same cash drain was $1.2 billion. Thus the 5 percent rate is in the national interest. It will make the savings bonds more attractive by making them more competitive, and thus help reduce the growing trend in redemptions. At the same time the 5 percent rate will not hamper the vital flow of savings into private institutions that are sources of channeling funds into housing and other markets. It is noted that the bill applies the 5 percent interest rate only to those savings bonds that are held to maturity. Bonds redeemed prior to maturity yield a lower rate.

The enactment of this legislation is also essential if we are to be fair with the purchasers of these bonds. We owe a responsibility to these buyers to make sure that they receive a reasonable return on their investment.

Mr. MICHEL. Mr. Speaker, I cannot say how happy I am that the House has finally taken action to raise the interest rates on Government bonds from 4.5 percent to 5 percent. I introduced legislation last February to accomplish this objective and have taken the floor on at least a half dozen occasions, urging that this be done. This interest increase is long overdue and I hope the American public will respond by increasing their purchases of bonds, which help fight inflation and also will provide financing for the Government's debt. This increase should also help to reverse the present high rate of bonds being cashed over bonds being sold.

These bonds are good investments for the small investor because of the deferment of taxes on interest until the bonds are cashed in. Their safety and the tax deferment feature should make them attractive to many savers, especially now that we are providing more realistic interest rates.

Now that we have gotten this legislation over the first hurdle, I hope it will move along in the other body, so that it can become effective as soon as possible.

Mr. VANIK. Mr. Speaker, I want to take this opportunity to urge the adoption of H.R. 14020 to raise the maximum allowable interest rate on series E bonds to 5 percent from the present level of 4.25 percent.

In my community and in every community in the United States, millions of prudent citizens have been buying the series E bonds on payroll savings plans. This citizen participation in investment in the public debt during recent years has constituted an act of extraordinary patriotism, particularly since their investment could more profitably be made in other areas.

It would be regrettable if the payroll savings plans were to be dropped because of the incredible and unfair 4.25 percent yield.

It is my hope that every citizen and every corporation will assume its fair share of the Federal debt which has been imposed on our country primarily because of the overwhelming cost of war, past, present, and future. While we endeavor to reduce Federal expenditures and bring the Federal debt into more manageable levels, a broad base of citizen participation is imperative.

Although $52 billion is presently invested by our citizens in outstanding savings bonds, the total amount of public investment in savings bonds has not kept pace with the gross national product.

The series E savings bonds are generally held for a long period of time, an average of 7 years, or until retirement. It is my hope that we can reverse the skyrocketing rate of interest and make the continued investment in series E bonds as wise and profitable for the citizen as it has been for the Government.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas (Mr. MILLS)?

There was no objection.

The Clerk read the bill as follows:

H.R. 14020

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the proviso in the second sentence of section 22(b)(1) of the Second Liberty Bond Act, as amended (31 U.S.C. 757c(b)(1)), is amended by striking out "3.26 per centum" and inserting in lieu thereof "5 per centum".

SEC. 2. (a) Section 25 of the Second Liberty Bond Act (31 U.S.C., sec. 757c-1) is hereby repealed.

(b) Section 22(b)(2) of such Act (31 U.S.C., 757c(b)(2)) is amended by striking out "(subject to section 25)" each place it appears therein.

SEC. 3. The authority granted by the amendment made by the first section of this Act may be exercised with respect to United States savings bonds bearing issue dates of June 1, 1969, or thereafter. Such authority may also be exercised with respect to United States savings bonds issued before June 1, 1969, but in no case shall the interest rate or investment yield on any bond be changed pursuant to such authority for any period which begins before June 1, 1969. For purposes of section 22(b)(2)(A) of the Second Liberty Bond Act and for purposes of section 454(c) of the Internal Revenue Code of 1954, the United States savings notes known as freedom shares issued not later than one year after the date of the enactment of this Act in connection with the issuance of United States series E bonds shall be treated in the same manner as such bonds.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. BYRNES of Wisconsin. Mr. Speaker, I ask unanimous consent that all Members may extend their remarks at this point in the RECORD.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

CHANGE OF CONFEREES ON S. 1857

Mr. MILLER of California. Mr. Speaker, I ask unanimous consent that the gentleman from California (Mr. BELL), one of the members on the part of the House on the conference on the bill S. 1857, be excused. The gentleman was called to California this morning.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The SPEAKER. The Chair appoints the gentleman from Kansas (Mr. WINN) as a manager on the part of the House at the conference on the bill S. 1857, to fill the vacancy resulting from the resignation of the gentleman from California (Mr. BELL).

The Clerk will notify the Senate of the change in conferees.

NATIONAL BUSINESS WOMEN'S WEEK

(Mr. BELCHER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BELCHER. Mr. Speaker, this week is being observed by the National Federation of Business and Professional Women's Clubs of America as "National Business Women's Week"—a salute to the achievements of all business and professional women in their communities.

I would like to take this opportunity to join in that salute, for a very special reason. With one exception my present staff is composed entirely of women, and this has been largely the case throughout my entire 19 years in Congress. My administrative assistant is a woman. My campaign manager is a woman. My Tulsa office is managed almost singlehandedly by a woman.

I will not say men could not have done as good a job as these fine ladies have done. But I am convinced no man could have done any better job. Over the years I have discovered that, given the opportunity and the training necessary, a woman can handle almost any job there is in the political arena, and, in a lot of cases, do it better.

For years now I have had a campaign unit known as "Page Belcher's Pages" and I have often said, "You may beat me, but you can't beat my pages." This group has certainly been one of my most valuable assets in every campaign.

Thus, from firsthand experience, I can say that I am indeed pleased and grateful for the tremendous progress of American working women over the last 50 years. And I commend the Business and Professional Women's Clubs for the great contribution they have made toward encouraging the ladies in this progress and equiping them for competence in the business and professional world.

THE U.S. MERCHANT MARINE—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 91-183)

The SPEAKER laid before the House the following message from the President of the United States; which was read and referred to the Committee on Merchant Marine and Fisheries and ordered to be printed:

To the Congress of the United States:

The United States Merchant Marine—the fleet of commercial ships on which we rely for our economic strength in time of peace and our defense mobility in time of war—is in trouble.

While only one-fourth of the world's merchant ships are more than twenty years old, approximately three-fourths of American trading vessels are at least that antiquated. In the next four years, much of our merchant fleet will be scrapped. Yet we are now producing only a few new ships a year for use in our foreign trade. Building costs for American vessels are about twice those in foreign shipyards and production delays are excessive. Operating expenses also are high by world standards, and labor-management conflicts have been costly and disruptive.

Both government and industry share responsibility for the recent decline in American shipping and shipbuilding. Both government and industry must now make a substantial effort to reverse that record. We must begin immediately to rebuild our merchant fleet and make it more competitive. Accordingly, I am announcing today a new maritime program for this nation, one which will replace the drift and neglect of recent years and restore this country to a proud position in the shipping lanes of the world.

Our program is one of challenge and opportunity. We will challenge the American shipbuilding industry to show that it can rebuild our Merchant Marine at reasonable expense. We will challenge American ship operators and seamen to move toward less dependence on government subsidy. And, through a substantially revised and better administered government program, we will create the opportunity to meet that challenge.

The need for this new program is great since the old ways have not worked. However, as I have frequently pointed out, our budget constraints at this time are also significant. Our program, therefore, will be phased in such a way that it will not increase subsidy expenditures during the rest of fiscal year 1970 and will require only a modest increase for fiscal year 1971. We can thus begin to rebuild our fleet and at the same time meet our fiscal responsibilities.

THE SHIPBUILDING INDUSTRY

Our shipbuilding program is designed to meet both of the problems which lie behind the recent decline in this field: low production rates and high production costs. Our proposals would make it possible for shipbuilders to build more ships and would encourage them to hold down the cost of each vessel. We believe that these two aspirations are closely related. For only as we plan a major long-range building program can we encourage builders to standardize ship design and introduce mass production techniques which have kept other American products competitive in world markets. On the other hand, only if our builders are able to improve their efficiency and cut their costs can we afford to replace our obsolescent merchant fleet with American-built vessels. These cost reductions are essential if our ship operators are to make capital investments of several billion dollars over the next ten years to build new, high-technology ships.

Our new program will provide a substantially improved system of construction differential subsidies, payments which reimburse American shipbuilders for that part of their total cost which exceeds the cost of building in foreign shipyards. Such subsidies allow our shipbuilders—despite their higher costs—to sell their ships at world market prices for use in our foreign trade. The important features of our new subsidy system are as follows:

1. We should make it possible for industry to build more ships over the next 10 years, moving from the present subsidy level of about 10 ships a year to a new level of 30 ships a year.

2. We should reduce the percentage of total costs which are subsidized. The Government presently subsidizes up to 55 percent of a builder's total expenses for a given vessel. Leaders of the ship-

building industry have frequently said that subsidy requirements can be reduced considerably if they are assured a long-term market. I am therefore asking that construction differential subsidies be limited to 45 percent of total costs in fiscal year 1971. That percentage should be reduced by 2 percent in each subsequent year until the maximum subsidy payment is down to 35 percent of total building expenses.

We are confident that the shipbuilding industry can meet this challenge. If the challenge is not met, however, then the Administration's commitment to this part of our program will not be continued.

3. Construction differential subsidies should be paid directly to shipbuilders rather than being channeled through shipowners as is the case under the present system. A direct payment system is necessary if our program is to encourage builders to improve designs, reduce delays, and minimize costs. It will also help us to streamline subsidy administration.

4. The multi-year procurement system which is now used for other government programs should be extended to shipbuilding. Under this system, the government makes a firm commitment to build a given number of ships over a specified and longer period of time, a practice which allows the industry to realize important economies of scale and to receive lower subsidies.

5. The increased level of ship construction will require a corresponding increase in the level of federally insured mortgages. Accordingly, we should increase the ceiling on our present mortgage insurance programs from $1 billion to $3 billion.

6. We should extend construction differential subsidies to bulk carriers, ships which usually carry ore, grain, or oil and which are not covered by our present subsidy program.

7. A Commission should be established to review the status of the American shipbuilding industry, its problems, and its progress toward meeting the challenge we have set forth. The Commission should report on its findings within three years and recommend any changes in government policy which it believes are desirable.

THE SHIP OPERATING INDUSTRY

My comments to this point have related to the building of merchant vessels. The other arm of our maritime policy is that which deals with the operation of these ships. Here, too, our new program offers several substantial improvements over the present system.

1. Operating differential subsidies should be continued only for the higher wage and insurance costs which American shipping lines experience. Subsidies for maintenance and repair and for subsistence should be eliminated. Instead of paying the difference between the wages of foreign seamen and actual wages on American ships, however, the government should compare foreign wages with prevailing wage levels in several comparable sectors of the American economy. A policy which ties subsidies to this wage index will reduce subsidy costs and provide an incentive for further efficiencies. Under this system, the operator would no longer lose in subsidies what he saves in costs. Nor would he continue to be reimbursed through subsidies when his wage costs rise to higher levels.

2. At the same time that we are reducing operating subsidies, it is appropriate that we eliminate the "recapture" provisions of the Merchant Marine Act of 1936. These provisions require subsidized lines to pay back to the government a portion of profits. If the recapture provisions are removed, the purpose for which they were designed will be largely accomplished by corporate taxes, which were at much lower rates when these provisions were instituted. We will also save the cost of administering recapture provisions.

3. Many bulk carriers presently receive indirect operating subsidies from the government because of the statutory requirement that certain government cargos must be shipped in United States vessels at premium rates. When the Department of Agriculture ships grain abroad, for example, it pays higher rates out of its budget than if it were allowed to ship at world market rates. We will propose a new, direct subsidy system for such carriers, thus allowing us to phase out these premium freight rates and reduce the costs of several nonmaritime government programs.

4. Ship operators now receiving operating differential subsidies are permitted to defer Federal tax payments on reserve funds set aside for construction purposes. This provision should be extended to include all qualified ship operators in the foreign trade, but only for well-defined ship replacement programs.

5. Past government policies and industry attitudes have not been conducive to cooperation between labor and management. Our program will help to improve this situation by ending the uncertainty that has characterized our past maritime policy. Labor and management must now use this opportunity to find ways of resolving their differences without halting operations. If the desired expansion of merchant shipping is to be achieved, the disruptive work stoppages of the past must not be repeated.

6. The larger capital investment necessary to construct a modern and efficient merchant fleet requires corresponding port development. I am therefore directing the Secretary of Commerce and the Secretary of Transportation to work with related industries and local governments in improving our port operations. We must take full advantage of technological advances in this area and we should do all we can to encourage greater use of intermodal transportation systems, of which these high-technology ships are only a part.

EQUAL EMPLOYMENT OPPORTUNITIES

The expansion of American merchant shipbuilding which this program makes possible will provide many new employment opportunities. All of our citizens must have equal access to these new jobs. I am therefore directing the Secretary of Commerce and the Secretary of Labor to work with industry and labor organizations to develop programs that will insure all minority groups their rightful place in this expansion.

RESEARCH AND DEVELOPMENT

We will also enlarge and redirect the maritime research and development activities of the Federal Government. Greater emphasis will be placed on practical applications of technological advances and on the coordination of Federal programs with those of industry.

The history of American commercial shipping is closely intertwined with the history of our country. From the time of the Colonial fishing sloops, down through the great days of the majestic clipper ships, and into the new era when steam replaced the sail, the venturesome spirit of maritime enterprise has contributed significantly to the strength of the Nation.

Our shipping industry has come a long way over the last three centuries. Yet, as one of the great historians of American seafaring, Samuel Eliot Morrison, has written: "all her modern docks and terminals and dredged channels will avail nothing, if the spirit perish that led her founders to 'trye all ports'." It is that spirit to which our program of challenge and opportunity appeals.

It is my hope and expectation that this program will introduce a new era in the maritime history of America, an era in which our shipbuilding and ship operating industries take their place once again among the vigorous, competitive industries of this Nation.

RICHARD NIXON.

THE WHITE HOUSE, *October 23, 1969.*

PRESIDENT'S MESSAGE ON MERCHANT SHIPBUILDING PROGRAM

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GERALD R. FORD. Mr. Speaker, for the first time since the Eisenhower years, America has a positive program to again bring this Nation into the front rank of seafaring countries.

That is the significance of the merchant shipbuilding program which President Nixon has outlined in the message he sent to the Congress today.

This is a program which gives American shipyards the incentive to modernize and expand. Unlike the previous administration President Nixon is not throwing our shipbuilding business into foreign shipyards. Instead he is offering American shipbuilders—industry and labor—a challenge and an opportunity.

Under the Nixon maritime program, American shipbuilders have the opportunity to invest $4 billion in modernizing their yards over the next 10 years so they can become fully competitive with other shipyards throughout the world—in techniques, facilities, and production.

If American shipbuilders accept the challenge and avail themselves of the opportunity, the program outlined by President Nixon will succeed. But it must be remembered that the Nixon program is predicated on a responsible repsonse from industry and labor. The Federal Government cannot carry this program forward

alone, because it is not just another subsidy program. It is a program under which the Federal Government is providing the leadership and incentive for a great surge forward in America's maritime fortunes.

This is a program of deeds and not words—a multiyear shipbuilding program to make long-range planning possible, a trebling of Federal mortgage insurance from $1 billion to $3 billion, payment of construction differential subsidies directly to shipbuilders instead of through shipowners, extension of subsidy payments to bulk carriers.

I think the Nixon maritime program will revitalize the American merchant marine and revive our shipbuilding industry. If industry and labor respond, we can once more make our merchant fleet a source of pride for every American.

PRESIDENT'S MARITIME PROGRAM

(Mr. GARMATZ asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GARMATZ. Mr. Speaker, President Nixon today officially announced the administration's long-range maritime program. As a result of that announcement, I believe this day, October 23, 1969, will be recorded as a momentous day in the history of the American merchant marine.

This is a day that I and many other Members of Congress have long fought for. Although at times our fight seemed futile, our energy and dedication and persistence has, I hope, at last paid dividends.

I have already been briefed on the President's 10-year program, which calls for construction of 30 ships a year and would include a mix of general cargo ships, dry-bulk carriers, and tankers. I am most happy to report that this program does not include build-abroad proposals. These ships will be built in American yards, by American craftsmen, and they will fly the American flag.

I want to congratulate President Nixon, not only for refusing to accept the counsel of those who wanted to build abroad—since such a proposal would have endangered acceptance—but also for incorporating so many of the basic elements for which we in Congress have been fighting so long.

The principal features of the program include:

First, procurement of groups of ships to reduce construction costs. This is expected to permit reduction of payment of construction differential subsidy from a present ceiling of 55 percent to 35 percent over a 6-year period.

Second, adjustments in the payment of operating differential subsidy to reduce costs and administrative burdens.

Third, emphasis on the building of dry-bulk carriers to carry bulk cargoes, which have been completely forfeited to foreign carriers.

Fourth, extension to all shipping companies of the privilege to establish tax deferred capital reserve funds for ship construction.

Fifth, other proposals to improve and strengthen our mortgage insurance, research and development and nuclear ship programs.

One proposal, on improving labor-management relations in the shipping industry, will be controversial. But again, the administration should be complimented for seeking new ways to meet this serious problem.

As chairman of the House Committee on Merchant Marine and Fisheries, I have sat through many hearings on the vexing problems of the maritime industry. I especially want to emphasize that all the efforts of my committee have been bipartisan in nature. Republicans and Democrats alike have put political interest aside and joined together to achieve the mutual goal of revitalizing the American merchant marine.

Hopefully, the House and Senate will react with the same bipartisan spirit in accepting the administration's proposals. I think the President has produced a sound, workable, good program, and I intend to support it. I also urge every Member of Congress to give it the support it deserves.

The administration's actions did not come any too soon. The hour is already late, and there is much to be done. Since more than two-thirds of our privately owned merchant ships are, or almost are, 25 years old, we must begin a solid shipbuilding program now—immediately—in order to protect our economic and military needs of the near future.

In view of this crisis situation—which, I am happy to say, this administration has recognized—there is a need for immediate and concerted action on many fronts. First of all, the House and Senate must initiate legislative action on the administration's program. My committee is ready to move on this program. And, I know that the Senate Commerce Committee will take prompt action as well.

I mentioned earlier that there is a need for concerted action on many fronts It is obvious that no program will work unless it has the support of all segments of the highly diversified maritime industry; this includes labor and management—as well as Government.

The administrative segment of Government acted today; Congress—as I have already indicated—is primed to act; ultimate success will, in the final analysis, depend upon concerted industry action.

The shipbuilding industry has promised that it can deliver the goods. It must now prepare itself to face the challenge and prove that it can produce the ships we need at prices and in time to meet our needs. The program presented to us today calls for construction subsidy to be paid directly to the shipyards, instead of to the steamship owner; it also proposes a multiyear procurement system which should enable shipyards to obtain long-term financing.

All of these provisions, including the administration's call for a multiyear, series-type construction, some of standardized ship design, should provide the long-awaited incentive which the shipyards have constantly said they needed.

Although the administration program contains no build abroad proposals, I think the American shipbuilding industry is aware that it must now stress increased modernization of construction facilities and employ all its technological know-how to try to build more ships in the most economical way possible. I think the industry is aware that it must face up to this challenge, and I think it can meet the new demands that will be placed upon it.

The extension of tax deferments to the unsubsidized segment of the American merchant marine will help that seriously declined segment to put aside capital funds for ship replacements. This, too, is a vital element in any long-range program, and should constitute a giant step in our merchant fleet's battle to regain ocean superiority.

In the past, the American maritime industry has been criticized unjustly, damned unmercifully and neglected disgracefully. It was almost allowed to die. Now it has been granted a reprieve—a new lease on life—in the form of this long-range program.

But in the days ahead, the industry will be watched with even more critical eyes. It will be up to the industry to prove it has the ability to once again become competitive.

The ability to compete on the world market will only be achieved if the total American maritime industry cooperates to make this program work. I hope that all elements will join forces in a new spirit of unity, forget petty differences, and work together for the good of the industry and the Nation.

If this is done, we shall surely succeed in again making the American flag a dominant power on the sealanes of the world.

Unless this is done, our merchant marine will surely sink.

Mr. Speaker, I want to personally thank President Nixon for this challenging opportunity he has presented us today. I have faith the industry will show its thanks and appreciation by rising to meet the challenge.

PRESIDENT'S MESSAGE ON MARITIME PROGRAM

(Mr. HAGAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAGAN. Mr. Speaker, I also congratulate President Nixon for his good judgment and foresightedness in making this announcement.

I assure Members the President is right in keeping with the needs of this country today.

I am delighted that the Nixon administration has seen fit to take this step in the right direction toward rebuilding our merchant fleet.

At long last an administration appears to recognize the critical condition of our merchant marine.

The legislation is expected to get to Capitol Hill within the next 4 weeks.

Of necessity, I must reserve full judgment until I have a chance to see just how far reaching this program is, and how the administration plans to implement it.

GENERAL LEAVE TO EXTEND

Mr. GERALD R. FORD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the President's message on the merchant shipbuilding program.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

SIX IN TENNESSEE RECEIVE 33d DEGREE, SCOTTISH RITE MASONRY

(Mr. FULTON of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FULTON of Tennessee. Mr. Speaker, six middle Tennesseans—five of them from my home district of Nashville-Davidson County—are in Washington today to receive the highest degree that is offered in Scottish Rite Masonry—the 33d degree, inspector general honorary.

These outstanding leaders include James W. Allen, Jr., a certified public accountant and a Nashville attorney; Wallace Phelan Douglas, grand secretary of the Grand Lodge, Free and Accepted Masons of Tennessee; Robert L. Evans, a retired businessman from Murfreesboro; Ernest C. Matthews III, a Nashville attorney; James G. Stahlman, owner and publisher of the Nashville Banner; and Clyde R. Watson, past potentate of Al Menah Shrine Temple, and a certified public accountant.

Their election to receive the 33d degree, inspector general honorary, of the Scottish Rite, was announced by Mr. Andrew Benedict, sovereign grand inspector general in Tennessee.

Each of these individuals has made outstanding contributions to his community, his State and to the principals of free masonry. Election to this highest degree in Scottish Rite Masonry is given to those individuals who have demonstrated their belief in and practice of great American fundamentals, outstanding service to the Rite, the community, country and mankind.

Each of these individuals possess these qualities, and I am proud that such an outstanding group are part of my congressional constituency. The honors being paid them are justly deserved. I am confident my fellow Members of the House join me in this personal tribute to their dedication and commitment to the principles of free masonry.

DRAFT REFORM

(Mr. HUNT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HUNT. Mr. Speaker, in emphasizing the importance of the President's draft reform legislation, Secretary Laird recently stated:

> There are no greater sacrifices that we, as government, can ask of our young men than those entailed in the Military Selective Service Act. There are no more sacred responsibilities of government than to assure that this obligation is shared fairly and that, consistent with national security needs, we do whatever is possible to limit the burden of Selective Service on those who are subject to it.

Last May, President Nixon in his selective service message to the Congress outlined a number of overdue reforms in our draft system. One major objective is to reduce the period of prime draft vulnerability from as long as 7 years to only 12 months. To place this revised system into effect, the administration has proposed a simple one sentence revision in the present law. This revision will permit the President to initiate a random sequence of selection for men in each year group who upon classification and examination are found equally available for military service. The revised system has been described in the President's message. It is—by any reasonable standard—the fairest and most understandable procedure open to us under conditions when more men become available for service than are needed.

This legislation, gentlemen, is not only urgently needed at this time; it is also by far the simplest piece of legislation that is likely to be presented to the Congress in this or any other session. More than 5 months have already elapsed since this proposal was first submitted to the Congress by the President. I urge that it be promptly approved by this House.

PERSONAL ANNOUNCEMENT

Mr. BEVILL. Mr. Speaker, on rollcall No. 133, on the appropriation bill for the Departments of Labor, and Health, Education, and Welfare, and related agencies, I was in my district in Alabama on official business and missed the vote. Had I been present I would have voted for the appropriation bill.

On rollcall No. 214, on the Educational Television and Radio Amendments of 1969, I was in my district in Alabama on official business and missed the vote. Had I been present, I would have voted for H.R. 7737.

ELECTION FINANCING REFORM LEGISLATION

(Mr. CONABLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONABLE. Mr. Speaker, today I am reintroducing the Election Financing Reform Act along with 16 of my colleagues. We hope there will be growing support for this needed change in regulating the financing of Federal elections. The present law is regulation in name only and by its operation it encourages proliferation of political committees and impedes the effectiveness of political parties. The most glaring fault of the existing law is that it denies the electorate information which is vitally important in making a choice on election day.

It is the intention of this bill to make public the machinery of campaign finances. It is also the intention of this bill to limit campaign spending and contributions without making that limit unrealistic and unenforceable.

There are too many doubts cast today on the decisions of elected officials, and in requiring less than full disclosure of campaign finances we encourage further doubt. Change is necessary in order to maintain the integrity of our election process and to allow our system of representative government to be truly responsive. Given the record of this Congress for taking necessary reform action, I am hopeful we can soon give serious consideration to this legislation being introduced today by our group.

CONFERENCE REPORT ON S. 1689, CHILD PROTECTION AND TOY SAFETY ACT OF 1969

Mr. STAGGERS. Mr. Speaker, I call up the conference report on the bill (S. 1689) to amend the Federal Hazardous Substances Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of October 21, 1969.)

The SPEAKER. The gentleman from West Virginia is recognized for 1 hour.

(Mr. STAGGERS asked and was given permission to revise and extend his remarks.)

Mr. STAGGERS. Mr. Speaker, I call for immediate consideration of the conference report on S. 1689, the Child Protection and Toy Safety Act of 1969. The House passed this legislation on September 4 by a rollcall vote of 327 to 0.

The bill amends the Federal Hazardous Substances Act to protect children from toys and other articles which are dangerous because of the presence of electrical, mechanical, or thermal hazards.

Substantially, the conference reported the House version. The conference substitute combines the respective short titles; the House version had "Child Protection Act" and the Senate version had "Toy Safety Act."

The conference also combined the procedural requirements for regulation by the Department of Health, Education, and Welfare.

Under the House version the Secretary would have engaged in formal rulemaking—either before or after removing a given item from the market. Under the Senate version the Secretary would have used informal rulemaking proceedings, but there was no provision comparable to the House provision which would allow him to summarily remove an article from the market upon a finding of "imminent hazard." The compromise allows the Secretary to remove from the market any article which he deems is an "imminent hazard" either before or after an in-

formal or a formal rulemaking proceeding. There were no other changes in the House version of the bill.

I am satisfied that the House managers successfully maintained the position of the House on this legislation and I urge that the conference report be adopted.

(Mr. SPRINGER asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SPRINGER. Mr. Speaker, the Child Protection Act passed by this House some time ago was a well considered and adequate measure for the protection of children from toys which endanger them by reason of mechanical, thermal, or electrical hazards. The difference between that bill and the one passed by the other House was slight and, as it turned out, really related to purely procedural matters.

The House bill had provided that toys presenting an imminent hazard could be immediately removed from the marketplace, after which proceedings under the Administrative Procedures Act would be followed to final determination of the issue. Since there are several alternatives under that act some difference appeared in the details for handling such cases. The conference quickly resolved the matter by providing more than one possible route to a decision, granting to both the Secretary and the party marketing the toy adequate remedy.

Other provisions of the House bill which refined the definitions of thermal, mechanical, and electrical hazards and which added a requirement that retail dealers repurchase toys proved to be hazardous were recognized as desirable additions and changes by the conferees and were therefore accepted.

The bill as it comes back to the House from the conference does no violence whatsoever to the aims of the bill as considered and passed by the House, and I recommend approval of the conference report.

Mr. STAGGERS. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

APPOINTMENT OF CONFEREES ON H.R. 13763, LEGISLATIVE BRANCH APPROPRIATIONS, 1970

Mr. ANDREWS of Alabama. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 13763) making appropriations for the legislative branch for the fiscal year ending June 30, 1970, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

Mr. ANDREWS of North Dakota. Mr. Speaker, reserving the right to object—and I shall not object—the main argument in respect to this bill is over what to do with the west front of the Capitol.

As our colleagues know, the House put in the bill $2 million to go ahead with planning for the necessary work to be done. The Senate called for study funds of $250,000, for the National Park Service to restudy this front extension. This is in essence what it boils down to. We have already had one study—do we need another?

I understand there may well be a motion to instruct the conferees, a strange motion, in that it would be not to sustain the position of the House but rather to sustain the position of the other body.

Mr. ANDREWS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. ANDREWS of North Dakota. I yield to the chairman of our subcommittee.

Mr. ANDREWS of Alabama. The gentleman has stated the parliamentary situation as I understand it to be. It is almost unprecedented to instruct conferees before they even have gone to conference about a matter which has not been before the conferees. If such a motion is made, I intend to offer a preferential motion to lay the motion on the table.

Mr. ANDREWS of North Dakota. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

Mr. STRATTON. Mr. Speaker, further reserving the right to object, the gentleman from North Dakota has, of course, stated the issue correctly, that the major point involves the appropriation of some $2 million to proceed with a $45 million extension of the west front of the Capitol.

The Senate has stricken out that money which the House included and instead inserted $250,000 for an engineering study to be conducted by an independent agency, the U.S. Park Service, of just what would be involved in restoring the Capitol so that it does not fall down, in short, a cost and feasibility study of plain restoration, something which has never been fully studied or researched by the Architect or his people.

The American Institute of Architects has recently indicated that this restoration work would cost only $10 million, or at the very most $20 million. That would mean, if this estimate is borne out by the feasibility study, that we would save the taxpayers between $25 and $35 million. Under the Senate amendment we would be spending $250,000 for a feasibility and cost study, with the likelihood that we may thereby save the taxpayers of this country $25 to $35 million.

Mr. Speaker, may I pose a parliamentary question to the Chair? If the unanimous-consent request of the gentleman from Alabama is approved, will it not then be in order to move to instruct the conferees?

The SPEAKER. If the consent is granted and before the appointment of conferees, the motion to instruct would be in order.

Mr. STRATTON. Therefore, Mr. Speaker, I intend to offer a motion to instruct the conferees to accept the Senate amendment which deletes $1.75 million for extension and provides instead $250,000 for a feasibility study of restoration. We have never had a chance to vote on the record of this particular issue previously in this House. In view of the overwhelming 2-to-1 vote that took place in the Senate, the other day against the costly extension project, I think Members ought to be given the opportunity for that vote, and I shall try to give them that opportunity.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. STRATTON. I will be glad to yield to the gentleman from Iowa.

Mr. GROSS. And it is not unprecedented—not the usual procedure but certainly not unprecedented—to offer a motion to instruct conferees. Would the gentleman agree with that?

Mr. STRATTON. The gentleman from Iowa is absolutely correct. Not only have I researched the precedents and rules of the House, which spell this authority out very carefully, but I am sure that the gentleman from Iowa and other Members of the House who were here will recall that the gentleman from Massachusetts (Mr. CONTE) offered an almost identical motion about a month ago to instruct the conferees on the Agriculture appropriation bill with respect to that $20,000 limitation on price-support payments to an individual farmer.

Mr. ANDREWS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. STRATTON. I yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. I make the statement that it is almost unprecedented. I have seen many motions made to instruct conferees to insist on the House position after there has been a conference report returned to the House. But now we are talking about instructing House conferees to do something before even going to conference and to take the Senate position, not the House position. I say that is almost unprecedented.

Mr. GROSS. Mr. Speaker, will the gentleman yield again?

Mr. STRATTON. Yes. I yield to the gentleman from Iowa.

Mr. GROSS. I think in my time in the House I have offered—and it has been some years ago—two motions to instruct before they went to conference. This would not be a procedural precedent. That is the time to instruct—before they go to conference.

Mr. ANDREWS of Alabama. How many times did you win?

Mr. GROSS. I do not recall, but I do not win often around here, anyway.

Mr. STRATTON. I might also comment to the gentleman from Iowa that a motion to instruct the conferees also permits an hour of debate. However, if another motion should be made to lay that motion to instruct on the table, then we will not have any opportunity for debate at all. This is the reason I am taking some time now to clarify just what the issue is. I might say to the gentleman from Iowa that on page 126 of Cannon's Precedents it says this:

> A motion to instruct conferees is not in order until a conference is agreed to and is not in order after the conferees have been appointed.

So, this motion requires split-second timing in order to make sure that we

get it in after the conference has been agreed to but before the Speaker has appointed the conferees.

Mr. GROSS. Mr. Speaker, will the gentleman yield further?

Mr. STRATTON. I yield further to the gentleman from Iowa.

Mr. GROSS. It is not always a question of how many times you win here or anywhere else. It is a question of whether you support a principle.

Mr. STRATTON. Absolutely.

Mr. ANDREWS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. STRATTON. Yes, I yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. If we adopt a precedent here of instructing the conferees before we even go to conference, we might as well not have any conference.

Mr. STRATTON. I would say again to the gentleman that we had a motion to this effect just the other day in the Conte motion. If we can save the taxpayers of this country between $25 million and $35 million at a time when the President of the United States is trying to cut down expenses, I think we ought to make a real effort to do it.

Mr. YATES. Mr. Speaker, will the gentleman yield to me?

Mr. STRATTON. I yield to the gentleman from Illinois.

Mr. YATES. I would ask the gentleman from Iowa, who has indicated that he has previously asked the House to instruct conferees, how many times he asked the House to instruct conferees to agree with the Senate's position?

Mr. GROSS. Mr. Speaker, will the gentleman yield further?

Mr. STRATTON. I yield further to the gentleman from Iowa.

Mr. GROSS. That is not the issue. The issue is whether the gentleman from New York (Mr. STRATTON) is right or wrong in asking that the conferees be instructed to support a position of the House. If this procedure and rule of the House has no meaning then why is it provided for in the rule book?

Mr. YATES. Mr. Speaker, if the gentleman from New York will yield further, he has that right, but how many times has the gentleman from Iowa asked the House to instruct conferees to agree with the position of the Senate before we went to conference? We should allow the conferees to give the position of the House on this matter.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

Mr. STRATTON. Mr. Speaker, further reserving the right to object, let me point out to the gentleman from Illinois that we had 2 hours of debate in favor of his point of view and only 8 minutes of debate in favor of mine.

Mr. YATES. That is a fair proportion.

Mr. STRATTON. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

PRIVILEGED MOTION OFFERED BY MR. STRATTON

Mr. STRATTON. Mr. Speaker, I offer a privileged motion.

The Clerk read as follows:

Privileged motion offered by Mr. STRATTON: Mr. STRATTON moves that the managers on the part of the House on the conference on the disagreeing votes of the two Houses on the bill H.R. 13763 be instructed to accept the Senate amendment, numbered Senate amendment 251, entitled "West Front of the Capitol" which occurs on page 28, line 8 of the Senate version of the bill which strikes out lines 8 through 15 and inserts in lieu thereof the following:

"WEST FRONT OF THE CAPITOL

"For the conduct of studies to determine the feasibility and cost of restoring the west central front of the Capitol, without regard to any other act, $250,000, which shall be transferred to the appropriation for 'Preservation of Historic Properties, National Park Service, Department of the Interior.'"

PREFERENTIAL MOTION OFFERED BY MR. ANDREWS OF ALABAMA

Mr. ANDREWS of Alabama. Mr. Speaker, I offer a preferential motion.

The Clerk read as follows:

Preferential motion offered by Mr. ANDREWS of Alabama: Mr. ANDREWS of Alabama moves to lay on the table the motion of the gentleman from New York.

The SPEAKER. The question is on the motion offered by the gentleman from Alabama (Mr. ANDREWS) to lay on the table the motion offered by the gentleman from New York (Mr. STRATTON).

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. YATES. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 199, nays 165, not voting 67, as follows:

So the motion was agreed to.

The Clerk announced the following pairs:

Mr. O'Neill of Massachusetts with Mr. Conte.
Mr. Hays with Mr. Devine.
Mr. Kirwan with Mr. Springer.
Mr. Celler with Mrs. Dwyer.
Mr. Clark with Mr. Frelinghuysen.
Mr. Aspinall with Mr. Burton of Utah.
Mr. Dingell with Mr. Cahill.
Mr. Adams with Mr. Brown of Ohio.
Mr. Johnson of California with Mr. Del Clauson.
Mr. Pepper with Mr. Denney.
Mr. de la Garza with Mr. Bush.
Mr. Purcell with Mr. Edwards of Alabama.
Mr. Brooks with Mr. Cramer.
Mr. Gray with Mr. Camp.
Mr. Corman with Mr. Grover.
Mr. Wolff with Mr. Bell of California.
Mr. Foley with Mr. Harsha.
Mr. Fuqua with Mr. Lipscomb.
Mr. William D. Ford with Mr. Clay.
Mr. Reuss with Mr. Dawson.
Mr. Baring with Mr. McEwen.
Mr. Tunney with Mr. Mailliard.
Mr. Dowdy with Mr. Martin.
Mr. Waldie with Mr. Powell.
Mr. Fascell with Mrs. May.
Mr. Culver with Mr. Pelly.
Mr. Hastings with Mr. Morse.
Mr. Quie with Mr. O'Konski.
Mr. McClure with Mr. Sandman.
Mr. Hanna with Mr. Teague of California.
Mr. Casey with Mr. Watson.
Mr. Symington with Mr. Diggs.
Mr. Whitehurst with Mr. Wiggins.

Mr. BURKE of Massachusetts changed his vote from "nay" to "yea."

Mr. DOWNING changed his vote from "nay" to "yea."

Mr. YATRON changed his vote from "yea" to "nay."

Mr. MACDONALD of Massachusetts changed his vote from "nay" to "yea."

Mr. CARTER changed his vote from "yea" to "nay."

Mr. WYATT changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

The SPEAKER. The Chair appoints the following conferees: Messrs. ANDREWS of Alabama, STEED, KIRWAN, YATES, CASEY, MAHON, ANDREWS of North Dakota, LANGEN, REIFEL, WYMAN, and BOW.

HOUSING AND URBAN DEVELOPMENT ACT OF 1969

Mr. PATMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 13827) to amend and extend laws relating to housing and urban development, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 13827, with Mr. FLOOD in the chair.

COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee Amendment: Page 45, line 2, strike out "412" and insert "415."

The committee amendment was agreed to.

AMENDMENT OFFERED BY MR. BRADEMAS

Mr. BRADEMAS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BRADEMAS: Page 46, after line 8, insert a new section 416 to read as follows:

"FHA FINANCING FOR MOBILE HOMES

"SEC. 416. Section 2 of the National Housing Act is amended by—

"(1) inserting '(i)' after the words 'for the purpose of' in the first sentence of subsection (a);

"(2) inserting '; and for the purpose of (ii) financing the purchase of a mobile home to be used by the owner as his principal residence' before the period at the end of the first sentence of subsection (a);

"(3) inserting '(other than mobile homes)' after 'new residential structures' in clause (1) of subparagraph (iii) of the second paragraph of subsection (a);

"(4) inserting the following new sentence at the end of subsection (a): 'The Secretary is hereby authorized and directed, with respect to mobile homes to be financed under this section, to (i) prescribe minimum property standards to assure the livability and durability of the mobile home and the suitability of the site on which the mobile home is to be located; and (ii) obtain assurances from the borrower that the mobile home will be placed on a site which complies with the standards prescribed by the Secretary and with local zoning and other applicable local requirements.';

"(5) inserting ', except that an obligation financing the purchase of a mobile home may be in an amount not exceeding $10,000' before the semicolon at the end of clause (1) in the first sentence of subsection (b);

"(6) inserting ': *Provided*, That an obligation financing the purchase of a mobile home may have a maturity not in excess of twelve years and thirty-two days' before the semicolon at the end of clause (2) in the first sentence of subsection (b); and

"(7) striking out 'real property' each place it appears in subsection (c) (2) and inserting in lieu thereof 'real or personal property'."

Mr. BRADEMAS. Mr. Chairman, I appreciate the opportunity to say a few words about a problem which I feel—indeed, I am sure most all of us here today feel—is rapidly approaching crisis proportions. This problem put simply is: The tremendous shortage of decent housing at reasonable cost.

With the enactment of the Housing Act of 1949, Mr. Chairman, Congress established the official national goal: "a decent home and a suitable living environment for every American family." Yet after decades of fragmented and grossly underfinanced Federal housing programs, over 6 million families still live in substandard housing—dilapidated, lacking in basic sanitary facilities, overcrowded. Millions more live in neighborhoods which are fast deteriorating. Further, at a time when most Americans are enjoying the highest standard of living that this Nation or any nation has ever known, we are also faced with a severe shortage of available housing.

It must therefore be obvious to all of us, Mr. Chairman, that we have not met our national goals in housing and that the results achieved under existing programs have fallen far short of meeting even the minimum needs of our people.

Because this country is facing such vast housing problems, has firmly set as its goal decent housing for all Americans, and has the basic wherewithall to attain this end, I have offered this amendment to the housing bill before our consideration today.

One of the most difficult problems facing our country today is that of providing decent housing for low- and moderate-income families at costs that are reasonable, particularly at a time of high land costs, high costs of construction, and of high interest rates.

My amendment is aimed not at solving the whole problem of housing, but at solving part of it.

The amendment that I propose, Mr. Chairman, would amend title I of the National Housing Act to allow the Federal Housing Administration to insure loans for the financing of mobile homes to be used by the purchaser as his principal place of residence.

Under my amendment, a mobile home buyer could obtain an FHA-insured loan in an amount up to $10,000 repayable over a maximum of 12 years.

The amendment, may I say, has already been adopted by the Senate as part of the housing and urban development bill. It is also supported by Secretary Romney of the Department of Housing and Urban Development, as well as by the National Housing Conference, and the savings and loan industry.

The Mobile Homes Manufacturers Association and Trailer Coach Association, which represent nearly 90 percent of the Nation's mobile home producers, and the Mobile Housing Association of America, which principally represents mobile home dealers from across the country, and numerous other organizations concerned with mobile homes have also given approval to my amendment.

The amendment I offer has one significant modification from the Senate-passed amendment but that change, which I will come to in just a moment, is strongly supported by Senator HOLLINGS of South Carolina, the principal author of the Senate amendment.

Mr. Chairman, let me say a word about mobile homes. Mobile homes represent a low-cost form of housing which offers a means of solving the housing problem of many low and moderate income families who cannot afford conventional housing and whose housing needs can be met by mobile-sized units.

As such, mobile homes supplement, not undercut, the home construction industry. For all practical purposes the low and moderate income consumer has been priced out of the more expensive home-buying market.

The rapid growth of the mobile home market alone is ample testimony to this, Mr. Chairman. A study of mobile home buyers conducted for the U.S. Department of Housing, and Urban Develop-

ment by the Bureau of the Census not long ago shows that mobile homes accounted for approximately 25 percent of the total production of new single family homes in 1968. In addition, during the same year the mobile home industry supplied more than 95 percent of all new single family housing units selling under $12,500.

Statistics gathered by the mobile home industry also show a rapid growth in mobile home sales: from about 100,000 units in 1960 to over 300,000 in 1968. By the end of 1969 this figure may well reach the 400,000 mark, a quadrupling in less than a decade. Indeed, it has been estimated that about 6 million people now live in mobile homes across the United States.

Considering its expanding growth and production, then, Mr. Chairman, the mobile home industry must indeed be looked upon with hope as capable of mass producing permanent, low-cost housing units which can be used to alleviate the current housing crisis in America by helping provide homes for low- and moderate-income families.

To illustrate, the HUD study of mobile-home buyers reached the following conclusion:

> Ninety-four percent of the mobile homes covered in the survey sold for less than $10,000. By contrast, only six percent of all new one-family homes (other than mobile) sold in 1966 for less than $12,500.

Obviously, Mr. Chairman, the people buying mobile homes today are those whose incomes have priced them out of the homebuilding market. They are the young married couples just starting out, the retired caught in the bind of rising costs and little income, those living in smaller communities where housing is scarce, as well as lower and middle income citizens trapped by inflation and high interest rates. These, in short, are Americans who cannot afford to build their own homes.

So it is not correct to say, Mr. Chairman—and I know some Members may have had apprehensions about this point—that extension of FHA title I loans to cover mobile homes would eat into the money available for financing conventional housing.

Indeed, the current average retail price for a mobile home is about $6,000 which is far below what the home construction industry could or would be able to produce conventional homes for and survive. The median selling price for the conventional home today is just under $27,000.

Mr. Chairman, as I have pointed out, over 6 million Americans now live in mobile homes. Recent production rates of mobile homes, I am informed, have approximated one-fourth to one-fifth of the new housing starts in 1968. Further, last year about 90 percent of the new homes sold in this country for less than $15,000 were mobile homes. There is no question then, Mr. Chairman, that mobile homes are here to stay.

Mr. Chairman, I would also like to clear up another misconception about mobile homes and their use, and this concerns their "mobility." I should like to here point out that a common conception of mobile homes as always on the road, transient in nature and a credit risk to finance, is just not true. According to the HUD survey I have cited previously, more than 2 million American families use mobile homes as their sole residence. Moreover, 80 percent of all mobile home owners sampled had not moved within a 5-year period. Again, I would cite a conclusion of the HUD survey of mobile home dwellers:

> So far, the mobility of these households is no greater than that of the population as a whole.

One additional statistic ought to be mentioned in this regard and that has to do with the financial stability of mobile home buyers. It was perhaps cast most vividly by John M. Martin, managing director of the Mobile Homes Manufacturers Association, in his testimony on September 12, 1969 before the Senate Subcommittee on Housing and Urban Affairs which held hearings on Senator Hollings' bill. Speaking in behalf of both the Mobile Home Manufacturers Association and the Trailer Coach Association, Martin said:

> Regarding mobile home financing, current FHA programs have a foreclosure rate of approximately 7 per 1,000. The mobile home industry financial institutions consider a rate of 5 per 1,000 high and one prominent company has a rate of 1 per 1,000, with others generally ranging between 1 and 3. This is achieved in spite of the fact that mobile home financing has generally been more expensive than conventional mortgage financing. The mobile home owner is parked to stay and he pays his bills. A good risk for either private enterprise or FHA.

To speak of "mobile" homes, then, Mr. Chairman, is not really accurate. And, as I have stated before, the amendment which I have offered today would only apply to purchases of a mobile home to be used by the buyer as a principal residence.

Mr. Chairman, I want to make a general proposition, having given these several statistics, that in view of them it is really now appropriate for the Federal Government to recognize the need to help people who wish to do so finance the purchase of mobile homes.

Under my amendment a buyer could get a loan insured by the FHA, repayable over a maximum term of 12 years.

At this point I want to lean very hard on one particular point, about which I feel strongly, as I am sure most Members of the House do. This is about high interest rates. To those who show with me a deep concern about high interest rates, let me note that by tying the mobile home financing program into the FHA title I program, mobile home buyers would be able to borrow money at rates substantially below the rates applicable to non-FHA insured loans, as much as 50 percent below.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I am glad to yield to the gentleman from Texas.

Mr. PATMAN. I notice that this would provide an effective rate of 11 percent on the mortgage up to $2,500; that is, on a discounted basis of 5½ percent. The next bracket would be 4½ percent on a discounted basis, which would be an effective rate of 9 percent, and would be an average of about 10 percent.

Now, under the regular FHA 203 section, would the effective rate be 7½ percent?

Mr. BRADEMAS. Mr. Chairman, let me respond by quoting from a comment which I asked HUD to give me on this amendment. They said that it does provide—that is to say, the amendment I am offering provides "for effective annual interest rates generally ranging from 8 percent to 8.83 percent, depending on the amount and term of loan."

HUD goes on to say:

> These rates would not even approach the 12 percent interest typical of conventional financing of mobile homes.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

(On request of Mr. PATMAN, and by unanimous consent, Mr. BRADEMAS was allowed to proceed for 5 additional minutes.)

Mr. BRADEMAS. Mr. Chairman, HUD goes on to say that—

> These rates—

That is to say, the rates for mobile home financing that would be made possible by the amendment I have here offered—

> would not even approach the 12 percent interest typical of conventional financing of mobile homes.

In further response to the question of the distinguished chairman, I might point to the statement made in the hearings on the Senate side by William B. Ross, then Acting Assistant Secretary for Mortgage Credit and FHA Commissioner, in which he inserted a table that makes the comparison between the interest rates that would be charged under my amendment and the interest rates that are presently being charged for mobile home loans which are not FHA-insured.

For example, I may say to the gentleman from Texas (Mr. PATMAN), that if the amount to finance were $5,000, repayable over a 7-year period, this would involve, under my amendment, an effective annual interest rate of 8.83. True, this is very high, but if a mobile home purchaser borrowed the money under the present non-FHA-insured conventional financing, it would cost him 11.5 percent.

Mr. PATMAN. Mr. Chairman, will the gentleman yield further?

Mr. BRADEMAS. I yield.

Mr. PATMAN. I do not want to compare it with the conventional rate on mobile homes. I want to compare it with the FHA rate in the other chapter under title II. In other words, that would be 7½ percent, would it not? Therefore, this rate would actually be about a percent or two higher, under the gentleman's amendment.

Mr. BRADEMAS. I appreciate the chairman's question.

Let me make this comment: We want to be careful not to compare apples and oranges, if I may put it that way, because the kinds of loans which are made for mobile homes are not the same kinds of loans which are made on conventional

housing. There are certain important distinctions.

For example, a person buying a mobile home does not seek a loan for the same length of time as he would on a conventional home loan. Under a title II mortgage credit type loan the length of time would be normally up to 30 years, whereas for a conventional mobile home purchase loan he would get, let us say, 5 to 7 years—or, under the amendment before us, he would be allowed as much as a 12-year loan.

Another important distinction between the two kinds of loans, title I and title II, of course, is that the amount of money borrowed for a mobile home is far less under title I than is customarily the cost under title II.

Still another significant difference between the two types of loans is that the title I loans are commercial consumer-type loans as distinguished from title II mortgage-type loans which are secured by buildings on real estate.

Mr. PATMAN. Does the gentleman not take it out of that category of consumer type when he extends the term to 12 years?

Mr. BRADEMAS. I think that the point the chairman raises is a fair-minded one. What we have tried to do is have a reasonable cutoff period. Twelve years seems to be a fair cutoff point. I do not pretend to have any divine expertise on whether 11 years is better than 12 years, but this seems to be, in the judgment of the experts with whom I consulted in drafting this amendment, a reasonable cutoff.

I think I understand what the chairman is saying in respect of his concern about interest rates, because, as the chairman knows from earlier conversations with the gentleman from Indiana, I share his hostility to high interest rates. That is one reason why I am a strong advocate of this amendment. If my amendment is adopted, it should make possible—on the basis of the evidence reported to me about interest rate structures—a reduction of as much as 50 percent in the effective interest rates paid by purchasers of mobile homes in this country.

Mr. PATMAN. There is just one thing. If it is a reduction in rates, I would be for it, but it occurs to me that it is actually charging more. If you put this over in the FHA title II where it logically belongs, in section 203, the interest rate would be 7½ percent, and you admit that this would be an average rate of 10 percent under this proposal of yours.

Mr. BRADEMAS. No. I did not say that.

Mr. PATMAN. I said it in evaluating it.

Mr. BRADEMAS. I did not say it.

Mr. PATMAN. It appears it is 5½ percent on a discount basis, which is an effective rate of 11 percent. After the first 25 it is 4½ percent on a discount basis, which means 9 percent, and between the two it will average out to about 10 percent. That means you are paying 10 percent, if I am correct, under this proposal of yours, whereas under the regular FHA it is only 7½ percent.

Mr. BRADEMAS. I appreciate the chairman's question. All I can say to him is that I think his information is not completely in accord with the facts as I have been given them.

Because I anticipated the question of the chairman, I went back to HUD not once, not twice, not three times, but four times, Mr. Chairman, to say that I wanted to be very sure about the question of interest rates. As I have just indicated to the chairman, in this document from HUD it was made very clear that my amendment provides for an effective annual interest rate generally ranging from 8 to 8.3 percent.

The CHAIRMAN. The time of the gentleman has again expired.

(By unanimous consent (at the request of Mr. PATMAN) Mr. BRADEMAS was allowed to proceed for 3 additional minutes.)

Mr. BRADEMAS. Whereas, if we were to continue with the present pattern of financing mobile homes in this country, the result would be people having to pay 12 percent. I do not like that, and I am sure the chairman does not like it, either.

If you put the mobile home insurance program over into title II type loans, as the chairman is suggesting, to repeat my metaphor, you are mixing apples with oranges, because title II is for a conventional home purchase generally over a 30-year period. And the interest rate under title II loans is straight line in nature over a long period of time, unlike the discount procedure that is provided under title I type loans.

Therefore, to place the mobile home program into a program of insured loans for a completely different purpose is to do complete violence to the purpose of my amendment and would, in all candor, Mr. Chairman, make completely ineffective and inoperable my intent with reference to mobile home loans.

Mr. PATMAN. Mr. Chairman, will the gentleman yield further?

Mr. BRADEMAS. Yes, I yield further to the gentleman from Texas.

Mr. PATMAN. These are substantial homes and will last a long time. The gentleman has 12 years in there. Mobile homes can be good, substantial homes. If you put them all into section 203, title 2, you would have an effective rate of 7.5 percent. I do not understand why the gentleman would insist upon mobile homes be FHA financed at a higher rate. However, if I could be convinced by the gentleman that it does represent a lower rate, I would be glad to support his amendment, but at this point I cannot do so.

Mr. BRADEMAS. I think you can readily appreciate that if a lender were considering whether to make a loan on a mobile home or on a conventional home—that is an FHA, title II-type loan—he would certainly see himself at a disadvantage if he were to go for the mobile home at the same interest rate.

Mr. PATMAN. Mr. Chairman, will the gentleman yield further?

Mr. BRADEMAS. If I may complete my statement, Mr. Chairman, because there is another important point which I want to make about my amendment, I should like to do so. This point is, namely, that my amendment would also answer some of the queries of those who might see mobile homes, or mobile home courts, as old, unsightly, substandard, and generally in conflict with sound planning and zoning practices.

This problem—the old "house trailer" or "trailer park" image—is a real one, and one with which the mobile home industry, numerous communities throughout our Nation, and concerned individuals and organizations have been dealing for many years.

This same general concern was brought out in the recent Senate hearings time and again, with the result that a provision was added in the Senate-passed version of the amendment that I am introducing today—a provision authorizing the Secretary of Housing and Urban Development to prescribe minimum standards for construction and design of mobile homes financed through FHA-insured loans. The Senate provision further requires assurances from mobile home buyers using such FHA-insured loans that the mobile home will be placed on a site which complies with local zoning and other applicable local requirements.

Mr. Chairman, I would like to point out that my amendment goes even a step further to authorize the Secretary of HUD to prescribe minimum standards for the site on which the mobile home is to be placed and to require that the borrower provide assurances that the site on which the mobile home is initially placed conforms with these standards.

The purpose of this modification, is to assure that the site is adaptable to the surrounding neighborhood. This control over the location of the mobile home unit should assist in preventing the development of unsightly and poorly planned mobile home courts.

Mr UDALL. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman from Arizona.

Mr. UDALL. Mr. Chairman, I applaud the gentleman from Indiana in offering this amendment. Out in my part of the country the mobile home has become a real way of life for the young Americans and the old people, as well as a lot of people who cannot afford conventional homes. We have got to make a breakthrough in this area and, therefore, I enthusiastically support the gentleman's amendment.

Mr. SCHEUER. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman from New York.

Mr. SCHEUER. Mr. Chairman, I applaud the proposal of this program by the gentleman from Indiana (Mr. BRADEMAS).

Before coming to Congress I was involved in the construction of moderate-income housing. I know how frustrating it is for builders across the country to produce houses in the $15,000 category. It has become almost an impossibility. The mobile home represents a real breakthrough. We are going to the heart of the matter when we deal with the environmental implications of the mobile home or the mobile homes that are

in place in mobile home parks that really have become eyesores in many instances, unfortunately, because of the lack of local zoning.

The CHAIRMAN. The time of the gentleman from Indiana has again expired.

(By unanimous consent (at the request of Mr. SCHEUER) Mr. BRADEMAS was allowed to proceed for 2 additional minutes.)

Mr. SCHEUER. Mr. Chairman, if the gentleman will yield further, frequently the zoning or lack of zoning has permitted the conglomeration of trailer parks that have been eyesores and which have been blight upon the environment.

I commend my colleague upon his suggestion that we have zoning standards—that we provide Federal standards—which are higher than some of the standards which exist today.

I would like to ask the gentleman whether he has had any discussion with the officials of HUD as to the kind of environmental standards they will provide and the availability of community services, recreation, and entertainment in these parks as well as outdoor facilities, schools and the like. Does the gentleman know what their standards are likely to be?

Mr. BRADEMAS. I appreciate the remarks of my colleague, the gentleman from New York.

With reference to his question, I would say I have talked only informally with HUD officials and we have discussed some of the very points that the gentleman has just mentioned.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman.

Mr. PATMAN. In the discussion of these mobile homes, taking into consideration that we have allowed them to be built on water the same as on land, but the Federal Home Loan Bank has never issued regulations in accordance with the law.

I hope the gentleman will keep that in mind because it is just as important that some people have them on water as well as on land.

Mr. BRADEMAS. I hope that on water, land, and the sea we will have the support of the gentleman from Texas.

Mr. WYATT. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman.

Mr. WYATT. Mr. Chairman, I would also like to add my commendation of the gentleman from Indiana on his very worthwhile amendment.

Mobile homes have become almost a way of life in my State.

Also I would like to commend this administration for supporting the gentleman's amendment. I think it is excellent.

Mr. BRADEMAS. I thank the gentleman from Oregon.

Mr. MYERS. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman.

Mr. MYERS. Mr. Chairman, I would like to associate myself with the gentleman's remarks. I know that the mobile home industry is an important industry in your district and it is certainly an important one to the State of Indiana. I congratulate the gentleman for his amendment.

Mr. BRADEMAS. I thank the gentleman.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. BRADEMAS. I yield to the gentleman.

Mr. ANDERSON of Illinois. Mr. Chairman, I too would like to indicate my endorsement of the amendment which has been offered by the gentleman from Indiana. I think it represents a very reasonable, sound, and constructive approach.

Mr. Chairman, I too will shortly offer an amendment which I think is designed also to help eliminate the deficit of housing in this country.

These proposals have the support of the Department of Health, Education, and Welfare.

Mr. Chairman, I hope the gentleman's amendment is overwhelmingly adopted.

Mr. BRADEMAS. I thank the gentleman from Illinois.

Mr. WIDNALL. Mr. Chairman, I move to strike out the last word and rise in support of the amendment.

Mr. Chairman, first I would like to compliment the gentleman from Indiana (Mr. BRADEMAS) for his amendment. I think it will be a fine addition to this year's housing bill. It can provide an opportunity for low income people to own homes that are modern, sanitary, and well constructed and at a price that ranges at the most, I would say, up to $12,000.

You can today get in the mobile home field a home that has three bedrooms and two baths and 20 feet by 60 feet in size for a maximum of $12,000, and running between $8,000 and $12,000. There is not anything comparable in regular construction of single-family homes that I know of anywhere in the United States. It would be an excellent addition to the programs we already have that are trying to help low income people.

I think this is instant housing. This can be done almost immediately. We have an urgent and crying need for this kind of housing and at the price it is possible to construct a home using the mobile home program.

Mr. SCHEUER. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman.

Mr. SCHEUER. I appreciate the views of our distinguished minority leader. I know, from personal experience, of his deep concern for an adequate supply of attractive moderate-cost housing. Would it be a fair expression of the congressional intent, with reference to the environmental implications of this mobile home program, would it be the congressional intent that officials of HUD would apply high standards of community planning and environmental design to assure that a new mobile home community and such other places where these mobile homes are used, would make a positive contribution to the environment whether they are urban or suburban, and that there would be available a full complement of attractive, wholesome, and appropriate community facilities and services available for families living in these new facilities, and that we would not repeat the experiences of the past of the blighting, "eyesore" effects on communities of mobile home colonies, which have sprawled, unplanned, and unkempt, growing like Topsy, across the face of the country?

Mr. WIDNALL. From my interpretation of the administration's position, it is their intent to do what the gentleman has suggested. In many communities throughout the United States there has been a fear of creating trailer courts in unregulated areas. They have become eyesores and little cancers on the landscape. There is absolutely no intent to encourage anything like that in the administration of this program. I feel that the proposal is the only hope for meeting the very urgent needs in cities, suburbs, and some of the rural areas of the United States. This type of housing that I have seen—and I have made it my business to see it in various places in the country—is excellent housing. I would be very happy to have one of these homes myself.

Mr. SCHEUER. If the gentleman will yield further, would not the gentleman be much happier if it were the policy of HUD to require that your mobile home be placed in a pleasant environment, attractively planned and landscaped, with proper recreation and community facilities and services, and proper community planning? Is this not the congressional intent, and would you not appreciate your mobile home being placed in such an attractive community environment?

Mr. WIDNALL. I certainly would.

Mr. SCHEUER. Do you think it is the intention of HUD to follow your view and the congressional mandate in that connection?

Mr. WIDNALL. I believe so.

Mr. SCHEUER. I thank my colleague.

Mr. BURKE of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachsetts. Mr. Chairman, while all these bouquets are being thrown around here, I think we ought to recognize the facts of the situation. At an interest rate of 13 percent, a married couple buying one of these homes and having a $10,000 note on it will have to pay back within a period of 7 years the sum of $20,000. I imagine very soon we will have a motion made in the House, possibly under this bill or some other bill, providing for married couples to be able to go to war surplus outlets and buy some of the pyramidal tents they have around.

I believe we ought to be realistic. All we are doing is kiting-up the interest rates, encouraging people who lend money to kite-up interest rates, and a 13-percent interest charge is an exorbitant charge. To expect a married couple to be able to pay that amount back within 7 years, the sum of $20,000, is unconscionable in my mind.

Mr. WIDNALL. I believe the gentleman should remember that today in the

United States there are many places where people are paying 18 and 22 percent in order to get mortgages when they seek to buy single-family homes.

Mr. BURKE of Massachusetts. That is correct. That is why we need a strong usury law in this country, and why we should stop soft-soaping and spreading false hopes and get down to the real nitty-gritty issues here and put a ceiling on interest charges, because the people who sell mobile homes get a down payment and they hold title to the mobile home until final payment is made, and when a young married couple is required to pay back to those people the sum of $20,000 within 7 years, I say it is an unconscionable thing for the Congress to encourage.

(By unanimous consent, Mr. WIDNALL was allowed to proceed for 2 additional minutes.)

Mr. WIDNALL. Mr. Chairman, I would like to call the attention of the gentleman from Massachusetts to the fact that this measure does not provide for 20-year loans. The loan would have a top of 12 years, as I understand, and it also provides something that you and I want most: some instant housing for the low-income people of this country. We can stay here and debate this year, next year, and the following year, and talk about unrealistic interest rates and get nowhere, while conditions worsen throughout the entire country. I want to see some action now, and this is the beginning of that type of action.

Mr. BURKE of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. I reiterate what I have said: Within 7 years, on a $10,000 note, the borrower will have to pay back $20,000 for that note.

Mr. HARVEY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, when one considers that the housing shortage at present, as documented by Secretary of Housing and Urban Development George Romney, is the biggest in our Nation's history, then it is understandable why support of FHA financing for mobile homes is so overwhelming in all housing circles.

In a recent interview, Secretary Romney pointed out that the shortage of homes between now and 1978 will be about 26 million units. This is the number of new or rehabilitated homes that it is estimated we would need to take care of people between now and 1978 and to replace substandard units.

But, for a more startling fact, consider this observation which was made by Daniel M. Fitz-Gerald, Wickes Corp. board chairman, last June. Mr. Fitz-Gerald, a nationally known business executive, revealed in a speech that from the time the Pilgrims landed at Plymouth Rock until this year—142 million houses have been built in the United States. That is 349 years. Now, in the next 30 years—yes, just 30 years—it now is estimated that we must build 142 million more to fill our needs. We must double in 30 years what it took us to do in 349 years, according to Mr. Fitz-Gerald.

These are startling facts. At this critical time, however, our homebuilding industry is now beset by high interest rates. Loan money for the homebuilding industry is hard to come by. The housing industry is in perhaps its most critical period of the postwar era.

Therefore, this special amendment being offered by our colleague, the Honorable JOHN BRADEMAS, which has my fullest support, is particularly timely today.

It is for an industry which, despite loan problems, is breaking records month after month. Let me recall from the September 1, 1969, issue of U.S. News & World Report that this year's total of mobile homes is expected to be about 400,000, up from 300,000 of 1968.

Furthermore, industry experts predict that mobile homes will soon account for one-third of all the next single-family houses sold in this country. Already, nearly 6 million people are living in these units.

This has particular and special meaning to me. Within Michigan's Eighth Congressional District, at least four companies in and near the small community of Marlette, Mich., located in Sanilac County, are a dynamic part of this industry.

These industries include Marlette Homes, Inc., Guerdon Industries, Inc., Active Homes Corp., and Divco-Wayne Industries, Inc. The latter's Marlette plant specializes in classrooms, but its plants elsewhere in the Nation are in what we now call the prefabricated transportable home business.

This is the new offshoot of the mobile homes. The transportable homes, of two-unit construction, truly are permanent structures which, if necessary, can be moved from time to time. They are customarily set on a foundation and become very much a permanent place of residence.

Marlette Homes' President Earl Swett has, I believe, correctly predicted an "unlimited expansion" in the years ahead for this industry.

Again, let me emphasize these are not like the old trailers. These are homes. The two-unit home is 20 feet wide and 55 feet long. New models have been expanded to 24 feet wide and 60 feet long. Marlette Homes, as do other manufacturers, have research-experimental models. These range from 24 feet wide to 45 feet long. The bigger units include three bedrooms, 1½ baths, kitchen, dining room, living room and walk-in closets.

Last year I supported legislation which finally granted savings and loan associations the power to make loans to finance mobile homes. This has proved helpful. But it is apparent additional help is required to help low- to moderate-income families who comprise the bulk of the mobile home purchasers. In permitting FHA to insure loans for the purchase of mobile homes, not to exceed $10,000 and to be repaid in 12 years, I believe we would finally provide real help to individuals in quest of housing.

Until today, purchasers of mobile homes have had to overcome real obstacles in order to purchase their homes. Short-term loans and high interest rates have been among them. Let me quote one paragraph from the testimony of William B. Ross, Acting Assistant Secretary for Mortgage Credit and FHA Commissioner, Department of HUD, as he testified before the Senate Banking and Currency Committee, in talking about present methods of financing these mobile homes:

> Interest is charged by the "add-on" method, meaning that it is calculated on the full loan amount for the whole term, rather than on a declining balance as in mortgage loans. This results in interest charges of roughly double the amount of simple interest.

I think eventually, Mr. Chairman, in the mobile home industry we are going to come to what the chairman of the full committee wants, which is to have this sort of provision included in title II, but I do not think that is at all practicable at this time. I do not think the mobile home industry feels it is practical in this period of tight money. I know the Department of Housing and Urban Development does not think it is wise, and as a reasonable person who observes the money market, I do not think it would work. Therefore, Mr. Chairman, I wholeheartedly support the amendment offered by the gentleman from Indiana. I hope it will pass.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. HARVEY. I yield to the gentleman from Texas.

Mr. PATMAN. Mr. Chairman, in the discussion by the distinguished gentleman from Michigan, did the gentleman take into consideration the fact that in a regular residence regardless of the way it is financed, when it is paid for, the purchaser owns the land as well as the house? In the mobile home the purchaser mortgages just the home and not the land. They have to pay rent on the land.

Mr. HARVEY. Mr. Chairman, I would say to the gentleman from Texas, of course there is no land to be bought. Approximately 20 percent of the purchase price of an ordinary house today according to HUD figures, is included in the land value. If the purchaser is not paying for that land, of course he does not receive it when he finishes paying for his home.

Mr. PATMAN. Mr. Chairman, let me ask the gentleman a question. I have great respect for the gentleman and great confidence in him. He was a most useful member on our committee, and I am sorry he is not still on it. If we would put this proposed amendment in section 203 of title II, it would be financed at the rate of 7.5 percent. The rate here, if put as the gentleman from Indiana has suggested in his amendment, could be 10 percent. So there is a 2.5 percent difference, it occurs to me. Would the gentleman please explain to me how we could afford an amendment that would raise the interest rate 2.5 percent?

Mr. HARVEY. Mr. Chairman, the chairman of the committee is talking about 7.5 percent plus points.

Mr. PATMAN. There are no points under FHA to the buyer.

Mr. HARVEY. There certainly are. There are in Michigan. I do not know about Texas, but there certainly are in Michigan. Let me say to the gentleman

from Texas that I fully concur in what the gentleman from Indiana the sponsor of this amendment says, that there is just so much money available, so much available credit. In such a period of tight money, if the lender who has funds to lend is forced to make the basic decision as to whether he is going to lend it on a home that is fixed on a permanent foundation or a mobile home, it is obvious which it will be.

It will be the much more substantial home on a permanent foundation rather than the mobile home which he will choose. It is that simple, for it is a wiser investment.

It seems to me because that is so, we will not accomplish the purpose we have in mind which is to get more people into homes.

I realize this is not the best solution. I think eventually we will come to title II on this, but I do not think we are ready for it right now.

Mr. ST GERMAIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the amendment because I believe a great deal is being overlooked here and we are being very shortsighted.

Recently, when I asked the Secretary of Housing and Urban Development why a thorough review was being made of the leased housing program, section 23(d), his reply was that by going into leased housing we are discouraging the construction of new housing.

No. 1: I disagree with that.

But if he is going to use that answer as far as section 23 housing is concerned, which I support fully, how can he then turn around and support the financing of mobile homes and encourage people to move into mobile homes?

Just consider the 12-year mortgage on the mobile home itself. When the 12 years are over and the home is paid for, what will the person have left? He will not even own any land, let alone equity.

True, the house today is that much more expensive, but consider the result, as was mentioned a few moments ago, when a person buys that mobile home. That is all he gets, and he has to find a place to put it.

Gentlemen, let me say that this is the first step. We are talking about 12 years, but the Senate wanted to go from 15 to 40 years on the mortgages for the mobile home sites.

In this particular bill we are going from $1,800 to $2,500 on the maximum amount of a mortgage which may be insured per space in a mobile home court.

This discussion about environment, community planning and what have you—that was put into the act last year, when we allowed mobile homes to be financed through the Federal Savings and Loan Associations.

Gentlemen, if you want to go along with this amendment, fine and dandy, but consider the future. You are discouraging Operation Breakthrough.

According to the Secretary of Housing and Urban Development, the point of Operation Breakthrough is to find a method to produce low-cost housing that will be within the reach of these younger families and the elderly families who do not have funds to buy a $25,000 house. Is that not where the thrust should be, rather than to take the easy way out?

As the gentleman from Massachusetts (Mr. BURKE) said earlier, the next thing we know we will be putting them up in tents. Admittedly, it is instant housing, but consider the quality of that housing and the durability of that housing. Consider what that mobile homeowner will have at the end of 12 years. What kind of equity will he have? That I believe is worthy of serious consideration.

Mr. WIDNALL. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the ranking minority member of the committee.

Mr. WIDNALL. As to the quality of production of the housing in the mobile home field, it is good housing. It will last. It is something anybody would be proud of. It is not junk housing at all. Some of it in the past has been, but not today.

I would take one of these mobile homes today, that can go on a 20- by 60-foot foundation, over most of the homes in Georgetown, where today people are paying $65,000, $75,000, or $85,000 just for prestige.

The ceilings are higher and the rooms are bigger and the sanitary facilities are better and everything else. We all know that many people buy homes just for prestige in Georgetown which would be condemned because they are inadequate today. They just do not measure up to the codes.

Mr. ST GERMAIN. I agree with the gentleman, but I suggest, as far as the housing in Georgetown is concerned, that this is a personal thing. As I say, I do not feel, by its very nature, that you have a permanent investment in the mobile home, and I do not believe we should encourage it by easing terms, which we do with each succeeding bill that we pass in the Congress.

The CHAIRMAN. The time of the gentleman has again expired.

(By unanimous consent (at the request of Mr. FLYNT) Mr. ST GERMAIN was allowed to proceed for 5 additional minutes.)

Mr. FLYNT. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the gentleman.

Mr. FLYNT. I would like to commend the gentleman for the approach that he has taken to this amendment, and I would like to associate myself with his remarks. I had not planned to discuss this amendment at all, but in view of the very fine argument that the gentleman from Rhode Island has made, I wish to join him, and I would like to ask for the comments of the gentleman from Rhode Island on some aspects of this. Recognizing that something is necessary now, perhaps as a crash measure to try to get people into homes, I was initially inclined to support the amendment offered by the gentleman from Indiana. However, when you look at this thing over the 12-year life of the mortgage, this could turn out to be one of the cruelest hoaxes that could possibly be perpetrated on the "homeowner" who would borrow money under the provisions of this particular amendment. At the end of the 12-year mortgage period he might find himself involved in litigation rather than living in a home to which he has title and one which he could sell to somebody else. As I understand it—and I think the gentleman from Rhode Island has pointed it out during the course of his remarks—under the provisions of this amendment it is not necessary that the borrower acquire any title to the land or the foundation upon which this mobile home is erected. Does the gentleman agree with that?

Mr. ST GERMAIN. That is correct.

Mr. FLYNT. Now I would like to ask the gentleman if at the end of that 12-year period, when the title would normally become clear, assuming that the mortgage is paid off, if this had been attached to the real estate and had become a part of the realty, when the mortgage is paid off, would the borrower then own his "personal property in the form of a mobile home," or would the owner of the land upon which the foundation rests own it? Would the gentleman care to comment on that?

Mr. ST GERMAIN. Very frankly, this is a legal question which has not been hit upon here. However, I would say eventually that the mobile home itself which was originally purchased would probably belong to the borrower who borrowed the funds and finally paid it off at the end of 12 years.

Also I want to point out that if they are going to pay off $10,000 in 12 years there is nothing that says that mobile home did not cost him $12,000 or $14,000 when he only financed $10,000. In addition to that, they are paying on the loan and they have to pay a pretty good charge for the utilities. When you consider what the monthly payments will be and what kind of a house they could afford for the same amount of money, I believe that that is important, too. Again at the end of the 12 or 15 years what do they have? No equity.

Mr. FLYNT. If the gentleman will yield further, when I asked that question I meant it as a question, because I do not know the answer to it. It is very clear that the answer would vary from State to State, depending upon the real property laws of the respective States.

In the absence of a written contract, or if a written contract had expired, the mobile home might well become a part of the realty and revert to the owner of the real estate. In this event the title of the borrower would lapse and the borrower would be divested of his property.

In some States the law is very clear in the absence of a contract that if there are direct affixations to the realty that the title to that which is affixed to the realty passes to the owner of the real estate rather than to the owner of what was previously personal property. Then does this become a deed of trust or does it become a chattel mortgage?

I think in States where legal differences exist between mortgages and deeds of trust that this would be a real question. It might be that the borrower who exercised his rights under the provisions of this amendment might be buying a lawsuit instead of buying a home.

Mr. ST GERMAIN. I thank the gentleman from Georgia.

Mr. SCHEUER. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the gentleman from New York.

Mr. SCHEUER. Mr. Chairman, I respect and congratulate the gentleman upon his concern with reference to Project Breakthrough. I, too, share those concerns. But I believe that this program is not only consistent with Project Breakthrough, but may provide a part of the very breakthrough that we are looking for in this particular project.

After all, what Project Breakthrough is all about is an attempt to apply industrialized housing techniques to produce shelter, industrial techniques which have been used in a technological society to produce automobiles, dishwashers, washing machines, and many other items successfully at ever-decreasing unit labor costs.

The labor unions are now showing very real and very encouraging signs of being sensitive to the nature of this problem and are now cooperating in several important new ventures with management.

They should be encouraged in every way and this program provides an additional laboratory for applying new manufacturing and technological developments and new forms of labor-management cooperation—to reducing housing costs and improving quality.

The CHAIRMAN. The time of the gentleman from Rhode Island has again expired.

(By unanimous consent (at the request of Mr. SCHEUER) Mr. ST GERMAIN was allowed to proceed for 3 additional minutes.)

Mr. SCHEUER. And, it seems to me that producing industrialized housing and mass-produced housing via the mobile home route can provide new guidelines, new techniques and a new approach for the Operation Breakthrough program.

Mr. Chairman, I thank my colleague for yielding.

Mr. ST GERMAIN. Mr. Chairman, there is one other point which I would like to make, and that is the big problem facing us today, tight money and lack of credit. If you cannot find money with which to buy homes now, you are going to encourage the financing of mobile homes to a greater degree. All one needs to do is to look at the percentage at which the use of mobile homes has increased over the past few years. Are you not going to worsen the situation insofar as tight money is concerned?

Mr. ASHLEY. Mr. Chairman, will the gentleman yield?

Mr. ST GERMAIN. I yield to the gentleman from Ohio.

Mr. ASHLEY. Opponents of the Brademas amendment seem to be saying that we will make money available with FHA backing to purchase high cost housing but we will not make money available with FHA backing to make possible the purchase of more modest housing? I think this could lead us into a very discriminatory situation. While I tend to be sympathetic to much of what the gentleman is saying, I think he should be very cautious about the position he is taking. We agree with respect to our concern for the environment, but the fact remains that although there is housing being built today, 90 percent of that housing is being bult for the upper-middle-income and rich people in the United States. For all practical purposes, we are building no housing whatsoever for our lower income families. I regard this program as really the first step in Project Breakthrough. We know we are faced with the need for shelter. This program represents a new delivery system. Certainly, it does not have all of the conventional and traditional aspects of custom built housing; no. But I am not as fearful as I have been and on balance, for the reasons that I suggest, I am going to support the amendment of the gentleman from Indiana because, begging the indulgence of the gentleman from Rhode Island, with whom I have discussed this at great length, I think we may be looking at a tight money situation for several years to come.

We have the competence to produce mobile, low-cost industrial housing. It makes sense, it seems to me, to facilitate the financing of this housing.

I think we cannot stand idly by and see the more fortunate segment of our society housed with Federal backing while this is denied to those who are less fortunate.

Mr. KYL. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like to continue the dialog with the gentleman from Rhode Island.

First, in regard to the conversation of the gentleman from Georgia. He expressed a general point of law regarding land and appurtenances. As a matter of fact, this is not an issue here because the placing of the mobile home on property is covered by specific contract, which does express in detail the exact terms.

The second thing is this. The gentleman from Rhode Island has made a point that we might be stifling Operation Breakthrough. At this point I am trying to decide whether the amendment offered by the gentleman from Indiana is a good one or not. But pursuant to the argument of the gentleman from Rhode Island, is it not possible that since mobile homes are taking an increasing percentage of the housing market year after year, if we encourage mobile home purchasing, we may stimulate, by competition, the very kind of effort we need to get the breakthrough in permanent type housing?

Mr. ST GERMAIN. Mr. Chairman, will the gentleman yield?

Mr. KYL. Yes, I certainly yield to the gentleman.

Mr. ST GERMAIN. I think it is entirely a question of what one believes in—whether one believes that this country should go to mobile homes to house our people; or are we looking for a breakthrough, let us stick with the term "breakthrough"—are we looking for a breakthrough in the homebuilding industry where we provide houses for low- and moderate-income people at a price that they can afford?

Incidentally, I have seen housing being produced now and I feel certain we are going to be able to produce housing in the $12,000 to $15,000 price—two- and three-bedroom houses. But we have to keep working at it and pounding at it if, as I say, we are going to go the mobile home route, if that is what you want and if Congress decides that is what it wants and the country decides that is what it wants, fine. But if we want to continue searching for a way to house our people in the ordinary conventional housing, then I say we have to put more emphasis, and not be deterred, but we have to put more emphasis on that because it is very tempting to take the easy way out. I fear we are doing this by encouraging mobile home purchases.

Mr. KYL. There is a further point to consider here. Most of us now look at mobile homes, not as a mobile homes but permanent ones. But mobile homes as such do have an advantage for those workers who must move around the country, and for many of the older people today who prefer to live in one part of the country during one season of the year and live in another part of the country in another season of the year.

I am not arguing with the gentleman. I am trying to think out loud to see if I can make a decision on this matter. I still wonder perhaps if the very fact that we encourage the use of mobile homes might not stimulate competition in the building industry.

Mr. ST GERMAIN. All I can say in answer to that is that that theory may well work out. But so far as the point the gentleman made about workers and elderly people who like to be in one place at one time of the year and in another place at another time of the year, certainly that was the original concept of the mobile homes. I agree with that. But then they are out of the ordinary, they are not the ordinary individuals we are putting in mobile homes today by approving this type of amendment.

Mrs. SULLIVAN. Mr. Chairman, will the gentleman yield?

Mr. KYL. I yield to the gentlewoman.

Mrs. SULLIVAN. I would like to ask the gentleman this question. Has the gentleman any knowledge of the length of life of these mobile homes? In other words in 10 years—that is, after they are paid for—how long will they last after that?

Mr. KYL. In response to the gentlewoman, I would like to yield to the gentleman from Indiana who is the author of this proposition, and ask him the question. What is the average useful life of these mobile homes?

Mr. BRADEMAS. Mr. Speaker, according to statistics I have been given by the Mobile Home Manufacturers Association—and I might add that there are relatively few documented statistics on the life expectancy of mobile homes—the median life expectancy for the life of a 12-foot-wide mobile home unit is around 16 years.

And I would like to make clear that here we are talking about those mobile homes which would be used as a place of permanent residence by the buyer. My amendment would only pertain to mobile home purchases such as these. I quote my offered amendment: "For the purpose of financing the purchase of a

mobile home to be used by the owner as his principal residence."

Incidentally, statistics for the mobile home industry show that some 86 percent of all mobile homes produced last year were 12 feet wide and varied from 54 to 65 feet in length. This year over 90 percent of the production is estimated for the 12-foot-wide mobile home, or more than 360,000 of the projected 400,000 units. As I have pointed out, the life expectancy of such trailers is 16 years.

I would also make the observation, in commonsense terms, that obviously the life of most mobile homes is not as long as that of a conventional home. That is merely one of the reasons it is easier to get title II type financing, mortgage financing, at lower interest rates on a conventional home than would be the case if mobile home loans had to be made under title II instead of title I. The effect of putting mobile home loans under title II would be to make such loans inoperable.

Mrs. SULLIVAN. Mr. Chairman, will the gentleman yield?

Mr. KYL. I yield to the gentlewoman from Missouri.

Mrs. SULLIVAN. The reason I asked the question is that the buyers of mobile homes are going to have their $10,000 or $12,000 debt paid off within 10 years, but after they have it paid off, what do they have, really, in equity? What is the worth of that mobile home they have been living in that length of time?

Mr. KYL. I would suggest that the answer to the question depends on the kind of care that is given to the property. I know of many mobile homes which have existed for a period in excess of 10 years and which are still very usable facilities.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HARVEY. Mr. Chairman, I ask unanimous consent that the gentleman may have an additional 2 minutes.

Mr. PATMAN. Mr. Chairman, reserving the right to object to the gentleman's request, and I shall not object, but since the debate has been rather free and many Members have participated in it, I wonder if we are about ready to vote on the amendment. I would ask unanimous consent that the gentleman from Missouri, Mr. RANDALL, have five minutes, and who else wants time?

The CHAIRMAN. The Chair will decide that question.

Mr. PATMAN. I wish to find out how many Members wish to speak further on the amendment. I suggest that 10 minutes would be satisfactory.

Mr. Chairman, I ask unanimous consent that all debate on the amendment and all amendments thereto close in 10 minutes.

PARLIAMENTARY INQUIRY

Mr. HALL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HALL. Is not a unanimous-consent request pending?

Mr. PATMAN. I reserved the right to object. There is a reservation of objection only. I ask for 15 minutes.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to limit all debate on the pending amendment and all amendments thereto to 15 minutes. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri (Mr. RANDALL).

Mr. RANDALL. Mr. Chairman, I rise in support of the amendment of the gentleman from Indiana to provide financing for mobile homes. It is difficult to believe there should be any opposition to this amendment. I had thought the principal purpose of this housing bill was to provide decent housing at reasonable costs not only to those who are well to do, but also to those families with low and moderate incomes.

We were all encouraged that a similar amendment has already been adopted by the other body, sponsored by one of the Senators from South Carolina.

Someone has said that statistics without analysis are not only meaningless but possibly misleading. Well, some statistics which are meaningful so far as mobile homes are concerned is that 90 percent of all homes sold for less than $15,000 are mobile homes. These are figures from the Department of Housing and Urban Development. Also, a HUD survey shows that millions of our citizens live in mobile homes and 80 percent of the occupants have not moved in 5 years which is no greater mobility than that of the general population.

It is my privilege to represent several counties in west central Missouri. I have studied carefully the provisions for rural housing in this bill. In our rural areas there is not only plenty of land room for sites for mobile homes. Quite frequently there is a real preference for this type of home. Take the case of a young couple who have bought some vacant acreage. They may not have the means at first to construct a conventional home.

Before we look at the arguments of opponents to this amendment who, for some reason seem to be against the inclusion of mobile homes in this bill, let us look at some of the real gains which are provided. First, no matter how we put it, or no matter how it is sliced, if mobile homes financing is made possible under this bill, it will be at a lower rate of interest than conventional financing. The present conventional financing rate may run as high as 11 or 12 percent, but would never run over 8 percent under the provisions of this housing bill. For example, a lower cost trailer which would not exceed the price of $5,000 could be financed for 7 years with a total interest cost of 8.8 percent under FHA. Under non-FHA or conventional financing the rate would be 11.5 percent.

A second great advantage in financing mobile homes under the housing bill is that we thereby achieve what is called instant housing. There is much talk about Operation Breakthrough. Sometimes it is only lipservice. In other words, it is nice to repeat such an attractive phrase, but here in this amendment is a proposal which will go a long way to realizing in fact and in truth a large number of housing units right now, not at some indefinite date in the future.

Yet another argument for this amendment is that there is a large number of persons who simply insist upon living in a mobile home. This is their first and last preference and they are going to select this type of housing even if this provision is not added to the housing bill. Without the amendment it means they are going to wait until they can find some conventional means to finance these mobile homes and that means higher interest and longer waiting.

In many parts of our country living in mobile homes is a way of life not only for young married couples but for retired couples.

As a testimonial to the popularity of this type of housing it is estimated that one out of every four newlywed couples will be moving into a mobile home.

There are bound to be those who will raise objections. What are the arguments that have been raised against this amendment? First, there are those who are worried about cluttering up the landscape as they put it. They have even gone so far as to say they are concerned about the bad environment which mobile homes create. Well, many years ago when I served as a member of the Jackson County court in Jackson County, Mo., I listened to perhaps as many as 3,000 zoning cases in the 12 years I sat on the county court. I have learned opponents to zoning have a way of making their objections heard. Even in the middle 1950's an applicant seeking to zone what was then called a trailer park, had to have some plans for streets, utilities, and a plan for landscaping surrounding the park.

Today these areas are no longer called trailer parks. They were called mobile home subdivisions. They are attractively laid out in a lot plan just like any other subdivisions.

For those who are really and honestly concerned about the damage to surroundings from these mobile homes should recall that in the other body the sponsor of a similar amendment provided these mobile homes could be financed by insured loans only if they were located in properly zoned areas. In an effort to improve over even that sort of provision, our good friend from Indiana, Mr. BRADEMAS, in his amendment left it up to the Secretary of Housing and Urban Development to approve or disapprove a mobile home insurance loan depending upon the suitability of the site upon which the home would be situated.

Strangely enough, another source of concern by those who oppose this amendment is that at the end of the payout period they own personal property and no real estate. This type of opponent argues that with the conventional home when a person pays for a house he also owns a lot. The answer to this argument is, of course, that the buyer has paid for the lot in the one case and has not paid for a lot in the other. Housing, by means of mobile homes is a fairly recent innovation. Just as the condominium was an innovation which came to be well accepted, we understand there are subdivisions

which accept mobile homes that also set off an area of these subdivisions for those mobile homes which were never intended to be transient. It is reserved for those who intend to "stay put," these persons are given an option to buy the parcel of land to which their mobile home is affixed.

In such cases after 10 years the mobile home occupants in these areas not only have their mobile home paid for, but also the parcel of land upon which it is situated.

Suppose the owner of a mobile home is not so lucky as to find one of these new subdivisions which sells a parcel of ground as an option under the rental agreement. Even so the occupant of a mobile home all of those years during which he is paying to find a suitable parcel of ground so that when he nears the end of his term of payment he can be the owner of the lot as well as the mobile home itself.

Yet another objection we hear is that this type of housing will do a disservice to our cities and counties and even our school districts because, for some unexplained reason, these units of housing will escape taxation. Of course, this kind of argument is a spurious one because conventional housing could also escape taxation if the assessor omitted to conduct a careful survey of new improvements within the area he is charged to assess. Certainly, there is no way to conceal or hide a mobile home any more than there is conventional housing. If in the past mobile homes have not borne their fair share of local taxes, then it is certainly not by design or intent on the part of the occupants of these mobile homes but an omission of some kind or other by those whose job it is to place a fair valuation upon these mobile homes just as they are required to place a fair valuation on conventional housing.

Mr. Chairman, this amendment merits the adoption of the Committee. If there is as great an interest in quickly providing a large number of units of housing as those who talk about Operation Breakthrough, then they will support this amendment. In the past the Congress has provided ample housing funds for the affluent and have provided not enough funds for the less affluent.

Let us make no mistake about it, we are not talking about the old-type house trailers. Today there are mobile homes which have three bedrooms and two baths on a lot as large as 20 by 60 feet. These run from $8,000 to $12,000. Nothing in the past has been comparable to the product that is available on today's market.

Today, they may be called mobile homes although they are not really mobile. Instead we are talking about good, prefabricated homes which have all of the conveniences and comforts of conventional homes. They are set upon foundations. Perhaps they are susceptible to being moved but only most infrequently.

Please remember we are not talking about old trailer parks but according to the words of the amendment of the gentleman from Indiana, we are authorizing these prefabricated units to be placed on "suitable sites" and that means in an area designed and planned in advance for this type of housing with all the utilities and with streets and sidewalks like most other subdivisions.

I strongly favor this amendment because I am convinced this is the type of housing that can make some real progress in the housing problems not only in our suburban areas, but also in our rural areas which it is my privilege to represent. In rural areas, this type of housing can be handily heated by liquid petroleum. There are already enough distributors to provide quick delivery for this type of fuel for heating. Lights can easily be provided by power companies which are either investor owned and in other parts of our district by our rural electric cooperatives. The time has passed to argue whether this type of housing has merit. It is preferred by literally thousands and thousands of families. The time has passed to quibble. The time to move forward is now.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. BRADEMAS).

Mr. BRADEMAS. Mr. Chairman, I thank my colleague, the gentleman from Missouri, for what he had to say. I want to come back just to summarize for a moment what the gentleman from Ohio (Mr. ASHLEY) so eloquently said. I think, as the gentleman from Rhode Island (Mr. ST GERMAIN) pointed out, we are all deeply concerned about affording more opportunities for low-income families to buy housing.

The fact of the matter is, under the present law, most of the housing that is constructed of a conventional kind, as the gentleman from Ohio (Mr. ASHLEY) pointed out, is not for low-income families. One of the fundamental justifications for the amendment I have offered is that it will make it possible, in realistic, practical terms, for low-income families to purchase homes at much lower interest rates than they must presently pay if they cannot get an FHA-insured loan for a mobile home.

If we want such persons to have to keep paying 12-percent interest, then Members ought to be against my amendment. If we want them to have an opportunity, considering that they are people who are not able to afford conventional housing, to obtain a loan at perhaps 50 percent less interest, according to the testimony of the people from HUD, then Members should be for my amendment. So if a Member is a good William Jennings Bryan populist, he should be for my amendment, I may say to the gentleman from Texas.

I think the fundamental point, Mr. Chairman, is this: People are now buying mobile homes. Do we want to give them an opportunity to buy mobile homes at more reasonable rates of interest than is presently the case?

That is the point.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Chairman, I rise in support of this amendment.

There is no question that the mobile home industry is the fastest growing industry in this country. There is also no question there are many problems to be resolved. Some of the building trades unions are trying to work out jurisdictional problems which I am sure will be resolved in due time; for this industry cannot flourish without the expert knowledge and experience of the building trades unions. However, basically the industry does offer in those communities where there is no other recourse, some hope for low-cost housing to the people of those communities.

We have adequate safeguards such as local zoning laws and other regulations to protect communities from indiscriminate use of this kind of housing. It would be my hope that the chairman of the banking committee, in view of the extended debate today on this issue, would take time to hold hearings on this whole question of the growth of the mobile home industry with particular emphasis on what it does to communities; its financing and in particular, financial help in building parks.

In many parts of the country they are using so-called mobile homes for development of entire communities. The gentleman from New Jersey said these are really prefabricated homes. I would say many of them are equally as well built as conventional buildings. This is a big subject. I would hope the chairman would initiate hearings on this industry, on this entire subject, to see what the impact will be on housing in America.

Mr. Chairman, in the meantime, I support this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. FARBSTEIN).

Mr. FARBSTEIN. Mr. Chairman, I support this amendment because I can see the benefits that can be derived therefrom.

Primarily as a Representative of an underprivileged area and of an area where the people need low- and middle-income housing, I am concerned about the possibility of any funds being withdrawn from housing of that type. I understand this amendment solely provides for FHA loans. I can readily see where, if insurance is provided for the purchase of these low-cost mobile homes, there is a possibility that those individuals who live in the central cities may be able to go to the suburbs and purchase these mobile homes, thereby releasing some of the pressure that presently exists in the central cities. Today all these people who need low- and middle-income housing can do is to remain in the central cities because of their inability in any way to obtain housing within their ability to pay.

It is a hope that these mobile homes will permit those who can afford them to move out of the central cities and thereby expand the number of housing units in existence. This will be a salutary situation as far as the people of my area are concerned.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. HARVEY).

Mr. HARVEY. Mr. Chairman, the gentleman from Iowa (Mr. KYL) asked a very thoughtful question just as he con-

cluded that part of the dialog on this amendment to give 12-year FHA credit to mobile-home buyers. It was, "What was the life of a mobile home? How long could one reasonably expect it would last?"

I wanted to inform the gentleman at that time that from the best statistics available from the mobile home industry, since World War II, 2,926,980 mobile homes have been produced, and approximately 70 percent of these homes produced going all the way back to 1946 are still in existence. And approximately 50 percent of these more than 2 million homes are in existence in mobile home communities.

Mr. Chairman, I can only speak for the State of Michigan, but I would say in the State of Michigan these homes hold their value and hold it very well. Mobile homes do not depreciate, in many cases, as much as a home built by conventional standards. They are a very worthwhile investment, as already recognized by commercial banks and savings and loan institutions.

Someone said this would hurt Operation Breakthrough. On the contrary, Mr. Chairman, I do not know if this is what Governor Romney has in mind for Operation Breakthrough, but this is where the action is in housing today. This is the real breakthrough in housing today, producing homes such as this and not in the conventional housing field.

Mr. Chairman, the amendment of the gentleman from Indiana will be a major step forward in our announced goal of giving every American a decent place in which to live. It should be supported overwhelmingly.

The CHAIRMAN. The Chair recognizes the gentleman from Rhode Island (Mr. ST GERMAIN.)

Mr. ST GERMAIN. Mr. Chairman, on the question to which the gentleman from Michigan just addressed himself, we nad no testimony before the House Subcommittee on Housing on mobile homes, but they did ask questions on this subject on the Senate side.

Mr. Gray, representing the mobile home industry, stated in an answer:

> I am just trying to visualize my own sales area. We have a 1956 unit that we will sell for close to $2,000 that sold originally for about $5,200. This is a nice unit.

He says—and listen to this—that originally in 1956 the cost was $5,200. Inflation has hit us; prices have gone up; and they will sell that for $2,000.

Quoting Mr. Gray further, there was a question asked about depreciation of mobile homes. He answered by saying:

> Therefore, the usual unit doesn't depreciate in comparison with something like an automobile or appliance or something like that. To give you an exact figure percentagewise of what it depreciates is very difficult. It depends a great deal on the individual that is residing in it, too.

I should like to conclude by saying that when Governor Romney came before us on Operation Breakthrough I did not get the impression that he was looking to mobile homes as being the answer to Operation Breakthrough. I hope to God, for the sake of this country, that this is not going to be the answer to Operation Breakthrough.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. MCCLORY).

Mr. MCCLORY. Mr. Chairman, I feel that the effect of adoption of this amendment, if it would do anything, would be to discourage this Operation Breakthrough on the construction of new low-cost housing which we so desperately need.

My experience with this subject, particularly at the State level, has been that the addition of great numbers of mobile homes cast an unconscionable burden on the homeowner, the small homeowner as well as the large homeowner. This is because these mobile homes do not pay taxes as people who own homes do. They are not subject to real estate taxes. And the mobile park owners resist the payment of any fair and equitable tax. So, if we adopt this amendment, we will hurt every county and municipality and State in the country which relies upon real estate taxes for the support of local government and local education wherever one of these parks is located.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. SCHEUER).

Mr. SCHEUER. Mr. Chairman, as I see it, this is a promising program that would affect the housing market in three ways.

First of all, from the point of view of dollars, it gives the moderate-income or low-income person or family another option, another choice, another alternative, to conventionally built FHA financed housing, which we have learned in city after city after city across the country cannot build for less than $20,000 or $22,000. Housing costs produced by conventional construction method and costs poses an impenetrable barrier to the low-income person in achieving decent shelter. It gives him no option whatsoever.

Second, is the time saved by the use of industrial mass production methods in manufacturing housing. How many mayors have agonized over the problem of land cleared for redevelopment perhaps several years, and how many local redevelopment agency officials have agonized over the endless time that it takes to get an urban renewal project for moderate-income people off the ground? This program could well reduce the amount of time that it takes to get a large-scale moderate income housing development started.

Third, it could be the very "breakthrough" that we are looking for in Project Breakthrough and provide the catalytic agent, which could bring cost cutting, mass production techniques, into housing construction.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. PATMAN) to close debate.

Mr. PATMAN. Mr. Chairman, this amendment would discriminate against the poor. I appreciate the fact that the gentleman from Indiana (Mr. BRADEMAS) seriously urges adoption of the amendment, because he sincerely believes it is in the public interest and in the interest of the poor. However, when you consider that it is actually increasing the rates, it is another thing. If he insists that he lowers the rates—and let us presume he is correct for the sake of argument—then he could lower the rates even more by putting this program under title II, section 203 of the National Housing Act. So why not do that? Why make these people pay 2½ percent more than the FHA rate under section 203?

Mr. Chairman, I seriously suggest this does substantially increase interest rates, and this is not the time to do that, particularly at the expense of the poor people of the country or the low-income groups. Therefore, I shall be compelled to vote against the amendment, Mr. Chairman.

The CHAIRMAN. The time of the gentleman from Texas has expired. All time has expired.

The question is on the amendment offered by the gentleman from Indiana (Mr. BRADEMAS).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. ANDERSON OF ILLINOIS

Mr. ANDERSON of Illinois. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. ANDERSON of Illinois: Page 30, after line 9, insert the following:
>
> "Section 1010(a) of the Demonstration Cities and Metropolitan Development Act of 1966, is amended—
>
> "(1) by striking out 'and' at the end of paragraph (2);
>
> "(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof '; and'; and
>
> "(3) by adding after paragraph (3) a new paragraph as follows:
>
> "'(4) assure, to the extent feasible, in connection with housing construction, any major rehabilitation and maintenance under programs administered by the Department of Housing and Urban Development, that there is no restraint by contract or practice against the employment of new or improved technologies, techniques, materials and methods or of preassembled products which may reduce the cost or improve the quality of such construction, rehabilitation, and maintenance, and therefore stimulate expanded production of housing under such programs, except where such restraint is necessary to insure safe and healthful working conditions.'"

Mr. PATMAN (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and printed in the RECORD. We have copies of it on both sides of the aisle and we are well acquainted with it.

The CHAIRMAN. Is there obection to the request of the gentleman from Texas?

There was no objection.

Mr. ANDERSON of Illinois. Mr. Chairman, 2 days ago Members of the House received a letter from the Department of Housing and Urban Development in which they indicated the Department was supporting two amendments to the Housing Act of 1969. One of them has just been adopted. The second amendment is the one which has just been read and which I offer to the Committee for your consideration, an amendment that

would direct the Secretary of Housing and Urban Development to "assure, to the extent feasible, in connection with housing construction, any major rehabilitation and maintenance under programs administered by the Department of Housing and Urban Development, that there is no restraint by contract or practice against the employment of new or improved technologies, techniques, materials, and methods or of preassembled products which may reduce the cost or improve the quality of such construction."

Mr. Chairman, in my opinion it has been useful and beneficial that we have had 3 days of debate on this bill during which time we have surveyed and analyzed the critical housing needs of our country. I further think it has been useful that immediately prior to the discussion of this amendment, we had the discussion on the mobile home amendment wherein several Members asked the gentleman from Rhode Island (Mr. ST GERMAIN), will it appreciably help Operation Breakthrough to the degree that it should.

There cannot be any question that the purpose and purport of this amendment is to lend our support to Operation Breakthrough.

Mr. Chairman, it was just a few weeks ago that we were successful in landing three intrepid young men on the moon. At that time many people were asking why did we attach so much significance to that magnificent feat while we have all of these problems in our land that remain unsolved. Of course, there are many reasons in addition to the accomplishments which were achieved and the commitments and the national purpose. But I think one important reason was that we were willing to embrace new technology and new materials and to set out and to use every innovative method that was possible in connection with achieving that goal.

Mr. Chairman, we have heard a lot of talk about the housing conditions which exist in our country. If we proceeded at the rate of 1.9 million new units that the chairman indicated was the goal at the beginning of this year, but which we have fallen far short of accomplishing, at the rate proposed in January we would still be almost three-quarters of a million units under what we need to fill the housing requirements of our country.

Mr. Chairman, insofar as I am concerned there is only one solution, there is only one answer, and that is we are going to have to adopt new technology, new methods, and industrialized mass-produced housing.

We are going to have to industrialize and mass-produce housing. We are going to have to use the systems approach as we used it in the space program and as we have used it successfully in so many other areas if we really want to make a breakthrough in this particular and very important and critical area of our country's needs.

So this amendment is designed to write into law the direction that the Secretary has the support of the Congress. That he has our support in trying so far as feasible to see that there are no restraints imposed against the introduction of new technology and new methods.

There has been some criticism following the adoption of this amendment in the other body which was adopted there virtually by a unanimous vote. And some of the very liberal Members of that body, among others, incidentally, spoke in favor of that.

There were some objections made by others that you should provide some latitude in insuring safe and healthful working conditions.

So purposely, to try to cure that objection, I have added to the amendment that was offered in the other body language which specifically states an exception that "except where such restraint is necessary to insure safe and healthful working conditions."

I stood in the well of this House not many weeks ago and I was one of those who helped to write some amendments on the construction safety bill. I am interested in protecting and preserving the health and safety of our construction workers. I could not for the world, with this or any other action, be guilty of doing anything that would be a departure from safe working conditions.

Unfortunately, there have been, I think, some entirely false and misleading arguments raised against this amendment.

Actually, as I read some of the statements made by the heads of the construction trades—the AFL–CIO—I thought that never in the world has so much been wrought by one small amendment. In one fell swoop, according to his memorandum, I have been able to repeal in part the exemption that labor now has as to the antitrust laws.

The next thing is that we are trying in some underhanded way to accomplish that with this amendment.

Let me make it perfectly clear that those are extravagant statements that have no bearing in fact on what we are proposing to do with this legislation.

You know sometimes when I go down to one of these galleries of modern art, I think when I read the title on one of these dark pictures that that is where some of these messages come from that we are setting up an overlord over the construction industry.

That is another one—that we are making a czar out of Romney in the construction of housing in this country.

I thought of some of the paintings that you can look at in the gallery of modern art and as I was standing there I wondered whether they are really right side up or upside down.

I think that some of these people were standing on their heads when they read this amendment because it cannot possibly add up to that.

There are extravagant conclusions stated in this memorandum, that this is an antiunion amendment. It is not antiunion at all. It is prohousing. It is an amendment showing that this Congress is on record as interested in as forceful and as positive way as we can to give endorsement to this idea and the Secretary, I think, very boldly and courageously and with innovative methods announced in May of this year that we are going to have Operation Breakthrough and introduce housing systems and concepts into the housing market and we ought to develop the kind of aggregated volume in housing that will lead or provide us with the goal of 26 million units in the next decade.

The CHAIRMAN. The time of the gentleman from Illinois (Mr. ANDERSON) has expired.

Mr. WAGGONNER. Mr. Chairman, I ask unanimous consent that the gentleman from Illinois (Mr. ANDERSON) may proceed for 5 additional minutes.

The CHAIRMAN. Without objection it is so ordered.

There was no objection.

Mr. ANDERSON of Illinois. Mr. Chairman, let me quote to you, for example, from a statement made by a labor leader of this country who I think feels exactly as I do with reference to this housing field.

I am quoting from some testimony offered recently, last year, before a committee of the Congress by Mr. Walter Reuther. This is what he said—and mark these words well:

> We have got to fundamentally change the whole economics of the housing industry if we are going to make the rehousing and rebuilding of America economically achievable. You can't rehouse American if it costs as much to build a Chevrolet house as people pay for a Cadillac. It's that simple. And so we believe that what has to happen is that we have got to take a whole new approach to the question of housing. We've got to develop a national approach so that we get the economies of scale.

That is the whole purpose behind the design competition that was announced in May of this year, and in response to which I am informed today that some 664 proposals have now been received on new and innovative housing systems concepts that can be used to mass produce housing in this country.

I merely wish to make this additional point. Of all the works that I have studied on the housing problem—and it is one in which I do confess a great interest—I think that "Building the American City," which is the very excellent report of the National Commission on Urban Problems, the one chaired by the very distinguished former senior Senator from my own State of Illinois, Paul Douglas, makes abundantly clear that if we are ever going to do anything about meeting the housing needs of our country, with all due respect to the gentleman from Indiana—and I voted for his amendment—we will not do it merely with mobile homes and by promoting financing in that area. We have to get something really new and innovative in the field of technology.

Let me quote only one particular paragraph on page 445 from the Douglas Commission report.

> There can be little doubt that prefabrication techniques, and large-scale production (on and off site) have produced cost savings in the past and should continue to do so in the future. Such savings are not merely theoretical. They have been proved.

And in the report they have documented in studies they have made in country after country in Western Europe that you can get savings up to 27

to 29 percent if you simply would get into the mass produced, industrialized system of housing. So there is no question but what this is the way to approach the problem.

Let me say one thing to my friends on this side of the aisle who are concerned about the arguments that some people in the laboring community have made, and as I have indicated in the quotation from Mr. Reuther. I think there are responsible labor leaders who will support us today if we have the courage to take the action that I am suggesting. This in no way interferes with the legitimate process of collective bargaining. It does not say, for example, that you cannot, by using the collective bargaining process, cushion the effects of technology. I can sympathize to some extent with those who think that the new materials, new methods, and new technology may lead to the loss of jobs. You still have the right, under an amendment of this kind, in collective bargaining, to cushion the impact of the introduction of these new methods.

But let me emphasize one more point, and then I wish to yield to the gentleman from Louisiana. Let me remind you that, according to a recent report of the Bureau of Labor Statistics, we are going to need 122,000 new skilled tradesmen and craftsmen in the building trades between now and 1975. We are currently training about 22,000 a year. Even if we were to double that number, which is highly unlikely, we would end up with a net shortage of a half million construction workers by 1975.

There is work for everyone in this important field. There is no need to fear this amendment, to fear putting our stamp of approval on new methods and new technology because it is going to put people out of work. The very opposite effect will be experienced. It will make jobs, create jobs in America.

Now I yield to the gentleman from Louisiana.

Mr. WAGGONNER. I thank my friend from Illinois for yielding. Would the gentleman mind telling the House what authority his amendment would give to the Secretary of Housing and Urban Development in accomplishing a breakthrough in this matter of building homes that he does not always have in applying what might be available or might become available in the way of advanced technology?

Mr. ANDERSON of Illinois. I think actually it is a very modest step. There is nothing in here that is punitive at all. There is no provision that he can go in and seek injunctive relief or anything of the kind, or that he can punish anyone. What it does do is to logically build on the premise that was created in 1966 when we set up this program under the Housing Act of that year.

In 1968 we introduced additional language providing that it shall be the responsibility of the Secretary to try to introduce new methods and new technology. Now I think we should go just a little bit further, and very logically suggest that in connection with programs administered by his Department—and I am referring to Operation Breakthrough—that he is going to have the right, in connection with public funds, to see that there is no restraint employed by way of contract.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. BARRETT, and by unanimous consent, Mr. ANDERSON of Illinois was allowed to proceed for 1 additional minute.)

Mr. ANDERSON of Illinois. I shall be glad to yield to the gentleman in a few seconds. Something occurred to me. I had this question put to me: Does it involve building codes? The language makes it clear that we are talking about restraints by contract and restraints by practice—not restraints by law. Clearly, a building code is something that is a matter of positive law. So we are not getting into that area, even though, I will be frank to confess to this committee, I think we ought to. I think housing codes are out of date in many areas throughout the country. But I have got to be honest and say we have not with the language of this amendment got into that particular area.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. Mr. Chairman, I just want to call to the attention of the Members the gentleman's statement earlier that this amendment was offered in the subcommittee in the Senate, and it was defeated 5 to 6. It was brought out in the Senate when there were only five Members on the floor. This amendment has not been explored on the Senate side to the extent that anybody on the Senate side knows exactly what is in it or what it will do.

Mr. ANDERSON of Illinois. I hope the gentleman has been listening to me for the last 10 minutes during which I have been trying to explain and understands full well what I have been trying to do in this amendment. Let me say at the appropriate time I will insert in the RECORD a letter from the Secretary on this matter.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. WAGGONNER, and by unanimous consent, Mr. ANDERSON of Illinois was allowed to proceed for 3 additional minutes.)

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Chairman, in answer to a previous question as to what authority the Secretary would have under the proposed amendment, that he does not have, I understood the gentleman to say, really nothing. But did I understand the gentleman to say that this amendment would give the Secretary, as the gentleman proposes, in advancing Project Breakthrough the same authority over all other HUD programs?

Mr. ANDERSON of Illinois. I did not, no, indeed, and I hope no such interpretation would be put on my remarks, because obviously there are other important housing programs that have got to be furthered. What I am saying, really, is in this particular area of trying to advance new technology, materials, and methods, that this will give the Secretary some encouragement in the furtherance of that.

Mr. WAGGONNER. The gentleman intends that the Secretary be limited in applying this new technology to Project Breakthrough? Is that correct?

Mr. ANDERSON of Illinois. I think it is implicit in the language read by the Clerk what I am trying to do is to amend section 1010(a) of the Model Cities and Metropolitan Development Act. I am not going outside the provisions of that act with the amendment I have offered.

Mr. WAGGONNER. Unanimous consent was asked and granted not to continue with the reading of the amendment, and all of us did not have copies of the amendment. This was the reason for my question.

Then the gentleman intends to apply it to Project Breakthrough. Would the gentleman agree to an amendment intended to limit it to that?

Mr. ANDERSON of Illinois. Let me say I have been informed, as I said a moment ago, that today 664 of these proposals have been received by HUD. Of that number, only about eight or 12 will actually be located on sites selected around the country and then tested as possible prototypes of mass-produced housing.

I would hate to see all the other innovative designs and suggestions that have been made simply go down the drain because they do not come under the protection of this language. What we are trying to do is something a little bit broader than the gentleman suggests, but maybe with respect to eight or 10 units that we say "no restraint by contract or practice" shall prevent those from being erected. I want to see this spread across the country.

Mr. WAGGONNER. The gentleman says:

> Assure, to the extent feasible, in connection with housing construction, any major rehabilitation and maintenance under programs administered by the Department of HUD, that there is no restraint by contract or practice—

That is all-inclusive. This would not limit the authority of Project Breakthrough.

Mr. ANDERSON of Illinois. The gentleman is talking about the Model Cities and Metropolitan Development Act of 1966. I do not see how I can possibly stretch that to go beyond programs covered in that act, which is model cities programs and other programs well known to the gentleman.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. PERKINS, and by unanimous consent, Mr. ANDERSON of Illinois was allowed to proceed for 2 additional minutes.)

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Kentucky.

Mr. PERKINS. Mr. Chairman, specifically what restraints in contracts are presently interfering with new technol-

ogy and new methods that the gentleman is seeking to remove from the present law by his amendment?

Mr. ANDERSON of Illinois. I am not seeking to remove anything from the present law, I would say to the gentleman from Kentucky, but I think there have been some instances in the past where some segments of the construction trades have been less than anxious to see the introduction, for example, of prefabricated housing, and to see the introduction of new methods and new materials that would save on labor.

We are not trying to cut the price of labor, but we want to save time in the cost of construction and thereby save on financial cost and all the rest.

I applaud the fact that I believe there is a changing attitude on the part of many in the construction trades. I am aware of the action of the union in Detroit, where I believe a union of some 50,000 signed a contract for the production of industrial type housing. That is fine. I would applaud the effort they made.

They should not have any fear in having us write into law the fact that we in the Congress support this kind of movement and we hope they will continue to characterize a progressive, liberal spirit on the part of the construction trades in this country, so that they will accept new technology and new methods. That is all we are trying to do.

Mr. PERKINS. I take it from the gentleman's statement that he is seeking to give the HUD cabinet officer additional authority over collective bargaining agreements.

Mr. ANDERSON of Illinois. No; I cannot agree.

Mr. PERKINS. That he does not now have.

Mr. ANDERSON of Illinois. I cannot agree at all. This involves no interference at all with the collective bargaining process, nothing at all.

I just said a moment ago that if people are worried about new technology they are free to bargain as to how the effects should be cushioned.

Is the gentleman going to stand there and tell me, with the present housing needs of this country, we should permit an arrogant few to say they will not permit the introduction of new methods, new materials, new technology?

Mr. PERKINS. Specifically what restraints is the gentleman referring to which prevent the new methods and new technology in this area?

Mr. BOW. Mr. Chairman, Operation Breakthrough deserves the wholehearted and unreserved support of every American who is interested in providing safe and sanitary housing for the millions of our fellow citizens who do not have it now and who will never have it unless we develop new technology in housing.

The building trades have expressed to me and to others their concern about the amendment by the gentleman from Illinois (Mr. ANDERSON). I do not foresee any reason for that concern. Skilled workmen in the building trades are and always will be in great demand and they always can be certain of their ability to obtain through collective bargaining the wages and working conditions they are entitled to enjoy. But all of the craftsmen and all of the engineers in the conventional construction business today cannot build the housing units this Nation needs and must have.

More than 600 organizations have submitted proposals to HUD on how to provide new housing and more housing under Operation Breakthrough. More than 200 prototype housing sites have been offered to HUD. I am pleased to say that two of the housing proposals and three of the sites come from my congressional district where we are determined to be a part of this technological breakthrough.

All of these proposals are now under intensive review and evaluation under the direction of Assistant Secretary Harold Finger.

The proposals are being evaluated by a Housing System Proposal Evaluation Board and five committees reporting to it. The Board will present its findings to Secretary Romney about mid-November so that he can select the best of the housing concepts proposed. More than 80 HUD professional staff members and representatives of other Federal departments are engaged in the evaluation process. The Board is composed of experts from all fields connected with housing, including architects, engineers, land planners, production specialists and financial and management experts. The interagency group includes representatives from the Departments of Agriculture, Transportation, Commerce, Defense, the Post Office Department, the General Services Administration, and the President's Office of Consumer Affairs. Other experts may be called from private industry as consultants if their specialized knowledge is required.

The House should demonstrate its support for Operation Breakthrough by the adoption of this amendment, giving Secretary Romney the authority he may need to put some of these ideas into effect. If we mean what we say about housing goals for our people, this is the time to prove it.

Mr. PATMAN. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 242]

Adams	Diggs	O'Konski
Anderson, Tenn.	Dingell	O'Neill, Mass.
Aspinall	Dowdy	Pepper
Baring	Edwards, Ala.	Philbin
Bell, Calif.	Fascell	Poage
Bolling	Foley	Powell
Brooks	Fuqua	Purcell
Brown, Ohio	Gray	Quie
Burton, Utah	Haley	Reid, N.Y.
Bush	Hanna	Reuss
Cahill	Hays	Rivers
Camp	Hébert	Robison
Clancy	Heckler, Mass.	Rosenthal
Clark	Horton	St. Onge
Clawson, Del	Ichord	Springer
Clay	Johnson, Calif.	Stuckey
Colmer	Jonas	Teague, Calif.
Conte	Kirwan	Tunney
Conyers	Kuykendall	Waldie
Corman	McCarthy	Watson
Culver	McClure	Whitehurst
Daddario	Mailliard	Wiggins
Dawson	Martin	Wilson, Charles H.
de la Garza	Meskill	Wold
Denney	Miller, Calif.	Wolff
Devine	Morse	Wydler
	Morton	

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FLOOD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 13827, and finding itself without a quorum, he had directed the roll to be called, when 352 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

Mr. FLOOD. The Committee will be in order.

Mr. BARRETT. Mr. Chairman, I rise in opposition to the amendment.

(On request of Mr. PATMAN, and by unanimous consent, Mr. BARRETT was allowed to proceed for 5 additional minutes.)

Mr. BARRETT. Mr. Chairman, it is contended that this amendment is intended to direct the Secretary of Housing and Urban Development to assure to the extent feasible that there are no restraints against the use of new technologies and material which may reduce the cost or improve the quality of housing construction and rehabilitation under HUD administered programs and that it is aimed at insuring the success of Operation Breakthrough.

We have no quarrel with the need for innovation and technological improvement in home construction, and this has been clearly spelled out in section 1010 (a) of the 1966 Demonstration Cities Act which encourages applying advances in technology to housing and urban development.

In fact, the Department of Housing and Urban Development informs me that Operation Breakthrough, about which we have heard so much, is a program under the existing language of section 1010(a). The Department has received 619 proposals for Operation Breakthrough, which proposals, we must recognize, take into consideration existing labor and other conditions and practices.

Now, let us look at the proposed amendment: the Secretary would be directed to assure that there is no restraint by contract or practice against the employment of new or improved technologies, and so forth.

Now, Mr. Chairman, these words I am going to read are not my words. I now quote from the CONGRESSIONAL RECORD of September 23, 1969, the proceedings of the Senate, on page 26712. Let me, Mr. Chairman, use the language of the gentleman who proposed this amendment. Mr. TOWER says:

> Mr. President, I wish to call to the attention of Senators that the printed version of my amendment No. 199 has been modified to provide that this assurance be made "to the extent feasible." Therefore, there is a discretionary power on the part of the Secretary so it will not disrupt efforts to negotiate where contracts that perhaps would come under the ban expressed here are in existence.

I am still quoting the Senator:

> We have to ask ourselves, Are we going to improve housing technology so we can bring down the costs or not? There are certain labor practices that do tend to keep the cost of construction up because prefab-

ricated materials such as door, windows, cabinets, and things of this sort cannot be used because certain working rules prohibit them and the workers would walk off if they were used.

We have to agree to this amendment in order to keep section 1010 in the 1966 act.

This clearly puts the Secretary in the middle of all contracting between management and labor in the construction field, and it puts him in as a czar. For there is no basis or means of appeal. The amendment would not only give the Secretary the power to reverse Supreme Court decisions recognizing the rights of workingmen to preserve their work opportunities, but also authorize the Secretary to intervene with coercive sanctions to impose his ideas on the parties to collective bargaining agreements with respect to a great many matters.

The amendment also would create obvious conflicts between two Federal statutes. Subjects of mandatory collective bargaining under the Taft-Hartley Act could be deemed "restraints" by the Secretary if this amendment were adopted and became part of the law.

The amendment before us refers to a "practice" or a "contract" in which there is a restrictive practice. As I have pointed out, it is obviously aimed, therefore, at alleged union or work practices and contracts and not at restrictive practices contained in building codes. Yet these latter, and especially the lack of uniformity from town to town and political jurisdiction to political jurisdiction are the real obstacles to the application of new technologies. And this we know to be fact.

Nor is the amendment limited to Operation Breakthrough. It is applicable to all construction and rehabilitation financed under any HUD program including the FHA insured mortgage programs and the public housing program.

Now, what do we do here if this amendment carries? What can happen? We prevent the progress of housing construction and set the stage for possible widespread strikes in the construction industry all over the country.

This is a dangerous amendment and I strongly urge its defeat.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. BARRETT. I shall be glad to yield to the distinguished gentleman from Illinois.

Mr. ANDERSON of Illinois. The gentleman from Pennsylvania quoted at some length the statement that was offered in the other body on the 23d of September in support of this amendment, specifically referring to what is likely to occur. That is, are we going to improve housing technology in order to bring down the cost of housing while the gentleman referred to specific labor practices that have kept up the cost of housing.

Is that why the gentleman is opposing the amendment, because the gentleman wants to perpetuate that kind of thing in the construction industry in this country?

Mr. BARRETT. I am glad the gentleman brought that up. May I say I have a great deal of respect for the gentleman from Illinois as a good lawyer, a good legislator and certainly a good debater. But I am not objecting to housing being built as rapidly as it possibly can through Operation Breakthrough. But what I object to is putting this power into the hands of one man who will make the decision and likely cause a disruption of our entire housing construction program throughout this country.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield further?

Mr. BARRETT. Yes, I yield further to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Can the gentleman think of a more logical person that we should select in connection with programs in financing—incidentally, I take exception to the gentleman's interpretation a while ago because we are not talking about FHA financing at all; we are talking about programs administered by the Administrator of the Department of Housing and Urban Development.

Mr. BROCK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to point out that I think the gentleman from Pennsylvania is somewhat confused in his interpretation of this particular amendment. I would like to take this time just to point out what I consider to be the facts.

This amendment does not, nor could it ever, reverse the decision of the Supreme Court. I think the gentleman knows that.

He also said it would apply to all HUD programs including FHA housing. There is no possibility of that being a fact. What this amendment does, and its intent is, to allow the Secretary and to direct the Secretary to use every possible method that he can to encourage improved techniques and new technologies and materials which may, and I quote the exact language of the amendment—"reduce the cost or improve the quality of such construction rehabilitation, and maintenance, and therefore stimulate expanded production of housing, except where such restraint is necessary to insure safe and healthful working conditions."

That is what the amendment is designed to do. It was passed in the other body on that premise.

I would point out to you that this amendment does not deal with the past. The gentleman from Kentucky asked what specific instances it would be addressed to. Let me give him a couple. In the case of a breakthrough project which was awarded in a city, the Secretary would be encouraged by this particular amendment in working with the members of the construction unions and with the contractors involved in the project—he would be encouraged and directed to urge that they adopt every possible modern technique that had been suggested in the breakthrough proposal—not to change their existing contracts at all, but to consider the fact that this was a new attempt at a breakthrough and a new attempt to achieve meaningful low cost housing for the American people.

It would be a matter of the bargaining process and it would enhance the bargaining process. We are not limiting it at all.

He says in the amendment: "to insure to the extent feasible."

Let me give you another example. When you go into a community which has applied for an Operation Breakthrough grant, you are dealing not only with the contractors and the contracting unions, but with city officials as well.

This requires the Secretary to encourage the local officials of that community to consider any new technology and its implementation in the application of their existing codes to the proposed project. Well, should we not do that? Should we not consider every step that we can to urge the local communities of America to get with it in accepting new technology and try to get low cost housing for the American people?

I do not understand the opposition to the amendment.

Mr. FARBSTEIN. Mr. Chairman, will the gentleman yield?

Mr. BROCK. I yield to the gentleman.

Mr. FARBSTEIN. I asked the Department of Housing and Urban Development if there was a defined limitation on the Secretary's exercise of power. The best they could provide me with was the last two paragraphs of Secretary Romney's letter of September 23 to Senator TOWER which sort of defines the purpose of this amendment.

One of the paragraphs said that there is no "unreasonable" restraint by contract or practice.

Will the gentleman please explain the reason that in his amendment it only talks of restraint and leaves out the word "unreasonable"?

Perhaps the gentleman from Illinois can answer that question why does he leave out the word "unreasonable" from his amendment.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman from Tennessee yield to permit me to respond?

Mr. BROCK. I yield to the gentleman.

Mr. ANDERSON of Illinois. I took it out because I thought it left an ambiguity because it did not say what the unreasonable restraints would be.

In my opinion, clearly "unreasonable restraint" would be one which affects health and safety. So that is why I spell it out and say "except for healthful and safe working conditions".

Mr. FARBSTEIN. Do you not think the phrase "unreasonable restraint" would rather limit the power of the Secretary of HUD rather than just the word "restraint" without any limitation? In other words, is there anything in this which says that a contract can be with nonunion labor? It seems to me that contracts can be made with nonunion labor with the consent of the Secretary. Is that the intent?

Mr. ANDERSON of Illinois. Absolutely. I would agree. There is nothing in here that would prohibit that.

Mr. FARBSTEIN. But the gentleman certainly is not proposing that we write that into this particular statute, is he?

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. HALPERN. Mr. Chairman, I sincerely believe, well intentioned as this amendment may be, that it would put

labor and management into a straitjacket—committed to the contractual guidelines ordered by HUD.

I believe the amendment would have a far-reaching effect on labor-management relations around the country. It would give a blank check to the Secretary to do anything he wishes in this area.

If enacted, the amendment as I see it would authorize the Secretary to drastically change existing bid requirements and deny a contract to a qualified contractor who was the lowest bidder on the project.

It is contended that the amendment would lower housing costs. But I am convinced it would do the contrary by allowing the Secretary to deny a contract to the lowest bidder if the contractor did not have a union contract he liked. Yes, and housing might well cost more especially if building methods or materials which look good on paper turn out to be a big failure in actuality, or if long-range maintenance costs increase through poor workmanship.

Under the amendment's provisions, the Secretary could also alter Government direction of substantive terms and conditions of collective bargaining agreements. And, regardless of the present contractual requirements of the National Labor Relations Act, he could set up his own requirements for contracts within his jurisdiction.

A recent study made by HUD shows that labor costs had been reduced from 33⅓ percent 12 years ago to between 16 and 18 percent today; material costs are now 43 percent compared to 33⅓ percent 12 years ago and the remainder costs in land development, broker's fees, and other tangible expenses which were also 33⅓ percent 12 years ago are now about 40 percent. Hence it is obvious that rather than increasing percentagewise to the cost of constructing housing, labor costs have decreased in proportion to total housing costs.

This clearly demonstrates that labor has been cooperating with new techniques and technology in the building of homes which is responsible for this 50-percent reduction in the cost of labor.

Under this amendment, as I see it, the Secretary would be given unprecedented dictatorial powers—powers that could cause disruption of labor-management relations and negotiations in this country and it would be a direct blow to our free enterprise system. I hope the amendment will not prevail.

Mr. PATMAN. Mr. Chairman, I wonder if we could arrive at an agreement to limit time. I wonder how many Members would like to speak on the amendment. I ask unanimous consent that all debate on the amendment and all amendments thereto cease in 35 minutes.

Mr. OTTINGER. Mr. Chairman, reserving the right to object, I have an amendment I wish to offer, and I believe the gentleman from California (Mr. REES) also wishes to offer an amendment. How can we be protected and be assured of some time?

Mr. PATMAN. On amendments I would think they should be allowed 5 minutes, at least. I shall amend the request to 1 hour.

The CHAIRMAN. The gentleman from Texas asks unanimous consent that all debate on the amendment and all amendments thereto cease in 1 hour.

Mr. PATMAN. At 5 o'clock.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. GERALD R. FORD. Mr. Chairman, reserving the right to object, as I understand it, the Chairman has asked for 1 hour, not until 5 o'clock.

The CHAIRMAN. The gentleman is correct.

Mr. PATMAN. I made that statement; the Chairman did not.

PARLIAMENTARY INQUIRY

Mr. WAGGONNER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WAGGONNER. The gentleman from Texas, chairman of the Banking and Currency Committee, has asked unanimous consent to limit debate to 1 hour on the amendment and all amendments thereto.

Mr. PATMAN. As I understand it, there are two amendments.

Mr. WAGGONNER. He further amended his request by saying 5 o'clock. It cannot be 5 o'clock and 1 hour.

The CHAIRMAN. The Chair recognizes the gentleman from Texas.

Mr. PATMAN. Mr. Chairman, my request is for 1 hour, without reference to 5 o'clock.

The CHAIRMAN. The gentleman from Texas asks unanimous consent that all debate on the amendment and all amendments thereto cease in 1 hour. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. REES), a member of the committee.

AMENDMENT OFFERED BY MR. REES TO THE AMENDMENT OFFERED BY MR. ANDERSON OF ILLINOIS

Mr. REES. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Illinois (Mr. ANDERSON).

The Clerk read as follows :

Amendment offered by Mr. REES to the amendment offered by Mr. ANDERSON of Illinois: Strike out "in connection with housing construction, any major rehabilitation, and maintenance under programs administered by the Department of Housing and Urban Development" in the proposed new paragraph (4) and insert in lieu thereof "in connection with the construction, major rehabilitation, or maintenance of any housing assisted under this section".

Mr. REES. Mr. Chairman, this is a very simple amendment. I might state at the outset I was very much impressed with the remarks of the gentleman from Illinois. I think he is correct. We must do everything possible to develop new housing concepts in this country if we are ever going to adequately house the American people.

The one problem I see with the amendment is that it pertains to all programs administered by the Department of Housing and Urban Development. The amendment which I am proposing is a very simple one in that it restricts the amendment offered by the gentleman from Illinois (Mr. ANDERSON) specifically to section 1010 of the code, which refers specifically to Operation Breakthrough.

I believe in looking at the amendment offered by the gentleman from Illinois (Mr. ANDERSON). It could be interpreted that it would pertain to all the HUD housing programs. It might pertain, for example, to FHA, which is administered by HUD. Likewise it might pertain to public housing. I do not think we want that. What we are really trying to do in Operation Breakthrough is to develop new concepts in housing. This is the first step.

I think the amendment offered by the gentleman from Illinois (Mr. ANDERSON) is necessary, but we should clarify this amendment so that it pertains specifically to this program and not to get into the gray area of every other program now being administered by the Department of Housing Urban Development.

The CHAIRMAN. Are there any Members whose names appear on the list read by the chairman who desire to speak with reference to the amendment to the amendment offered by the gentleman from California (Mr. REES)?

The Chair recognizes the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, it is with great reluctance that I ask for this time to oppose the amendment offered by the gentleman from California (Mr. REES). I really think he is trying to be helpful and constructive, and he was kind enough to furnish me a few minutes ago with a copy of the amendment which he has proposed.

Frankly, I do not think it is necessary. It seems to me if Members will take the Model Cities and Metropolitan Development Act of 1966, to which the amendment I presented is offered as an amendment, we see it clearly does relate to this particular section 1010 which deals with the Operation Breakthrough program. So to that extent it seems to me the amendment offered by the gentleman from California is addressing itself to something that, in fact, is unnecessary.

Mr. REES. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from California.

Mr. REES. Mr. Chairman, again I would read the language in the gentleman's amendment that refers to this: "under programs administered by the Department of Housing and Urban Development."

It does not say the programs administered by Model Cities or any other specific program. It means every program administered by that Department.

Mr. ANDERSON of Illinois. Could I ask the gentleman from California a question. Suppose as a result of the 674 housing system concepts that have now been received by HUD, that as a result of receipt of those proposals we do develop some concepts that really embrace initiative and new technological breakthroughs, would the gentleman be reluctant to see those employed in the Model Cities program as a whole? Would the

gentleman object to the Secretary having at least the moral suasion of his office, to be able to use the persuasion powers of his office to suggest that these ought to be employed in a model cities program, in an urban renewal program, as well as in some other programs directly operated under the Operation Breakthrough?

Mr. REES. The model cities program is already covered in section 1010 under subsection (3). All this would mean is if there is developed a good technique, fine, but then the technique has to be developed for the housing industry in general, and I believe it has to be sold to the housing industry in general and to the building trades unions in general.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. GERALD R. FORD. Mr. Chairman, I ask unanimous consent that my time be allocated to the gentleman from Illinois (Mr. ANDERSON). I believe this is a very important discussion and I should like to have the time used for that purpose.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

(By unanimous consent, Mr. DON H. CLAUSEN and Mr. WEICKER yielded their time to Mr. ANDERSON of Illinois.)

Mr. ANDERSON of Illinois. Mr. Chairman, perhaps it will not be necessary for me to take all the time yielded, but I do appreciate the opportunity to reiterate something which was said earlier in the debate. Perhaps there are some Members on the floor now who were not then present.

According to the latest tabulation which I received today from the Department of Housing and Urban Development there are a total of 664 proposals that have been received from various firms and industries around the country under Operation Breakthrough. Some 217 sites have been proposed.

In connection with that program, as I understand it, under the selection and evaluation process now going on, sometime around the middle of November, after evaluation and review, the Office of the Secretary of Housing and Urban Development will select about eight—possibly as many as 12, but no more than that—sites on which these new modular types of housing, housing prototypes, will be erected.

What I am afraid of is that if we narrow—which is essentially what the gentleman from California is proposing we do—this language in such a way that it refers only to those eight or 10 projects which are being administered by HUD under Operation Breakthrough, we will lose the potential advantage of all these other some 600 proposals that have been received, which may be found attractive by various segments of American industry to mass produce housing, but, because they are not specifically folded in under the language of the gentleman's amendment, it would be possible for craft unions to restrict the employment and the use of these other technologies, these other new materials that might be developed.

I do not believe the gentleman intends that result, but I am very much afraid if we adopt his amendment that is precisely what the effect will be.

Mr. REES. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I am pleased to yield to the gentleman from California.

Mr. REES. There are two sections. One is section (3), which is in the law now. The other is section (4), which is the gentleman's amendment. I shall like to limit section (4) specifically to this act, because this is what we are talking about, this specific program.

Let me read section (3), which is the law right now. It says:

(3) require, to the greatest extent feasible, the employment of new and improved technology, techniques, materials and methods in housing construction, rehabilitation and maintenance under programs administered by the Department of Housing and Urban Development with a view to reducing the cost of such construction, rehabilitation, and maintenance, and stimulating the increased and sustained production of housing under such programs,

This is what the law says now, so if something is found in Operation Breakthrough there is already the power of the Secretary to require to the greatest extent feasible the use of these techniques in a contract the Department might sign with someone else, or a program which might be administered under the Department.

Operation Breakthrough, in dealing with the gentleman's language, when it talks about no restraint by contract or by law against the employment of new and improved techniques, is a further step.

Because we take this further step I think we should restrict it specifically to Operation Breakthrough, because you also have the interplay of section 3 there, which means if something is found, the Secretary does have the power to go in to the greatest extent feasible in order to promote this in all programs that are administered by the Department.

Mr. ANDERSON of Illinois. I appreciate the explanation of the gentleman, and I agree with his interpretation of the present subsection (3) of section 1010 (a). However, I wonder at this timidity. If it is a good principle, which we should really employ and which is important to the construction industry of this country, why should we circumscribe it to confine it only to those sites under Operation Breakthrough? As long as we have already written into the law this requirement, why should we be afraid to go on and take the logical next step, which would give authority to the Secretary to look critically at those restrictions which might otherwise be employed by way of practice and contract?

Incidentally, the gentleman from New York (Mr. SCHEUER), if I may quote him here, reminded me 2 days ago that the New York Times carried a story where I think there was a strike—and I will be pleased to yield to the gentleman from New York, and perhaps he can explain it better than I can—a strike against the Public Housing Authority because they did not want more than 10 rooms to be painted in a single day.

Mr. SCHEUER. I thank the gentleman for yielding.

It was a question of where the New York Public Housing Authority, as quoted in the New York Times of yesterday, was employing nonunion labor. The reason was that the union was prohibiting their painters from painting more than 10 rooms per week.

Mr. ANDERSON of Illinois. In other words, union labor was losing out to nonunion labor because of a restrictive practice that certainly makes no sense at all. Under the circumstances we should not be afraid in this Congress to do what they did in the other body and take what is a perfectly logical step, I believe, of suggesting that there is nothing wrong with saying that when programs are financed out of the Federal Treasury and when taxpayers' dollars are used in these programs, the Secretary who administers them ought to have some authority to look at, and do so with a critical eye—the kind of restrictive practice just mentioned by the gentleman from New York.

Mr. RHODES. Mr. Chairman, will the gentleman yield to me?

Mr. ANDERSON of Illinois. I yield to the gentleman.

Mr. RHODES. Mr. Chairman, I wish to commend the gentleman from Illinois on the amendment which he has offered. I believe it strengthens the bill and is necessary, and I hope it will be adopted.

Mr. ANDERSON of Illinois. Again I will say in concluding, Mr. Chairman, that I think even though I know the gentleman attempted to be helpful with the limiting words of his amendment, I think there is every reason and every justification for adopting the amendment as it was offered.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana (Mr. WAGGONNER).

Mr. WAGGONNER. Mr. Chairman, I would like to ask the gentleman from Illinois (Mr. ANDERSON) a question or two which I believe he can give me brief answers to.

Do you understand as I do section 1010 of the Demonstration Cities and Metropolitan Development Act of 1966 to provide authority only to conduct research and development? Does it provide for any other program except for research and development?

Mr. ANDERSON of Illinois. Well, the title as I have it here in my hand and the text of that section reads: "Applying Advances in Technology to House and Urban Development."

The first section, section (a) says:

(a) To encourage and assist the housing industry to continue to reduce the cost and improve the quality of housing by the application to home construction of advances in technology, and to encourage and assist the application of advances in technology to urban development activities.

That is the opening paragraph.

Mr. WAGGONNER. Can the gentleman name me one program provided for under section 1010 other than the authority for research and development?

Mr. ANDERSON of Illinois. Well, of

course, 1010, I point out to the gentleman, is a part of the Demonstration Cities and Metropolitan Development Act of 1966 (42 U.S.C. 3372). And that does embrace a variety of Federal programs, the Model Cities program, the Urban Renewal program and I think also the Neighborhood Development program.

Mr. WAGGONNER. Does the gentleman believe, having used the plural word "programs" twice in his proposed amendment, that it would be discretionary on the part of the Secretary of the Department of Housing and Urban Development to require the application of this technology that he becomes attracted to any housing program in the Department of Housing and Urban Development?

Mr. ANDERSON of Illinois. No; that goes beyond, I think, the purview of the amendment. I do not think it says he can require. What he can do is to use the authority of his office to see that it just is not arbitrary and that it is not put into the contract, completely disregarding everything else. I do not think there is anything to the effect that they are to use it in connection with the administration of these other programs.

Mr. WAGGONNER. Then, we are giving him statutory authority with the adoption of this language?

Mr. ANDERSON of Illinois. Well, of course, we are amending the statute. Yes; it is statutory language, authority which he could use to the extent feasible. We are not clothing him with any absolute arbitrary power.

I would remind the gentleman of the contract review procedures that are now available with respect to anything that the Secretary does which would be available for review in this instance.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. REES) to the amendment offered by the gentleman from Illinois (Mr. ANDERSON).

The question was taken; and on a division (demanded by Mr. REES) there were—ayes 40, noes 42.

Mr. REES. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. REES and Mr. WIDNALL.

The committee again divided, and the tellers reported that there were—ayes 66, noes 50.

So the amendment to the amendment was agreed to.

AMENDMENT OFFERED BY MR. OTTINGER TO THE AMENDMENT OFFERED BY MR. ANDERSON OF ILLINOIS

Mr. OTTINGER. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Illinois (Mr. ANDERSON).

The Clerk read as follows:

Amendment offered by Mr. OTTINGER to the amendment offered by Mr. ANDERSON of Illinois: In line 6 of paragraph (3), after the word "contract", add: "building codes, zoning ordinances".

Mr. OTTINGER. Mr. Chairman, I wish to make clear at the outset that I oppose the Anderson amendment, even though I very much appreciate that its purpose is a good one, to promote technological improvements in the building trades. I oppose it because I think that it intrudes the Secretary of Housing and Urban Development in an unwarranted way into the collective-bargaining process. It is particularly objectionable because it points its finger solely at union practices. I think it is very much an antiunion amendment as it is now drafted.

The amendment seeks to assure, to the extent feasible that there is no restraint by "contract or practice" against technological improvements. That language clearly means by union contract or labor practices, as made clear in the discussion of the gentleman from Illinois. Nothing is said about nonunion restraints on introduction of new technology.

The Secretary of Housing and Urban Development has quite clearly recognized that an equal impediment to the adoption of technological improvements exists in building codes and zoning ordinances. In point of fact, the letter that the gentleman from Illinois sent to all of us urging support of his amendment quotes the Secretary as follows:

Any limitations placed on our ability to utilize the advances in technology to produce more housing, whether imposed by zoning, building codes, or labor practices, keep us from producing houses that this country urgently needs.

I feel very strongly that if this kind of amendment is to be adopted, that at the very least it should also affect the building codes and the zoning practices which restrict technological improvement equally with any labor practices.

With respect to labor practices, I would like to say that whatever may have been the case in the past—and I do not think the unions have been as responsive to innovation as they should have been in the past—that that is very rapidly changing. The unions themselves, the building trades unions have promoted an outstanding study of the problems of technological introduction and are now quickly instituting technological changes.

Mr. Chairman, there is no question that if we are to build the housing needed in this country—and that is a very high priority—we are going to have to facilitate new building methods.

The way to accomplish this, however, is in cooperation with the unions—not by forcing changes down the unions' throats, as was Secretary Romney's attitude when he first introduced Operation Breakthrough. Many technological changes involve complicated readjustments in our work force. These adjustments should be worked out in an orderly way between labor and management—but mandated by the Government.

The Anderson amendment was not presented in committee. There were no hearings on it. The parties have had no opportunity to explore its implications. It is unfair to force adoption on the floor of such a provision under these conditions.

For these reasons, I urge defeat of the Anderson amendment—but as a safeguard against the possibility of its adoption, approval of my amendment to make the amendment applicable to the restraints of building codes and zoning ordinances.

The CHAIRMAN. The time of the gentleman from New York has expired.

The Chair recognizes the gentleman from Tennessee (Mr. BROCK).

Mr. BROCK. Mr. Chairman, I rise to address myself to the amendment. I rise in support of the amendment of the gentleman from New York. I believe it is an excellent amendment. He is fully correct in recognizing the limiting factor in terms of our breakthrough into the new technology that is created by some of the building codes. Any effort that this body can make to strengthen the hand of the Secretary and our homebuilding industry in this particular area is a significant step forward. I fully support the amendment of the gentleman.

I think there was some confusion on the amendment that was last presented. I do not believe the amendment of the gentleman from California will diminish the impact in this particular effort today to achieve breakthroughs. I think his amendment was constructive. I consider the amendment offered by the gentleman from New York constructive. I support him and I urge support of the full Anderson amendment, as amended.

The CHAIRMAN. Is there any further discussion of the amendment offered by the gentleman from New York (Mr. OTTINGER)? If not, the question is on the amendment offered by the gentleman from New York (Mr. OTTINGER) to the amendment offered by the gentleman from Illinois (Mr. ANDERSON).

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 67, noes 0.

So the amendment to the amendment was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. GONZALEZ).

Mr. GONZALEZ. Mr. Chairman, I believe for the record we ought to evaluate the amendment offered by the gentleman from Illinois for what it really is.

In the first place, it was defeated in the Senate by a vote of 6 to 5 in the committee, and it was appended on the Senate floor with six Members of the Senate present. I think that record ought to be underlined and stressed here today.

I think everybody who has studied the subject matter recognizes the amendment for what it really is, which is a union-busting attempt.

The housing bill we are debating today is considered to be noncontroversial. Yet statements have been made that I think are open to question. For example, during the committee hearings, I asked a representative of the American Institute of Architects exactly what in terms of the cost of an average home being built in America today was represented by these so-called labor practices, and the representative said the most it would amount to would be not even 4 percent. So what are we talking about? We are talking about a thinly veiled attempt to give the Secretary of HUD the power to bust the unions in the construction trades.

What are we being offered to affirmatively by the Secretary? Mobile homes

is about the only thing emphasized in this Act of 1969. We had the Hoover bills of the depression and now we are to have crammed down our throats the rolling Romneys.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. GONZALEZ. I yield to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I compliment the gentleman from Texas (Mr. GONZALEZ) on his remarks, and I associate myself fully with his remarks.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. GONZALEZ. I yield to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, was the gentleman here when I read the fact that the restrictive practices in New York City knocked union painters off the job and as a result the nonunion painters were working for the city housing authority?

Mr. GONZALEZ. I was here when the gentleman explained the story he read in the New York Times, but I still do not think that makes a case for his thrusting off or palming off this amendment.

Mr. ANDERSON of Illinois. I am not palming off anything.

Mr. GONZALEZ. But the gentleman uses this as an example to justify the amendment the gentleman is offering in an attempt to curtail this practice. It is commonly understood the people who have wanted this amendment have said so in very blunt terms on other occasions.

The CHAIRMAN. The Chair recognizes the gentleman from Utah (Mr. LLOYD).

Mr. LLOYD. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Illinois (Mr. ANDERSON).

I have to reflect on the fact that this amendment was just called a "union-busting amendment." It seems to me when we consider labor-management negotiations and contracts, we think too little about the public interest. This amendment is not designed to be anti-management or promanagement or anti-labor or prolabor. This is an amendment which recognizes that the public interest is paramount to both.

The idea of the Secretary of HUD being characterized as being associated with something called union-busting certainly does not check with the past record of the Secretary.

I recall that when he was Governor of the State of Michigan, when many were advocating a right to work bill for his State, he said:

> No, I am not in favor of a right to work bill for this State.

We should not be considering this bill from the standpoint of whether it is for or against a special interest. We have the challenge in this country of providing 20 million new housing units in the next 10 years. The interest which we in this House should consider paramount to all others is the public interest.

In my view, the amendment of the gentleman from Illinois (Mr. ANDERSON), is most decidedly in the public interest, which interest it is our duty to represent.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. MADDEN).

Mr. MADDEN. Mr. Chairman, my colleague (Mr. ANDERSON) has the best intentions, no doubt, in this wholesale manufacture of housing he is advocating, but the gentleman from New York (Mr. OTTINGER) whose amendment passed unanimously, correctly stated that this Anderson amendment would destroy collective bargaining.

Bear this in mind: Everybody wants to have all these low-priced houses for folks in the low-income bracket. This amendment creates Secretary Romney of HUD as a building czar. Do they ever figure it takes 3 or 4 years for these electricians, plasterers, carpenters, machinists, bricklayers, and so forth, to become qualified mechanics?

Can anyone tell me where they are going to build millions of cheap houses without expert union labor? I would like to know what kind of a house they are going to sell to these low-income people.

We might as well be factual. This amendment will get the housing industry into a can of worms. It is going to promote friction among the various classified building trades among the people and the building trades, and between the building trades and the Government, which is a farfetched departure from the accepted and successful house and home construction we have always enjoyed. The only exception has been where "fly by night" building contractors have erected cheap subdivisions which degenerated into slums in a few years. We would have slums and ghettos inside of 18 months, with the so-called plaster-of-paris houses that are going to be built under Secretary Romney's plan. Union labor will not go in with Mr. Romney or anybody else to put up a lot of cracker-box homes. They claim the houses will be cheaper, but they have not said that contractors, lumber and building supply, or real estate will be lowered. If the houses will be cheaper, labor will have to provide the reduction in cost.

It is just such a fallacy that the amendment of my good colleague, Mr. ANDERSON, will give the public.

I will tell the Members where this would throw collective bargaining out the window. When we throw collective bargaining out the window, we will not have anybody to build these cracker-box houses that are intended to be built under this amendment.

In the first place, I will give an example. Contractors are required to bargain mandatorily on wages and hours and working conditions. If the collective bargaining agreement does not work out on that point, if he refuses and does not go into any contract, in that way he violates the Labor Relations Act.

If Mr. Romney cannot get expert mechanics, electricians, machinists, and so forth to build these houses, my gracious, what kind of houses are we going to have? The proposed plan may set back or postpone housebuilding perhaps for a year. There will be millions of people waiting for these cheap houses. They do not know what they are going to be, and they might wait for them if this "pie in the sky" building program ever gets organized on a practical foundation.

If the high-interest bankers and their "money monopoly" will forfeit some of their fabulous interest profits, we will have plenty of homeseekers who could start building millions of homes throughout the Nation in a few weeks.

If this billion and one-half home-building legislation is passed without the Anderson amendment, and low interest is provided by the banks and loan companies, we will have homebuilding prosperity by next January 1970.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. FARBSTEIN).

The Chair recognizes the gentleman from Kentucky (Mr. PERKINS).

PARLIAMENTARY INQUIRY

Mr. PUCINSKI. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. PUCINSKI. As Members fail to respond to their names, is the time then redistributed among the remaining Members who have not yet spoken? There was a fixed period of time.

The CHAIRMAN. The time was equally divided. The Chair has recognized Members whose names are on the list. The time will not be redivided.

The Chair recognizes the gentleman from Illinois (Mr. PUCINSKI).

AMENDMENT OFFERED BY MR. PUCINSKI TO THE AMENDMENT OFFERED BY MR. ANDERSON OF ILLINOIS

Mr. PUCINSKI. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Illinois:

The Clerk read as follows:

> Amendment offered by Mr. PUCINSKI to the amendment offered by Mr. ANDERSON of Illinois: In the last line, after the word "working" insert "and living".

Mr. PUCINSKI. Mr. Chairman, the amendment I am offering is to provide some degree of safety in any effort to use low-cost materials in housing construction. This amendment seeks to make certain that the lives of people who will move into the projects after they are built are not endangered through the use of time-saving or low-cost materials. We have an exemption in the amendment offered by the gentleman from Illinois (Mr. ANDERSON) which says the provisions of the amendment shall not apply "where such restraint is necessary to insure safe and healthful working conditions." I have merely added two words "and living" to the exception, making it read "working and living conditions." In other words, if at some point the people at HUD decide that they can save some money by using less safe material that will endanger the lives of those who occupy the building built, there will at least be recourse to challenge the use of such material or method under my amendment.

Mr. ANDERSON of Illinois. Will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. I certainly will not take exception to the language that the gentleman proposes. I think that

the horrors he is conjuring up are rather remote, namely, that HUD would deliberately go out and do something like that.

Mr. PUCINSKI. I disagree with the gentleman. I have seen some of these short-cut methods used and I have seen people burned to death in buildings and I have seen enough fires in my life to know that defective materials were used against the code. That is my basic opposition to your general amendment. It would put the Federal Government into every community in this country and impair local building codes and safety standards. All I am trying to do is insure in the event your amendment is adopted that we will have some recourse to see to it that unsafe materials or questionable techniques will not be used in the construction of these houses. That is all I hope to do here, and I hope the amendment will be adopted and the gentleman will accept it. I want the legislative history to show that my amendment permits a challenge of any decision by HUD to use materials or techniques if it can be shown such action or approval by HUD jeopardizes or may jeopardize the health or safety of people who will occupy such housing.

Mr. ANDERSON of Illinois. I am certainly willing to accept it. However, I am sorry that the gentleman in the same spirit of reciprocity is not willing to accept my amendment, because as far as making a czar out of Secretary Romney, the gentleman knows that in the 9 years I have been here I have never proposed making a czar out of any Federal official.

Mr. PUCINSKI. I did not use the word "czar."

Mr. ANDERSON of Illinois. And I wish to state that this language in my amendment, as it is limited by the language offered by the gentleman from California (Mr. REES) will not make a czar of anybody.

Mr. PUCINSKI. Nobody knows what happens when guidelines come down the pike. I am sure my colleague is very sincere, but he and I have been here long enough to know what happens when you give bureaucracy the kind of power that we give it here in your amendment.

The CHAIRMAN. Are there any Members whose names were on the list read by the Chair who wish to speak for or against the Pucinski amendment? If not, the question is on the amendment offered by the gentleman from Illinois (Mr. PUCINSKI) to the amendment offered by the gentleman from Illinois (Mr. ANDERSON).

The amendment to the amendment was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Chairman, I am opposed to the amendment. It would give the Secretary of the Department of Housing and Urban Development more power with respect to collective bargaining agreements than now exists in any official or agency of the Federal Government. At the present time the National Labor Relations Act expresses the national policy on collective bargaining and labor management relations. If it is felt that there is any need to alter this policy, then I think the Congress should do it and it should not be left up to the discretion of a single officer of the Federal Government. At the present time, under the National Labor Relations Act, it is the function of the courts to ultimately determine whether or not a particular provision in a contract or practice is unlawful. The courts are constantly considering issues in various cases involving such provisions. We are told—and I have heard it said here on the floor in the course of the debate—that there is a difference in what the Labor Act makes unlawful and what it prohibits—then to that I would say if the Labor Act does not make a contract or practice unlawful, then it must be lawful and permitted under the act.

If there is a need for additional restraints, I firmly believe that these restraints should be imposed by legislation which has been carefully considered by the House Committee on Education and Labor after a thorough hearing into all aspects of the problem it seeks to remedy. I do not believe that this body wishes to grant to the Secretary of the Department of Housing and Urban Development authority—he, himself—to determine what such restraints should be.

Mr. Chairman, in my judgment the proposal should be voted down.

The CHAIRMAN. The Chair recognizes the gentlewoman from Oregon (Mrs. GREEN).

Mrs. GREEN of Oregon. Mr. Chairman, I think that regardless of where I might live, I would be very much concerned about the apparent inability of this country to provide enough decent housing for our people.

But coming from the State of Oregon, I am especially concerned because the health of the economy of my State depends upon the health of the lumber industry and upon the health of the housing construction industry. And, indeed, the physical and mental health of all our people depends to a great extent upon their access to decent low-cost housing.

I, therefore, view with special alarm the trend toward higher and higher housing costs for the working people of this country and the downward trend in new housing starts.

It seems to me if we can eliminate any restrictions which contribute to this upward trend in the cost of housing units or which contribute to the downward trend in the number of new housing starts, then this Congress, that has expressed its concern about the inability to provide decent housing, ought to vote to eliminate those restrictions. And, if there are new technological developments or techniques that would contribute to more and more housing and better housing at lower cost, then we ought to be in favor of taking advantage in every way possible of these new technological developments. It is for these reasons, Mr. Chairman, I strongly support the Anderson amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Rhode Island (Mr. ST GERMAIN).

Mr. ST GERMAIN. Mr. Chairman, I want to add my voice to those who oppose the adoption of this amendment.

Those in support of this amendment have been careful to point out that this amendment is not intended to interfere with the normal relationships between employee and employer or the contracting union.

I cannot agree. Possibly this is the intent of the sponsors of the amendment, but that is not what the amendment says. Rather, it gives the Secretary complete authority to do what he feels advisable to "assure, to the extent feasible—that there is no restraint—against the employment of new or improved technologies, techniques, materials and methods."

I would therefore ask, as a matter of legislative history, that the sponsors of this amendment make a clear and concise statement in the RECORD to the effect that it is not their intent that there be any interference by the Secretary of Housing and Urban Development in normal labor-management relations or agreements arising therefrom.

In any case, it does not appear to me to be wise for the Congress to give broad authority to the Secretary in a case such as this without writing into the statute limitations or specific guidelines to be followed.

The Secretary under this amendment would apparently be able to use the various powers of his Department as a coercive sanction in providing governmental direction to the terms and conditions of agreements entered into under our free collective bargaining process by contractors budding on HUD-administered projects.

Additionally, as I understand history, the Congress has always been very jealous with its power to set the direction of the substantive terms and conditions of collective bargaining agreements. Yet, by this amendment, we are delegating that power to the Secretary of Housing and Urban Development so far as agreements falling within the coverage of this amendment are concerned. I do not think we should abdicate such authority to the Secretary without having given careful consideration to whether this is the only way the problem, if one exists, can be attacked.

We are simply asked to approve a floor amendment, without hearings and without an opportunity to do some careful thinking, which may set a precedent for a continuing decrease of congressional authority or influence in this area and a corresponding malignant increase in the authority of the executive branch.

Our constituents did not send us here merely to act during the heat of a debate on the crucial issues facing our country today. They have sent us here to think issues through for them and to vote as we feel best in the interests of our Nation and our constituents.

I have serious doubts about whether this amendment will be good for our country in the long run, even though the arguments in favor of it have some appeal, and I therefore am not going to vote for the approval of any such amendment the sole consideration of which has been made on this floor with most Members absent.

Also of deep concern to me is the fact

that it appears this amendment could well create a conflict in the application of Federal statutes.

It would not matter that the National Labor Relations Act, as amended, does not make particular clauses in agreements unlawful. Although a clause in a contract might stand under Supreme Court interpretation of the Labor Act, its use could nevertheless be prohibited by the Secretary of Housing and Urban Development in programs administered by him.

For example, lawful subcontracting provisions are a mandatory subject of bargaining under the National Labor Relations Act, and a contractor may not refuse to bargain about them. Nevertheless, contractors who are parties to a collective bargaining agreement containing such a lawful clause could be ineligible as a result of a unilateral decision by the Secretary, to bid on work under programs established under an entirely different statute.

This has the appearance of a back-door amendment to the labor laws, and I for one, do not feel it is appropriate for the Congress to take such an approach to the problem.

We would be creating the possibility that every collective bargaining agreement entered into by contractors doing business with HUD would be reviewed by that Department. I am sure the Department would receive hundreds of requests from dissident employers and employees asking that their particular contract be reviewed. This could reopen old wounds and every labor issue which might be brought under the broad language of the amendment. Labor relations would be disrupted around the country, and rather than produce more housing, the amendment might well be counterproductive.

I would not want to see labor strife and unrest result from the adoption of this amendment. Before the Congress subjects collective bargaining agreements to the scrutiny of any Federal department, I think we should very systematically and prudently decide in our own minds what limitations we want placed on this review authority and how we may provide procedures by which strife and unrest could be prevented.

We cannot do that on the House floor. That is a job for the committee, and can only be done by a diligent and foresighted calculation of the complex problems involved and the ramifications of a particular phrase in the language of the proposal. I cannot support the adoption of this amendment under the present circumstances.

Mr. Chairman, we have now been debating this bill and the amendments thereto, and particularly the amendments, since yesterday afternoon. I call your attention to the fact that on numerous occasions the point has been made against certain amendments that not enough time has been spent and that no hearings have been held on these amendments.

Certainly, I think the debate on this amendment this afternoon has indicated that, prior to even thinking of adopting it, there ought to be hearings to allow both sides to be heard.

As a matter of fact, I, for one, have a great deal of admiration for the proponent of the amendment, the gentleman from Illinois (Mr. ANDERSON). Ordinarily, he is one of the clearest speakers in the House of Representatives. Yet, with all of his talent and all of his ability which has been demonstrated here in this debate, there is a great deal of question as to the application of this amendment—as to how far it goes and what it does or does not do.

So on that point alone I feel it should be rejected.

In conclusion, to those who feel that as a result of the Rees amendment that they do not have anything to worry about, I would like to point out to the Members that from here this bill will go to conference with the other body where stronger language was adopted by the other body. I, for one, do not want to chance its coming out of conference with the Senate language rather than the language as amended by the Rees amendment.

For this reason, Mr. Chairman, I urge the rejection of the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. MOORHEAD. Mr. Chairman, I rise in opposition to the Anderson amendment, even though I think it has been improved by adoption of the Rees amendment and the Ottinger amendment.

My opposition is certainly not directed toward the objectives of the amendment as I understand them—namely, to insure that there be no obstacles placed in the way of achieving our national housing goals by using the latest technological advances and materials—but rather the method of trying to achieve this by placing, without congressional hearings, unrestricted powers in the Office of the Secretary of the Department of Housing and Urban Development.

One year ago, in the Housing and Urban Development Act of 1968, we committed ourselves to achieving the production of 6 million dwellings for low- and moderate-income families over the next 10 years and for increasing other production to an average annual rate of 2 million dwellings.

We realize that to achieve this objective we would have to develop and use new and improved technology in the housing industry. Accordingly, in section 1704(c) of the 1968 housing bill we added a new subparagraph (3) to section 1010 (a) of the Demonstration Cities and Metropolitan Development Act of 1966.

The Anderson amendment, as I understand it, would add a new subparagraph 4 with almost the same wording as subparagraph 3, which we adopted almost 1 year ago after extensive hearings.

The gentleman from Tennessee asks if we are opposed to the new techniques.

Let me read to you the 1968 law which was adopted after lengthy hearings. It expresses in a positive and inoffensive manner what the pending amendment expresses in a negative and possibly offensive manner. In subsection 3 of the 1968 law the Secretary is directed to "require, to the greatest extent feasible, the employment of new and improved technology, techniques, materials and methods in housing construction, rehabilitation, and maintenance under programs administered by the Department of Housing and Urban Development with a view to reducing the cost of such construction, rehabilitation, and maintenance, and stimulating the increased and sustained production of housing and under such programs."

The subparagraph has been in effect for only 1 year.

No one came before our subcommittee asking for an amendment on the grounds that subparagraph 3 was unworkable.

On the other hand, I would be the last to claim that all problems in modernizing the housing industry are solved by subparagraph 3 even with the addition of the Anderson amendment. But there are right ways and wrong ways to achieve the objectives and the wrong way is to act hastily on the floor of the House without extensive hearings.

The right way is to consider through a congressional hearing the entire scope of the problems facing the housing industry as recommended by the Douglas Commission.

In accordance with the recommendation of the Douglas Commission, on July 17 of this year, I introduced, with 27 cosponsors, a bill to establish a nongovernmental institution called the National Institute of Building Sciences to bring all segments of the housing industry together in a partnership to bring about a dramatic expansion of housing production, and to solve some of the problems involved in housing costs, including perhaps the single largest cause: conflicting and obsolescent building codes.

Instead of incurring the hostility of organized labor, my bill would seek to enlist the cooperation of labor by providing that the operations of the National Institute of Building Sciences, "shall be directed by a council which shall be broadly representative of all sectors of the building industry including labor, all levels of government, and the consuming public."

I think that this is all that is necessary.

Further, I would seriously doubt that the Secretary of Housing and Urban Development wants to be cast in the role of labor mediator for all existing contracts in the construction industry.

Therefore, I believe that we should vote down the pending amendment and proceed in the proper congressional manner with hearings on the bill to establish a National Institute of Building Sciences, and I hope the chairman of the committee can assure me that such hearings will be scheduled.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. ASHLEY).

(By unanimous consent, Mr. BARRETT yielded his time to Mr. ASHLEY.)

Mr. ASHLEY. Mr. Chairman, the gentleman from Illinois has propounded an amendment which certainly has the intense interest of every Member of this body. He has said that we need, in order to achieve decent housing at a price that the American family can afford, the same kind of innovation and tech-

nological breakthrough that we witnessed in our space effort. I simply must wonder at the fact that, to the best of my knowledge, no legislation was ever enacted by this Congress with respect to our space effort comparable to the amendment offered by the gentleman from Illinois today. Perhaps with it we would have gotten to the moon sooner that we did. The fact is we got there in a timely fashion without it.

Mr. Chairman, there has been no testimony on the part of this administration in favor of the substance of the Anderson amendment, and I think the reason there has not been is clear.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, I did make what I consider to be a conscientious effort to get the views of the administration on this particular amendment.

Mr. ASHLEY. Precisely.

Mr. ANDERSON of Illinois. And I think I have it. I have in my hand a letter signed by the Secretary of Housing and Urban Development.

Mr. ASHLEY. There is no question it is the view of the administration, but what I am saying is that after 8 months in office the administration still did not come before the appropriate committees of the House and the Senate and in testimony demonstrate a need for the substance of the gentleman's amendment. I am perfectly well aware, as I am sure all Members are, of the contents of the letter to which the gentleman refers.

The reason the administration did not see fit to testify is very likely the reason alluded to by the gentleman from Pennsylvania (Mr. MOORHEAD). The fact of the matter is that the Anderson amendment was adopted last year and is part of the law of the land today. The gentleman from Illinois would require the Secretary to "assure, to the extent feasible, in connection with housing construction, any major rehabilitation and maintenance under programs administered by the Department of Housing and Urban Development, that there is no unreasonable restraint by contract or practice against the employment of new or improved technologies, techniques, materials," and so forth.

Under the Housing Act of 1968, adopted last year, we have almost precisely the same language. I would ask the gentleman from Illinois what addition he feels his amendment makes to the language in the 1968 act, referred to by the gentleman from Pennsylvania (Mr. MOORHEAD) and most recently by me?

Mr. ANDERSON of Illinois. Of course, I think actually the language was added in 1968 in the amendments to the Housing Act in that year, and they merely in very general terms express the intent of the Congress that the Secretary explore the possibilities of using the new technologies.

Mr. ASHLEY. I thank the gentleman but he is mistaken. Rather than the vague language the gentleman suggests, here is the language from the 1968 act:

The Secretary is directed to require the employment of new and improved technology, techniques, materials, and methods in housing construction.

That is not vague language. That is very specific language which was adopted last year. It is the law of the land today. I see no reason whatever to come forth with an amendment that now talks about "unreasonable restraints" without saying by whom, without defining what is unreasonable restraint, without suggesting the criteria for determining on the part of the Secretary of Housing and Urban Development what would constitute an unreasonable restraint.

Mr. ANDERSON of Illinois. Mr. Chairman, will the gentleman yield further at that point?

Mr. ASHLEY. I yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. Mr. Chairman, would the gentleman agree, for example, with the kind of practice referred to earlier in the debate where a union would demand a contract that their members paint only 10 rooms a week despite the fact that a new brush or machine had been devised that would provide for painting of 10 rooms in a day? Would that be restrictive?

Mr. ASHLEY. It might very well be, but, if so, the Secretary is required under the law of last year to require the employment of new and improved techniques in construction. If there is an unfair practice now, if it is in restraint, if it is all the gentleman suggests, the law last year covers it and we do not need the amendment the gentleman is proposing. What I am suggesting is that this is duplication.

The CHAIRMAN. The Chair recognizes to close the debate, first, the gentleman from New Jersey (Mr. WIDNALL).

Mr. WIDNALL. Mr. Chairman, I rise at this time to support the Anderson amendment as amended by the Rees amendment. I think it is vital as part of Operation Breakthrough, which is in an imaginative way capturing the attention of the country and also much public support. It is gaining from day to day.

I do believe there is a misunderstanding as to what this amendment says and what it does. I think it is important as we close the debate to read the amendment in its amended form, which we will soon be voting on:

Assure, to the extent feasible—

And, Mr. Chairman, I emphasize that "to the extent feasible"—

that there is no restraint by contract or practice against the employment of new or improved technologies, techniques, materials and methods or of preassembled products which may reduce the cost or improve the quality of such construction, rehabilitation, and maintenance—

Mr. Chairman, this is very important—

and therefore stimulate expanded production of housing under such programs—

I also want to emphasize this—

except where such restraint is necessary to insure safe and healthful working conditions.

I believe that every Member of Congress will recognize the fact that we are falling far short of meeting the housing needs of this country. We have had many programs in existence for years which have failed to measure up to the needs and the goals of the people of our country.

We know what the situation is now. We have to do something about it. That means we are going to be in a period of change and that it will be healthy change as we review and move on with this program and other programs. Something must be done.

I do not believe there is anyone who recognizes this more than the Secretary of Housing and Urban Development, Mr. Romney, who has done his best in traveling throughout the United States to see at firsthand the problems. He has studied. He has not moved rapidly because he wanted to try to present a sane, good program to the country. This is a vital part of Operation Breakthrough.

The CHAIRMAN. The Chair recognizes the distinguished chairman of the committee, the gentleman from Texas (Mr. PATMAN), to close debate on this amendment.

Mr. PATMAN. Mr. Chairman, I rise in opposition to the amendment of the gentleman from Illinois (Mr. ANDERSON).

I think that every Congressman recognizes the immediacy of this country's housing needs and the necessity of developing technological breakthroughs to meet these needs. However, this amendment by Mr. ANDERSON of Illinois is not a proper vehicle for meeting this need for a number of reasons, according to my opinion.

To begin with, there are very serious objections to this amendment. Its language is inflexible and rigid. It grants unlimited power to the Secretary of Housing and Urban Development without any procedural safeguards. It is not a balanced or reasonable approach to this complex problem in that it focuses on unions while ignoring questions that have been raised regarding local building codes, the high cost of money and land, all of which play an important part in the cost of housing. It inevitably will create a conflict with the application of the National Labor Relations Act. Lawful agreements, working rules and practices which are mandatory subjects of bargaining under the National Labor Relations Act could be prohibited under this amendment by unilateral decisions by the Secretary of Housing and Urban Development.

In view of these serious objections, any additional legislation on this subject properly should be developed only after extensive congressional hearings. This amendment was not a part of the administration's housing bill, nor was it even discussed at the hearings.

The necessity for a congressional hearing is pointed up by the fact that the proponents of this amendment state that it will permit the Secretary of Housing and Urban Development to use the powers of persuasion of his office to encourage technological breakthroughs. Yet the present Housing Act already contains a provision that requires the Secretary to encourage large scale experimentation of new technology. No adequate explanation has been presented why the additional legislation in this area is necessary.

It seems particularly appropriate that this amendment be the subject of a congressional hearing at which the Secre-

tary of Housing and Urban Development can present his case regarding the amendment and other interested parties can be given an opportunity to present testimony regarding this most complex issue.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. ANDERSON), as amended.

The question was taken; and on a division (demanded by Mr. ANDERSON of Illinois) there were—ayes 100, noes 77.

Mr. PATMAN. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. ANDERSON of Illinois and Mr. PATMAN.

The Committee again divided, and the tellers reported that there were—ayes 130, noes 93.

So the amendment, as amended, was agreed to.

AMENDMENT OFFERED BY MR. WIDNALL

Mr. WIDNALL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WIDNALL: On page 44, after line 24, insert the following new section:

"Medicine Cabinets In Federally Assisted Housing

"SEC. 415. (a) The head of the appropriate Federal agency shall prescribe reasonable standards with respect to the type or design of latches hereafter installed on medicine cabinets in federally assisted housing with a view to preventing injury to young children as a result of gaining access to the contents of such cabinets.

"(b) As used in this section—

"(1) The term 'federally assisted housing' means (A) housing constructed, rehabilitated, or otherwise provided with assistance under the National Housing Act, the United States Housing Act of 1937, section 101 of the Housing and Urban Development Act of 1965, section 202 of the Housing Act of 1959, title V of the Housing Act of 1949, the Consolidated Farmers Home Administration Act of 1961, section 7(b) of the Small Business Act, or chapter 37 of title 38, United States Code; and (B) family housing constructed by the Department of Defense.

"(2) The term 'appropriate Federal agency' means (A) the Secretary of Housing and Urban Development with respect to housing constructed, rehabilitated, or otherwise provided under the National Housing Act, the United States Housing Act of 1937, section 101 of the Housing and Urban Development Act of 1965, or section 202 of the Housing Act of 1959; (B) the Secretary of Agriculture with respect to housing constructed, rehabilitated, or other provided under title V of the Housing Act of 1949, or the Consolidated Farmers Home Administration Act of 1961; (C) the Administrator of the Small Business Administration with respect to housing constructed or repaired with assistance under section 7(b) of the Small Business Act; and (D) the Secretary of Defense with respect to family housing constructed by the Department of Defense.

"(c) The respective appropriate Federal agencies shall, in prescribing standards under this section, seek, through consultation or otherwise, to achieve the greatest practicable uniformity in such standards."

And renumber the succeeding section accordingly.

Mr. WIDNALL (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that the amendment be printed in the RECORD.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The CHAIRMAN. The gentleman from New Jersey (Mr. WIDNALL) is recognized in support of his amendment.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman.

Mr. BARRETT. Mr. Chairman, in the interest of time, I wish to say I have had an opportunity to go over the amendment and we see no objection to it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. WIDNALL).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. PUCINSKI

Mr. PUCINSKI. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PUCINSKI: On page 46, line 8, after "cost", insert:

"SEC. 415. All rules, regulations, directives, instructions and policies promulgated by the administrator under this Act shall be so promulgated within the provisions of the Administrative Procedures Act."

Mr. PUCINSKI. Mr. Chairman, I will not take 5 minutes.

What this amendment does is to require that all rules and regulations shall be published in the Federal Register so that you can see what the administration is doing—what the Administrator is doing. We have done this on other bills simply because there is a growing tendency to have guidelines to substitute for the provisions of the Administrative Procedure Act.

I hope that the chairman of the committee will accept the amendment. I think it is important in a bill like this where a tremendous number of people are involved and where whole industries are involved it is important for Members of Congress, it would help all of us if we knew in advance what the Department is planning to do with these provisions. It in no way interferes with the Administrator's management or conduct of the Agency.

It does not impede his operations. It does not take any of his powers away. All it says is that the Administrative Procedure Act which has been on the books for some 20-odd years and in view of the fact that in recent years guidelines have been developed to bypass the APA—all we are trying to do is to give the Congress the knowledge that we need.

Mr. WIDNALL. Mr. Chairman, if the gentleman will yield, do you have a copy of the amendment? I have not seen it.

Mr. PUCINSKI. I have shown it to the chairman of the committee. I apologize to the gentleman.

Mr. WIDNALL. Is it not true at the present time, the Department of Housing and Urban Development would be forced to do what you are talking about which is already in the act?

Mr. PUCINSKI. I regret to advise my colleague that is not true. The Administrative Procedure Act was passed by the Congress because the Congress realized that we here in the Congress cannot cross every "t" or dot every "i" and so this great authority was delegated to the administrator. So when the Administrative Procedure Act passed the Congress—all right, we delegate this authority but we want the administrator to tell the Congress what he is doing or plans to do about publishing it in the Federal Register—to publish his proposed rules and regulations. This was going on for a few years. Then about 10 or 12 years ago, and I must say this because most prevalent in the past administration, we saw the emergence of guidelines to bypass the Administrative Procedure Act.

What happens today is the guidelines are published and they are sent down range and nobody ever has a chance to look at them and no one ever has a chance to comment on them and when they are sent down range, they become effective. Two jurisdictions have already held that guidelines take on the color of law. So all we are saying here is that we are reemphasizing the fact that the rules and regulations shall be published in the Federal Register for all interested parties to study them before they become effective and comment upon them if that is their desire.

Mr. BROCK. I believe the gentleman has a desirable objective in mind in terms of broad policy that is going to be adopted in relation to a national program, but I think he is somewhat amiss of the mark when we talk about an operation breakthrough, because here we are trying new technology.

Mr. PUCINSKI. This applies to the whole act.

Mr. BROCK. I know, and it is going to destroy any possibility of a breakthrough.

Mr. PUCINSKI. If the gentleman from New Jersey (Mr. WIDNALL) is correct, that the amendment would apply to the whole law, then nothing would destroy such a possibility. We are merely emphasizing that this is the intent of Congress. We want to see the rules and regulations that they propose for the administration of the act. That is all. I hope the amendment will be adopted.

Mr. BROCK. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Tennessee is recognized.

Mr. BROCK. Mr. Chairman, the purpose of an Operation Breakthrough is to let the Secretary have the flexibility to innovate, to be creative, to try something new on a one-time basis in a pilot project in a city somewhere in these United States. He has had 60-odd proposals. He may take 8, 10, or 12 of them and try them. To delay that operation, to open up a Pandora's box to every special-interest group to come in would defeat its purpose. Why we should not even try something new is beyond me. The gentleman knows that the bill he is talking about was designed to affect long-term programs that are going to become policy. They should not affect innovative experimentation.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. BROCK. Certainly, I yield to the gentleman from Illinois.

Mr. PUCINSKI. There is nothing in this amendment that could be disagreeable to the gentleman. I will ask unanimous consent that the amendment be read again, because there is nothing in the amendment that even approximates that. This amendment states that all rules and regulations shall become promulgated within the framework of the Administrative Procedure Act, which is now on the books. That is all. If the Secretary wants to fund a demonstration project, fine, he can do that, and nobody stops him. But if he wants to set up rules and regulations setting up demonstration projects, then he would publish those rules and reguations in the Federal Register for all interested parties to see.

Mr. BROCK. How about rules or regulations or policies affecting one experimental project?

Mr. PUCINSKI. It would not affect it.

Mr. BROCK. That is what the amendment says.

Mr. PUCINSKI. The Administrative Procedure Act, if my colleague will look at the act, provides the machinery under which an administrator shall publish in the Federal Register the proposed rules and regulations which he recommends for implementing an act—in this instance, the Housing Act.

All I am saying to my colleague is that in the last decade we have seen the emergence of government by guidelines, and no one ever sees the guidelines until they become literally law. All I am saying is that the administrator of this agency, as I hope the other agencies will also, will show the Congress and show the other interested parties what he proposes to do. That is all.

Mr. BROCK. I would frankly place more credibility in the gentleman's amendment if he had offered it on the health, education, and welfare bill.

Mr. PUCINSKI. The gentleman is correct. I did offer it. In fact, I have been offering the amendment to every major bill, simply because I think it would restore the responsibility of Government back to Congress, where it belongs.

Mr. BROCK. I fully agree with the gentleman's intent in that case. If it does not affect the demonstration or innovative project, then I cannot object to it.

Mr. PATMAN. Mr. Chairman, I rise in opposition to the amendment.

The CHAIRMAN. The gentleman from Texas is recognized.

Mr. PATMAN. Mr. Chairman, this same amendment was proposed in 1968 to the 1968 Housing Act and was defeated. We had hearings, and the gentleman did not appear before the committee in support of the amendment this year. We had reason to believe that he had either abandoned it or at least was not insisting on it.

The amendment is far reaching. It could involve many emotional questions in this country and get far away from any housing legislation.

We do not know how far it would go under the Administrative Procedure Act. I hope this amendment is voted down. It is dangerous. I hope it is voted down. The gentleman admits he has been trying to get it on other bills, and he has failed to get it on any bill.

Mr. PUCINSKI. No; we got it through.

Mr. PATMAN. Not on a housing bill though.

Mr. PUCINSKI. That is correct, and I regret that we did not get it on a housing bill, because the gentleman has seen the arbitrary rules and arbitrary standards being handed down in many parts of the housing bill over which Congress has nothing to say and no control. So I am hopeful that as long as the chairman did recall and refresh my recollection, that Members will realize what we are trying to do is to recapture control.

Mr. PATMAN. Mr. Chairman, I do not yield further.

This is going too far. We do not know how far the Administrative Procedure Act would go in the administration of this. It is going off in a different direction entirely from the housing bill. We do not know how dangerous it is or how ineffective it would be in enforcing the provisions of this law. I do not think we should go in this direction. I hope the amendment is defeated.

Mr. WIDNALL. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I think the amendment would be highly detrimental to the administration of this act, because of one word in his amendment that has not been discussed by the gentleman from Illinois (Mr. PUCINSKI), which says:

> All rules, regulations, directives, instructions and policies promulgated by the Administrator under this Act shall be so promulgated within the provisions of the Administrative Procedure Act.

I do not believe the word "policies" has ever been in any bill before. I do not think it should be, and I think it would be something that would completely hamstring the operation of the act and the attempt we have been making to get expeditious action in moving in new directions.

It is also highly irregular to offer this amendment to the House without providing any copies even for the majority or the minority sides.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. WIDNALL. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Chairman, I would not press the issue. The fact remains I am somewhat surprised that my colleague would be so concerned over an amendment to this act which requires nothing more than publication in the Federal Register of how they intend to implement an act approved by the Congress of the United States. It does nothing more. It makes these people tell the Members of Congress and all other interested parties what they plan to do with the legislation the Congress approves. It is just that simple.

Mr. ERLENBORN. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I am surprised the gentleman from Illinois offered this amendment. I have supported in the past similar amendments offered by the gentleman to other bills. I agree with the purpose he states, but the way in which this is offered, never having been offered to the committee, and copies not having been submitted to the majority and minority sides is irregular.

And I do not believe—the gentleman can correct me if I am wrong and I will yield to him for that purpose—that the amendment has ever been offered in the same form in which it is offered today, that is including the words "directives, instructions, and policies." I fear this goes well beyond what I have supported in the gentleman's efforts in the past, and that is that rules and regulations and guidelines which would take on the color of law be published in the Register. But now every policy that is considered by the Department of HUD and every directive which is sent from Washington to one of its regional offices will have to be published in the Federal Register, and we will inundate the office with paperwork and glut the Federal Register. I do not think the amendment is well thought through.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Chairman, I think the gentleman misses the point of the amendment. The controlling factor is the Administrative Procedure Act. That is what controls. Whatever procedures are spelled out in the APA prevail.

I would not add anything to the APA. I would not touch it, amend it, or expand it. Whatever requirements are made of an administrator in the APA; those requirements would have to be abided by and adhered to under this amendment. So we do not do anything not on the books now, because the APA has been on the books since 1946. All we do is reaffirm the importance of the APA.

Mr. ERLENBORN. The gentleman misunderstands the point I am making. Certainly the Administrative Procedure Act does not require every policy adopted, every directive sent out, be published in the Federal Register. If it did, then the gentleman's amendment would be completely unnecessary. It is ill advised, and I hope the amendment will be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. PUCINSKI).

The amendment was rejected.

Mrs. SULLIVAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I suppose it is human for each of us to think that everything we do here, or propose, has historic significance. With due allowance, therefore, for this tendency upon our part to see history being written in every vote, I would like to recall a little matter of perhaps some historic value which occurred a dozen years ago. It was the first teller vote ever held in the House on the issue of instituting a food stamp program. We lost. The vote was ayes 89, noes 128. That was on June 20, 1957.

That vote was historic and significant, in my opinion, more from a political standpoint than anything else. For as pointed out at the time by the gentleman from Michigan (Mr. DINGELL) only one

Member of the House from the minority side, the gentleman from Pennsylvania (Mr. SAYLOR) went through the tellers in favor of food stamps in 1957. He has always supported this legislation.

Subsequently, as the years passed, some additional Members from the Republican side—a few—joined in this effort, but when the Food Stamp Act of 1964 was reported by the House Committee on Agriculture, every single Republican member of that committee voted against it. And so did the overwhelming majority of Republicans in the House.

TWO DIFFERENT ISSUES 12 YEARS APART RESULT IN IDENTICAL VOTE PERCENTAGES

Yesterday, we had an amendment before us on the housing bill which I feel is somewhat comparable, from a political standpoint at least, to the experience of June 20, 1957, on the food stamp issue. That was my amendment to create a Home Owners Mortgage Loan Corporation to provide direct loans, at 6½ percent or less, to credit-worthy middle-income families, earning $12,000 a year or less, to enable them to obtain the financing needed to buy homes they can afford. The HOMLC would operate only during periods when the private mortgage market cannot or will not provide mortgage money to middle-income families at reasonable rates—a situation such as right now.

The teller vote on this proposal yesterday was ayes 78, noes 111. It failed.

Mr. Chairman, it is a remarkable coincidence that the vote in favor of this amendment was just about exactly the same from a percentage standpoint—41 percent—as the vote in favor of the food stamp idea the first time the House had a teller vote on it, 12 years ago.

NO REPUBLICAN VOTES THIS TIME

What is even more remarkable is that this time, so far as I recall from counting the aye votes yesterday as a teller, there was not a single Republican Member of the House willing to come through the line in favor of the idea of enabling moderate-income American families to get reasonable financing for the purchase of a home. Not one.

If I failed to recognize any Republican faces in the line, I would be glad to apologize to any Member from the minority side who would wish to correct me on that.

Mr. Chairman, I am sorry that this vote seemed to have turned into a partisan matter, with all Republicans present voting no and most of the Democrats present—not all, and not enough, but most of those present—voting aye. But the result was not surprising. It takes a while for Members on the other side of the aisle to recognize a good idea when it is presented here for the first time, or the third, or 10th. Eventually, as in the case of the food stamp idea, many of them finally come around. Now the big problem our Republican colleagues are trying to decide about the food stamp issue is not whether it is a good idea, but whether it should have only $340 million to spend this year, as present law provides, or $610 million, as proposed by the Nixon administration, or $1,250 million as agreed to by the Senate. And this year dozens of Members of this House from the Republican side are enthusiastically cosponsoring bills to expand, improve, and in other ways endorse the whole idea of a food stamp plan expanded to include everyone who is in need of food assistance in order to obtain an adequate diet at a price he can afford.

HISTORY INDICATES THE GOP ELEPHANT WILL EVENTUALLY LEARN TO RECOGNIZE A GOOD IDEA

I am sure many of our Republican friends will eventually see the value, also, of the Home Owners Mortgage Loan Corporation, but I am somewhat resigned to waiting 12 years for most of the Republicans here to see the light.

Hence, as I had to do in the food stamp matter 12 years ago, I am planning to concentrate my efforts in behalf of the HOMLC among my Democratic colleagues, knowing that those who examine the bill introduced by me and Mr. BARRETT, H.R. 13694, which I offered yesterday as an amendment to the housing bill, will enthusiastically support it. I intend to fight as hard for this measure as I did for the food stamp bill. And one day, I suspect, many Republican Members of the House will be making speeches here complaining, as they have done about food stamps this year, that the HOMLC had only $10 million in its revolving fund after 5 years and should have far more money to lend out.

They say the elephant never forgets. But the history of progressive legislation—from social security through to the present—shows that it usually takes the GOP elephant many years to learn anything—so that it will then have something to remember, and will know what not to forget.

Mr. WEICKER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I intend to make a motion to recommit, after the Committee rises, based on the amendment presented to the Committee yesterday afternoon.

Very briefly, let us set the record straight, that urban renewal, under the present laws, has no requirement whatsoever for the creation of housing. The only requirements in the law today are those requirements stating that if housing is a part of the urban redevelopment plan then 20 percent shall be low- or moderate-income housing. But there is no requirement for any housing whatsoever.

The net result of this has been clear. Rather than create a situation in our cities whereby they can be developed in balance, both the commercial side and the living side, this particular piece of legislation really could be called the great shopping plaza renewal act or the office building renewal act. Far from assisting with the housing needs of this country, this very piece of legislation has gone ahead and created a problem which requires the Operation Breakthrough, which requires the model cities program, et cetera.

This specific amendment does not require that any housing be put in if the urban renewal project goes into an area where there is no housing. But if the project goes into an area with housing and tears down x number of units, yes, as a part of the plan then that number of units would have to be replaced. There is no shunting of the problem outside of the cities. It has to be handled on location.

To those who would say the one-for-one situation is restrictive so far as housing is concerned, I will say I believe it is a lot more restrictive for the person who is displaced from his home and has no other place to go.

This is very definitely a question of priorities. The relocation provisions under our present Urban Renewal Act do not create any more housing. All this does is to postpone the problem, and the backlog of housing units required just goes on the upswing.

Mr. GIAIMO. Mr. Chairman, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Connecticut.

Mr. GIAIMO. I should like to commend the gentleman on the statement he is making. He is absolutely right. This is the same idea he tried to get through yesterday on the amendment. If housing is demolished in the process of urban renewal we must replace the housing for the people who theretofore had been living in the area.

This is a good amendment in the nature of a motion to recommit, and I intend to support it.

Mr. WEICKER. I thank the gentleman.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Illinois.

Mr. McCLORY. I witnessed an urban renewal project where housing was destroyed for people who needed the housing most, and no provision was made for housing of those disadvantaged persons. I believe the gentleman's amendment is commendable, and I intend to support him.

Mr. WEICKER. I thank the gentleman.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Massachusetts.

Mr. BOLAND. Mr. Chairman, I am going to support the gentleman's motion to recommit. It ought to be in the law and it should have been in the law a long time ago, from the very first year that urban renewal was passed by the Congress. It is a good amendment and should have been adopted yesterday. I support the gentleman's motion to recommit.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. Mr. Chairman, I only want to point out that I think the gentleman had better take a hard look at this. I do not want to consume the time of the Members at this late hour, but the majority of the low- and moderate-income housing is 50 percent, or really 51 percent, and not less than 20 percent.

Mr. WEICKER. Let me say to the gentleman from Pennsylvania that requirement is only there if housing can be part of the urban renewal plan, but there is no requirement that there be any housing in there at all.

Mr. LONG of Maryland. Mr. Chairman, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Maryland.

Mr. LONG of Maryland. I congratulate the gentleman on his motion and believe that it will solve a very important problem here. I intend to support his motion to recommit.

Mr. WEICKER. I thank the gentleman.

Mr. PUCINSKI. Mr. Chairman, will the gentleman yield?

Mr. WEICKER. I yield to the gentleman from Illinois.

Mr. PUCINSKI. How does the gentleman's amendment comply with a U.S. district court ruling in Chicago by Judge Austin, which may or may not be upheld on review, where the judge held that you have to build three housing units outside of a ghetto area before you can build one unit inside? Where you have an urban renewal project and put in a fixed number of housing units—and I support your concept, but I want to know how will this comply with this decision and how will you be able to build your homes if the principle enunciated by Judge Austin becomes final?

Mr. WEICKER. The principles enunciated by this Congress will overrule those enunciated by the judge. It was not the intent of this Congress to create an urban renewal act geared only to commercial interests in the United States. The Congress has not enunciated its principles up to now, and I believe this will help to do it.

Mr. ASHLEY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I do not think that there should be any question about the impact and the effect of this motion to recommit. If it is adopted, it will ruin and it will end the urban renewal program as we know it today.

I have been on the Subcommittee on Housing for 15 years, and I can assure you that I have worked hard to come to understand the program. I will yield to any Member on either side, any member of the Housing Subcommittee, who will not affirm what I am saying.

There are some 2,600 urban renewal projects in being today, either in construction or in completion. Not one-tenth of 1 percent of these projects could go forward if the motion to recommit were adopted and were to become law. The fact of the matter is that the gentleman is seeking to superimpose a judgment from Washington over that of the local community. Hear me out. There are projects in your districts that seek to reduce density by taking out substandard units and not putting in one for one, as the gentleman's motion would require. There are projects in your districts that seek new recreational space and new park space. It is necessary in some instances to take out units and not to replace them on a one for one basis in order to achieve this end.

What I am saying, Mr. Chairman, is that if this motion to recommit is adopted, this Congress will be putting its judgment—insisting that its judgment be substituted for that of the local governing bodies.

Mr. Chairman, this motion to recommit has got to be opposed on the basis of the testimony of the Conference of Mayors, the Leagues of Cities and the Association of County Officials.

This motion, as I have said, Mr. Chairman, would absolutely end urban renewal as we know it today, and I repeat that I will yield to any member of the Housing Subcommittee to challenge me on what I say.

Mr. WEICKER. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Connecticut.

Mr. WEICKER. It is not going to destroy urban renewal. It is going to put the human element back into urban renewal where it should have been from the start.

Mr. ASHLEY. I refuse to yield further. I consider it presumptuous that the gentleman from Connecticut would tell our subcommittee it has been unmindful of the human element involved. If he feels so strongly, I would suggest that the gentleman might have come before the committee in a timely fashion rather than offering his amendment as he did yesterday without any prior notice, and now in the form of a motion to recommit.

Mr. Chairman, if this is so essential, then why did not the gentleman present himself before the committee with reference to this proposal? Why is this the first time that this matter has been presented?

Mr. ANDREWS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. I am sure that the gentleman from Ohio knows about the history of the southwest section of Washington, D.C. A few years ago thousands of people were living in that area. However, under the urban renewal program the houses were torn down and the property was sold to wealthy people on which to construct high-rise apartments. My question is that those people who were put out of their homes are still without homes.

Mr. ASHLEY. Let me say to the gentleman from Alabama that the problem that he has suggested has come to the attention of our subcommittee. The gentleman from New Jersey, the ranking minority member of our subcommittee, has for years offered amendments which have been adopted to tighten up on these operations in order to assure that low-cost housing for families of modest income would be provided. These amendments have been adopted. They are a part of the law today.

But to insist upon a one-for-one replacement takes away the opportunity of lowering the densities of our poorer cities.

I will say to the gentleman from Connecticut that there is no addendum to his motion that says that there will be some means of accommodating the inner city people in the suburbs; no, not at all.

Mr. Chairman, this motion to recommit in my view is directed at and its sole intent is to lock into the cities those people who are living in the cities today. It can only perpetuate the terrible densities of our inner cities and the stifling conditions which breed unrest, crime, and violence.

The gentleman from Connecticut talks about assuring the human element in urban renewal. His motion, however, is only certain to continue the inhumanity characteristic of so much of our urban life and to preserve the unethical and immoral class structure of present-day suburbia.

Mr. GILBERT. Mr. Chairman, our country is facing a housing crisis of growing magnitude. It extends to the housing available to Americans of low- and middle-income levels. We have talked a great deal, going back to the days of World War II, about the need for vast building programs for housing. But each year we fall a little further behind in our housing goals.

I commend the Banking and Currency Committee for approving the full authorization for the model cities program. When this program was first passed under the previous administration, much hope was invested in it. In my own district in the Bronx, N.Y., we have started a model cities project. It has brought a feeling that there is indeed an urban future for us. I see new signs of enthusiasm within the model cities area. This program has gained widespread acceptance as a basic approach toward meeting the needs of low-income families in blighted areas through comprehensive use of the whole range of Federal programs. I am pleased that the committee has given this program its confidence by recommending the authorization that was envisaged in the original legislation.

I also want to indicate my support for such other provisions within this bill as low-cost loans for housing for the elderly and emergency flood insurance. I find it prudent that the committee has seen fit to include funds for the rehabilitation of older public housing projects. This is an important provision. Neglected houses and buildings, once vacated, become breeding places for crime and disease. This indicates the wide scope of this legislation, which I regard highly.

The bill contains two other important provisions to help our senior citizens. It makes an increase in the rehabilitation grants available to low income families in urban renewal areas who must fix up their property; and, the bill authorizes an additional $150 million for the 3 percent loan program to finance housing for the elderly and the handicapped. These provisions certainly have my strong support.

The bill, H.R. 13827, modifies the public housing annual Federal contribution formula which would restore the authority in the original 1937 Housing Act. These contributions have been limited by regulation—just to debt service—on public housing projects and today a number of local housing authorities find they cannot meet operating costs out of rentals. Management costs of public housing have spiraled along with other costs, while the average income of public housing occupants has remained virtually the same as the program serves a lower range of income groups, particularly senior citizens.

Mr. Chairman, this bill will make a number of important improvements in existing programs and provides authorizations to continue these programs through the next fiscal year. There are some problems the bill fails to remedy. In some respects it fails to face up to two needs of public housing in high cost areas. It establishes a limitation on construction cost per room which will mean that no new public housing can be constructed under federally assisted financing in the city of New York, and other such cities. Further, it fails to come to grips with the problem of urban space in that it makes no provision for disposal of excess Federal property at a reasonable price for low- and moderate-income housing. The existing cost limitation per unit of public housing has made it almost impossible for the NYC Housing Authority to construct new residential facilities for the past year, and I fear that our housing problem in New York City is going to become worse.

Mr. Chairman, I opposed the Anderson amendment, not because I fail to recognize the importance of using new technology for housing construction. I oppose it because it ignores the guarantees to the rights of labor that have been built up over the years. The trade union movement is as eager as the Congress to get new homes built quickly and inexpensively and has shown that it is adaptable to the use of new technology.

Mr. Chairman, I am going to vote for this housing bill. It makes many important improvements. I regret, however, that it does not go far enough. Our goal is not only more homes but a decent, safe, and sanitary home with a suitable living environment for every American family. This legislation is necessary to help meet this goal—but a whole range of community development programs including public works, transportation, health, education, job training, and, employment programs must also be implemented and funded—if we are to rebuild our ghettos and make our communities a decent place in which to live.

Mr. REID of New York. Mr. Chairman, I rise in support of H.R. 13827, the Housing and Urban Development Act of 1969.

In passing the Housing and Urban Development Act of 1968, the Congress established a clear national housing production target—26 million units of housing in 10 years, including 6 million units for low- and moderate-income families. Yet current statistics show that, this year, we may not achieve even 1 million housing starts, when the congressional mandate calls for 2.7 million starts annually. We are falling behind in our efforts to meet the congressional mandate in this area and the goals set by the Kerner Commission report.

It became clear during the testimony of the Honorable John V. Lindsay, mayor of New York, before the Senate Subcommittee on Housing and Urban Affairs, on July 25, 1969, that one of the major roadblocks to the construction of public housing—an important part of our effort—is the statutory per-room cost limitation for public housing. I would like at this point to quote extensively from Mayor Lindsay's testimony:

> The fact is that all the federally assisted housing programs—public housing, homeownership, 236 rental assistance—face an impossible roadblock, and that is a roadblock that is endangering every housing program and is placing in jeopardy any hope whatever of meeting our national housing goals.
>
> To put it bluntly, this roadblock is leading the Nation to the imminent collapse of publicly assisted housing production. And when I speak of "imminent collapse", I am not using scare words and I am not exaggerating.
>
> This roadblock, Mr. Chairman, is the statutory cost limitations which control both low and moderate income housing construction.
>
> Over the last 20 years construction costs have increased by at least 125 percent nationally and 130 percent in high cost areas such as New York City. Projected increases are even more spectacular, as the cost of land, labor, and materials continue to rise at an alarming rate.
>
> Yet the cost limits for public housing and the mortgage limits for the Federal Housing Administration's programs have lagged miserably behind these increases. For example, as construction costs more than doubled in the last 20 years, cost limits for the public housing program were raised by only 26 percent in high cost areas.

The bill before us today would increase the basic per-room construction cost limitation for public housing from $2400 to $2640, and increase the additional per-room allowance for high-cost areas from the present $750 to $825. However, in view of the housing lag in New York City, my own county of Westchester, and other areas where construction costs are high, it is unfortunate that the committee failed to adopt the more flexible approach of the other body. Under the Senate bill, as my colleagues know, the Secretary would have discretionary authority to increase the basic limits by up to 45 percent in high-cost areas. I would think such an approach is necessary if we are to avoid the nightmare predicted by Mayor Lindsay—unless formulas are sufficiently liberalized, 30,000 housing units scheduled for construction in New York City alone in the next 18 months will not be built.

The other major provision of the Senate bill which is missing from the measure before us today is a new program to provide rental assistance to public housing tenants. Under current law, low-income Americans are eligible for Federal rent subsidies only if they live in private housing. As a result, as many as 90 percent of the low-income persons in this country live in private housing, often dilapidated slum housing, because public housing is unavailable to them. According to the New York Times, some 200,000 families live in substandard housing in New York City alone.

The Senate provision—originated by Senator BROOKE—authorizing $75 million annually to help pay the rents of tenants in public housing would pave the way for many of these citizens to move into safe and sanitary quarters. The Government would pay all costs of public housing for those families with no income; in those cases where a family's rent was more than 25 percent of its income, the Government would pay the difference.

Although I feel the measure before us would have been improved with the two changes I have discussed, several of the provisions in the House bill are useful, and should contribute to the increased effectiveness of the neighborhood development program, particularly. Like many of my colleagues, I have been disturbed by reports that only 35 of the 150 cities which have applied for funds under the neighborhood development program have received grant contracts. It is my understanding that some cities, because of delays in processing of NDP applications, lack of funds, and the possible loss of local grant-in-aid credit, have recently sought to return to conventional urban renewal programs. Hopefully, the setting aside of funds for NDP projects, extension of the period of eligibility for local grant-in-aid credit, and the provision of a 2-year budgeting period for NDP will help solve these problems.

In short, Mr. Chairman, I feel the House and the Congress must show a new sense of urgency if we are to meet the housing problems so urgently described by the Kerner Commission and others. I urge enactment of this bill as a necessary step toward reaching our goals in housing construction.

Mr. BUTTON. Mr. Chairman, I support H.R. 13827, the Housing and Urban Development Act of 1969. I wish I could say that I am completely happy with this bill, but I am not. It does not go far enough. As the distinguished gentleman from Pennsylvania (Mr. BARRETT) said during general debate on this bill:

> In the midst of the greatest prosperity ever known by any nation in history, 6 million American families still live in substandard housing.

This is an incredible statistic when you consider the evidence of report after report indicating domestic unrest stemming from a No. 1 problem of proper—or in most cases, improper—housing.

While there is much to be proud of in this bill and the hard work put in it by the gentleman from Pennsylvania (Mr. BARRETT), the gentleman from New Jersey (Mr. WIDNALL), the distinguished chairman of the Committee on Banking and Currency, the gentleman from Texas (Mr. PATMAN), and all the members of that committee, I do not feel we can honestly say we have done all we can to truly improve the quality of life for all Americans in need of a decent home. The prices of new homes and interest rates on financing what they are today, of course, just does not make the dream of home ownership possible for all Americans.

We are in a crisis of confidence and hopefully the Congress will go much further next year in meeting the inadequate housing and poor living conditions which subtract so much from the total of a man's livelihood and his desire to produce.

I am pleased, however, that H.R. 13827 emphasizes the importance of the neighborhood development program—a new set of rules for carrying out urban renewal enacted in the Housing and Urban Development Act of 1968.

More than 280 communities, including my district—Schenectady, N.Y.—have NDP applications filed with HUD or

about to be submitted. If this program is fully implemented, this method of renewal will cure the phenomenon so prevalent in many communities where urban renewal activities, due to their slowness, have at times compounded the problems they were supposed to solve.

Thirty-nine other Members joined me in introducing an amendment to H.R. 13827 which would extend for 1 year the eligibility of noncash grant-in-aid credits under NDP. The Committee adopted the intent of my amendment as section 203 of title II of the bill. I, along with many other Members who have cities where these credits are essential to the success of their NDP program, are grateful to the efforts of the committee and the staff for including this section in the bill.

I am especially pleased with the language in the committee report which states that cities which have undertaken urban renewal under NDP be not more administratively restricted than those cities seeking assistance under regular renewal projects. After HUD urged cities, at their own expense, to prepare applications for funding under NDP, I feel that this recommendation in the report is extremely important and fitting. The fact that H.R. 13827 stipulates that $400 million in fiscal year 1970 urban renewal funds be earmarked for NDP and that at least 35 percent of all urban renewal appropriations in succeeding years be earmarked for NDP, is, in my view, equally important in seeing that NDP will continue to be what the program was intended to be—a change in the renewal process that would serve to accelerate renewal efforts.

As my distinguished colleague the gentleman from Minnesota (Mr. FRASER) pointed out during general debate, a bipartisan group of 85 of us here in the House joined in sending a letter to Secretary George Romney which expressed our concern over reports that HUD intends to place severe restrictions on the implementation of NDP.

I was pleased with the quickness of Secretary Romney's response to our letter when he stated in a telegram, presumably sent to all 85 signers of the letter:

> Wish to advise you: first, this department and this administration firmly supports the NDP concept as a valuable and flexible tool to aid cities in achieving their renewal objectives; second, we have no intention of taking any action that would weaken this tool for urban renewal; third, the October 3 press release on the two year provision does not require completion of renewal activities within that time and assumes certain types of activities involving federal financial assistance can and will continue beyond the two years; fourth, the press release of October 3 contains no reference to conversions to NDP. A final decision on this matter is yet to be made and your views will be carefully considered; fifth, this department has no intention of taking final action on administrative regulations for NDP until the House of Representatives acts on H.R. 13827.

I commend the Secretary for both the promptness and responsiveness of his wire. It is gratifying to be reassured that not only the Department of Housing and Urban Development, but the administration firmly support the NDP concept, and that they "have no intenton of taking any action that would weaken this tool for urban renewal." This wire is confirmation that the NDP program will be as comprehensive as expected by the cities and intended by the Congress.

Eventually, more detail needs to be spelled out on the issues of conversion and time limits referred to in our letter and in the Secretary's reply. We would like to know exactly what those "certain types of activities" are and what the programs of "Federal financial assistance" are which would permit a city to continue NDP projects longer than 2 years. Since the principle of conversion is an essential element of the NDP concept, we are disturbed to learn that at this late date a final decision is yet to be made as to whether additional cities will be afforded equal treatment with the initial 35 in being permitted to transfer or convert to NDP funds already under renewal contract and grant reservation. However, the Secretary's wire clearly demonstrates that he is fully informed of the provisions of H.R. 13827, and of its accompanying report language requiring that cities undertaking NDP "should be permitted and encouraged to do so under conditions which are not more restrictive than those imposed on regular urban renewal projects."

I am confident, therefore, that we can expect, in good faith, that any future regulations relating to time limits and conversion will be in conformity with the commitment of the Department of Housing and Urban Development and the administration to the concept of NDP.

At my request, the Department of Housing and Urban Development provided me with a listing of all NDP applications submitted or about to be submitted to HUD through August 31, 1969. Because NDP is so important to these communities, I include this list by region at this point in the RECORD:

NDP APPLICATIONS SUBMITTED OR ABOUT TO BE SUBMITTED TO HUD

Mr. RANDALL. Mr. Chairman, H.R. 13827, the Housing Act of 1969 contains benefits for housing assistance not only for urban areas but most fortunately and quite properly has not forgotten the needs for rural housing.

As I read this measure for the first time I was quite concerned that the $100 million ceiling applying to rural housing mortgages has been removed. I was at first fearful that this left us in a sort of gray area. It took some study to figure this one out, but I am now convinced the removal of this ceiling was in reality something that would not hurt but could possibly help our rural housing programs.

Put differently, it certainly does not increase the authority of funding and instead actually increases it. Previously, there was a 100-million ceiling that had no longer been used by FHA for direct loans. This bill combines direct loan and the insured loan account for rural housing into what could be said to be one accounting or one bookkeeping system. This is just another way of expressing the proposition that both direct loan funds and insured funds are in one pot. Direct loans are still possible but there exists only one account. Ths is in accordance with what the Farmers Home Administration had asked for.

Those who have said the removal of the 100-million ceiling leaves rural housing with an empty package miss the point because the removal of the ceiling leaves no limitation of any kind except those budgetary limitations imposed by the administration. In the past, the FHA has had as much as 300 million direct loan funds and 300 million insured loan funds. The removal of this limitation permits the agency to work without a ceiling prescribed by law and secure in funds what they can, consistent with budget limitations.

Commendation is due the gentleman from Georgia (Mr. STEPHENS) for his amendment which expanded the authority of General National Mortgage Administration to buy mortgages on rural housing. Actually this distinguished member of the Banking and Currency Committee was responsible for an amendment which would make such mortgages eligible for purchase under title I. While his amendment did not require GNMA to make these purchases it does provide the authority or permit them to make such purchases.

In terms of benefits to rural housing this measure removes the 5,500-population ceiling as being unrealistic and an arbitrary limitation. It should be recalled the limit 5 years ago was 2,500 population for Farmers Home Administration loans. Then, at that time, it was raised to 5,500. The measure we are considering today will remove the 5,500-population limitation and as long as the community is not a satellite of a city, loans could be made to a community of 10,000 or more. This means the FHA can now make loans both direct or insured to communities of over 5,500 population.

Another improvement as far as rural housing goes which I am delighted to endorse and happy to see included in this bill is the provision that the Secretary of

Agriculture is allowed to sell insured notes in blocks rather than individuals as heretofore. Under present law a prospective rural homeowner who wants to build as one of a group of three or four friends in the same general area would have to ask for one loan and the builder complete that unit before the builder could apply for another loan.

In other words, under present law a builder in a rural area must start and finish one dwelling at a time. He must complete one dwelling before he can get another loan. This present measure will make it possible for a builder to apply for eight or 10 loans at a time and proceed with the development of a small subdivision. The question could quite properly be asked, since this has been done for such a long time in our urban and suburban areas why have we not thought about this kind of thing for our rural areas?

H.R. 13827 may do a lot of things for the urban areas but it is also most important for those of us who represent rural areas. Let us never forget the Census Bureau, that out of a total of 5.9 million substandard housing units in the United States, 4.2 million, or nearly two-thirds, are in the rural areas. Here is a huge housing problem, but local banks serving rural communities are limited to the extent of long-term credit, leaving FHA the only vehicle for financing rural housing.

It has long been my point that it costs far less to revitalize rural communities which includes rehabilitation of rural housing than it will cost to rehabilitate the cities. On a dollar-per-dollar basis, money provided the rural areas provides an inestimably better return for the investment of Federal funds than money in urban areas. The reasons are clear. It is far more expensive to reconstruct housing units in high-priced urban land areas than a similar number in the rural areas.

Once we upgrade urban housing there is at least the implied invitation for discouraged rural people to migrate to the cities. But the worst aspect of the problem is that no matter how successful urban renewal projects may be they simply exchange the problem of today for a far greater set of problems tomorrow requiring infinitely more money to deal with more and more perplexing problems at some future date. In deed and in truth, the problems created by urban renewal programs may not even respond to money regardless of the amount.

Urban renewal projects when completed tend to attract additional rural folk to flock to the cities. It would be far less expensive to construct housing units to meet the housing needs for millions of people in a rural atmosphere than in metro-America. Then, too, there are limitless opportunities to America's industries to disperse, rebuild, and expand in the smaller cities of our land.

About 70 percent of our Nation's population lives on 1 percent of the land. Billions of dollars have been spent to combat housing shortages in the big cities. To this date they have provided nothing but first aid and done really nothing to alleviate the problem of the big cities.

Several polls have shown that people prefer homes in less populous areas if they could find adequate housing in these areas and if industry would follow the housing migration to our smaller cities.

That is why I have emphasized the rural housing aspect of this bill. The same kind of energy, money, and guidance heretofore devoted to the hopeless task of rebuilding our urban areas, if diverted to rural revitalization, would be eminently more successful in achieving the goals of not just better housing but better conditions of employment and a better America.

It is my considered opinion we cannot continue pouring millions of dollars into urban areas. Revitalization of rural America may indeed be the one last hope for rescuing America from the decay of urban blight.

Mr. CONYERS. Mr. Chairman, this resolution disturbs me greatly. It is being debated less than 3 weeks after the passage of the military procurement authorization bill for 1970. At that time the spending of $21 billion on weapons was approved. We approved that tremendous sum for systems of questionable need, doubtful utility and for which there was frequently no strategic military requirement. Now I should not have to tell you gentlemen of the urgent need in this country for adequate, low-cost housing. The established national housing policy of the United States is a "decent home and a suitable living environment for every American family." This minimal goal was set 20 years ago. And just what is the present situation? The Kerner Commission found that nearly 6 million families live in substandard housing. It was that commission's recommendation that we commit ourselves to build at least 6 million Government-assisted housing units by 1972. Furthermore, the Department of Housing and Urban Development says that the country needs—and is capable of producing—26 million dwelling units by 1978. Does the bill that is now before us even begin to meet these needs—the fulfillment of our national housing goal? I submit that it is woefully inadequate. For example, section 236(i)(1) of the National Housing Act increased by only $20 million the funds for interest reduction payments to owners of rental housing projects designed for occupancy by low-income families. Section 10(e) of the Housing Act of 1937 providing for loans for low-rent housing and slum clearance projects is amended by an increase of only $25 million. The housing crisis in America requires far more than this. It requires immediate and massive Government support—not a drop in the bucket and a promise for the future.

I am especially distressed that public housing rent increases in the District of Columbia, Detroit, and around the country did not elicit a response from any members of the Banking and Currency Committee in their report on this bill or on the floor from any other Members of this body. I speak specifically of the rent increase announced recently by the National Capital Housing Authority. For the 10,500 tenant families affected here in the District, this increase averages approximately $11 per month. For many of us this may not seem like a great deal, but to the poor it is an oppressive sum. Furthermore, the rent increase will hit the poorest families the hardest. The minimum rents for the cheapest apartments will be raised $10 per month—a 37-percent increase. This increase will require a minimum of 30 percent of the income of the poorest families be paid for rent. Where will this end? By law, rent supplements cannot benefit public housing tenants; these tenants are obliged to meet all operating costs of their housing unit. These costs, including maintenance expenditures, have risen tremendously in recent years. The Vietnam war has precipitated much of this inflation. The mistakes of our leaders are now being disproportionately borne by those least able to pay the price. I fully appreciate the need of public housing authorities for additional operating income. But I maintain that the very poorest of our public housing tenants can no longer be required to meet these increases, as necessary as they may be. This was perceptively recognized by the Senate Committee on Banking and Currency. While dealing in committee with the Senate version of the Housing and Urban Development Act of 1969, they included provisions that would make possible annual rental assistance payments to the housing agencies so that families of very low income would not have to pay over one-fourth of their income for rent. I refer to section 211, title II of S. 2864. That is the least we can do, gentlemen. I therefore urge the conferees for the House, when they meet with those from the Senate, to work for the inclusion of these provisions in the final version of this act.

We can and should do more—much more. Earlier this year, I and 29 of my colleagues in this body introduced the Full Opportunity Act. Title V of that act provides the funds that would implement our national housing policy, and go a long way toward solving the housing crisis. In amending section 10(e) of the Housing Act of 1937, this act increases to $275 million the amount spent on public housing each year for the next 10 years. The 300,000 additional public housing units each year for the 10 years are in that way authorized. In like manner, this act increases rent supplements to $175 million each year for the next 10 years and provides for the financing of 2 million additional housing units over that 10-year period.

I am fully aware that these are large sums of money. But if we cared as much about advancing men's lives as we seem to care about advancing the means by which they are destroyed, we could raise this money with no new taxes. Yet we, in the face of this clear need and mounting crisis, continue to squander our tax revenues by fulfilling every military demand. The passage of the military procurement authorization bill earlier this month certainly highlighted for me this country's grossly distorted national priorities. This year we will spend over $100 billion on defense and defense-related expenditures. And what will we spend on housing? In this same time period all federally assisted housing programs, including model cities, will re-

ceive a little over $3 billion. This Housing and Urban Development Act of 1969 does little to alleviate this distortion. But until we resolve to assist those many afflicted by the present housing crisis in America, we can only continue to assist those few that the programs in this act will reach. And so again, I reluctantly urge passage of another inadequate Housing and Urban Development Act.

Mr. PATMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to explain that we will ask for separate votes as follows:

First, on the committee amendment, as amended by the Teague of Texas-Brock amendments relating to the temporary extension of flexible interest rates. I know a lot of the Members feel very strongly about this and many are conscientious and want to take the interest rate ceiling off for the next 2 years and some do not. So, there will be an opportunity for each Member to express his own conviction about whether he favors a high interest rate or a low interest rate.

Next, Mr. Chairman, there will be a separate vote on the Anderson of Illinois amendment, as amended. I believe it is well understood as to the application of the advances in technology in housing and urban renewal, the amendment which was adopted on page 30 after line 9 of the bill. On those two amendments we expect to ask for separate votes.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. FLOOD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 13827) to amend and extend laws relating to housing and urban development, and for other purposes, pursuant to House Resolution 580, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment?

Mr. PATMAN. Yes, Mr. Speaker, a separate vote is demanded on the committee amendment, as amended by the Teague of Texas and Brock amendments relating to temporary extension of flexible interest rate authority, shown as section 414 on page 44, lines 20 through 24 of the reported bill.

Also, Mr. Speaker, a separate vote is asked for on the Anderson of Illinois amendment, as amended, relating to the application of advances in technology concerning housing and urban development which was adopted on page 30, after line 9 of the bill.

PARLIAMENTARY INQUIRY

Mr. BROCK. Mr. Chairman, a parliamentary inquiry.

The SPEAKER. The gentleman will state the parliamentary inquiry.

Mr. BROCK. Mr. Speaker, I am not entirely sure I heard the chairman of the committee correctly. But I understood him to say he wanted a separate vote on the committee amendment, as amended by the Teague of Texas and Brock amendments. Those are two separate amendments and I question whether or not we can vote on them en bloc.

The SPEAKER. The Chair will state that the vote will be on the committee amendment, as amended.

Is a separate vote demanded on any other amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The Clerk will report the so-called Anderson of Illinois amendment on which a separate vote has been demanded.

The Clerk read as follows:

Amendment: On page 30, after line 9, insert the following:

"Section 1010 (a) of the Demonstration Cities and Metropolitan Development Act of 1966, is amended—

"(1) by striking out 'and' at the end of paragraph (2);

"(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof '; and'; and

"(3) by adding after paragraph (3) a new paragraph as follows:

"'(4) assure, to the extent feasible, in connection with the construction, major rehabilitation, or maintenance of any housing assisted under this section; that there is no restraint by contract building codes, zoning ordinances or practice against the employment of new or improved technologies, techniques, materials and methods or of preassembled products which may reduce the cost or improve the quality of such construction, rehabilitation, and maintenance, and therefore stimulate expanded production of housing under such programs, except where such restraint is necessary to insure safe and healthful working and living conditions.'"

The SPEAKER. The question is on the amendment.

The question was taken, and the Speaker announced that the ayes appeared to have it.

Mr. PATMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. PATMAN. Mr. Speaker, I demand a division.

The question was taken; and on a division (demanded by Mr. PATMAN) there were—ayes 133, noes 98.

So the amendment was agreed to.

The CHAIRMAN. The Clerk will report the next amendment on which a separate vote is demanded.

The Clerk read as follows:

Amendment: page 44, line 20, insert:

"TEMPORARY EXTENSION OF FLEXIBLE INTEREST RATE AUTHORITY

"SEC. 414. Section 3(a) of the Act of May 7, 1968 (Public Law 90-301), is amended by striking out 'October 1, 1969' and inserting in lieu thereof 'October 1, 1971', and by amending the proviso to such section to read as follows: *'Provided,* That not withstanding any other provision of law, the Administrator of Veterans' Affairs is authorized, until October 1, 1971, to establish a maximum interest rate for guaranteed or insured loans to veterans under chapter 37 of title 38, United States Code, not in excess of such rate as he may from time to time find the loan market demands.'."

The CHAIRMAN. The question is on the amendment.

The question was taken; and on a division (demanded by Mr. PATMAN) there were—ayes 163, noes 43.

So the amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. WEICKER

Mr. WEICKER. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. WEICKER. I am, Mr. Speaker, in its present form.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. WEICKER moves to recommit the bill (H.R. 13827) to the Committee on Banking and Currency with instructions to report the same back to the House forthwith with the following amendments: Page 20, after line 11, insert the following new section:

"REQUIREMENT OF SUBSTANTIAL RESIDENTIAL REDEVELOPMENT WHERE PROJECT INVOLVES DEMOLITION OR REMOVAL OF RESIDENTIAL STRUCTURES

"SEC. 213. Section 105 of the Housing Act of 1949 is amended by adding at the end thereof the following new subsection:

"'(h) In the case of any project which includes the demolition or removal of any residential structure or structures and which receives Federal recognition after the date of the enactment of this subsection (whether or not it is a project taken into account for purposes of applying subsection (f))—

"'(1) the redevelopment of the urban renewal area shall include the provision of standard housing units for low and moderate income families and individuals at least equal in number to the total number of dwelling units in the structure or structures demolished or removed; and

"'(2) the portion of the total cost of such redevelopment which is attributable to the provision of standard housing units for low and moderate income families and individuals (as determined by the Secretary) shall be at least 35 per centum or, if greater, a percentage bearing the same ratio to 100 as the total appraised value of such residential structure or structures bore to the total appraised value of all the structures in the urban renewal area immediately prior to their demolition or removal (as determined by the Secretary, without regard to any decrease in such value which may have resulted from the imminence of such demolition or removal).'"

And renumber the succeeding sections accordingly.

Mr. GERALD R. FORD (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the motion to recommit be dispensed with and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and the Speaker being in doubt, the House divided, and there were—ayes 116, noes 92.

Mr. PATMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. The Chair will count the House.

Two hundred thirty-nine Members are present, a quorum.

Mr. PATMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

So the motion to recommit was agreed to.

PARLIAMENTARY INQUIRY

Mr. GERALD R. FORD. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. GERALD R. FORD. On the basis of the division, is not the motion to recommit agreed to?

The SPEAKER. The motion to recommit has been agreed to.

Mr. GERALD R. FORD. I thank the Chair.

Mr. PATMAN. Mr. Speaker, pursuant to the instructions of the House in the motion to recommit, I report back the bill, H.R. 13827, with an amendment.

The Clerk read as follows:

Page 20, after line 11, insert the following new section:

"REQUIREMENT OF SUBSTANTIAL RESIDENTIAL REDEVELOPMENT WHERE PROJECT INVOLVES DEMOLITION OR REMOVAL OF RESIDENTIAL STRUCTURES

"SEC. 213. Section 105 of the Housing Act of 1949 is amended by adding at the end thereof the following new subsection:

"'(h) In the case of any project which includes the demolition or removal of any residential structure or structures and which receives Federal recognition after the date of the enactment of this subsection (whether or not it is a project taken into account for purposes of applying subsection (f))—

"'(1) the redevelopment of the urban renewal area shall include the provision of standard housing units for low and moderate income families and individuals at least equal in number to the total number of dwelling units in the structure or structures demolished or removed; and

"'(2) the portion of the total cost of such redevelopment which is attributable to the provision of standard housing units for low and moderate income families and individuals (as determined by the Secretary) shall be at least 35 per centum or, if greater, a percentage bearing the same ratio to 100 as the total appraised value of such residential structure or structures bore to the total appraised value of all the structures in the urban renewal area immediately prior to their demolition or removal (as determined by the Secretary, without regard to any decrease in such value which may have resulted from the imminence of such demolition or removal).'"

And renumber the succeeding sections accordingly.

Mr. GERALD R. FORD (during the reading). Mr. Speaker, I ask unanimous consent that the amendment be considered as read, and printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The SPEAKER. The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

Mr. PATMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 339, nays 9, answered "present" 3, not voting 80, as follows:

[Roll No. 243]

Mr. Culver with Mr. Quie.
Mr. Flynt with Mr. Schneebeli.
Mr. Foley with Mr. O'Konski.
Mr. Moss with Mr. Springer.
Mr. Ichord with Mr. Shriver.
Mr. Udall with Mr. Snyder.
Mr. Mann with Mr. Teague of California.
Mr. Wydler with Mr. Wold.
Mr. Winn with Mr. Wiggins.
Mr. Watson with Mr. Whitehurst.

Mr. HAMMERSCHMIDT changed his vote from "nay" to "yea."

Mr. UTT. Mr. Speaker, I have a live pair with the gentleman from New York (Mr. KING). If he had been present he would have voted "yea." I voted "nay." I withdraw my vote and vote "present."

The result of the vote was announced as above recorded.

The SPEAKER. Pursuant to the provisions of House Resolution 580, the Committee on Banking and Currency is discharged from the further consideration of the bill S. 2864.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. PATMAN

Mr. PATMAN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. PATMAN moves to strike out all after the enacting clause of S. 2864 and insert in lieu thereof the text of H.R. 13827, as passed, as follows:

That this Act may be cited as the "Housing and Urban Development Act of 1969".

SEC. 2. Section 305(g) of the National Housing Act is amended—

(1) by striking out "$1,000,000,000" and inserting in lieu thereof "$2,500,000,000";

(2) by inserting "at par" immediately after "and to purchase"; and

(3) by striking out "$15,000", "$17,500", and "$22,500" and inserting in lieu thereof "$17,500", "$20,000", and "$25,000", respectively.

TITLE I—MORTGAGE CREDIT

EXTENSION OF PROGRAMS

SEC. 101. (a) Section 2(a) of the National Housing Act is amended by striking out "1969" in the first sentence and inserting in lieu thereof "1970".

(b) Section 217 of such Act is amended—

(1) by striking out "or title X" and inserting in lieu thereof "title X, or title XI"; and

(2) by striking out "1969" and inserting in lieu thereof "1970".

(c) Section 221(f) of such Act is amended by striking out "1969" in the fifth sentence and inserting in lieu thereof "1970".

(d) Section 809(f) of such Act is amended by striking out "1969" in the second sentence and inserting in lieu thereof "1970".

(e) Section 810(k) of such Act is amended by striking out "1969" in the second sentence and inserting in lieu thereof "1970".

(f) Section 1002(a) of such Act is amended by striking out "1969" in the second sentence and inserting in lieu thereof "1970".

(g) Section 1101(a) of such Act is amended by striking out "1969" in the second sentence and inserting in lieu thereof "1970".

LOWER DOWNPAYMENTS FOR FHA-FINANCED SALES HOUSING

SEC. 102. (a) Section 203(b)(2) of the National Housing Act is amended by striking out "$20,000" each place it appears and inserting in lieu thereof "$25,000".

(b) Section 220(d)(3)(A)(i) of such Act is amended by striking out "$20,000" each place it appears and inserting in lieu thereof "$25,000".

(c) Section 222(b)(3) of such Act is amended by striking out "$20,000" each place it appears and inserting in lieu thereof "$25,000".

(d) Section 234(c) of such Act is amended by striking out "$20,000" each place it appears and inserting in lieu thereof "$25,000".

MOBILE HOMES

SEC. 103. (a)(1) Section 207(a) of the National Housing Act is amended—

(A) by striking out "trailer coach mobile dwellings" in paragraph (1) and inserting in lieu thereof "mobile homes";

(B) by striking out "trailer court or park" in paragraph (6) and inserting in lieu thereof "mobile home court or park"; and

(C) by striking out "trailer coach mobile dwellings" in paragraph (6) and inserting in lieu thereof "mobile homes."

(2) Section 207(c)(3) of such Act is amended by striking out "trailer courts or parks" and inserting in lieu thereof "mobile home courts or parks".

(b) Section 207(c)(3) of such Act is amended by striking out "$1,800 per space" and inserting in lieu thereof "$2,500 per space".

(c) The last paragraph of section 207(c) of such Act (immediately following paragraph numbered (3) is amended by inserting after "such term as the Secretary shall prescribe" in the first sentence the following: "(not exceeding 20 years in the case of a mortgage for a mobile home court or park)".

MAXIMUM MORTGAGE AMOUNT UNDER SECTION 220 MULTIFAMILY HOUSING PROGRAM

SEC. 104. Section 220(d)(3)(B)(i) of the National Housing Act is amended to read as follows:

"(i) not exceed $50,000,000;".

MORTGAGE INSURANCE ON CONDOMINIUM UNITS FOR SERVICEMEN

SEC. 105. Section 222(b)(1) of the National Housing Act is amended by inserting "or 234(c)," immediately after "221(d)(2),".

ASSISTANCE PAYMENTS UNDER SECTION 235 FOR PURCHASER ASSUMING MORTGAGE

SEC. 106. (a) Section 235(c) of the National Housing Act is amended by striking out "subsection (j)(4)" and inserting in lieu thereof "subsection (i) or (j)(4)".

(b) Section 235(b)(2) of such Act is amended by striking out the first proviso and inserting in lieu thereof the following: ": *Provided*, That if any cooperative member who has received assistance payments transfers his membership and occupancy rights to another person who satisfies the eligibility requirements prescribed by the Secretary and undertakes the obligation to pay occupancy charges, the new cooperative member may qualify for assistance payments upon the filing of an application with respect to the dwelling unit involved to be occupied by him".

AUTHORIZATION FOR ASSISTANCE PAYMENTS UNDER SECTIONS 235 AND 236

SEC. 107. (a) The second sentence of section 235(h) of the National Housing Act is amended by striking out "by $100,000,000 on July 1, 1969" and inserting in lieu thereof "by $125,000,000 on July 1, 1969".

(b) The second sentence of section 236(i)(1) of such Act is amended by striking out "by $100,000,000 on July 1, 1969" and inserting in lieu thereof "by $125,000,000 on July 1, 1969".

INTEREST REDUCTION PAYMENTS UNDER SECTION 236 ON CERTAIN PROJECTS FINANCED UNDER STATE OR LOCAL HOUSING PROGRAMS

SEC. 108. The proviso in section 236(b) of the National Housing Act is amended by striking out "with respect to a rental or cooperative housing project" and inserting in lieu thereof "with respect to a mortgage or part thereof on a rental or cooperative housing project".

MAXIMUM RENTALS FOR UNITS IN SECTION 236 PROJECTS AND UNITS QUALIFYING FOR RENT SUPPLEMENT PAYMENTS

SEC. 109. (a) The second sentence of section 236(f) of the National Housing Act is amended by striking out "25 per centum of the tenant's income" and inserting in lieu thereof "20 per centum of the tenant's income".

(b) Section 101(d) of the Housing and Urban Development Act of 1965 is amended by striking out "one-fourth of the tenant's income" and inserting in lieu thereof "20 per centum of the tenant's income".

ASSISTANCE PAYMENTS WITH RESPECT TO EXISTING DWELLINGS UNDER SECTION 235

SEC. 110. Section 235(h)(3) of the National Housing Act is amended—

(1) by inserting "and" at the end of subparagraph (A); and

(2) by striking out subparagraphs (B) and (C) and inserting in lieu thereof the following:

"(B) 30 per centum of the total additional amount of contracts for assistance payments authorized by appropriation Acts to be made prior to July 1, 1971,".

SECTION 236 PROJECTS FOR ELDERLY OR HANDICAPPED FAMILIES

SEC. 111. (a) Section 236(a) of the National Housing Act is amended by inserting after "occupancy by lower income families" the following: "(including a project designed primarily by occupancy by lower income elderly or handicapped families)".

(b) The second sentence of section 236(e) of such Act is amended by striking out "at intervals of two years" and inserting in lieu thereof "at intervals of five years in the case of elderly or handicapped families and two years in any other case".

(c) The second sentence of section 236(f) of such Act is amended by striking out "or such greater amount" and inserting in lieu thereof "or (except in the case of a dwelling unit in a project designed primarily for occupancy by lower income elderly or handicapped families) such greater amount".

(d) The First sentence of section 236(i)(2) of such Act is amended—

(1) by striking out "shall in no case exceed 90 per centum" and inserting in lieu thereof "shall in no case exceed (A) $5,500 a year for an individual or $6,600 a year for a couple in the case of an elderly or handicapped family, or (B) 90 per centum"; and

(2) by inserting before the period at the end thereof the following: "in any other case".

(c) The second sentence of section 236(i)(2) is amended by inserting "in any project" after "accord a preference".

(f) Section 236(j)(2) of such Act is amended—

(1) by inserting "and" after the semicolon at the end of subparagraph (A),

(2) by striking out subparagraph (B), and

(3) by redesignating subparagraph (C) as subparagraph (B).

(g) Section 236 of such Act is further amended by adding at the end thereof the following new subsection:

"(n)(1) In making and contracting to make interest reduction payments and insuring mortgages under this section in the case of projects designed primarily for occupancy by elderly or handicapped families, and in

administering the provisions of this section insofar as they involve or relate to such projects, the Secretary shall to the maximum extent possible apply the same definitions, terms, and conditions and utilize the same personnel, facilities, and procedures as in the case of loans under section 202 of the Housing Act of 1959."

(b) As used in this section, the term "elderly or handicapped families" shall have the same meaning as in section 202 of the Housing Act of 1959.

10 PER CENTUM INCREASE IN MAXIMUM MORTGAGE AMOUNTS UNDER FHA INSURANCE PROGRAMS

SEC. 112. (a) (1) Section 203(b)(2) of the National Housing Act is amended by striking out "$30,000", "$32,500", and "$37,500" wherever they appear and inserting in lieu thereof "$33,000", "$35,750", and "$41,250", respectively.

(2) Section 203(h) of such Act is amended by striking out "$12,000" and inserting in lieu thereof "$13,200".

(3) Section 203(i) of such Act is amended by striking out "$13,500" and inserting in lieu thereof "$14,850".

(4) Section 203(m) of such Act is amended by striking out "$15,000" and inserting in lieu thereof "$16,500".

(b) (1) Section 207(c)(3) of such Act is amended by striking out "$9,000", "$12,500", "$15,000", "$18,500", and "$21,000" wherever they appear and inserting in lieu thereof "$9,900", "$13,750", "$16,500", "$20,350", and "$23,100", respectively.

(2) Section 207(c)(3) of such Act is further amended by striking out "$10,500", "$18,000", "$22,500", and "$25,500" and inserting in lieu thereof "$11,550", "$19,800", "$24,750", and "$28,050", respectively.

(c) (1) Section 213(b)(2) of such Act is amended by striking out "$9,000", "$12,500", "$15,000", "$18,500", and "$21,000" wherever they appear and inserting in lieu thereof "$9,900", "$13,750", "$16,500", "$20,350', and "$23,100", respectively.

(2) Section 213(b)(2) of such Act is further amended by striking out "$10,500", "$18,000", "$22,500", and "$25,500" and inserting in lieu thereof "$11,550", "$19,800", "$24,750", and "$28,050", respectively.

(d) (1) Section 220(d)(3)(A)(i) of such Act is amended by striking out "$30,000", "$32,500", "$37,500", and "$7,000" wherever they appear and inserting in lieu thereof "$33,000", "$35,750", "$41,250", and "$7,700", respectively.

(2) Section 220(d)(3)(B)(iii) of such Act is amended by striking out "$9,000", "$12,500", "$15,000", "$18,500" and "$21,000" wherever they appear and inserting in lieu thereof "$9,900", "$13,750", "$16,500", "$20,350", and "$23,100", respectively.

(3) Section 220(d)(3)(B)(iii) of such Act is further amended by striking out "$10,500", "$18,000", "$22,500", and "$25,500" wherever they appear and inserting in lieu thereof "$11,550", "$19,800", "$24,750", and "$28,050", respectively.

(4) Section 220(h)(2) of such Act is amended by striking out "$10,000" and inserting in lieu thereof "$11,000".

(e) (1) Section 221(d)(2) of such Act is amended by striking out "$15,000", "$17,500", "$20,000", "$27,000", and "$33,000 wherever they appear and inserting in lieu thereof "$16,500", "$19,250", "$22,000", "$29,700", and "$36,300", respectively.

(2) Section 221(d)(2) of such Act is further amended by striking out "$25,000", "$32,000", and "$38,000" and inserting in lieu thereof "$27,500", "$35,200", and "$41,800", respectively.

(3) Section 221(d)(3)(ii) of such Act is amended by striking out "$8,000", and "$11,250", "$13,500", "$17,000", and "$19,250" wherever they appear and inserting in lieu thereof "$8,800", "$12,375", "$14,850", "$18,700", and "$21,175", respectively.

(4) Section 221(d)(3)(ii) of such Act is further amended by striking out "$9,500", "$16,000", "$20,000", and "$22,750" and inserting in lieu thereof "$10,450", "$17,600", "$22,000", and "$25,025", respectively.

(5) Section 221(d)(4)(ii) of such Act is amended by striking out "$8,000", "$11,250", "$13,500", "$17,000", and "$19,250" wherever they appear and inserting in lieu thereof "$8,800", "$12,375", "$14,850", "$18,700", and "$21,175", respectively.

(6) Section 221(d)(4)(ii) of such Act is further amended by striking out "$9,500", "$16,000", "$20,000", and "$22,750" and inserting in lieu thereof "$10,450", "$17,600", "$22,000", and "$25,025", respectively.

(7) Section 221(h)(6)(A) of such Act is amended by striking out "$15,000" and inserting in lieu thereof "$16,500".

(f) Section 222(b)(2) of such Act is amended by striking out "$30,000" and inserting in lieu thereof "$33,000".

(g) (1) Section 231(c)(2) of such Act is amended by striking out "$8,000", "$11,250", "$13,500", "$17,000", and "$19,250" wherever they appear and inserting in lieu thereof "$8,800", "$12,375", "$14,850", "$18,700", "$21,175", respectively.

(2) Section 231(c)(2) of such Act is further amended by striking out "$9,500", "$16,000", "$20,000", and "$22,750" and inserting in lieu thereof "$10,450", "$17,600", "$22,000", and "$25,025", respectively.

(h) (1) Section 234(c) of such Act is amended by striking out "$30,000" and inserting in lieu thereof "$33,000".

(2) Section 234(e)(3) of such Act is amended by striking out "$9,000", "$12,500", "$15,000", "$18,500", and "$21,000" wherever they appear and inserting in lieu thereof "$9,900", "$13,750", "$16,500", "$20,350", and "$23,100", respectively.

(3) Section 234(e)(3) of such Act is further amended by striking out "$10,500", "$18,000", "$22,500", and "$25,500" and inserting in lieu thereof "$11,550", "$19,800", "$24,750", and "$28,050", respectively.

(i) Section 235 of such Act is amended by striking out "$15,000", "$17,500", and "$20,000" wherever they appear and inserting in lieu thereof "$16,500", "$19,250", and "$22,000", respectively.

(j) Section 237(a)(2) of such Act is amended by striking out "$15,000" and "$17,500" and inserting in lieu thereof "$16,500" and "$19,250", respectively.

INCREASE IN GNMA PURCHASE AUTHORITY

SEC. 113. Section 302(b) of the National Housing Act is amended—

(1) by striking out "exceeds or exceeded $17,500" in clause (3) of the proviso in the first sentence and inserting in lieu thereof "exceeds or exceeded $22,000";

(2) by striking out "that exceeds $17,500" in the second sentence and inserting in lieu thereof "that exceeds the otherwise applicable maximum amount"; and

(3) by striking out "did not exceed $17,500" in the second sentence and inserting in lieu thereof "did not exceed the otherwise applicable maximum amount".

GNMA SPECIAL ASSISTANCE PURCHASES

SEC. 114. Section 305 of the National Housing Act is amended by adding at the end thereof the following new subsection:

"(j) Notwithstanding any other provision of this Act, the Association is authorized to purchase pursuant to commitments or otherwise mortgages otherwise eligible for purchase under this section at a price equal to the unpaid principal amount thereof at the time of purchase, with adjustments for interest and any comparable items, and to sell such mortgages at any time at a price within the range of market prices for the particular class of mortgages involved at the time of sale as determined by the Association. Mortgages issued under title V of the Housing Act of 1949, except mortgages for above moderate income families issued under section 517(a) of such Act, are eligible for purchase under this section."

TITLE II—URBAN RENEWAL AND HOUSING ASSISTANCE PROGRAMS

URBAN RENEWAL GRANT AUTHORITY

SEC. 201. (a) The first sentence of section 103(b) of the Housing Act of 1949 is amended by inserting before the period at the end thereof the following: ", of which increase at least $400,000,000 shall be for grants under part B, and which amount shall be further increased by $2,000,000,000 on July 1, 1970, of which increase at least 35 per centum shall be for grants under part B".

(b) The first paragraph of section 103(b) of such Act is further amended by adding at the end thereof (immediately after the sentence amended by subsection (a) of this section) the following new sentence: "In making any grants under this title, the Secretary shall give priority to applications for projects which are identified and scheduled to be carried out as projects or activities included within approved comprehensive city demonstration programs assisted under the provisions of section 105(c) of the Demonstration Cities and Metropolitan Development Act of 1966."

NEIGHBORHOOD DEVELOPMENT PROGRAMS

SEC. 202. (a) Section 131 of the Housing Act of 1949 is amended by striking out "annual" in subsections (b) and (c)(1) and inserting in lieu thereof "twenty-four month".

(b) Section 132 of such Act is amended—

(1) by striking out "twelve-month period" in subsections (a)(1) and (b) and inserting in lieu thereof "twenty-four month period"; and

(2) by striking out "twelve months" in subsection (a)(1) and inserting in lieu thereof "twenty-four months".

(c) Section 133(b) of such Act is amended by striking out "twelve-month period" and inserting in lieu thereof "twenty-four month period".

(d) Section 134(a) of such Act is amended by striking out "annual" in paragraphs (3) and (5) and inserting in lieu thereof "twenty-four month".

(e) Section 134(b) of such Act is amended to read as follows:

"(b) The approval by the Secretary of financial assistance for one or more twenty-four-month increments of a neighborhood developed program shall not be considered as obligating him to provide financial assistance for subsequent increments; except that amounts approved by the Secretary for the succeeding twenty-four-month increment shall be reserved for obligation out of grant funds which may be provided under section 103(b) for the fiscal year applicable to such subsequent increment."

(f) The amendments made by this section shall apply with respect to contracts under part B of title I of the Housing Act of 1949 executed on and after July 1, 1970; and any contract under such part B executed prior to July 1, 1970, shall, at the request of the municipality involved, be amended (effective on or after such date) to reflect such amendments.

EXTENSION OF PERIOD OF ELIGIBILITY OF LOCAL GRANTS-IN-AID FOR CERTAIN URBAN RENEWAL AND NEIGHBORHOOD DEVELOPMENT PROJECTS

SEC. 203. (a) The second paragraph of section 110(d) of the Housing Act of 1949 is amended—

(1) by inserting "(except the second sentence of this paragraph)" after "any other provision of this subsection"; and

(2) by adding at the end thereof the following new sentence: "In connection with any project for which an application is filed not later than the date of the enactment of the Housing and Urban Development Act of 1969 and which has not received Federal recognition (other than a project to which clause (2) of the second sentence of section 133(a) applies), the three-year period referred to above shall be extended to a period of four years prior to the authorization by

the Secretary of a contract for loan or capital grant for the project."

(b) Section 112(b) of such Act is amended—

(1) by striking out "No expenditure" and inserting in lieu thereof "Subject to the second sentence of this subsection, no expenditure"; and

(2) by adding at the end thereof the following new sentence: "In connection with any project for which an application is filed not later than the date of the enactment of the Housing and Urban Development Act of 1969 and which has not received Federal recognition (other than a project to which clause (2) of the second sentence of section 133(a) applies), the seven-year period referred to in clause (1) of the preceding sentence shall be extended to a period of eight years prior to the authorization by the Secretary of a contract for a loan or capital grant for the project."

(c) Section 133(a) of such Act is amended—

(1) by striking out "For" and inserting in lieu thereof "Except as otherwise provided in this subsection, for";

(2) by striking out "the second paragraph" and inserting in lieu thereof "the first sentence of the second paragraph"; and

(3) by adding at the end thereof the following new sentence: "In connection with any neighborhood development program for which an application is filed not later than the date of the enactment of the Housing and Urban Development Act of 1969 and for which no contract for financial assistance under the program has been authorized by the Secretary the three-year and seven-year periods referred to above shall be extended to periods of four and eight years, respectively, prior to authorization of (1) the first contract for financial assistance under the program which includes the urban renewal area benefited by the public improvement or facility, or the expenditures, for which credit is claimed, or (2) a contract for a loan or capital grant for an urban renewal project authorized after the date of the enactment of the Housing and Urban Development Act of 1969, in an area which is benefited by the public improvement or facility, or the expenditures, for which credit is claimed and which was included in the neighborhood development program application."

INCLUSION OF ENCLOSED PEDESTRIAN MALLS AS ELIGIBLE URBAN RENEWAL ACTIVITIES

SEC. 204. (a) Section 110(c)(3) of the Housing Act of 1949 is amended by inserting after "playgrounds," the following: "pedestrian malls and walkways (including in the case of an enclosed mall or walkway any necessary roofs, walls, columns, lighting, and climate control facilities),".

(b) The first sentence of the second unnumbered paragraph following paragraph (10) of section 110(c) of such Act is amended by inserting after "provided" the following: "in paragraph (3) with respect to enclosed pedestrian malls and walkways and as provided".

REHABILITATION GRANTS

SEC. 205. Section 115(c) of the Housing Act of 1949 is amended by striking out "or (2) $3,000" and inserting in lieu thereof "or (2) $3,500".

LOCAL GRANT-IN-AID CREDIT FOR CERTAIN FACILITIES BUILT ON BEHALF OF PUBLIC UNIVERSITIES

SEC. 206. Clause (A)(ii) of the second proviso in section 110(d) of the Housing Act of 1949 is amended by striking out "by a public university" and inserting in lieu thereof "by or on behalf of a public university".

INCOME LIMITATION UNDER REHABILITATION LOAN PROGRAM

SEC. 207. Section 312(a) of the Housing Act of 1964 is amended by striking out the last sentence and inserting in lieu thereof the following:

"In making loans with respect to residential property under this section, priority shall be given to applications made by persons whose annual income, as determined pursuant to criteria and procedures established by the Secretary, is within the limitations prescribed by the Secretary for occupants of projects financed with below-market interest rate mortgages insured (in the area involved) under section 221(d)(3) of the National Housing Act."

SEC. 208. The proviso in the first paragraph of section 102(c) of the Housing Act of 1949 is amended by—

(1) striking ", if";

(2) striking ", the interest rate on such a loan from a source other than the Federal Government is greater than the rate at which funds could be made available under the Federal loan contract,";

(3) striking "from such sources" and inserting in lieu thereof "from a source other than the Federal Government"; and

(4) inserting "or a supplemental grant in an amount which he determines is necessary to enable a local public agency to obtain funds from a source other than the Federal Government" immediately following "contract rate".

LOANS FOR PUBLIC HOUSING PROJECTS

SEC. 209. Section 9 of the United States Housing Act of 1937 is amended by striking out the third sentence.

PUBLIC HOUSING ANNUAL CONTRIBUTIONS

SEC. 210. (a) The proviso in section 10(b) of the United States Housing Act of 1937 is amended by inserting after "any contract" the following: ", although not limited to debt service requirements,".

(b) The first sentence of section 10(e) of such Act is amended by striking out "on July 1 in each of the years 1969 and 1970" and inserting in lieu thereof "on July 1, 1969, and $170,000,000 on July 1, 1970".

ROOM COST LIMITATIONS FOR PUBLIC HOUSING PROJECTS

SEC. 211. The first sentence of section 15(5) of the United States Housing Act of 1937 is amended by striking out "$2,400", "$3,500", "$4,000", and "$750" wherever they appear and insert in lieu thereof "$2,640", "$3,850", "$4,400", and "$825", respectively.

MANAGEMENT AND SERVICES IN PUBLIC HOUSING PROJECTS

SEC. 212. The last sentence of section 15(10) of the United States Housing Act of 1937 is amended by striking out "July 1, 1970" and inserting in lieu thereof "July 1, 1971".

ELIMINATION OF WORKABLE PROGRAM REQUIREMENT WITH RESPECT TO LOW-RENT HOUSING IN PRIVATE ACCOMMODATIONS AND OTHER LOW-RENT PUBLIC HOUSING, AND WITH RESPECT TO MORTGAGE INSURANCE UNDER SECTION 221(d)(3) PROGRAM

SEC. 213. (a) Section 101(c) of the Housing Act of 1949 is amended—

(1) by striking out "or for annual contributions or capital grants pursuant to the United States Housing Act of 1937, as amended, for any project or projects not constructed or covered by a contract for annual contributions prior to August 1, 1956,";

(2) by striking out "or section 221(d)(3)";

(3) by striking out "(i)", and "or (ii) section 221(d)(3) of the National Housing Act if payments with respect to the mortgaged property are made or are to be made under section 101 of the Housing and Urban Development Act of 1965,", in the first proviso; and

(4) by striking out "or a contract for annual contributions or capital grants was entered into pursuant to the United States Housing Act of 1937,".

(b) The second proviso in section 10(e) of the United States Housing Act of 1937 is amended to striking out "no such new contract" and all that follows down through "Housing Act of 1949, and".

(c) Section 23(f) of the United States Housing Act of 1937 is amended by striking out all that follows "this Act" where it first appears and inserting in lieu thereof "shall not apply to low-rent housing assisted or to be assisted under this section."

REVIEW OF RELOCATION PLANS UNDER URBAN RENEWAL PROGRAM

SEC. 214. Section 105(c) of the Housing Act of 1949 is amended by adding at the end thereof the following new paragraph:

"(3) Within one year after the date of enactment of this paragraph, and every two years thereafter, the Secretary shall review each locality's relocation plan under this subsection and its effectiveness in carrying out such plan."

REQUIREMENT OF SUBSTANTIAL RESIDENTIAL REDEVELOPMENT WHERE PROJECT INVOLVES DEMOLITION OR REMOVAL OF RESIDENTIAL STRUCTURES

SEC. 215. Section 105 of the Housing Act of 1949 is amended by adding at the end thereof the following new subsection:

"(h) In the case of any project which includes the demolition or removal of any residential structure or structures and which receives Federal recognition after the date of the enactment of this subsection (whether or not it is a project taken into account for purposes of applying subsection (f))—

"(1) the redevelopment of the urban renewal area shall include the provision of standard housing units for low and moderate income families and individuals at least equal in number to the total number of dwelling units in the structure or structures demolished or removed; and

"(2) the portion of the total cost of such redevelopment which is attributable to the provision of standard housing units for low and moderate income families and individuals (as determined by the Secretary) shall be at least 35 per centum or, if greater, a percentage bearing the same ratio to 100 as the total appraised value of such residential structure or structures bore to the total appraised value of all the structures in the urban renewal area immediately prior to their demolition or removal (as determined by the Secretary, without regard to any decrease in such value which may have resulted from the imminence of such demolition or removal)."

AUTHORIZATION FOR HOUSING FOR THE ELDERLY OR HANDICAPPED

SEC. 216. Section 202(a)(4) of the Housing Act of 1959 is amended to read as follows:

"(4) There is authorized to be appropriated for the purposes of this section not to exceed $500,000,000, which amount shall be increased by $150,000,000 on July 1, 1969. Amounts so appropriated shall constitute a revolving fund to be used by the Secretary in carrying out this section."

AUTHORIZATION FOR COLLEGE HOUSING DEBT SERVICE GRANTS

SEC. 217. Section 401(f)(2) of the Housing Act of 1950 is amended by striking out all that follows "exceed" and inserting in lieu thereof "$20,000,000, which amount shall be increased by $4,200,000 on July 1, 1970."

TITLE III—MODEL CITIES AND METROPOLITAN DEVELOPMENT PROGRAM

AUTHORIZATION FOR MODEL CITIES PROGRAM

SEC. 301. (a) Section 111(b) of the Demonstration Cities and Metropolitan Development Act of 1966 is amended—

(1) by striking out "and" the third time is appears;

(2) by inserting before the period at the end thereof the following: ", and not to exceed $750,000,000 for the fiscal year ending June 30, 1971"; and

(3) by adding at the end thereof the following new sentence: "Under regulations prescribed by the Secretary, 10 per centum of the amounts appropriated pursuant to this subsection for the fiscal year ending June 30, 1970, and for any fiscal year thereafter shall be used for assistance to city demonstration agencies in smaller cities, and may be so used (to the extent specifically provided in such regulations) without regard to the limitation set forth in the first sentence of section 105(c)."

(b) Section 111(c) of such Act is amended by striking out "1970" and inserting in lieu thereof "1971".

AUTHORIZATION FOR COMPREHENSIVE PLANNING GRANTS

SEC. 302. The fifth sentence of section 701(b) of the Housing Act of 1954 is amended by striking out "and not to exceed $390,000,000 prior to July 1, 1970" and inserting in lieu thereof "and not to exceed $390,000,000 prior to July 1, 1971".

URBAN INFORMATION AND TECHNICAL ASSISTANCE SERVICES

SEC. 303. (a) Section 701(a) of the Housing Act of 1954 is amended—

(1) by striking out "and" at the end of paragraph (10);

(2) by striking out the period at the end of paragraph (11) and inserting in lieu thereof "; and"; and

(3) by adding after paragraph (11) the following new paragraph:

"(12) States, including statewide agencies or instrumentalities of a State or its political subdivisions which are designated by the Governor of the State and acceptable to the Secretary, for programs focused upon the needs of communities having populations less than one hundred thousand which provide information and data on urban needs and urban assistance programs and activities and technical assistance to such communities with respect to the solution of local problems."

(b) Title IX of the Demonstration Cities and Metropolitan Development Act of 1966 is repealed.

AUTHORIZATION FOR OPEN SPACE, URBAN BEAUTIFICATION, AND HISTORIC PRESERVATION GRANTS

SEC. 304. The first sentence of section 702 (b) of the Housing Act of 1961 is amended by striking out "and not to exceed $460,000,000 prior to July 1, 1970" and inserting in lieu thereof "and not to exceed $460,000,000 prior to July 1, 1971".

AUTHORIZATION FOR NEW COMMUNITY SUPPLEMENTAL ASSISTANCE GRANTS

SEC. 305. Section 412(d) of the Housing and Urban Development Act of 1968 is amended by striking out "July 1, 1970" and inserting in lieu thereof "July 1, 1971".

COMMUNITY FACILITIES GRANTS

SEC. 306. (a) Section 702(c) of the Housing and Urban Development Act of 1965 is amended by striking out "1969" in clause (2) and inserting in lieu thereof "1970".

(b) Section 708(b) of such Act is amended by striking out "1970" and inserting in lieu thereof "1971".

(c) The second sentence of section 708(a) of such Act is amended by inserting before the period at the end thereof the following: ", and not to exceed $100,000,000 for the fiscal year commencing July 1, 1970".

URBAN MASS TRANSPORTATION

SEC. 307. (a) The first sentence of section 4(b) of the Urban Mass Transportation Act of 1964 is amended—

(1) by striking out "and" the second time it appears; and

(2) by striking out the period and inserting in lieu thereof "; and $300,000,000 for fiscal year 1971."

(b) Section 5 of such Act is amended by striking out "1970" and inserting in lieu thereof "1971".

TRAINING AND FELLOWSHIP PROGRAMS

SEC. 308. Title VIII of the Housing Act of 1964 is amended to read as follows:

"TITLE VIII—TRAINING AND FELLOWSHIP PROGRAMS

"FINDINGS AND PURPOSE

"SEC. 801. (a) The Congress finds that the rapid expansion of the Nation's urban areas and urban population has caused severe problems in urban and suburban development and created a national need to (1) provide special training in skills needed for economic and efficient community development, and (2) support research in new or improved methods of dealing with community development problems.

"(b) It is the purpose of this title to provide fellowships for the graduate training of professional city planning and urban and housing technicians and specialists, and to assist and encourage the States, in cooperation with public or private universities and colleges and urban centers and with business firms and associations, labor unions, and other interested associations and organizations, to (1) organize, initiate, develop, and expand programs which will provide special training in skills needed for economic and efficient community development to those technical, professional, and other persons with the capacity to master and employ such skills who are, or are training to be, employed by a governmental or public body which has responsibility for community development, or by a private nonprofit organization which is conducting or has responsibility for housing and community development programs, and (2) support State and local research that is needed in connection with housing programs and needs, public improvement programing, code problems, efficient land use, urban transportation, and similar community development problems.

"FELLOWSHIPS FOR CITY PLANNING AND URBAN STUDIES

"SEC. 802. (a) The Secretary is authorized to provide fellowships for the graduate training of professional city planning and urban and housing technicians and specialists as herein provided. Persons shall be selected for such fellowships solely on the basis of ability and upon the recommendation of the Urban Studies Fellowship Advisory Board established pursuant to subsection (b). Fellowships shall be solely for training in public and private nonprofit institutions of higher education having programs of graduate study in the field of city planning or in related fields (including architecture, civil engineering, economics, municipal finance, public administration, and sociology), which programs are oriented to training for careers in city and regional planning, housing, urban renewal, and community development.

"(b) There is hereby established the Urban Studies Fellowship Advisory Board (hereinafter referred to as the 'Board'), which shall consist of nine members to be appointed by the Secretary as follows: Three from public institutions of higher learning and three from private nonprofit institutions of higher education, who are the heads of departments which provide academic courses appropriately related to the fields referred to in subsection (a), and three from national organizations which are directly concerned with problems relating to urban, regional, and community development. The Board shall meet upon the request of the Secretary and shall make recommendations to him with respect to persons to be selected for fellowships under this section. Members of the Board shall be entitled to receive transportation expenses and a per diem in lieu of subsistence as authorized for members of advisory committees created pursuant to section 601 of the Housing Act of 1949.

"MATCHING GRANTS TO STATES

"SEC. 803. (a) Subject to the provisions of this title and in accordance with regulations prescribed by him, the Secretary may make matching grants to States to assist in—

"(1) organizing, initiating, developing, or expanding programs to provide special training in skills needed for economic and efficient community development to those technical professional, and other persons with the capacity to master and employ such skills who are, or are training to be, employed by a governmental or public body which has responsibilities for community development, or by a private nonprofit organization which is conducting or has responsibility for housing and community development programs; and

"(2) supporting State and local research that is needed in connection with housing programs and needs, public improvement programing, code problems, efficient land use, urban transportation, and similar community development problems, and collecting, collating, and publishing statistics and information relating to such research.

"(b) No grants may be made to a State under this section unless the Secretary has approved a plan for the State which—

"(1) sets forth the proposed use of the funds and the objectives to be accomplished;

"(2) explains the method by which the required amounts from non-Federal sources will be obtained;

"(3) provides such fiscal control and fund accounting procedures as may be reasonably necessary to assure proper disbursement of, and accounting for, Federal funds paid to the State under this section;

"(4) designates an officer or agency of the State government who has responsibility and authority for the administration of a statewide research and training program as the officer or agency with responsibility and authority for the execution of the State's program under this section; and

"(5) provides that such officer or agency will make such reports to the Secretary, in such form, and containing such information, as may be reasonably necessary to enable the Secretary to perform his duties under this section.

"(c) No grant may be made under this section for any use unless an amount at least equal to such grant is made available from non-Federal sources for the same purpose and for concurrent use.

"STATE LIMIT

"SEC. 804. Not more than 10 per centum of the total amount appropriated for the purposes of this title may be used for making grants to any one State.

"TECHNICAL ASSISTANCE, STUDIES, AND PUBLICATION OF INFORMATION

"SEC. 805. In order to carry out the purpose of this title, the Secretary is authorized to provide technical assistance to State and local governmental or public bodies and to undertake such studies and publish and distribute such information, either directly or by contract, as he shall determine to be desirable. Nothing contained in this title shall limit any authority of the Secretary under any other provision of law.

"APPROPRIATIONS

"SEC. 806. There is authorized to be appropriated for the purpose of making grants and providing fellowships under this title, without fiscal year limitation, not to exceed $30,000,000. Any amounts appropriated under this section shall remain available until expended.

"MISCELLANEOUS

"SEC. 807. (a) As used in this title the term 'State' means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Trust Territory of the Pacific Islands, and the Virgin Islands; and the term 'Secretary' means the Secretary of Housing and Urban Development.

"(b) There are authorized to be appropriated such sums as may be necessary for administrative and other expenses in carrying out this title."

TITLE IV—MISCELLANEOUS

AUTHORIZATION FOR PROPERTY ACQUISITIONS IN APPLYING ADVANCES IN TECHNOLOGY TO HOUSING AND URBAN DEVELOPMENT

SEC. 401. Section 1010(a) of the Demonstration Cities and Metropolitan Development Act of 1966, is amended—

(1) by striking out "and" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; and"; and

(3) by adding after paragraph (3) a new paragraph as follows:

"(4) assure, to the extent feasible, in connection with the construction, major rehabilitation, or maintenance of any housing assisted under this section, that there is no restraint by contract building codes, zoning ordinances or practice against the employment of new or improved technologies, techniques, materials, and methods or of preassembled products which may reduce the cost or improve the quality of such construction, rehabilitation, and maintenance, and therefore stimulate expanded production of housing under such programs, except where such restraint is necessary to insure safe and healthful working and living conditions."

SEC. 402. The first sentence of section 1010(c) of the Demonstration Cities and Metropolitan Development Act of 1966 is amended—

(1) by inserting "(1)" after "authorized"; and

(2) by inserting before the period at the end thereof the following: ", and (2) notwithstanding any other provision of law, to acquire, use, and dispose of land and other property as he deems necessary to carry out the purposes of subsection (a)(1) of this section".

EMPLOYMENT OPPORTUNITIES FOR LOWER INCOME PERSONS IN CONNECTION WITH HUD-ASSISTED PROJECTS

SEC. 403. Section 3 of the Housing and Urban Development Act of 1968 is amended to read as follows:

"EMPLOYMENT OPPORTUNITIES FOR LOWER INCOME PERSONS IN CONNECTION WITH ASSISTED PROJECTS

"SEC. 3. In the administration by the Secretary of Housing and Urban Development of programs providing direct financial assistance in aid of housing, urban planning, development, redevelopment, or renewal, public or community facilities, and new community development, the Secretary shall—

"(1) require, in consultation with the Secretary of Labor, that to the greatest extent feasible opportunities for training and employment arising in connection with the planning and carrying out of any project assisted under any such program be given to lower income persons residing in the area of such project; and

"(2) require, in consultation with the Administrator of the Small Business Administration, that to the greatest extent feasible contracts for work to be performed in connection with any such project be awarded to business concerns, including but not limited to individuals or firms doing business in the field of planning, consulting, design, architecture, building construction, rehabilitation, maintenance, or repair, which are located in or owned in substantial part by persons residing in the area of such project."

URBAN PROPERTY PROTECTION AND REINSURANCE—ENTRY INTO REINSURANCE CONTRACTS

SEC. 404. Section 1222(d) of the National Housing Act is amended by striking out all that follows "thereafter" the first time that word appears and inserting in lieu thereof a period.

URBAN PROPERTY PROTECTION AND REINSURANCE—STATE SHARE OF REINSURED LOSSES

SEC. 405. Section 1223(a) of the National Housing Act is amended by striking out paragraph (1) and inserting in lieu thereof the following:

"(1) in any State which has not, after the close of the second full regular session of the appropriate State legislative body following the date of the enactment of this title, adopted appropriate legislation, retroactive to the date of the enactment of this title, under which the State, its political subdivisions, or a governmental corporation or fund established pursuant to State law, will reimburse the Secretary for any reinsured losses in that State in any reinsurance contract year, in an amount up to 5 per centum of the aggregate property insurance premiums earned in that State during the calendar year immediately preceding the end of the reinsurance contract year on those lines of insurance reinsured by the Secretary in that State during the contract year, to the extent that reinsured losses paid by the Secretary for such year exceed the total of (A) reinsurance premiums earned in that State during that reinsurance contract year plus (B) the excess of (i) the total premiums earned by the Secretary for reinsurance in that State during a preceding period measured from the end of the most recent reinsurance contract year with respect to which the Secretary was reimbursed for losses under this title over (ii) any amounts paid by the Secretary for reinsurance losses that were incurred during such period;".

STUDY OF REINSURANCE AND OTHER PROGRAMS

SEC. 406. Section 1235(b) of the National Housing Act is amended by striking out "one year following the date of the enactment of this title" and inserting in lieu thereof "June 30, 1970".

EMERGENCY FLOOD INSURANCE PROGRAM

SEC. 407. Part A of chapter II of title XIII of the Housing and Urban Development Act of 1968 is amended by adding at the end thereof the following new section:

"EMERGENCY IMPLEMENTATION OF PROGRAM

"SEC. 1336. (a) Notwithstanding any other provisions of this title, for the purpose of providing flood insurance coverage at the earliest possible time, the Secretary shall carry out the flood insurance program authorized under chapter I during the period ending December 31, 1971, in accordance with the provisions of this part and the other provisions of this title insofar as they related to this part but subject to the modifications made by or under subsection (b).

"(b) In carrying out the flood insurance program pursuant to subsection (a), the Secretary—

"(1) shall provide insurance coverage without regard to any estimated risk premium rates which would otherwise be determined under section 1307; and

"(2) shall utilize the provisions and procedures contained in or prescribed by this part (other than section 1334) and sections 1345 and 1346 to such extent and in such manner as he may consider necessary or appropriate to carry out the purpose of this section."

EXTENSION OF FLOOD INSURANCE PROGRAM TO COVER LOSSES FROM WATER-CAUSED MUDSLIDES

SEC. 408. (a) Section 1302 of the Housing and Urban Development Act of 1968 is amended by adding at the end thereof the following new subsection:

"(f) The Congress also finds that (1) the damage and loss which results from mudslides is related in cause and similar in effect to that which results directly from storms, deluges, overflowing waters, and other forms of flooding, and (2) the problems involved in providing protection against this damage and loss, and the possibilities for making such protection available through a Federal or federally sponsored program, are similar to those which exist in connection with efforts to provide protection against damages and loss caused by such other forms of flooding. It is therefore the further purpose of this title to make available, by means of the methods, procedures, and instrumentalities which are otherwise established or available under this title for purposes of the flood insurance provide protection against damage and loss resulting from mudslides that are caused by accumulations of water on or under the ground."

(b) Section 1370 of such Act is amended by inserting "(a)" after "SEC. 1370.", and by adding at the end thereof the following new subsection:

"(b) The term 'flood' shall also include inundation from mudslides which are caused by accumulations of water on or under the ground; and all of the provisions of this title shall apply with respect to such mudslides in the same manner and to the same extent as with respect to floods described in paragraph (1), subject to and in accordance with such regulations, modifying the provisions of this title (including the provisions relating to land management and use) to the extent necessary to insure that they can be effectively so applied, as the Secretary may prescribe to achieve (with respect to such mudslides) the purposes of this title and the objectives of the program."

NATIONAL FLOOD INSURANCE PROGRAM—ADOPTION OF LOCAL FLOOD CONTROL MEASURES

SEC. 409. (a) Section 1305(c)(2) of the Housing and Urban Development Act of 1968 is amended by striking out "June 30, 1970, permanent" and inserting in lieu thereof "December 31, 1971, adequate".

(b) Section 1315 of such Act is amended—

(1) by striking out "June 30, 1970" and inserting in lieu thereof "December 31, 1971"; and

(2) by striking out "permanent" and inserting in lieu thereof "adequate".

(c) Section 1361(c) of such Act is amended by striking out "permanent" and inserting in lieu thereof "adequate".

INTERSTATE LAND SALES

SEC. 410. Section 1403(a)(10) of the Housing and Urban Development Act of 1968 is amended to read as follows:

"(10) the sale or lease of real estate which is free and clear of all liens, encumbrances, and adverse claims if each and every purchaser or his or her spouse has made a personal on-the-lot inspection of the real estate which he purchased and if the developer executes a written affirmation to that effect to be made a matter of record in accordance with rules and regulations of the Secretary. As used in this subparagraph, the terms 'liens', 'encumbrances', and 'adverse claims' do not refer to property reservations which land developers commonly convey or dedicate to local bodies or public utilities for the purpose of bringing public services to the land being developed, nor to taxes and assessments imposed by a State or other public body having authority to assess and tax property which, under applicable State or local law, constitute liens on the property before they are due and payable, nor to beneficial property restrictions which would be enforceable by other lot owners or lessees in the subdivision, if (A) the developer, prior to the time the contract of sale or lease is entered into, has furnished each purchaser or lessee with a statement, the form and content of which has been approved by the Secretary, setting forth in descriptive and concise terms all such reservations, taxes, assessments, and restrictions which are applicable to the lot to be purchased or leased, and

(B) receipt of such statement has been acknowledged in writing by the purchaser or lessee, and a copy of the acknowledged statement is filed with the Secretary in accordance with such rules and regulations as he may require."

REPORTS

SEC. 411. Section 1603 of the Housing and Urban Development Act of 1968 is amended by striking out "January 15" and inserting in lieu thereof "February 15".

RURAL HOUSING

SEC. 412. (a) Sections 513, 515(b)(5), and 517(a)(1) of the Housing Act of 1949 are each amended by striking out "October 1, 1969" wherever it appears and inserting in lieu thereof "October 1, 1970".

(b) Section 517(c) of such Act is amended by striking out all that follows "section" and inserting in lieu thereof a period.

(c) Section 517 of such Act is amended by adding at the end thereof the following new subsection:

"(k) Any sale by the Secretary of loans individually or in blocks, pursuant to subsections (c) and (g), shall be treated as a sale of assets for the purposes of the Budget and Accounting Act, 1921, notwithstanding the fact that the Secretary, under an agreement with the purchaser, holds the debt instruments evidencing the loans and holds or reinvests payments thereon as trustee and custodian for the purchaser."

(d) Section 517 of such Act is further amended by adding at the end thereof (after subsection (k), as added by subsection (c) of this section) the following new subsection:

"(l) The Secretary may also, upon the application of lenders, builders, or sellers and upon compliance with requirements specified by him, make commitments upon such terms and conditions as he shall prescribe to make or insure loans under this section to eligible applicants."

(e)(1) Section 517 of such Act is further amended by adding at the end thereof (after subsection (l), as added by subsection (d) of this section) the following new subsection:

"(m) The assets and liabilities of, and authorizations applicable to, the Rural Housing Direct Loan Account are hereby transferred to the Fund, and such Account is hereby abolished. Such assets and their proceeds, including loans made out of the Fund pursuant to this section, shall be subject to all of the provisions of this section."

(2) The first sentence of section 517(d) of such Act is amended—

(A) by striking out "(a) and (b)" and inserting in lieu thereof "(a), (b), and (m)"; and

(B) by inserting "or otherwise acquired by" after "loans made from".

(3) Section 518 of such Act is repealed.

(4) Section 519 of such Act is amended by striking out "or the Rural Housing Direct Loan Account" and "or Account".

(f) Section 520 of such Act is repealed.

AUTHORITY TO TRANSFER ADDITIONAL AMOUNTS FROM GENERAL INSURANCE FUND TO SPECIAL RISK INSURANCE FUND

SEC. 413. Section 238(b) of the National Housing Act is amended by striking out "the sum of $5,000,000" in the first sentence and inserting in lieu thereof ", at such times and in such amounts as he may determine to be necessary, a total sum of $20,000,000".

SAVINGS AND LOAN ASSOCIATIONS

SEC. 414. (a) Section 5 of the Federal Home Loan Bank Act (12 U.S.C. 1425) is amended to read as follows:

"SEC. 5. No institution shall be admitted to or retained in membership, or granted the privileges of nonmember borrowers, if the combined total of the amounts paid to it for interest, commission, bonus, discount, premium, and other similar charges, less a proper deduction for all dividends, refunds, and cash credits of all kinds, creates an actual net cost to the homeowner in excess of the lawful contract rate of interest applicable to such transactions, or, in case there is no lawful contract rate of interest applicable to such transactions, in excess of such rates as may be prescribed in writing by the Board acting in its discretion from time to time. This section applies only to home mortgage loans on single-family dwellings."

(b) Section 5(c) of the Home Owners' Loan Act of 1933 (12 U.S.C. 1464(c)) is amended by adding at the end thereof the following new paragraph:

"Without regard to any other provision of this subsection, any such association is authorized to invest in shares of stock issued by a corporation authorized to be created pursuant to title IX of the Housing and Urban Development Act of 1968, and is authorized to invest in any partnership, limited partnership, or joint venture formed pursuant to section 907(a) or 907(c) of that Act."

(c)(1) Section 404(d)(2)(B) of the National Housing Act (12 U.S.C. 1727(d)(2)(B)) is amended by striking out "1966" and inserting in lieu thereof "1965".

(2) Section 6(b) of the Act of September 21, 1968 (Public Law 90–505), is amended by striking out "1968" and inserting in lieu thereof "1965".

(d) Section 12 of the Federal Home Loan Bank Act (12 U.S.C. 1432) is amended by adding at the end thereof the following new subsection:

"(c) Subject to such regulations as may be prescribed by the Board, one or more Federal home loan banks may acquire, hold, or dispose of, in whole or in part, or facilitate such acquisition, holding, or disposition by members of any such bank, of loans (or interests in loans) having the benefit of insurance under section 221(d)(3), 221(h), 235, or 236 of the National Housing Act, as now or hereafter in effect, or any commitment or agreement therefor."

TEMPORARY EXTENSION OF FLEXIBLE INTEREST RATE AUTHORITY

SEC. 415. Section 3(a) of the Act of May 7, 1968 (Public Law 90–301), is amended by striking out "October 1, 1969" and inserting in lieu thereof "October 1, 1970", and by amending the proviso to such section to read as follows: "*Provided*, That notwithstanding any other provision of law, the Administrator of Veterans' Affairs is authorized, until October 1, 1971, to establish a maximum interest rate for guaranteed or insured loans to veterans under chapter 37 of title 38, United States Code, not in excess of such rate as he may from time to time find the loan market demands.".

MEDICINE CABINETS IN FEDERALLY ASSISTED HOUSING

SEC. 416. (a) The head of the appropriate Federal agency shall prescribe reasonable standards with respect to the type or design of latches hereafter installed on medicine cabinets in federally assisted housing with a view to preventing injury to young children as a result of gaining access to the contents of such cabinets.

(b) As used in this section—

(1) The term "federally assisted housing" means (A) housing constructed, rehabilitated, or otherwise provided with assistance under the National Housing Act, the United States Housing Act of 1937, section 101 of the Housing and Urban Development Act of 1965, section 202 of the Housing Act of 1959, title V of the Housing Act of 1949, the Consolidated Farmers Home Administration Act of 1961, section 7(b) of the Small Business Act, or chapter 37 of title 38, United States Code; and (B) family housing constructed by the Department of Defense.

(2) The term "appropriate Federal agency" means (A) the Secretary of Housing and Urban Development with respect to housing constructed, rehabilitated, or otherwise provided under the National Housing Act, the United States Housing Act of 1937, section 101 of the Housing and Urban Development Act of 1965, or section 202 of the Housing Act of 1959; (B) the Secretary of Agriculture with respect to housing constructed, rehabilitated, or otherwise provided under title V of the Housing Act of 1949, or the Consolidated Farmers Home Administration Act of 1961; (C) the Administrator of the Small Business Administration with respect to housing constructed or repaired with assistance under section 7(b) of the Small Business Act; and (D) the Secretary of Defense with respect to family housing constructed by the Department of Defense.

(c) The respective appropriate Federal agencies shall, in prescribing standards under this section, seek, through consultation or otherwise, to achieve the greatest practicable uniformity in such standards.

MISCELLANEOUS AND TECHNICAL AMENDMENTS

SEC. 417. (a) Section 235(c) of the National Housing Act is amended by inserting immediately before the period at the end of the first sentence the following: ": *Provided further*, That the Secretary is authorized to continue making such assistance payments where the mortgage has been assigned to the Secretary".

(b) Section 236(b) of such Act is amended by striking out "*Provided*, That" and inserting in lieu thereof the following: "*Provided*, That the Secretary is authorized to continue making such interest reduction payments where the mortgage has been assigned to the Secretary: *Provided further*, That".

(c) Section 223(d) of such Act is amended by inserting at the end thereof the following new sentence: "A loan involving a project covered by a mortgage insured under section 213 that is the obligation of the Cooperative Management Housing Insurance Fund shall be the obligation of such fund, and loans involving projects covered by mortgages insured under section 236 or under any section of this title pursuant to section 223(e) shall be the obligation of the Special Risk Insurance Fund."

(d) Section 214 of such Act is amended by inserting "or mobile home courts or parks" in the first sentence after "construct dwellings".

(e) Section 1101(c)(2) of such Act is amended—

(1) by striking out "value of the property or project" and inserting in lieu thereof "replacement cost of the property or project"; and

(2) by striking out "The value" and inserting in lieu thereof "The replacement cost".

FHA FINANCING FOR MOBILE HOMES

SEC. 418. Section 2 of the National Housing Act is amended by—

(1) inserting "(i)" after the words "for the purpose of" in the first sentence of subsection (a);

(2) inserting "; and for the purpose of (ii) financing the purchase of a mobile home to be used by the owner as his principal residence" before the period at the end of the first sentence of subsection (a);

(3) inserting "(other than mobile homes)" after "the new residential structures" in clause (1) of subparagraph (iii) of the second paragraph of subsection (a);

(4) inserting the following new sentence at the end of subsection (a): "The Secretary is hereby authorized and directed, with respect to mobile homes to be financed under this section, to (i) prescribe minimum property standards to assure the liability and durability of the mobile home and the suitability of the site on which the mobile home is to be located; and (ii) obtain assurances from the borrower that the mobile home will be placed on a site which complies with the standards prescribed by the Secretary and with local zoning and other applicable local requirements.";

(5) inserting ", except that an obligation financing the purchase of a mobile home may

be to an amount not exceeding $10,000" before the semicolon at the end of clause (1) in the first sentence of subsection (b);

(6) inserting ": *Provided*, That an obligation financing the purchase of a mobile home may have a maturity not in excess of twelve years and thirty-two days" before the semicolon at the end of clause (2) in the first sentence of subsection (b); and

(7) striking out "real property" each place it appears in subsection (c)(2) and inserting in lieu thereof "real or personal property".

The SPEAKER. The question is on the motion offered by the gentleman from Texas (Mr. PATMAN).

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 13827) was laid on the table.

LEGISLATIVE PROGRAM FOR WEEK OF OCTOBER 27

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute.)

Mr. GERALD R. FORD. Mr. Speaker, I take this time for the purpose of asking the distinguished majority leader the program for the remainder of this week and the agenda for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the distinguished majority leader.

Mr. ALBERT. Mr. Speaker, in response to the able minority leader's inquiry, we expect to request to adjourn over upon the announcement of the program for next week.

Monday is District day, and there are eight District bills:

H.R. 13837, to amend Healing Arts Practice Act;

H.R. 12673, to authorize blood banks to transfer blood components;

H.R. 9257, to amend the laws with respect to the parking or storage of motor vehicles;

H.R. 13564, to eliminate straw party deeds in joint tenancies;

H.R. 13565, to validate certain deeds improperly acknowledged or executed;

S. 2056, judge's survivors annuity refund;

H.R. 10335, revise District of Columbia's Criminal Code with respect to false pretenses and bad checks; and

H.R. 10336, to provide liens against property of hotel guests.

Also we have H.R. 13950, Federal Coal Mine Health and Safety Act of 1969. This has an open rule with 3 hours of general debate.

For Tuesday and the balance of the week, a continuing appropriations resolution for fiscal year 1970. Then we continue with consideration of H.R. 13950, the Federal Coal Mine Health and Safety Act of 1969. Also H.R. 14001, the Selective Service Amendment Act of 1969, which has an open rule with 4 hours of debate.

H.R. 14252, the Drug Abuse Education Act of 1969, subject to a rule being granted; and

H.R. 4244, pertaining to the Administrative Conference of the United States, with an open rule and 1 hour of debate.

This announcement is made subject to the usual reservations that conference reports may be brought up at any time and any further program may be announced later.

Mr. GERALD R. FORD. Mr. Speaker, I would like to ask the distinguished majority leader the following question: This appears to be a very full schedule for next week, and I approve of the program that is outlined here wholeheartedly. From an analysis of this program, is there a high likelihood that there will be a session next Friday?

Mr. ALBERT. I should think there will be unless some change develops that I know nothing about at this time.

Mr. GROSS. Mr. Speaker, would the minority leader yield?

Mr. GERALD R. FORD. I yield to the gentleman from Iowa.

Mr. GROSS. I am somewhat intrigued by the fact that there is not a single authorization bill nor an appropriation bill scheduled for next week. Of course, I understand that the continuing resolution providing for continuing appropriations is on the schedule. Is it intended to pass all the regular appropriation bills at this session of Congress—I mean before January 1, or will some of the regular appropriation bills be carried over into next year?

Mr. ALBERT. Mr. Speaker, if the gentleman from Michigan will yield further——

Mr. GERALD R. FORD. I yield to the gentleman from Oklahoma.

Mr. ALBERT. This continuing resolution is for 1 month. I, for one, am glad it is for 1 month. I think we need to proceed with the regular bills. I hope that the regular bills will all be passed before this continuing resolution runs out.

Certainly, the gentleman is on one of the committees and recognizes better than I the problems relating to getting out authorization bills. The gentleman's committtee has one of the major authorization bills that is outstanding. All of the appropriation bills but one not requiring authorization have been passed by the House of Representatives but not by the Congress.

Mr. GROSS. Well, Mr. Speaker, if the gentleman will yield further, I cannot let the gentleman from Oklahoma suggest that I am on one of the legislative committees that still has an authorization bill pending—I cannot let that go and pass by without some comment. The gentleman I am sure is aware of the fact that I am a member of the minority of that committee. I cannot move bills in and out of the committee.

Mr. ALBERT. The gentleman always underestimates his influence.

Mr. GERALD R. FORD. I thank the distinguished majority leader.

ADJOURNMENT TO MONDAY NEXT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DISPENSING WITH BUSINESS IN ORDER UNDER THE CALENDAR WEDNESDAY RULE ON WEDNESDAY NEXT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule on Wednesday next be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

GOVERNOR REAGAN ON TAX REFORM AND THE PROCEDURES OF CONGRESS

(Mr. VAN DEERLIN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. VAN DEERLIN. Mr. Speaker, California's Gov. Ronald Reagan apparently does not like H.R. 13270, the tax reform bill overwhelmingly approved by the House last August 7. In a speech Tuesday night at Flint, Mich., Mr. Reagan asserted that the bill was "hatched in a back room, passed in the dark of night, and smuggled through the House."

He implied that the measure was somehow cooked up by the Johnson administration—"concocted in a back room by the staffs of a repudiated administration"—and he stated that the "flak and fallout" from the bill "threatens to drastically change the American economic system."

Even allowing for the license of a political party dinner, the Governor's words must sound strange indeed to millions of ordinary Americans to whom this bill would grant a long overdue measure of relief.

And they also must have a distinctly hollow ring for the members of our own Ways and Means Committee who labored so mightily to produce this historic legislation.

Rather than being "roared" through the Ways and Means Committee, as Mr. Reagan asserts in a rather peculiar choice of words, the bill was the carefully considered product of 30 days of public hearings and 38 days of executive sessions. Testimony was taken from 410 witnesses, surely a wide enough cross section to include even some of Mr. Reagan's friends.

The bill came to the House floor with the complete support of both the distinguished chairman of the Ways and Means Committee (Mr. MILLS), and the highly respected ranking minority member (Mr. BYRNES).

It was taken up under a rule providing 6 hours of debate, and was approved on a massive vote of 394 to 30. Evidently, few of Mr. Reagan's fellow Republicans in the House shared his disgust with the legislation, since they supported it even more preponderantly than the Democrats—176 to 10.

As for Mr. Reagan's contention that

the measure was in some way foisted on the House by Johnson administration officials, the facts clearly speak otherwise.

A look at the legislative history of the bill indicates that, if anything, President Johnson was himself lukewarm about tax reform. In fact, the only reason the administration prepared reform proposals for submission to Congress was because it was ordered to under terms of an amendment to the 1968 Revenue and Expenditure Control Act. And, interestingly, the amendment, directing the administration to submit a reform plan by December 31, 1968, was drafted and introduced by a Republican, Senator JAVITS.

Mr. Reagan's contention that Johnson administration left-overs also were responsible for much of the staff work on the tax reform bill also lacks substance.

Besides drawing on the expertise of its own staff and the staff of the Joint Committee on Internal Revenue Taxation, the Ways and Means Committee was ably assisted by Edwin S. Cohen, Assistant Secretary of the Treasury for the Nixon administration, and some of Mr. Cohen's colleagues from the Treasury Department.

By unanimous consent, and in a sense of fairness, I shall insert Governor Reagan's full remarks in the RECORD:

EXCERPTS OF REMARKS BY GOV. RONALD REAGAN—REPUBLICAN FUND-RAISING SPEECH FLINT, MICH., OCTOBER 21, 1969.

Governor Milliken and I share the challenge of being governors of large industrial states. Most of our problems eventually get back to the matter of money. In this regard, Washington inevitably plays a major role. The federal government has preempted many of the sources of our income. To correct this, we are struggling to bring about some tax sharing.

Past administrations have also brought about an inflation of the currency which adds tremendous problems to the operation of a state government. But the current mischief causing us concern originated in the House of Representatives and is known as the Tax Reform Bill of 1969. It has been called the most revolutionary tax bill of our time. Tax Coordinator, a tax reporting publication, calls it "the most incredibly complicated tax law in United States history." In less formal circles it is known as the "Lawyers and Accountants Relief Act." This bill had its genesis in the surtax bill of 1968 sought by President Johnson to fight off the chickens of inflation which were coming home to roost.

The 1968 bill also required that the administration prepare a tax reform package for presentation to the 1969 Congress. The military would describe this as bobby trapping the position before withdrawal. With the inauguration of President Nixon, the Democratic leadership of Congress triggered the device.

What followed was unusual in the history of Congress. The most revolutionary tax reform bill of our time roared through the Ways and Means Committee, on to the floor of the House, and past the membership with virtually no advance notice or public hearing. The flak and fallout threatens to drastically change the American economic system.

There is a lot of noble oratory about closing loopholes and the sound of the tumbrels can be heard carrying the venal rich to their just punishment. Many of what our friends call loopholes are really the incentives which made the whole cockeyed tax structure work. Provisions for depletion, deductibility of gifts and tax free institutions were devices voted in by earlier congresses to promote worthwhile social objectives. Wasn't there a time when we felt that the discovery and production of raw materials was as important to our nation as the urban environment now? Are we no longer interested in supporting our schools and foundations? The booby trap has been extremely effective already.

Donations to private charities have ground to a halt since the passage of the House bill. Small colleges are threatened with extinction. Even such august institutions as the Institute for Advance Study at Princeton have publicly stated that their operations could be severely curtailed if the present bill is passed. Is this really in the best interest of our society, or is it simply another attempt by the bureaucrats to stifle anything but government owned and operated institutions? Is a man who gives away substantial sums of his invested capital every year using a gimmick, or is he benefiting society as was intended by the current tax law?

Of more direct concern to your governor and to me is the impending federal raid on municipal bond sales. The Bank of New York has accurately described the municipal bond market as "a disaster area in the finance world." Ever since House adoption of the current tax bill, interest rates on municipal bonds have sky-rocketed and sales have virtually stopped. In California our state water plan and needed campus facilities have been delayed because we cannot sell authorized bond issues.

And who gets the bill when municipalities and states must raise tax rates to compete in the commercial money market? The forgotten American—the low and middle income families whose property taxes will be raised once more to meet these increased borrowing costs.

And why should anyone have to be taxed for inflation? A man buys a house for $10,000. The local tax collector one day has to tell this citizen that it's now valued at $15,000—not because it's worth more but because dollars are worth less. If he sells his house for $15,000, the government tells him he's made a $5,000 profit even though he must pay $15,000 for an exactly similar house. Government taxes 25 or 50 percent of what it has declared is profit and in truth he is the loser.

The real issue is a bill hatched in the back room, passed in the dark of night, and smuggled through the House. Shouldn't we start anew and ask some more basic questions?

I would like to suggest something I believe is in keeping with our Republican philosophy—a new bill of our own embodying a new basic principle, namely, a limit on government's power to tax. Surely the right to earn, keep and disburse should be as inalienable a right as the others listed in the first ten Amendments to the Constitution?

Dr. C. Northcote Parkinson, that great chronicler of the modern bureaucracy, has noted that the percentage of gross national product intercepted by the tax collector is an excellent barometer of the stability of civilizations. When all taxes, federal, state and local, absorb a significant portion of a society's gross national product, there is trouble. "At 35 percent there is a visible decline in freedom and stability," he wrote. "At 36 percent, there is disaster, complete and final, though not always immediate."

Today, 37 cents of every income dollar in the nation goes to taxes.

In this decade alone, total taxes for the average United States family are up 73 percent. The average family of four, with a wage earner who makes $10,000 a year, has to pay $2,600 in taxes . . . and he works three months just to earn the money to pay them . . . and he's not going to stand for it much longer.

Why not consider a limit on the power of all government to tax? And a distribution of these taxing powers between the federal, state and local levels in order to prevent the current preemption of the taxing power by the federal establishment. Those who are always rejecting what they charge are simplistic answers should be happy for the problems involved are complex. But history on the one hand, and the angry mood of the taxpayer on the other, confirm that our society will not remain stable upon attempting to increase taxes further.

Let us hope the Senate will carry out its traditional deliberative role for, we have a tax bill before us, concocted in a back room by staffs of a repudiated administration. What it slipped through in the dark of night does not stand the light of day. Under the false claim that it will benefit the system it would destroy, the current bill carries the seeds of destruction of local government, of private educational and charitable foundations, and of the basic concepts of a free enterprise system which has fought the most successful war on poverty in the history of man.

The President should examine it with care, for as Governor Milliken and I are both well aware, the power of veto is one of the major responsibilities of any chief executive.

DANIELS-McGEE ACT OF 1969

(Mr. DANIELS of New Jersey asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DANIELS of New Jersey. Mr. Speaker, the date, Monday, October 20, 1969, marks what I believe to be a most significant event in the 49-year history of the Civil Service Retirement system. It has the significance of assuring that the system will have the ability to fulfill its future obligations to millions of past, present, and future Federal employees and their families.

It is with a deep sense of pride and gratitude that I take this time to commend the President's action of October 20 in approving Public Law 91–93, the Civil Service Retirement Amendments of 1969, which will maintain confidence in the financial integrity of the program and contribute importantly toward the financial security of both the active and retired Federal work force.

Further, Mr. Speaker, in an attempt to be responsive to the widespread interest in its new and liberalized benefit provisions, I take this opportunity to present a series of questions and answers about the major changes made by this landmark legislation:

FINANCING THE RETIREMENT SYSTEM

1. Q. How is the financing of the system changed?

A. It is improved in three ways:

1. By an increase in retirement contributions so that they are sufficient to meet the normal cost of the system.

2. By authorization of appropriations to meet liabilities which result from future changes.

3. By authorizing the Treasury Department to pay interest on the existing unfunded liability of the system and for the cost of allowing credit for military service in computing annuities.

2. Q. How much will be deducted from an employee's pay as retirement contributions?

A. Seven percent of basic pay, instead of 6½ percent.

3. Q. When does this increased deduction begin?

A. The first pay period in 1970.

4. Q. Is the Government required to contribute to the retirement fund?

A. Yes, each Government agency matches the deductions from its employees' pay.

CREDIT FOR UNUSED SICK LEAVE

1. Q. In what kind of retirement cases may unused sick leave be added to the employee's service?

A. In two kinds:

1. Where the employee retires on an immediate annuity on or after October 20, 1969.

2. Where the employee dies on or after October 20, 1969 leaving a widow (or dependent widower) who is entitled to a survivor annuity.

2. Q. What is an immediate annuity?

A. One that begins no later than 1 month after separation from service. This would include an employee who retires at his own option, or who retires for age, disability, or because he was involuntarily separated without cause.

3. Q. How will credit for unused sick leave be allowed?

A. By adding the time represented by the unused sick leave to the retiring employee's actual service.

4. Q. For what purpose will unused sick leave be credited?

A. Only for counting the total number of years and months of service used in computing the amount of annuity.

5. Q. May unused sick leave be used for figuring the high average salary?

A. No.

6. Q. May unused sick leave be counted toward the minimum length of service necessary to retire or to qualify for a survivor annuity?

A. No.

7. Q. How much time credit is allowed for the unused sick leave?

A. Generally, each 8 hours of unused sick leave equals one day. Days are converted to months and years on a 260-day work year basis. On this basis, approximately 22 days equals 1 month.

8. Q. Is deposit of contributions to the retirement fund required to obtain retirement credit for unused sick leave?

A. No.

9. Q. Does the limitation on annuity of not more than 80 percent of the high average salary apply to annuity based on unused sick leave?

A. No. Additional annuity attributable to the sick leave credit is allowable over and above this limitation.

HIGH AVERAGE SALARY

1. Q. What change has been made in the average salary computation?

A. The "high-5" average salary formerly used in computing annuities is changed to "high-3". This is the largest annual rate resulting from averaging an employee's rates of basic pay in effect during any period of 3 consecutive years of civilian service, with each rate weighted by the time it was in effect.

2. Q. When does use of the high-3 average salary become effective?

A. It applies in the case of any employee who is separated from service on or after October 20, 1969.

3. Q. How is the high average salary figured if the employee has less than 3 years of service?

A. If an employee dies with between 18 months and 3 years of service and leaves survivors entitled to annuity (see following questions), his high average salary is figured over all his civilian service.

SURVIVOR ANNUITY—SPOUSE

1. Q. What change is there in the rights of widows?

A. The widow (or dependent widower) of an employee who dies on or after October 20, 1969, after as little as 18 months of civilian service is now entitled to survivor annuity. Formerly the minimum service requirement was 5 years.

2. Q. Must the minimum of 18 months be continuous service?

A. No. It may consist of 2 or more periods of service.

3. Are any of the other requirements for a widow's or widower's annuity changed?

A. All other requirements remain the same.

4. Q. How much survivor annuity is payable to a widow?

A. The 1969 Amendments guarantee a minimum annuity to the widow (or dependent widower) of an employee who dies on or after October 20, 1969. This amounts to 55 percent of the *smaller* of—

1. 40 percent of the deceased employee's high average salary, or

2. the regular annuity obtained after increasing the deceased employee's service by the period of time between his date of death and the date he would have reached age 60.

5. Q. Is this guaranteed minimum used in all cases?

A. It does not apply if the widow's annuity based on employee's actual service is more than the guaranteed minimum. In this instance, the widow's annuity is 55 percent of the annuity earned by the employee at the time of his death.

6. Q. In what situations will 55 percent of the earned annuity be more than the guaranteed minimum?

A. Whenever the deceased employee had sufficient service to produce a higher benefit. Also, since service cannot be projected beyond age 60 in any case, the guaranteed minimum is not operative where the employee dies after reaching that age.

7. Q. Was any change made in the benefit payable to the surviving spouse of a disability annuitant?

A. Yes. Formerly an employee who retired for disability could pass on to the surviving wife or husband only 55 percent of his earned annuity, even though he received a higher benefit under the existing guaranteed minimum disability annuity provision. Now, for a disability annuitant who retires on or after October 20, 1969, the widow or widower will receive 55 percent of whatever annuity the retiree receives, unless the employee at retirement had specified a lesser benefit.

SURVIVOR ANNUITY—CHILD

1. Q. What change is there in the rights of children?

A. Each eligible child of an employee who dies on or after November 1, 1969, after as little as 18 months of civilian service is now entitled to survivor annuity. Formerly the minimum service requirement was 5 years.

2. Q. Need the minimum of 18 months be continuous service?

A. No. It may consist of 2 or more periods of service.

3. Q. Are any other requirements for a child's annuity changed?

A. No. All other requirements remain the same.

4. Q. How much survivor annuity is payable to a child?

A. The 1969 amendments increase annuity to a child. If the deceased employee is survived by a husband or wife, each eligible child will receive 60 percent of the employee's high average salary divided by the number of children. Annuity to any child is limited to $900 a year, and the total to all children cannot be more than $2,700 a year.

If no husband or wife survives the employee, each eligible child will receive 75 percent of the employee's high average salary divided by the number of children. Annuity to any one child is limited to $1,080 a year, and the total to all children cannot be more than $3,240 a year.

5. Q. Are all children entitled to survivor benefits eligible for the increased annuity?

A. Yes. These increased rates apply not only to children who qualify after this amendment is enacted, but also to children who are now receiving survivor annuity.

6. Q. When are these increases in children's annuities effective?

A. November 1, 1969. They will be reflected in the December 1, 1969 annuity checks which pay annuity for November.

REMARRIAGE OF SURVIVING SPOUSE

1. Q. What effect does remarriage have on the survivor annuity of a widow or widower?

A. Basically, remarriage generally stops the survivor annuity. The new law permits continuance of survivor annuity, regardless of when the employee retired or died, if the widow or widower remarries (1) on or after July 18, 1966, and (2) after attaining age 60. Where such a remarriage has already occurred and the widow's or widower's annuity has been stopped, it will be resumed commencing October 20, 1969.

2. Q. If a widow's or widower's annuity is stopped because of remarriage, can it be resumed if the remarriage ends?

A. Yes, if (1) the remarriage occurred after July 18, 1966, (2) the widow or widower does not elect some other annuity which is acquired by reason of the remarriage, and (3) any lump sum retirement benefit paid is returned. Where a remarriage has already ended, the survivor annuity may be resumed effective October 20, 1969.

3. Q. If a widow's or widower's annuity has already stopped but the remarriage has ended, how can the annuity be resumed?

A. She or he must write to the Civil Service Commission giving full identifying information and full particulars about the remarriage and when and how it ended.

COST OF LIVING INCREASES

1. Q. Do the 1969 Amendments change the way cost-of-living increases in annuities are figured?

A. Yes. Cost-of-living annuity increases are still figured as formerly except that, under the Amendments, 1 percent is added to each cost-of-living increase that is developed by the Consumer Price Index.

2. Q. Does the extra 1 percent affect the 4 percent cost-of-living increase that is already scheduled for November 1, 1969?

A. Yes, it changes this 4 percent increase to a 5 percent increase.

3. Q. Who will receive the 5 percent cost-of-living increase due November 1, 1969?

A. All retired employees and survivor annuitants whose annuities commenced November 1, 1969 or earlier.

4. Q. What is the last day an employee may retire from service and have his annuity commence November 1, 1969?

A. October 31, 1969. Employees in a pay status and separated after that date will not qualify for the 5 percent cost-of-living increase scheduled for November 1, 1969.

5. Q. Is there any advantage for an employee to retire on or before October 31, 1969?

A. If the employee retires between October 20 and 31, he will not only have his annuity figured under the 1969 Amendments but also have the 5 percent cost-of-living increase added to his annuity. However, the 1969 Amendment liberalizations—high average salary computation, unused sick leave credit, etc.—will apply equally to persons who retire after October.

6. Q. Will the extra 1 percent be added to future cost-of-living increases that are developed by the Consumer Price Index?

A. Yes.

EMPLOYEES PREVIOUSLY SEPARATED

1. Q. What is the effect of this amendment on those already separated from Federal service?

A. The provisions of this new law do not generally apply to those separated or retired before its effective date. However, annuitants already on the rolls will receive the extra 1 percent annuity increase.

2. Q. Do the provisions of the new law apply to retirees who have been reemployed by the Government?

A. Yes, under certain conditions. The age

or optional retiree who is separated on or after October 20, 1969, and who has completed at least 1 year of continuous full-time civilian service as a reemployed annuitant will receive credit for any unused sick leave in determining his supplemental annuity. Should the retiree complete 5 years of such service, his annuity can be recomputed; in the recomputation, he will be eligible for all the benefits of the new law, i.e., sick leave credit, high average salary computation, and survivor benefits previously outlined.

COAL MINE HEALTH AND SAFETY BILL

(Mr. HECHLER of West Virginia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HECHLER of West Virginia. Mr. Speaker, at 4:40 this morning the body of the first of the coal miners who perished in the gassy grave of the Farmington, W. Va., disaster was recovered. Seventy-eight men were killed in the fiery explosions which rocked the No. 9 mine on November 20, 1968.

The Farmington disaster roused the conscience of the Nation to demand that action be taken to protect the health and safety of the coal miners. Although there have been no major disasters since Farmington, 182 coal miners have been killed and 5,465 injured since that terrible morning last November.

Mr. Speaker, the coal operators of this Nation have been lobbying to weaken the health and safety legislation which Congress will start considering soon. The National Coal Association has written a letter to every Member of Congress which threatens Congress with power shortages if we try too hard to protect coal miners. The letter, dated October 21, states bluntly:

> If Congress enacts a bill which closes many coal mines it will jeopardize the public welfare by bringing on a nationwide power and steel shortage. . . . If Congress forces the closing of coal mines, a serious shortage can become critical and the nation will face power blackouts.

Mr. Speaker, there is talk of compromise in the air. There are many who would water down and compromise this bill. Death is a very certain phenomenon, Mr. Speaker. How can we compromise on an issue like that? Can you compromise on a man's life, limbs, and lungs? The coal operators shed tears and spread fears that coal mines will be closed down. Would you rather close down a mine or close down a man?

As the widows of Farmington wait patiently for the recovery of the bodies of their husbands who perished at Farmington, let us in Congress rise to the challenge and enact a strong, meaningful, effective coal mine health and safety bill without compromise with coal miners' lives. The slaughter in the coal mines must stop.

ROGERS INTRODUCES 3-YEAR EXTENSION OF REGIONAL MEDICAL PROGRAM

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, I am today introducing legislation to extend and expand the regional medical programs for 3 fiscal years. The present authorizing legislation expires on June 30, 1969.

The basic structure of the regional medical program is to provide for education, research, training, and demonstrations in the fields of heart disease, cancer, stroke, and related diseases.

The bill that I am introducing would not change the basic purpose of this law, but would expand the field of activity to include other major diseases and conditions as well as heart disease, cancer, and stroke. This would enable a regional medical program to operate from a broader base and to work with such medical problems as arthritis and trauma.

Eventually, as the regional medical program continues to expand its scope of operation in providing up-to-date medical knowledge to the practitioners and providers of health care, the categorical emphasis of the program should be eliminated and the program properly coordinated with comprehensive health planning.

A basic purpose of the regional medical program is to afford the medical profession and the medical institutions the opportunity of making available to their patients the latest advances in the diagnosis and treatment of these diseases. The bill that I am introducing would expand this purpose to include prevention from these diseases and rehabilitation of those stricken with the disease.

I believe that this proposed change in the law will enable the regional medical programs to more fully carry out the intent of the original legislation by providing more extensive and current knowledge about these diseases and conditions to the providers of health care.

In addition, the bill that I am introducing would provide for the inclusion of representatives from official health and health planning agencies on the advisory group for the operation of the local regional medical programs. Under present law only representatives from voluntary health agencies are permitted to serve on such advisory boards and I believe that the program will benefit from having these official groups on the advisory boards at the local level.

Another change that I am proposing in the bill I am introducing would permit consideration of all regional medical program projects at the local level by the 314(b) comprehensive areawide health planning agencies established under the Partnership for Health Act, Public Law 89–749. This change in the basic law, I believe, will contribute to a more effective regional medical program and will better insure that consumer participation at the local level is meaningful.

I believe, too, that this change in the basic law would be consistent with the direction being taken by the national advisory council on regional medical programs. At its February 1969 meeting that council issued a policy directive which required that where applications for regional medical program projects include requests for the purchase of major patient care equipment, adequate evidence must be included to show that the project plan has been reviewed and, if necessary, approved by the appropriate local planning agency. And, in Memphis, Tenn., the regional medical program and the local 314(b) agency share the same advisory board and geographical area.

Moreover, I feel that by maximizing appropriate coordination at the local level, one of my principal concerns regarding the regional medical programs will be eased. During hearings last year on the 2-year extension of the law, I expressed concern that this program in too many instances was stopping at the university dean's office, rather than reaching the providers of health care, and the practicing physicians and community hospitals within a given region were not effectively receiving the most recent information on these diseases.

I realize that the regional medical program is still in its infancy, but I believe that increased coordination will be realized through utilization of the 314(b) agencies and that we will be making better utilization of our resources under this most worthwhile program.

A corollary to the provision in the bill which would permit review by the 314(b) agency is the question of decategorization of the regional medical program. At its inception, the regional medical program had categorical emphasis and this has been supported for the most part by the medical community, the medical schools and the major voluntary associations interested in the specific diseases at which the program was aimed.

As the regional medical program has entered the operational phases, it has become more broadly defined through interpretation and implementation. However, I do not believe we should abruptly decategorize the regional medical program, but rather should move gradually toward decategorization through a broadening of purpose of the program and through closer coordination with the 314(b) agencies. The bill that I am introducing today will, I believe, assist in attaining this objective.

Mr. Speaker, to date 55 regions of the regional medical program have been organized, and 44 of these have received operational grants reaching 75 percent of the Nation's population. Another six regional programs should enter their operational phase by the end of this year.

To date, for the 4 fiscal years the regional medical program has been in effect, more than $114 million has been distributed to the 55 designated regions for planning or operation.

At present, approximately 75 percent of the population of this Nation is located in regions which have received operational grants, and by the end of the present fiscal year, it is anticipated that almost all of the population will be covered by regions with operation grants.

State hospital associations in all of the 50 States participate in the program; all State health departments plus those in the District of Columbia and Puerto Rico participate in the program and more than 2,000 persons representing the medical and health resources of the regions serving on the regional advisory groups

which provide advice to the grantee in the planning and operational program and which must approve an application for an operational grant.

I believe the regional medical program is coming of age, and I am hopeful that early hearings on this legislation can be held in order to permit a determination on the proper direction for the program in the future.

WILSON APPLAUDS CHANGE IN ADMINISTRATION DRUG APPROACH

(Mr. CHARLES H. WILSON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CHARLES H. WILSON. Mr. Speaker, for some time now I have been calling for a more realistic approach to the narcotic addiction and drug abuse problem. I hope that my statements in this area have played some small role in providing information and presenting various opinions that resulted in the change in administration policies regarding penalties for possession of drugs. I commend President Nixon and Attorney General Mitchell for heeding the advice of not only concerned Members of Congress but of health experts and police officials throughout the country.

While I condemn the seller of narcotics and recommend the severest of penalties for such activities, it has been my opinion that existing and, up to a few days ago, administration proposed sentences were unrealistic and unfair for those who were merely users of marihuana and drugs. I have contended that, in regard to users, the problem should be considered largely a health problem rather than merely a law enforcement issue.

It appears that the administration has taken cognizance of this point and, apparently after intense internal discussions between Dr. Egeberg, Dr. Yolles, and other Health, Education, and Welfare officials with Justice Department officials with Justice Department officers such as John Ingersoll, Director of the Bureau of Narcotics and Dangerous Drugs, and, reportedly, Attorney General Mitchell himself, and has reassessed its former policy and announced a change therein.

At a time when recent National Institute of Mental Health surveys indicate that one of five college students smoke or have smoked marihuana, when reports from Vietnam estimate that 30 percent of our troops there smoke marihuana, when deaths from drug abuses are soaring throughout the country, the problem can easily be recognized as going beyond a law and order characterization. It is a health problem, granted a health problem of staggering proportions, but a problem that requires understanding, compassion, research and education as well as coordination and planning of improved law enforcement techniques. The administration has taken a step in the right direction.

For my colleagues information, I am inserting into the CONGRESSIONAL RECORD an article that appeared in the fall 1969 issue of the Law Officer, the official publication of the International Conference of Police Associations which deals with the drug abuse nightmare. In addition, I am including the text of the Washintgon Post editorial of October 23, which praises the recent testimony of Mr. Ingersoll before the Senate Subcommittee on Juvenile Delinquency. Finally, I am inserting an article that appeared in the October 13, 1969, issue of the Los Angeles Times which discusses Operation Cooperation, the latter-day version of Operation Intercept.

Cooperation between the United States and Mexico is essential to reduce the illicit importation of narcotics from our neighbor to the south. The destruction of the sources of marihuana carried out by Mexican Army troops is, in my opinion, a better procedure than harming legitimate businesses on both sides of the border and inconveniencing thousands of tourists and workers. But destruction of marihuana plants is not the answer. Illegal importation of U.S. produced and subsequently exported amphetamines and barbiturates must be stopped. The sources of hard narcotics must be eliminated if possible. This may require increased cooperation between the United States and opium exporting countries such as Turkey.

A crackdown must be made on organized crime which is responsible for providing heroin to addicts throughout the United States. Let us not lose sight of the more serious threat posed to our society by the addict who must steal $150 worth of goods daily to feed his heroin habit due to the increasing and more visible and publicized use of marihuana. Narcotic addiction has cost our economy billions of dollars and thousands of lives. Any investment made by the Congress to counteract organized dope pushing must prove worthwhile in the long run.

Let us not pinch pennies in this area of law enforcement when the time for full and adequate funding comes up every year. Money spent in this pursuit will act to protect citizens from potential burglaries and robberies that they will otherwise experience at the hands of addicts. In addition, the addict must be treated and cured. Consequently funds expended for construction and staffing of treatment facilities represent another wise investment of the taxpayers' money. I urge my colleagues to consider this when the requests for funds for drug research, related law enforcement activities, construction of treatment facilities, training of competent personnel, and grants for dissemination of educational materials are before the House.

I now include the various articles mentioned above:

[From the Law Officer]

SENATOR SAYS AMERICA IN DRUG ABUSE NIGHTMARE

New federal drug laws are needed to deal with the spiraling problem of drug abuse and addiction in America, but the administration bill introduced last month calling for more stringent penalties for drug users is not the answer, several law and medical authorities indicated in narcotics hearings before the Special Committee on Alcoholism and Narcotics recently.

The committee's chairman, Sen. Harold E. Hughes (D-Iowa), joined in deploring the present approach to the "national nightmare" of drug abuse. The U.S. is dealing with the problem, he said, "in an atmosphere of fear and blindness that can only be compared to our attitude toward witchcraft in the 17th century. We know more about the craters on Mars than we know about the drug problem."

Sen. Hughes said he was "not pleading for any particular program or approach, but simply for an openmindedness and the willingness to admit that we are in a mess and need a fresh start."

Big-time crime reaps huge profits from controlling the illegal drug traffic, the Senator said. Addiction in turn is linked to all kinds of criminal acts ranging from mugging to murder, he added.

"Treatment for drug abuse is virtually non-existent because in point of fact addiction is not recognized to be the illness it is," Sen. Hughes said. "Under our law it is a crime. We are working from a prosecution rather than a public health approach. We are concerned with punishing people, not educating them or healing them.

"The tangle of existing laws governing drug use and distribution is hopeless to straighten out, because the fundamental premise is wrong—that drug addiction is a crime instead of an illness," he added.

Hughes told the committee, "We should have learned by this time that excessively harsh laws do not invariably deter people from breaking the law or even improve the possibilities for the authorities to do an effective job of enforcement.

Dr. Stanley F. Yolles, director, National Institute of Mental Health, testified before the Hughes committee that, "A conservative estimate of the total involuntary social costs of narcotic drug abuse (in the U.S.) amounts to $541 million per year." He said the cost to law enforcement alone is an estimated $61 million annually.

[From the Washington Post]

TEMPERING JUSTICE WITH REASON

There is an abundance of good sense in the administration's second thoughts about the treatment of drug victims. In their earlier approach to the problem, President Nixon and Attorney General Mitchell seemed to take the view that all users of any sort of mind-affecting substance whatever—from marijuana to morphine, but, of course, not including alcohol or tobacco—were willfully possessed of demons which could be exorcised only through infliction of the most extravagant forms of punishment. They seem to have been persuaded, however—and the indications are that Dr. Roger Egeberg, the new Assistant Secretary of HEW in charge of health, had much to do with the persuading—that justice can usefully be tempered with mercy and reason in this difficult area.

John E. Ingersoll, director of the Bureau of Narcotics and Dangerous Drugs, went before the Senate Subcommittee on Juvenile Delinquency Monday and recommended two sensible distinctions in regard to drugs. He urged that the punishment of persons who simply have illicit drugs in their possession for their own use should be different from the punishment of persons trafficking in drugs and seducing innocent victims into addiction. He proposed for the administration that first-time possession of any narcotic or dangerous drug be punishable by a $5,000 fine and a sentence of no more than a year. This seems to us excessively severe but a great deal more rational than the present law setting the sentence at two to ten years with a fine of $20,000 for narcotics and marijuana. He also urged that the mandatory minimum sentence for simple possesson of marijuana be lifted.

The second distinction sought by Mr. Ingersoll is that marijuana be regarded not as a narcotic drug but as an hallucinogenic. This, too, reflects elementary common sense. The use of marijuana does not produce addiction. As Mr. Ingersoll remarked in his testimony, "although it is termed an hallucinogen, we

need to know more about this particular drug, especially its long-term effects. Therefore, the department supports a provision that will allow for a study into the causes and effects of marijuana use."

There are two practical considerations that argue strongly for acceptance of these distinctions. One is that the excessive penalties now provided for any sort of illict drug use or possession make prosecution more difficult. "All too often," Mr. Ingersoll told the subcommittee, "because of the present penalty structure, there is real hesitancy on the part of prosecutors and courts to handle possession cases because of the potential high penalties involved. By allowing the court to prosecute the possessor who intends to sell as a felon and the possessor for one's own use as a misdemeanant, I beleve we will have better law enforcement and better respect for the law."

There is another important argument for this reversion to rationality. Many young Americans have come to feel that their elders have developed an obsession about marijuana reflecting prejudice more than reason. It has not been shown, these protesters say, that marijuana affects the mind or body any more harmfully than alcohol or tobacco. The contention deserves careful consideration and investigation. Marijuana is not necessarily dangerous and evil just because the young like to defy the old by resort to it.

[From the Los Angeles Times, Oct. 13, 1969]

MEXICANS REPORT RAID ON MARIHUANA PLANTATION—$40 MILLION WORTH OF DRUG BURNED, NEWSPAPERS SAY

(By Dial Torgerson)

Mexican Army troops raided a marijuana plantation and burned marijuana worth more than $40 million on the illicit drug market, according to reports Sunday in Mexican newspapers.

The plantation was near Tecolote, in the state of Guerrero, inland for Acapulco.

The raid apparently was an indication of the Mexican government's aggressive new attitude in attempts to control the domestic marijuana crop—one of the major purposes of Operation Cooperation, the latter day version of Operation Intercept.

Newspapers said the raid was led personally by the minister of national defense, Marcelino Garcia Barragon, who said Mexico would throw 40 small planes into the country's antidope drive.

WILL CARRY MACHINE GUNS

Authorities reported that the planes would be equipped with machine guns for use against smugglers who make deliveries by air.

U.S. officials said that although Operation Cooperation would involve fewer searches at 31 border checkpoints along the 2,000 mile U.S.-Mexican frontier, aerial and sea surveillance would not be relaxed.

For the first time since the operation shifted from "intercept" to "cooperation" cars began to roll more swiftly through border checkpoints Sunday.

Intercept called for car-by-car, person-by-person inspection of everyone entering this country from Mexico. Cooperation involves what the government calls "continued intensified surveillance," which is more relaxed than Intercept's careful searches.

Southbound traffic picked up as word of changed procedures spread. Inspections were still more severe than before Intercept's beginning Sept. 21. But they were less intensive and time-consuming, and crossing back into the United States took less time than under Intercept.

Federal officials said that at the San Ysidro crossing south of San Diego, border-crossing delays Sunday were only about 25% longer than prior to Sept. 21.

INSPECTIONS STILL IN FORCE

"While inspections have been relaxed, they have by no means been eliminated," said a spokesman for the Treasury Department, whom Customs officers are implementing the searches. "To assume so is erroneous. Intensified surveillance is continuing."

The spokesman said that under the new system there are fewer primary and secondary inspections, and primary checks involve fewer parts of the car.

The easing of inspections was worked out in meetings in Washington between U.S. and Mexican legal experts after the Mexican government agreed to more strenuous efforts to curb narcotic sources inside Mexico.

A federal spokesman said a 21-year-old Riverside waitress made the mistake of assuming the change in procedures meant "wave-through" checks at the border.

Authorities said Carol Ann Lough—who was charged with smuggling after 22,000 amphetamine pills were found in paper bags on the back seat of her car—told inspectors at San Ysidro:

"I didn't think you were still inspecting."

AN AIRY TOMB

(Mr. MIKVA asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. MIKVA. Mr. Speaker, millions of Americans are currently observing Clean Air Week. But in observing it, they are doing so with troubled minds and dirty lungs. Our fellow citizens are becoming increasingly aware that the problem of air pollution demands more attention than setting aside 1 week, during which we agonize about our contaminated atmosphere and hope for miraculous solutions. The public desires—and deserves—concerted action by this Congress. The public knows that our environment will continue to deteriorate as long as Congress coddles the polluters of the very air we breathe. Today, I am introducing the Air Pollution Abatement Act of 1969 which will make enforcement of stringent national standards the policy and practice of the United States.

Before I explain this bill, I want to go on record as recognizing the total problem of environmental pollution. Not only am I alarmed about the air we inhale, but also about the water which we drink and the ground which we till. Whatever the particular type of pollution, the end result is human pollution. It is man himself who pays for the contamination of his own life space. The Congress bears the responsibility of ridding this land of every environmental scourge.

But while I recognize the entire problem of environmental quality, I also realize that Congress must take specific action on concrete problems. While I will support all efforts to upgrade the quality of our environment, I also believe that Clean Air Week affords a unique and appropriate time to grapple with one aspect of that subject—air pollution.

This body knows that air pollution constitutes a bothersome problem. It has demonstrated such awareness in the enactment of the Clean Air Act of 1963 and the Air Quality Act of 1967. However, it is my earnest conviction that Congress must view air pollution as more than bothersome. We must attack air pollution as a public menace which merits our immediate action. Why is this so? Why must Congress stand up and tackle the airy menace? Because air pollution poses a serious threat to the lives and health of millions of Americans. The Department of Health, Education, and Welfare has stated:

> Analyses of numerous epidemological studies clearly indicate an association between air pollution . . . and health effects of varying severity. This association is most firm for the short-term air pollution episodes.
>
> The epidemological studies concerned with increased mortality also show increased morbidity. Again, increases in hospital admissions or emergency clinic visits, are most easily demonstrated in major urban areas.[1]

Stated simply: We pay for breathing bad air with our health—and perhaps our lives.

Air pollution also threatens to upset the ecological balance of the environment. For example, under certain conditions, direct sunlight can be reduced by one-third in summer to two-thirds in winter.[2] Thus air pollution robs us of the benefits and beauty of direct sunlight. Moreover, the presence of excessive amounts of carbon dioxide prevents plants from doing their usual job of absorbing carbon dioxide and producing oxygen.

Air pollution also increases the hazards and decreases the efficiency of transportation by reducing visibility. The presence of high concentrations of particulates can reduce visibility to as low as 5 miles[3] and thereby inhibit movement to and through polluted areas by both private carriers and those engaged in interstate and foreign commerce.

Not only does air pollution thus threaten us directly, it also costs millions of Americans millions of dollars each year—dollars which are spent on cleaning and maintainance costs. What an incredible waste of money. Surely it would make more sense to spend this money on controlling pollution instead of on eradicating its effects. It has been estimated that Metropolitan New York sacrifices $1 billion, yes, $1 billion, annually because of air pollution. That means that every man woman and child in New York City pays $70 a year so that others may poison the air.[4]

If I sound like an alarmist—in spite of the above facts—may I cite the distinguished opinion of a man who probably knows as much about environmental disruptions as anyone. Mr. David Gates, ecologist and director of the Missouri Botanical Gardens, warns that we may produce an earth populated by "half-starved, depressed billions gasping in air depleted of oxygen and laden with pollutants, thirsting for thickened, blighted water."[5] A reporter from New York

[5] "Saving the World the Ecologist's Way," Robert W. Stock. *New York Times Magazine*, October 5, 1969. (p. 33)

Times magazine recorded these impressions and statements as a result of an interview with Mr. Gates:

Yet a touch of nostalgia almost of despair, constantly intrudes upon his conversation. "It's so difficult to make people understand the seriousness of the threat," he says. "They don't realize how much we've lost already. They don't realize that we live in a closed system, that the air and water, the plants and animals, are being irreparably damaged and there are no replacements. And it's not just a matter of esthetics. When we lose a wildlife species of a plant, we lose a genetic stock that future generations might need desparately for food."

Just before we parted, I asked him if he thought the trend toward human oblivion would be halted. "I don't know," he replied. "It's very likely we won't be able to stem the momentum, but we have to try. We're definitely not going to make it if we persist in fighting major wars, throwing away our energies. Priorities—it always come back to that. We have to learn to care about what kind of environment we're going to live in. The question is, Will we learn in time?" [6]

Mr. Speaker, Mr. Gates is right. In spite of the awesome situation, we must try to enhance the quality of our environment. We must strive to rearrange our unbalanced priorities.

I believe that the passage of my bill would mark one stride toward these objectives.

The bill which I introduce today, the Air Pollution Abatement Act of 1969, does not attempt to deal with every aspect of air pollution. Rather, it seeks to deal primarily with stationary sources of pollution. I do not minimize the importance of pollution from vehicles. In fact, I am cosponsoring with my colleague, the gentleman from Washington (Mr. FOLEY), the Low-Emission Vehicle Act, which seeks to eliminate vehicular pollution. But if we can reduce drastically the amount of pollution from stationary sources, millions of Americans will reap substantial health and financial benefits.

I would like now to outline four salient provisions of this measure, the Air Pollution Abatement Act of 1969.

First, this act would authorize the establishment of national standards for the control of emissions which cause or contribute to air pollution. These standards are needed because the current regulations in most States and cities are too weak to fight the war against air pollution. The standards which the Secretary of Health, Education, and Welfare must establish according to this bill will safeguard all citizens of the United States, no matter where they live. This is not an attempt to pre-empt State or local enforcement. It is simply a recognition that in some areas ambient air quality standards are not adequate to protect public health, that in other areas adequate standards are not matched by adequate enforcement, and that no matter how good the standards and enforcement, it is not possible to wall good air in to one State and out of another.

Second, this act authorizes the Secretary to establish special standards to take effect when specified climatic conditions prevail which substantially increase the danger to human health from emissions into the atmosphere. In such situations the Secretary would have emergency shutdown powers. Such an authorization would enable us to protect urban areas which were threatened by air inversions or other unique atmospheric conditions.

A third provision of the bill would strengthen the enforcement provisions of the Clean Air Act. It would do so in two ways. First, any violator can be sued by either the U.S. attorney or an injured citizen and be forced to pay a penalty not less than $50 nor more than $2,000 for each violation. In the second place, the Secretary may issue cease-and-desist orders, which carry penalties from $1,000, and in some cases $10,000, for each day of violation. In at last giving the Secretary some meaningful, enforcement powers, the act leaves no simple escape hatches for offenders. Presently, violators of existing regulations pay only "slap-on-the-wrist" fines as low as $10. Recent advances in Pennsylvania offer some hope that State and local enforcement procedures may inprove. But the gravity of the problem does not allow us to wait for that to happen.

Finally, this bill includes a built-in safeguard for workers who might be adversely affected when their plants were shut down by cease-and-desist orders. Since the worker is not responsible for the pollution, he should not have to suffer for attempts to ameliorate the problem. Hence, this bill provides that workers who are adversely affected will be entitled to substantial unemployment allowances for up to 52 weeks, and sometimes longer, directly from the Federal Government. These allowances would insure that workers temporarily not working while air pollution control equipment is being installed, will not suffer.

In conclusion, Mr. Speaker, the bill which I am proposing today may not entirely solve the problem of air pollution; it will not miraculously rectify a corrupted atmosphere. However, it will put some teeth in the national antipollution effort. It will enable the people and their government to wage war on the enemy around us; namely, air pollution and those who are careless enough or unscrupulous enough to cause it. In so doing, Congress will have allowed all Americans "to breathe a lot easier" and prevented the slow death of all forms of life in an airy tomb.

The text of the bill follows:

H.R. 14484

A bill to amend the Clean Air Act to provide for the adoption of national standards governing emissions from stationary sources, to create a federal duty not to pollute the atmosphere, to provide additional public and private remedies for the abatement of air pollution, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Air Pollution Abatement Act of 1969."

SEC. 1. Section 101(a) of the Clean Air Act, as amended (42 U.S.C. 1857) is hereby amended by striking out "and" at the end of paragraph (3), by striking out the period at the end of paragraph (4), and inserting in lieu thereof "; and" and by adding at the end thereof the following:

"(5) That the emission of atmospheric pollutants in any area of the United States adversely affects interstate and foreign commerce by inhibiting movement to and through polluted areas; by imposing additional costs upon persons engaged in commerce or in the manufacture of goods destined for shipment in commerce; by causing air pollution in states and nations other than that in which the emission occurs; and, because of differing state and local regulations, by creating cost differentials for the operation of industry in various parts of the nation.".

SEC. 2. Title I of the Clean Air Act, as amended, is hereby amended by inserting after section 111 (42 U.S.C. 1857f) the following new sections:

"INJURIOUS EMISSIONS PROHIBITED

"SEC. 112. It shall be a violation of this Act for any person to cause or to permit the discharge, emission, or release into the atmosphere from any source whatever of odors or solid, liquid, or gaseous matter in such place, manner, or concentration as (1) to cause or significantly contribute to causing injury or damage to persons, to business, or to property; or (2) to endanger or significantly contribute to endangering the health, comfort, repose, safety, or welfare of the public; or (3) to constitute a violation of any State or local law, ordinance, regulation, or other provision respecting air pollution.

"EMISSION STANDARDS FOR STATIONARY SOURCES

"SEC. 113. (a) Within one year after the date of enactment of this Act, the Secretary shall, after reasonable notice and opportunity for interested parties to present their views, issue emission standards for all or designated emissions into the atmosphere from stationary sources. Such standards shall as a minimum ensure the elimination of health hazards and the upgrading of existing air quality. No standard shall allow any wastes determined by the Secretary to be amenable to treatment to be discharged into the atmosphere without an acceptable treatment or control.

"(b) Within one year after the date of enactment of this Act, the Secretary shall, after reasonable notice and opportunity for interested parties to present their views, issue special emission standards to apply when specified climatic conditions prevail which substantially increase the danger to human health from emissions into the atmosphere.

"(c) Standards set under this section shall take effect within one hundred eighty days from the date of issue. Standards shall be reviewed by the Secretary not less than once each year and shall be amended to take account of improved air pollution control technology and of increased knowledge of the effects of air pollution. Such amended standards shall take effect within one hundred eighty days from the date of issue.

"(d) It shall not be necessary to prove emissions in excess of the standards set pursuant to this section in order to establish a violation of section 112(1) or 112(2) of this Act, but such emission shall be prima facie evidence of such violation.

"REMEDIES

"SEC. 114. (a) Any person who causes or permits any emission in violation of section 112 or of standards set by the Secretary under section 113(a) shall forfeit and pay to the United States a civil penalty of not less than $50 nor more than $2000 for each violation. Each day on which such an emission is caused or permitted shall constitute a separate offense.

"(b) The penalties provided for in this section may be recovered in a civil suit in the name of the United States brought without regard to the amount in controversy, in any federal or State court in any district in

[6] *Ibid.*, p. 136.

which the alleged emission occurred or caused harm. If, after notice of probable violation to the State and political subdivision in which the probable violation is occurring, such State or political subdivision has not within twenty days indicated in writing to the United States Attorney for the district in which the violation is occurring an intention to file suit to restrain such violation under a law or ordinance of that State or political subdivision, or under this Act, it shall be the duty of such United States Attorney to file suit for the recovery of such forfeitures. If after thirty days notice by mail from any citizen injured by such emission, the United States Attorney does not institute a proceeding for the violation of sections 112(1), 112(2), or of standards set under section 313(a), any such citizen may upon notice to the United States Attorney do so on behalf of and in the name of the United States. When an injured citizen files suit on behalf of and in the name of the United States under the preceding sentence, such suit shall preclude additional separate suits by injured citizens, but the court shall permit the joinder of additional party plaintiffs, including the United States.

"(c) The United States or any injured citizen may sue for injunctive relief against any emission in violation of section 112 or of standards set by the Secretary under section 113(a). Such an action may be brought, without regard to the amount in controversy, in any federal or State court in any district in which the emission allegedly occurred or caused harm. The court shall specify a time for answer, not exceeding 20 days after service of the complaint. When such action is filed by the United States or an injured citizen, the defendant may be restrained from continuing such pollution pending hearing before the court upon an appropriate showing of irreparable harm. Upon default or answer the court shall immediately inquire into the facts and circumstances of the case and enter an appropriate order, which may include damages for injury and discomfort, costs, and reasonable attorneys' fees in favor of a successful plaintiff. In determining reasonable attorneys' fees, the court shall consider the time, effort and skill required to prepare the case as well as the amount recovered.

"(d)(1) If the Secretary, after reasonable notice and opportunity for a hearing, determines that any person is violating section 112 or standards set pursuant to section 113(a), he shall issue and cause to be served upon such person an order requiring him to cease and desist from continuing violation within such time as may be specified in the order, but in no event more than sixty days from the date of receipt of the original notice of hearing.

"(2) Any person required by an order of the Secretary to cease and desist from such violation may obtain judicial review of such order by filing a petition for review, within twenty days after service of such order, in the United States court of appeals for any circuit in which the violation is found to have occurred or caused harm. A copy of the petition shall forthwith be transmitted by the clerk of the court to the Secretary or to any officer designated by him for that purpose and to the Attorney General, and thereupon the Secretary shall certify and file in the court through the Attorney General the record of the proceedings upon which the order is based as provided in section 2112 of title 28, United States Code. Any information obtained in the course of investigations of violations of this Act may be used in pending or subsequent criminal prosecutions under title 18, United States Code.

"(3) Upon the filing of such petition, such court shall have power to affirm the order of the Secretary, or to set it aside in whole or in part temporarily or permanently, and to enforce such order to the extent that it is affirmed, and to issue such orders pendente lite as in its judgment are necessary to prevent injury to the public. The commencement of proceedings under this paragraph shall not operate as a stay of the Secretary's order.

"(4) No objection to the order of the Secretary shall be considered by the court unless such objection was urged before the Secretary or unless there were reasonable grounds for failure so to do. The findings of the Secretary as to the facts, if supported by substantial evidence on the record considered as a whole shall be conclusive, and the standards set by the Secretary shall be binding.

"(5) The judgment of the court affirming or setting aside, in the whole or in part, any order under this subsection shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of title 28, United States Code.

"(e)(1) If the Secretary finds that any person is violating standards set pursuant to section 113(b), he shall issue and cause to be served upon such person an order requiring him to cease and desist from continuing violation. This order shall be effective immediately upon receipt, and for a period of time thereafter not to exceed seventy-two hours. The offender shall be required to pay his employees at their regular scale of wages during the time that the order is in effect.

"(2) Any person required by an order of the Secretary issued pursuant to this subsection to cease and desist from a violation may obtain judicial review of such order by filing a petition for review pursuant to subsection (d) of this section. The filing of a petition for review under this paragraph shall not operate as a stay of the Secretary's order.

"(3) If the Court shall find after a full hearing of the facts, that the order of the Secretary was not warranted, such person shall be entitled to such damages as he has incurred in complying with the order.

"(f) Any person who violates an order issued pursuant to subsection (d) of this section shall forfeit and pay to the United States a civil penalty of $1,000 for each day of violation. Any person who violates an order issued pursuant to subsection (e) of this section shall forfeit and pay to the United States a civil penalty of $10,000 for each day of violation These penalties shall be enforced by the procedures prescribed in this section.

"(g)(1) The Secretary shall have the power to require by subpoena the attendance and testimony of witnesses, and the production of all books, papers, and documents relating to any matter which is the subject of a hearing authorized by this section. The attendance of witnesses, and the production of books, papers, and documents, may be required from any place in the United States at any designated place of hearing. On motion of the Secretary or of any party to a proceeding before the Secretary, any court of the United States within the jurisdiction of which an inquiry under this section is carried on may, in case of contumacy or refusal to obey a subpoena issued to any person, issue an order requiring such person to appear before the Secretary (and produce books, papers, or documents if so ordered) and give evidence touching the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof.

"(2) For purposes of enforcement of this section or of sections 112 or 113, officers or employees duly designated by the Secretary, upon presenting appropriate credentials and a written notice to the owner, operator, or agent in charge, are authorized (i) to enter, at reasonable times, any factory, warehouse, office, or other business or service establishment with respect to which there is reasonable ground to believe that it is causing, permitting, or otherwise responsible for discharges into air in violation of section 112 or of standards set under section 113 or that it is engaging in any act or practice which threatens such a discharge, and (ii) to inspect, at reasonable times and within reasonable limits and in a reasonable manner, such factory, warehouse, office, or other establishment, and all pertinent equipment, finished and unfinished materials, containers, and labeling therein, and all other things therein (including records, files, papers, and processes, controls and facilities) bearing on such discharges or on such act or practice. A separate notice shall be given for each such inspection, but a notice shall not be required for each entry made during the period covered by the inspection. Each such inspection shall be commenced and completed with reasonable promptness.

"SEC. 115. Nothing in this Act shall forbid the setting of more stringent standards for emissions or for air quality by any competent authority, or shall interfere with the enforcement of any other public or private remedies against air pollution. All remedies provided for in this Act are in addition to legal or equitable remedies now existing or which shall hereafter be enacted into law.

"EMPLOYEE ADJUSTMENT ASSISTANCE

"SEC. 116. (a) Payment of an unemployment allowance shall be made by the Secretary of Labor to an adversely affected worker subject to subsections (b) (c) and (d) of this section. Such payment shall be made upon a showing on the part of the worker that he was totally or partially deprived of wages due to the operation of subsection (d) of section 114 of this Act.

"(b) The unemployment allowance payable to an adversely affected worker for a week of unemployment shall be an amount equal to 65% of his average weekly wage or to 65 percentum of the average manufacturing wage, whichever is less, reduced by 50 percent of the amount of his remuneration for services performed during such week.

"(c) The amount of unemployment allowance payable to an adversely affected worker under subsection (a) of this section for any week shall be reduced by any amount of unemployment insurance which he has received or is seeking with respect to such week; but, if the appropriate State or federal agency finally determines that the worker was not entitled to unemployment insurance with respect to such week, the reduction shall not apply with respect to such week.

"(d) Payment of unemployment allowances shall not be made to an adversely affected worker for more than 52 weeks, except that, in accordance with regulations prescribed by the Secretary of Labor—

"(1) such payments may be made for not more than twenty-six additional weeks to an adversely affected worker to assist him to complete training approved by the Secretary of Labor, or

"(2) such payments shall be made for not more than thirteen additional weeks to an adversely affected worker who had reached his 60th birthday on or before the date of discontinuance of his wages.".

JIM ELDER, U.S. HEAVYWEIGHT PRIZEFIGHTER EXPRESSES OUTRAGE AND PROTEST AS TO USE OF CASSIUS CLAY AS COMMENTATOR IN BOXING CONTEST BETWEEN UNITED STATES AND SOVIET UNION

(Mr. THOMPSON of Georgia asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. THOMPSON of Georgia. Mr. Speaker, I take the floor today to commend Jim Elder, U.S. heavyweight prize-

fighter, a veteran of the war in Vietnam, and a participant in the amateur boxing contest between the United States and the Soviet Union being held at Las Vegas, Nev. Mr. Elder has issued a statement of outrage and protest against the network who has announced they will use as a commentator for these contests, Cassius Clay. Cassius Clay should not be the commentator for an event of this sort because of the overt disrespect he has shown to this Nation and its people and I, like Mr. Elder, consider this an affront to loyal Americans everywhere, although it will obviously receive much applause in some of the hippy circles. Maybe the American Broadcasting System feels that they need to appeal more to the hippies and yippies of America for support than they do loyal Americans, who, without fanfare and at great personal sacrifice, carry out the duties which citizenship in this great land entails.

The people of America are becoming fed up with those who will take the fruits and benefits of this great country and yet are unwilling to share in the responsibility for its continued existence. Cassius Clay, because of the unique position he holds within the sports world and the obvious impact this has on the American youth, has by his refusal to do his duty to his country and serve in the Armed Forces, as many other loyal American youth have done, demonstrated that he is not worthy of the confidence which many have placed in him.

Jim Elder points out that the conviction of Clay is still being appealed by Clay in an effort to attempt to evade through legal technicalities the responsibility of his act. Jim Elder says this is an affront to himself and other participants in this contest. I would like to add that this is an outrage against the American public and that, as an elected representative of the public and a member of the committee which has jurisdiction over the FCC, I have today written a letter of protest to the network involved and advised them that I consider their actions to be an affront to all veterans and loyal Americans and an obvious attempt to build the image of Cassius Clay at the expense of those who build this country through the sacrifices they make, even though they may not want to serve in the armed services; they know their duty and they do it, while Cassius Clay is only interested in the amount of money he can make with no thought of the duty he owes to this country.

FACT SHEET ON VIETNAM

(Mr. ADAIR asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ADAIR. Mr. Speaker, of late, critics of our policy in Vietnam have been saying that President Nixon's policy is no different than that of his predecessors. Nothing could be further from the truth. The White House recently issued a fact sheet on Vietnam refuting this allegation and I commend it to the attention of my colleagues:

FACT SHEET

THE SITUATION AS OF JANUARY 20

Military conditions

The number of U.S. troops to Vietnam was still increasing. (When the men on their way there on January 20 finally arrived, it reached an all-time high in February). We appeared still to be seeking a military solution.

Military operations were characterized by maximum military pressure on the enemy, through emphasis on offensive operations.

Progress in strengthening the South Vietnamese Army was slow; resources being devoted to this effort did not receive high priority.

Political conditions

We found only a general and vague set of proposals for political settlement of the war. While they called for "self-determination", they provided no specific program for achieving it.

Mutual withdrawal of forces was provided for under the Manila Declaration, which envisioned that the allied withdrawal would be completed within six months of the withdrawal of North Vietnamese forces and the subsiding of the level of violence.

THE SITUATION TODAY

Military conditions

We have instituted a Vietnamization program which envisages South Vietnamese responsibility for all aspects of the war—coping with both Viet Cong insurgency and regular North Vietnamese forces—even if we cannot make progress in the political negotiations.

We have offered the withdrawal of U.S. and Allied forces over a 12-month period, if North Vietnamese forces also withdraw.

We have declared that we would retain no military bases.

We have begun to reduce our presence in South Vietnam by setting in motion the replacement of over 60,000 U.S. troops (12% of total troops or 20% of combat troops.) This is a meaningful act of de-escalation.

We have emphasized to our military commanders the requirement that losses be held to an absolute minimum, consistent with their mission to protect allied forces and the civilian population. (Casualties in the first nine months of the Administration are one-third less than during the comparable period last year.)

Political conditions

For the first time, concrete and comprehensive political proposals for settlement of the war have been made:

We have proposed free elections organized by Joint Commissions under international supervision.

We and the Government of South Vietnam have announced that we are prepared to accept any political outcome which is arrived at through free elections.

We have offered to negotiate supervised ceasefires under international supervision to facilitate the process of withdrawal.

We have expressed willingness to discuss the 10-point program of the other side, together with plans put forward by the other parties.

In short, the only item which has not been declared negotiable is the right of the people of South Vietnam to determine their future, free of outside interference.

THE REAL ENEMY IS THE INTERNATIONAL COMMUNIST APPARATUS OPERATED FROM MOSCOW

(Mr. RARICK asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. RARICK. Mr. Speaker, I would like to comment on two items in the news this week.

The Soviet Union announces a military aid grant in excess of $1 billion to its puppet government in Hanoi. Our business-as-usual friends around the world have hastened to condone this war subsidy.

France pledges friendship and cooperation to Moscow; Sweden tries to explain that its aid to Hanoi is not anti-American; India wants to improve relations with Hanoi if it can find a formula which will not diminish the flow of U.S. dollars to Calcutta.

The second significant development began in this Chamber last week when the Export Control Act was extended.

We missed a golden chance for peace by helping end the war in Vietnam when we refused to prevent Americans from trading with nations aiding the enemy. We extended a law which permits fratricide for profit and even hides the identity of those unscrupulous American merchants who apply for this type of Red trade permit.

The other body has now amended the Export Control Act to make such Red trade far easier than it is now, by reducing from 1,300 to only 200 the categories of goods considered strategic and by seeking to liberalize such trade without even the formality of export permits.

All Americans must understand that the real enemy is not the backward peasants of an insignificant puppet state but rather the international Communist apparatus operated from Moscow.

Russian-made armament is killing our men. To the extent that American exports behind the Iron Curtain relieves the pressure on the Soviet production system, Russia is free to continue to produce weapons for use by Hanoi. It is insanity for us to aid the enemy with our dollars and our national production machinery, while we ask our young men to give their lives in a no-win war which we pretend is to contain Communist aggression.

Mr. Speaker, Members of this body should recognize what other Americans are discovering—that many of the same people who work diligently to support international communism in trade and propaganda measures are the very ones who cry loudest for immediate peace—peace at any price—in Vietnam, as long as that price does not include forgoing the profit of Red trade.

I insert several news clippings following my remarks:

[From the Washington Star, Oct. 21, 1969]

RED ROLE IN VIETNAM NEEDS AIRING

(By David Lawrence)

How many Americans know who are the real enemies of the United States in the Vietnam war? Two governments have helped the North Vietnamese to kill or wound tens of thousands of Americans in the last five years. So, when an enemy boastfully and officially acknowledges the military assistance it is giving the Hanoi government, the item might at least be expected to make news for our front pages.

This correspondent read many newspapers last Sunday morning and nowhere found printed a dispatch distributed by the United

Press International wire on Saturday night which read as follows:

"MOSCOW—A North Vietnamese delegation led by Premier Pham Van Dong left Moscow Saturday to return to Hanoi.

"Soviet Premier Alexei Kosygin and other officials saw off the North Vietnamese at the railway station. The North Vietnamese will visit Volgograd, the former Stalingrad, en route to Hanoi.

"The delegation arrived last Monday and during its stay signed a new agreement for Soviet military and economic aid to North Vietnam for the coming year."

Reuters News Service sent over its wires in this country yesterday afternoon the following dispatch:

"HONG KONG—Russia declared its readiness to give all necessary assistance to the Vietnamese Communists until they achieve complete victory in South Vietnam, a joint Soviet North Vietnamese communique released today said.

"The communique issued at the end of a one-week visit to Russia by a North Vietnamese delegation led by Premier Pham Van Dong said . . . Russia fully supported conditions put forward by the Vietnamese communists for a settlement and demanded the U.S. put an end to its aggression and withdraw its troops from South Vietnam 'completely and unconditionally.' "

Developments of this kind have, of course, been reported in the press hitherto when similar action was taken. But somehow the information has never been given attention inside the United States, especially by dissenters who have been engaging in antiwar "demonstrations" and are supposed to be readers of the news in the press.

Yesterday morning, some papers did print on the front page an Associated Press dispatch on the subject which said that, according to U.S. government sources, the level of Soviet arms aid to Hanoi has dropped considerably in recent months but that this does not mean "any abandonment of Moscow's policy of large-scale material support for Hanoi's war effort."

The North Vietnamese, of course, need less and less antiaircraft equipment now because the United States has halted the bombing of the North. Also, the ground war in the South has been slowed down. The Associated Press said further:

"According to estimates from U.S. sources, total Soviet aid to North Vietnam reached a peak of about $700 million in 1967, of which about $500 million was military and $200 million economic. In 1968, the year in which U.S. bombing of the North was cut back in April and halted entirely in November, Soviet arms aid is estimated to have dropped to around $300 million."

But while military aid is being cut somewhat, economic aid is climbing. Red China is estimated to be continuing its assistance at the rate of approximately $200 million a year, more than half of which is in military items, primarily small arms and ammunition. Communist East Europe has been providing about $145 million of aid annually to North Vietnam.

Why hasn't this information been emphasized throughout the country? Why aren't the American people told how much the Soviets and the Red Chinese have done to bring about casualties in South Vietnam year after year? Do the critics in Congress approve of a continuance of diplomatic relations with any government that is actively helping the enemy?

What has the Senate Foreign Relations Committee done about this problem? Committee members snipe at their own government for trying to protect American troops in Vietnam by employing certain forces in Laos, but criticism of Russian and Red Chinese intrigue in Asia is being omitted. An open debate on Communist participation in the Vietnam war would be more constructive than the so-called "Moratorium" speeches that have been made in recent days inside and outside of Congress.

SOVIETS SIGN NEW AID PACT WITH HANOI

Moscow, October 15.—The Soviet Union will supply additional military and economic aid to Hanoi under agreements signed here today by the Soviet and North Vietnamese premiers, Tass reported.

The official Soviet news agency did not disclose the amount of the new Soviet aid. Previous estimates by Washington have put it at more than a billion dollars a year.

Tass said the new aid agreements were signed by North Vietnamese Premier Pham Van Dong and Soviet Premier Kosygin. Dong arrived here for talks Monday after attending 20th anniversary celebrations of the Communist takeover in East Germany.

Tass said the two premiers signed agreements on Soviet aid and "the granting of new long-term credits, as well as documents on certain other questions of Soviet-Vietnamese cooperation."

SENATE VOTES TO EASE TRADE WITH RED BLOC

Reversing a 20-year-old policy, the Senate voted 49 to 24 yesterday to liberalize trade with the Soviet Union and its allies.

Over the Nixon administration's firm opposition, it approved a bill cutting from 1,300 to 200 the number of categories of goods considered strategic. American companies are barred from selling strategic goods to Russia and East European countries.

The administration backed a bill, passed by the House, which would have merely extended for another two years the 20-year-old Export Control Act.

An attempt by (blank) to substitute the House measure for the more liberal Senate version was defeated, 44 to 34.

The legislation now goes to a conference committee of House and Senate members which will seek to reconcile the different bills.

(Blank) cited these examples of goods for which an export license was required under the old law before they could be sold to the Soviets—disinfectants, cement, vaccine, yellow corn, textile finishing agents, fabrics, herbicides and insecticides. Requiring a license for such sales, he said, carries the "inherent implication that such sales are somehow questionable if not downright unpatriotic."

The Senate action would limit the "strategic goods" list to those items having a direct military use.

(Blank) rejecting the administration policy, argued that it was self-defeating for the United States to refuse to sell to the Communists goods that every other Western nation sells to them.

"Other Western nations think it incredible that we're letting them have all this business," (Blank) said.

But (Blank) called the Senate measure, sponsored by (Blank and Blank) "a menace to national security and an unwarranted affront to the President."

The bill would take two important steps toward easing present curbs on East-West trade:

It would eliminate the section that bans such shipments if they contribute to the economic potential of the importing country.

It would lessen the government's power to prohibit shipments contributing to the military potential of the recipient if a similar item can be obtained by the Communist nation elsewhere.

Sponsors of the bill said, however, that the President would retain full power to bar items of military or strategic significance, goods in short supply, or shipments that might conflict with U.S. foreign policy objectives.

SOVIETS TRIM ARMS AID TO NORTH VIETNAM

(By Lewis Gulick)

The level of Soviet arms aid to Hanoi has dropped considerably in recent months, apparently because of the end of the air war against North Vietnam.

In reporting the downturn in Soviet military shipments, to a level perhaps only half of the peak flow in 1967, U.S. government sources did not see any abandonment of Moscow's policy of large-scale material support for Hanoi's war effort.

The Soviets still are supplying large amounts of petroleum, weapons and ammunition, trucks and transportation equipment, communications and other items used by North Vietnamese forces, the sources said. The Kremlin announced last week a new agreement with Hanoi for further arms and economic assistance. (The terms of the agreement have not been disclosed.)

But North Vietnam no longer needs the quantities of expansive surface-to-air missiles (SAMS), sophisticated radar gear, antiaircraft guns and jet fuel, or replacements for bombed items. Also, the ground war in the South has slowed down.

According to estimates from U.S. sources, total Soviet aid to North Vietnam reached a peak of about $700 million in 1967, of which about $500 million was military and $200 million economic. In 1968, the year in which U.S. bombing of the North was cut back in April and halted entirely in November, Soviet arms aid is estimated to have dropped to around $300 million.

In 1969, it is estimated, Moscow's military assistance to Hanoi will decline further at about the same rate. Thus, the current flow, as measured in dollar value, could be down to one-half the 1967 peak.

Meanwhile, Soviet economic aid to North Vietnam is reported to have climbed some, to perhaps $230 million in 1968 and $250 million this year, and to have shifted in line with North Vietnam's changing economic picture.

Moscow's economic help is believed now to include less food than before, but more material designed to rebuild the North Vietnamese economy. Items include plant equipment, machine tools and fertilizer.

Hanoi's aid from her other giant Communist backer, Red China, is estimated to be continuing at a rate of around $200 million a year. Somewhat more than half of Peking's assistance is said to be in military items, largely small arms and ammunition. She has also sent in much food.

Communist East Europe is another provider for North Vietnam, but on a lesser scale. U.S. sources figure East European shipments to Hanoi last year totaled about $145 million.

FRANCE PLEDGES AMITY TO SOVIET

Moscow.—French Foreign Minister Maurice Schumann arrived yesterday for a five-day official visit and pledged that France would continue its policy of close friendship with the Soviet Union.

Schumann is the first French minister to visit Russia since Georges Pompidou succeeded Charles de Gaulle as French president in June. His visit to Moscow follows one to Washington, and he seemed to confirm that Pompidou would follow up his scheduled U.S. trip in February with one to the Soviet Union.

Schumann said his own visit "certainly will have less importance than others which will follow" and stressed that France wanted "continuation" of France's policy of cooperation with the Soviet Union inaugurated by de Gaulle's visit in 1966.

Schumann is to preside Monday at the opening session of meeting of the Franco-

Soviet Grand Commission on bilateral cooperation and will be joined by Finance Minister Valery Giscard d'Estaing.

SWEDEN INSISTS RELIEF IS AIM OF HANOI AID

(By Henry S. Bradsher)

After arousing a U.S. threat of economic sanctions in retaliation for Swedish aid to Hanoi, Sweden is now emphasizing its intention to provide "humanitarian" aid to both Vietnams.

That means medical supplies, hospital equipment and similar aid through the Red Cross so long as fighting continues in Vietnam, with reconstruction aid being sent to North and South after the war ends.

The explanations were given by the Swedish foreign minister, Torsten Nilsson, and a delegation of the Swedish parliament's foreign relations committee. Both have been visiting the United States.

Nilsson aroused the threat by remarks on aid to North Vietnam made at a conference of his governing Social Democratic party. The explanations have been numerous since then.

Olle Dahlen, a Liberal party spokesman in the parliamentary delegation, told reporters yesterday that a decision of parliament May 21 banned reconstruction aid until after the war ended. Some humanitarian aid already has been given to both sides through the Red Cross, he said.

Nilsson met in New York Monday with Secretary of State William P. Rogers to discuss a wide range of subjects. He stressed the humanitarian nature of current aid.

There was a hint in the attitude of U.S. officials now that such aid would not force implementation of a restriction on the U.S. Export-Import Bank. The bank is barred from providing credits to countries sending material—any material, humanitarian or otherwise—to a country engaged in hostilities with the United States.

The Scandinavian airline SAS, of which Sweden is a partner, has been expected to seek big new Export-Import Bank credits to buy American jet passenger planes.

An official decision on the credit question is still in the future, however.

Reporting on the Rogers-Nilsson talks, a State Department spokesman said the Nixon administration has not yet decided whom to send as U.S. ambassador to Sweden. The post has been vacant for a year.

Swedes believe it is vacant as a sign of displeasure with Sweden's establishment of diplomatic relations with Hanoi. The State Department declines to comment officially on this.

The leader of the parliamentary delegation, Arne Geijer, said he believed it was wrong to keep the post vacant.

Geijer is both chairman of the foreign relations committee and head of Sweden's trade unions organization. He held talks here with President George Meany of the AFL–CIO.

INDIA'S TREND TOWARD HANOI DISTURBS UNITED STATES

(By Inder Malhotra)

CALCUTTA.—A slow, subtle but considered change in India's policy toward Hanoi is creating fresh strain in India's relations with America, which for quite some time have been remarkably free from strain.

Americans have reacted with unusual sharpness to the Indian decision, still at a stage of thinking aloud, to upgrade the Indian Consulate General in Hanoi to an embassy, thereby giving full diplomatic recognition to North Vietnam, New Delhi is also unwilling to accord similar recognition to the American-backed government of South Vietnam because of its instability.

On the contrary, while refusing to recognize the provisional government set up by the National Liberation Front, India wants to maintain some contacts with the Vietcong.

WASHINGTON PUT OUT

There are reports that, in response, Washington has issued thinly veiled threats that the change in Indian policy toward Hanoi could mean termination of American aid to India.

There is an American law under which the President is authorized, though by no means bound, to cancel and to any country trading or consorting with Hanoi or Havana.

It would be wrong to say that the reported American warning has not caused any concern in the Indian capital, but its immediate result has been to strengthen rather than weaken New Delhi's resolve to improve relations with North Vietnam.

The process of improving relations with North Vietnam began with Foreign Minister Dinesh Singh's visit to Hanoi for Ho Chi Minh's funeral. It is intended to carry it further quickly by restoring trade and cultural contacts between the two countries.

RADICAL CHANGE

This is a far cry from only three years ago when the Indian need for American surplus wheat was desperate and Americans made wheat supplies conditional on an embargo on trade with Cuba and North Vietnam. At the time, the Indian government said it did not want to trade with Hanoi for reasons of its own, not because of American pressure not to do so. With Cuba, there was never any trade anyway.

New Delhi's stand may have been partially influenced by Hanoi's action at the time. Although Ho Chi Minh was a great friend of Nehru and enjoyed high prestige in India, relations between India and North Vietnam soured after Hanoi sided with China during the Chinese invasion of India in 1962.

Some thinkers in the Indian Foreign Office as well as outside have been advocating closer relations with Hanoi for some time, but the government has only now taken note of the demand.

IGNORING IDEOLOGY

The government recognizes that India ought to maintain friendly relations with all nations geopolitically important to it, regardless of ideology. Hence, the decision to befriend the Shah of Iran despite his pronounced friendship for Pakistan and to open legislation in North and South Korea.

North Vietnam's importance is seen to be ever greater. It is on China's periphery. After the American withdrawal from Asia, North Vietnam's prestige will be high. Through a friendly policy it can perhaps be induced to be more nationalist than communist. Those who attempt to see far into the future also think that a post-Ho Vietnam may someday be a bridge between India and a post-Mao China.

[From the Washington Star, Oct. 22, 1969]

QUAKERS REQUESTS FOR PRISONERS LIST REJECTED BY HANOI

PHILADELPHIA.—A Quaker sociologist on a mission to North Vietnam to deliver medical supplies and find out the names of American prisoners of war says he asked Hanoi four times for a list of American servicemen but the requests were denied.

Dr. Joseph Elder said yesterday he delivered $25,000 worth of medical equipment, including tools for open heart surgery, to the North Vietnamese last week. The 39-year-old University of Wisconsin professor spoke at a press conference at the American Friends Service Committee.

Elder said he took 250 letters and a shipment of vitamins for prisoners from American wives who believe their husbands are Communist prisoners.

Elder said the U.S. government had granted his license to buy surgical supplies abroad and had validated his passport for travel to North Vietnam.

HANOI AIDE IN PEKING

TOKYO.—Premier Pham Van Dong of North Vietnam arrived in Peking yesterday, the New China news agency said today. The Hanoi delegation arrived from Moscow.

UNITED NATIONS DAY

The SPEAKER pro tempore. Under previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 60 minutes.

(Mr. BROWN of California asked and was given permission to revise and extend his remarks.)

Mr. BROWN of California. Mr. Speaker, on October 24, 1945, the United Nations Charter entered into effect.

Two years later on October 31, 1947, the General Assembly of the international organization unanimously adopted a resolution declaring October 24 from this day forth be officially called United Nations Day and be devoted to inform the peoples of the world of the aims and achievements of the organization and to obtaining support for its activities.

Member governments were invited to cooperate in the anniversary of its observance. In the United States the President annually issues a proclamation designating October 24 as United Nations Day and suggesting appropriate methods for observing the anniversary.

In Proclamation 3924 issued on October 15, 1969, President Nixon urged, and I quote,

"Citizens of this nation to observe that day by means of community programs which will contribute to a realistic understanding of the United Nations and its associated organizations."

He called upon Federal, State, and local officials to encourage citizen groups and communications media to engage in appropriate observance in cooperation with the United Nations Association of the United States and other interested organizations.

Mr. Speaker, I have taken this special order today to call attention to the fact that tomorrow is United Nations Day and also to call attention to a House concurrent resolution which I previously introduced on September 18, 1969, and which I reintroduced today with 30 cosponsors which calls upon the United Nations to declare this day as a permanent international holiday.

Mr. Speaker, I ask unanimous consent that the full text of my resolution be printed in the RECORD together with a list of the 30 cosponsors.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

H. CON. RES. 367

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that October 24, United Nations Day, should be a permanent international holiday.

Accordingly, the Congress recommends to the United States Representative to the United Nations that he propose to the General Assembly the declaration of this day as a permanent international holiday.

Mr. BROWN of California. Mr. Speaker, included herewith is a list of the cosponsors of the resolution:

Joseph P. Addabbo of New York.
Jonathan B. Bingham of New York.
Phillip Burton of California.
Shirley Chisholm of New York.
Jeffery Cohelan of California.
Silvio Conte of Massachusetts.
John Conyers, Jr., of Michigan.
Emilio Daddario of Connecticut.
John Dellenback of Oregon.
Bob Eckhardt of Texas.
Don Edwards of California.
Leonard Farbstein of New York.
William Ford of Michigan.
Donald Fraser of Minnesota.
Gilbert Gude of Maryland.
Seymour Halpern of New York.
Julia Hansen of Washington.
Frank Horton of New York.
James Howard of New Jersey.
Robert Kastenmeier of Wisconsin.
Robert Leggett of California.
Spark Matsunaga of Hawaii.
Abner Mikva of Illinois.
Patsy Mink of Hawaii.
Charles Mosher of Ohio.
Bertram Podell of New York.
Edward Roybal of California.
Benjamin Rosenthal of New York.
William Ryan of New York.
Louis Stokes of Ohio.

Mr. Speaker, the idea of having October 24 proclaimed as an international holiday is not an idea which I conceived of myself. I would like to pay tribute to the originator of this idea, Miss Dorothy Schneider of Santa Barbara, Calif., who is an active and long-time member of the Santa Barbara chapter of the United Nations Association of the United States.

Miss Schneider over the last several years has communicated with a large number of leading citizens of this country and of other countries suggesting that the idea of designating October 24 as an international holiday be acted upon.

She has received truly a tremendous number of favorable responses to her voluminous correspondence. These favorable replies include many Members of Congress, the Secretary General of the United Nations, other officials of the United Nations, and a large body of interested citizens throughout this country. The idea of such an international holiday has been transmitted to our own Department of State by our own Ambassador to the United Nations, and is receiving consideration by the Department of State at the present time.

I would like to indicate my own very strong support for this proposal originated by Miss Schneider and supported by so many other distinguished citizens as one way in which we may indicate our own continued dedication to the ideals which were originally the basis for the development of the United Nations charter. I think that this is a method by which we can all in this country and in other countries of the world pay tribute to the strong, universal feeling that we are hoping to move toward a world of peace, one in which there will be a structure of international law strong enough to resolve the many issues which create conflict in the world today.

In my opinion, there are many other ways in which our country could give support to these ideas, and this suggestion of designating an international holiday is only one of those many ways, one which I would say has much merit from the standpoint that it is not an idea which would cost a great deal of money. It is an idea which would focus the attention of people all over the world on the contribution of the United Nations and, hopefully, upon the needs for strengthening the United Nations in the role which it has played.

Mr. GUDE. Mr. Speaker, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from Maryland.

Mr. GUDE. I thank the gentleman for yielding, and would like to commend him for his leadership in sponsoring this resolution, which I am pleased to cosponsor. I believe that the need for an effective international organization devoted to the ends of peace has never been clearer. The tension and armed conflict in much of the world are evidence that the United Nations has not been able to accomplish all that its founders hoped, and United Nations Day is a fitting reminder that we need to renew our efforts to strengthen the United Nations as an instrument of peace.

It is appropriate also on this occasion to make special note that the United Nations provides a world forum where we can urge the community of nations to live up to mankind's best standards for human and national conduct. I believe it is time the United States went on record as supporting these standards worldwide by ratifying the Conventions on Genocide, Abolition of Forced Labor, Political Rights of Women, and Freedom of Association and the Right to Organize. It is a continuing reproach to us all that no action has been taken to support these conventions abroad when we have long been committed to their implementation at home. I am therefore taking this opportunity to reintroduce a resolution expressing the sense of the House of Representatives that the United States ratify these fundamental principles of good conduct in the world community.

Mr. BROWN of California. I thank the gentleman from Maryland for his contribution.

I yield to the gentleman from Wisconsin.

Mr. KASTENMEIER. Mr. Speaker, I thank the gentleman for yielding.

I take this time to commend the gentleman from California for his leadership in this connection and also the gentleman from Maryland for joining with the gentleman from California in sponsoring this proposal that United Nations Day be made a permanent holiday.

Further, in other respects I associate myself with the remarks of the gentleman from California and suggest too that today there is a problem of maintaining the International Court of Justice.

Mr. Speaker, United Nations Day, 1969, comes at a time when it is all too easy to catalog the failures and shortcomings of the U.N. and to denigrate its role in influencing major world events.

On the other hand, there is ample evidence that some of the unspectacular accomplishments of the U.N. have made the world a bit safer. It is also useful to recall that the U.N. still provides a common meeting ground for the most implacable of foes. When I hear criticism of the U.N. because of its apparent impotence, I can draw comfort from the fact that it has been in business as long as it has, and that, despite its obvious defects, has managed to remain a going concern—although it is not always clear where it is going.

If the U.N. is to be more relevant in situations which threaten peace, our own country will have to provide much of the initiative in adapting the U.N. to the needs of the next decade. Our motivation need not be altruistic, but admittedly selfish. If the United States is to avoid the role of world policeman, it is almost axiomatic that the peacekeeping functions of the U.N. must be revitalized. If the financial burden and responsibility for developmental aid is to be spread more evenly, the U.N. is the logical vehicle for this task.

It is my sincere hope that our Government is now preparing for a significant effort in the coming year to reshape the U.N. in order to make it more relevant to changing times. However, before we can presume to take the lead in the renovation process, I think that it is necessary to first show by our actions, rather than by sweeping rhetoric, that the present administration is firmly committed to a growing role for the U.N. in our foreign policies.

There are two small pieces of unfinished business which should be taken care of without delay. I believe that the administration should publicly announce its intention to move ahead with repeal of the Connally amendment and should also seek to improve our anemic average in ratifying the U.N.'s human rights Conventions.

Mr. Speaker, to date, I am unaware of the public enunciation by the present administration of its support for repeal of the Connally reservation. This reservation restricts our Nation's acceptance of the jurisdiction of the International Court of Justice in disputes with other nations regarding "matters which are essentially within the domestic jurisdiction of the United States as determined by the United States." This self-judging aspect of our acceptance of jurisdiction has created understandable doubt in the international community of the good faith of our declared intention to accept the jurisdiction of the Court.

It is relevant to point out that most nations which have accepted the Court's statutory jurisdiction have done so without similar reservation. On a more practical plane, it is also apparent that the vital interests of the United States are protected regardless of any action the Court might take because of the U.S. veto power and the charter prohibition against U.N. intervention in matters essentially within the domestic jurisdiction of any State.

Before we can take part in the anticipated efforts to seek ways to expand the role of the Court, which, incidentally, has only one case remaining on its docket, and is in real danger of becoming moribund, we should make it crystal clear that we have enough faith in the Court's integrity and relevance to relinquish our right to determine when it

should have jurisdiction. Imagine the state of justice in any society if one side of a dispute could determine whether he wishes to be judged for his action. The rule of law in international affairs is certainly not advanced by the poor example being set by the most powerful nation in the world.

Our sorry record with regard to ratification of the U.N.'s human rights conventions also stands out like a sore thumb. Out of the nine conventions which the General Assembly invited all member states to ratify by 1968, we have ratified only one, and this one dealt with slavery. Speak about being cautious. It is a particularly sad commentary that the Senate has failed to ratify the Convention on Genocide which would commit us as a nation to the prevention and abolition of genocide. Equally disappointing is our failure to accept the Convention on Political Rights of Women, and the Convention on Forced Labor which prohibits compulsory labor for the purpose of political coercion or punishment.

On September 18 of this year, President Nixon addressed the United Nations General Assembly. In restating our international commitment, the President stated:

> The more closely the world community adheres to a single standard in judging international behavior, the less likely the standard is to be violated.

But this, and other praiseworthy declarations, were not accompanied by any promises of concrete action by our country. While the two preceding administrations have gone publicly on record for repeal of the Connally amendment and previous Presidents have sought Senate ratification of human rights conventions, we have no indication yet as to where President Nixon stands on these two issues.

It is important to note that our adherence to the conventions would neither detract from, nor enhance, for that matter, the human rights already enjoyed by American citizens. On the other hand, U.S. adherence would lend weight to efforts for the achievement of human rights throughout the world. This would be a desirable goal both from a humanitarian viewpoint as well as an essential, long-range step to establish the proper conditions for world peace.

I fully realize that the two items I have raised today are not terribly crucial and not directly connected with the more burning issues facing our Nation or the U.N. at present. But, these are matters which are meaningful to those of us who can appreciate the smallest steps in the direction of world order and who, by now, do not expect giant strides along this path.

The stature of our Nation at the U.N. would be raised just a bit if we made the small effort required to demonstrate our faith in the U.N.'s promulgations on human rights and in its Court.

(Mr. KASTENMEIER asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. BROWN of California. Mr. Speaker, at this point in the RECORD I include with my remarks a series of approximately 35 letters endorsing the idea of an international holiday on United Nations Day. These letters are from various distinguished personages:

THE SECRETARY-GENERAL,
October 25, 1968.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Mr. Hoffman passed on to me your letter dated 12 October. I think it is an excellent suggestion that United Nations Day, 24 October, should be proclaimed an international holiday and observed as such in all Member countries.

I hope that some Member Government will some day take the initiative to put this proposal before the General Assembly and have it adopted.

I am also grateful to you for your good wishes and kind sentiments.

Yours sincerely,

U THANT.

UNITED NATIONS,
New York, February 20, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for your letter of 12 February and enclosures concerning your proposal that United Nations Day be proclaimed an international holiday. It is a very interesting idea and I wish you well with it.

Yours sincerely,

RALPH J. BUNCHE,
Under-Secretary-General.

PERMANENT MISSION OF AFGHANISTAN TO THE UNITED NATIONS,
August 25, 1969.

Miss DOROTHY SCHNEIDER,
United Nations Association of the United States of America, Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Further to our letter dated July 25, 1969, in acknowledgement of your letter dated July 23, 1969, regarding your proposal to proclaim United Nations Day an international holiday.

I wish to inform you that the Government of Afghanistan has decided to support your proposal, and will therefore lend its support whenever this proposal is considered in the United Nations.

Sincerely yours,

ARDUR-RAHMAN PAZHWAK,
Permanent Representative.

UNITED NATIONS INSTITUTE FOR TRAINING AND RESEARCH—UNITAR,
New York, May 6, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: I thank you for sending me a copy of your correspondence with the United Nations Secretary-General concerning your proposal for a permanent United Nations Day international holiday. I think the proposal is an excellent one and I am glad to note that the United States Mission is taking the the initiative to bring it to the notice of the Committee dealing with the celebration of the Twenty-fifth Anniversary of the United Nations. I simply cannot imagine anybody dissenting from the proposal.

Sincerely yours,

S. O. ADEBO.

PERMANENT MISSION OF GHANA TO THE UNITED NATIONS,
New York, N.Y., June 11, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MADAM: Thank you for your letter of May 31, 1969 forwarding correspondence with the Secretary-General of the United Nations on your proposal for a United Nations International Holiday.

Such expressions of interest and faith in the United Nations give encouragement to all who are dedicated to the task of making the United Nations an effective instrument for the maintenance of world peace and order. I find your idea of an international United Nations Holiday a fitting recognition of what the United Nations has achieved for mankind in the sphere of peace and co-existence.

The Preparatory Committee for the celebration of the 25th Anniversary of the United Nations, of which I am Chairman, has been concerned with the planning of an appropriate progamme for the occasion, and I am glad the American delegation is looking into the possibility of introducing your proposal there. I would be happy to promote interest in the idea.

Yours faithfully,

R. M. AKWEI,
Ambassador, Permanent Representative.

U.S. REPRESENTATIVE TO THE UNITED NATIONS,
March 11, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for bringing your proposal to proclaim United Nations Day a permanent international holiday to my attention. Congressman Teague and Congressman Edwards have also forwarded your letters to me.

Your expression of support for the United Nations is most encouraging.

I have brought your proposal to the attention of the Department of State. At this time, your suggestion is under consideration for possible inclusion in our proposals for the United Nations Twenty-Fifth Anniversary celebration. You will be kept informed of any decisions.

With best wishes.

Sincerely yours,

CHARLES W. YOST.

U.S. MISSION TO THE UNITED NATIONS,
New York, N.Y., September 10, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for your letter of August 30 enclosing copies of responses you have received regarding your proposal that UN Day be proclaimed a permanent international holiday. You have a most impressive list of supporters and we appreciate your bringing these letters to our attention.

As Ambassador Yost wrote to you at an earlier date, we brought your proposal to the attention of the State Department and we have been in touch with the Department on this matter since that time. We understand that Mr. Fred Blachly has informed you that the Department feels your proposal should first be submitted as a bill in Congress. Until there is some indication that the United States will declare United Nations Day an official holiday in this country, we are not in a position to make any recommendations of this nature to the United Nations.

We hope you understand our position.

Sincerely,

JOHN MCH. STUART, Jr.,
Senior Adviser, Public Affairs.

SUPREME COURT OF THE UNITED STATES,
Washington, D.C., February 25, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR DOROTHY: How nice to receive your letter of February 22. It was fifteen years ago that I saw you in Marrakech, and I remember the interesting visit that we had.

I am all for making October 24th United Nations Day, and you can pass that word along to U Thant or any others who may be promoting the cause.

I have been to Santa Barbara several times, where I see you are in residence. I am Chairman of the Board of the Center for the Study

of Democratic Institutions, and I see that some of the people you have on your sponsoring list for UN Day are Center people, so you must be well acquainted with our work there.

It would be nice to see you any time you are East.

Yours faithfully,

W. O. DOUGLAS.

U.S. SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
Washington, D.C., February 18, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for your letter of February 15, 1969, enclosing a copy of your letter to the Secretary General of the United Nations, Honorable U Thant, regarding the proposal that a United Nations day be proclaimed an international holiday.

I think this suggestion has considerable merit, Miss Schneider, and I would expect to support it in the Senate.

With every good wish, I am

Sincerely,

GEORGE MCGOVERN.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 26, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for your recent letter and for the materials you enclosed concerning your proposal that United Nations Day be proclaimed an international holiday.

I appreciate having your views on this subject and commend your basic idea that people should be more immediately aware of the brotherhood of man.

With kind regards.

ROBERT W. KASTENMEIER,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 24, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Your proposal certainly has merit.

I hope greater recognition of the United Nations Day can be promoted.

Best wishes.

Sincerely,

DONALD M. FRASER.

MEMBERS OF CONGRESS FOR PEACE THROUGH LAW,
Washington, D.C., February 27, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Many thanks for calling to my attention your efforts to establish an international United Nations Day. This is a splendid idea which I will bring to the attention of my MCPL colleagues.

Sincerely,

F. BRADFORD MORSE,
Chairman.

U.S. SENATE,
COMMITTEE ON COMMERCE,
Washington, D.C., February 18, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for your recent letter requesting United Nations Day, October 24, be proclaimed an international holiday. Your request is excellent and would well serve to unite Member countries in a better spirit of understanding the words "United Nations"; therefore, you may be sure I will give your proposal my full consideration and attention.

Sincerely,

VANCE HARTKE,
U.S. Senator.

OFFICE OF THE PRIME MINISTER,
Ottawa, May 12, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: On behalf of Mr. Trudeau, I would like to thank you for your letter of May 3, and express his appreciation for your very excellent suggestion. A copy of your correspondence has been sent to Mr. Pelletier, the Secretary of State of Canada, for his consideration.

Yours sincerely,

WILLIAM G. MORRIS,
Secretary.

NICOSIA,
September 8, 1969.

OPEN LETTER TO DELEGATES OF THE 22D PLENARY ASSEMBLY OF THE WORLD FEDERATION OF UNITED NATIONS ASSOCIATIONS

"Wars begin in the minds of men". It is not enough to construct and to maintain organizations for the prevention of war and for the building of peace, unless the minds of men and women throughout the world accept the necessity of using and strengthening these organizations. Books of information, inspired speeches, and all the vast methods of publicity are not likely to succeed unless year by year the eyes and ears and, through them, the minds of people in every country are reminded of the possibility of establishing peace in the world through the United Nations.

We, therefore, Officers and Honorary Officers of the World Federation of United Nations Associations, suggest to the Twenty-second Plenary Assembly of WFUNA to appeal to every Government to institute in its country an Annual National Holiday on the twenty-fourth of October in the manner most suitable to its national customs. In this way, by constant and regular reminders, the idea that the United Nations is the only means by which war can be ended, can become a permanent thought in "the minds of men".

Ales Bebler, President; Leonard F. Behrens, Honorary President; Ahmed Matine-Daftary, Honorary President; S. D. Pandey, Vice-President; Y. T. Lee, Vice-President; Jan G. G. De Geer, Vice-President; Anton Canellas, Vice-President; Jean Picker, Vice-President; Franco A. Casadio, Chairman of the Executive Committee; N. J. C. M. Kappeyne van de Coppello, Treasurer; L. H. Horace Perera, Secretary-General.

THE UNITED NATIONS ASSOCIATION OF TRINIDAD AND TOBAGO, THE GENERAL SECRETARY,
Trinidad, West Indies, August 7, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MADAM: Thanks very much for your letter of July 10.

At our monthly general meeting held yesterday (Wednesday, August 6), we studied your proposal and it unanimously agreed to support you in your quest for a permanent United Nations Day International holiday.

We feel that by having such an international holiday on such a special day, would be a step towards bringing the nations of the world, one step closer. Then we as United Nations Associations would strive to make that day meaningful, so that it may be viewed as a day for and with a purpose, and not just another holiday.

Pledging our support and with every good wish.

Yours sincerely,

AINSLEY A. SAHAI.

UNITED NATIONS ASSOCIATION OF AUSTRALIA, FEDERAL SECRETARIAT,
Brisbane, Australia, September 30, 1969.

MISS D. L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Further to my letter of the 25th July 1969 regarding your proposal for a permanent UN Day holiday.

At a recent meeting of the Executive Committee of the UNA of Australia, it was agreed that this suggestion be referred to various Divisions (Chapters) of our Association for their consideration.

I wonder if you are aware that this matter was discussed at the 22nd Plenary Assembly of WFUNA held in Cyprus earlier this month and that the full resolution was carried unanimously:

"Item 8 (d): Consideration of Plans for the 25th Anniversary of the United Nations.

I. The Twenty-second Plenary Assembly of WFUNA.

Considering it essential for the future of mankind that all peoples become increasingly aware of the importance of the United Nations for the world community,

Considering that United Nations Day, the 24th October, offers an excellent opportunity for informing the public about the United Nations,

Supports the idea that United Nations Day be celebrated in all countries as a national holiday, adapted to the custom and culture of the people concerned,

Expresses the hope that the next UN General Assembly will adopt a recommendation in this same spirit, and

Recommends that all UNAs promote this idea in their countries."

Yours sincerely,

A. J. SYMONDS.

WORLD FEDERATION OF UNITED NATIONS ASSOCIATIONS,
Geneva, July 16, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: I am in receipt of your letter of the 8th July and the many documents which you have attached.

For the moment, I wish only to say that I am including "the declaration of UN Day as a public holiday in all countries" among proposals which I am making to our Assembly for the commemoration of the Twenty-fifth Anniversary of the United Nations.

With my kind regards.

Yours sincerely,

L. H. HORACE PERERA,
Secretary-General.

WORLD FEDERATION OF UNITED NATIONS ASSOCIATIONS,
Amsterdam, June 25, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thanking you for your letter of June 18th concerning your proposal for a permanent United Nations Day international holiday, I must say that I think it is an excellent suggestion. From those who have expressed approval I know personally Mr. U Thant, Dr. Bunche and I saw Mr. Hoffman still in the beginning of this year here in Holland. I might give you this comment that getting the approval of the authorities to grant a holiday on all the schools on the 24th of October will get young people accustomed with the idea that there exists a world-wide organization. I know that there is nothing which makes such an impression on young mankind than getting a day free of duties. I therefore hope that you will be successful and it would be of great support for you when the American association would make a proposal in the circle of WFUNA in order that you would get world-wide support for your suggestion.

Sincerely yours,

——— ———.

WORLD ASSOCIATION OF WORLD FEDERALISTS,
Ottawa, Ontario, March 24, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you so very much for your letter of March 8 and the several copies of letters from prominent persons in the USA who support your "United Nations Day" proposal.

Yes, you most certainly do have my permission to say I heartily approve of this imaginative idea. In gaining a broad base of support for UN Day becoming an international holiday I think we should be guided in part by the problems encountered in advancing similar proposals. In addition to encouraging our World Federalist National Organizations to take action at the National level, may I suggest that we also encourage United Nations Associations, in the USA and elsewhere, to take a position on the matter. Contact with the World Federation of United Nations Associations (WFUNA) may also be helpful.

Please continue to keep me informed of your continued efforts to achieve a "one world" holiday for men and women of all nations.

Sincerely yours,

ANDREW A. D. CLARKE,
Secretary General.

PARIS, *July 2, 1969.*

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: I think it is an excellent suggestion that United Nations Day, 24th October, should be proclaimed an international holiday and obesrved as such in all Member countries, as it is already in countries such as Cambodia.

I hope that the General Assembly will some day adopt this proposal and I will submit it to the next meeting of the Executive Board of the French Association for the United Nations.

Yours sincerely,

G. GEORGES-PICOT,
Honorary President,
World Federation of UN A's.

UAW, INTERNATIONAL
AFFAIRS DEPARTMENT,
Washington, D.C., July 15, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Walter Reuther has asked me to convey to you his thanks for having sent him, in April, the material relating to a proposal that there be created an international and permanent United Nations Day holiday, and his warm approval of the idea. The UAW will be delighted to work toward realization of this objective and we will do what lies within our means to build public support for it. We would be pleased, meanwhile, to receive from you any ideas which you may have collected as to what date cr dates might be most reasonably sought as targets, and what other organizations have expressed a supportive interest in the idea.

Very sincerely yours,

VICTOR G. REUTHER,
Director, International Affairs Department.

XEROX,
OFFICE OF THE CHAIRMAN,
Rochester, N.Y., July 23, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara Calif.

DEAR MISS SCHNEIDER: Thank you so much for your note of the 19th and the enclosures. I think this is an extraordinarily good idea and have so written to Arthur Goldberg of the UNAUSA Association. I'm sure the efforts of the Association would be more meaningful than that of any individual member.

Sincerely,

J. C. WILSON,
Chairman.

AMERICAN TELEPHONE & TELEGRAPH CO.,
New York, N.Y., July 3, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for sending me copies of the correspondence you have received in response to your suggestion that United Nations Day be proclaimed an international holiday. It is heartening to note that so many distinguished people support this proposal. Certainly common observance of UN Day by the nations of the world would help focus attention on our common stake in an effective international orgnaization. I shall take whatever opportunities are afforded me to express my own support of such an observance.

Sincerely,

H. I. ROMNES,
Chairman of the Board.

DUKE UNIVERSITY,
RULE OF LAW RESEARCH CENTER,
Durham, N.C., February 28, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for your letter of February 22, 1969, and the enclosures. It seems to me that the proposal that the United Nations Day be proclaimed an international holiday is a meritorious one, and I shall certainly do what I can to support it.

Yours sincerely,

ARTHUR LARSON,
Director.

PRINCETON UNIVERSITY,
CENTER OF INTERNATIONAL STUDIES,
Princeton, N.J., May 5, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: I wish to acknowledge your letter of April 30, in which you set forth your proposal for a permanent United Nations Day international holiday.

This sounds like a good idea, and I wish you the best of success with your proposal.

Sincerely,

CYRIL E. BLACK.

THE AMERICAN LUTHERAN CHURCH,
Minneapolis, Minn., September 30, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: I have read your letter of September 25 with the six attachments.

I commend you for your effort to secure from the United Nations a declaration to set aside October 24 as an International United Nations Day. You have my permission to add my name to the list of those who support this proposal.

I wish you well.

Sincerely,

FREDRIK A. SCHIOTZ.

AMERICAN BAPTIST CONVENTION,
Valley Forge, Pa., September 24, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Thank you for your letter of September 20 and its enclosures. I think your idea of encouraging the United Nations to set aside October 24th annually as an international holiday is a good one and I will be glad to lend my support to your proposal.

Cordially,

EDWIN H. TULLER,
General Secretary.

NATIONAL URBAN LEAGUE,
New York, N.Y., June 27, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: I am sorry to be so late responding to your letter of May 30th and hope you will understand the delay was not caused by any lack of interest in your suggestion. In fact, I feel the idea that we proclaim October 24, United Nations Day, an international holiday is an excellent one and you may be assured I shall do all I can to try to advance it.

Thank you also for sharing the other correspondence with me and best wishes.

Sincerely yours,

WHITNEY M. YOUNG, Jr.

THE UNITED METHODIST CHURCH,
Los Angeles, Calif., September 19, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: I like your idea of a permanent United Nations Day international holiday. I am glad to add my name to those who support this proposal and I hope it is adopted.

Thank you for writing and may the good Lord bless you always.

Sincerely,

Bishop GERALD KENNEDY.

CENTER FOR THE STUDY
OF DEMOCRATIC INSTITUTIONS,
Santa Barbara, Calif., September 15, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: You may add my name to your list of those who approve of your proposal for a permanent United Nations Day International Holiday.

Sincerely yours,

ROBERT M. HUTCHINS,
President.

BETHEL, CONN.,
April 1, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: Yor letter of March 8 has just come to the attention of Miss Marian Anderson, and since she is in Seattle, Washington, she has requested that I acknowledge receipt of your message, in order not to delay reply too much longer.

Regarding your proposal that United Nations Day be proclaimed an international holiday, Miss Anderson agrees, and says she thinks it would be an excellent idea.

She thanks you for writing and sends you her best wishes for a joyous and peaceful holiday.

Very truly yours,

ELEANORE M. FRIESE
(For Marian Anderson).

THE AMERICAN MUSEUM
OF NATURAL HISTORY,
New York, N.Y., April 8, 1969.

Miss DOROTHY SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: In answer to your letter of March 8, 1969, I believe that making United Nations Day an International Holiday is an excellent idea. I would suggest that the plan include flying the UN flag, the flag of the country and any flag of any smaller unit, city or state or province, together. This would undercut some of the more extreme nationalistic demonstrations.

Sincerely yours,

MARGARET MEAD.

WASHINGTON, D.C.,
June 6, 1969.

DEAR MISS SCHNEIDER: That sounds like a pretty good holiday idea; I will wait with interest to see if it can be established.

Sincerely,

ERIC SEVAREID.

ANOTHER MOTHER FOR PEACE,
Beverly Hills, Calif., May 16, 1969.

Miss DOROTHY L. SCHNEIDER,
Santa Barbara, Calif.

DEAR MISS SCHNEIDER: The Steering Committee of Another Mother for Peace has voted unanimously to urge that United Nations Day be proclaimed an international holiday.

Such an international holiday would provide a focus for people everywhere in the world to join in support of the United Nations as the world organization to which we all look as the forum in which nations can

achieve world understanding. It could also provide a means of strengthening the organizations of the U.N. through which much of the practical work of building peace can be done.

Another Mother for Peace would therefore be pleased to endorse a resolution offered by the United States or any other member of the United Nations to establish October 24 as an international holiday.

Sincerely yours,

DOROTHY B. JONES,
Co-chairman.

Mr. PODELL. Mr. Speaker, next year will mark the 25th anniversary of the signing of the United Nations Charter. In 1947, October 24 was designated by the General Assembly as United Nations Day. Such a designation has been applied to this date in our country, proclaimed as such by the President. House Concurrent Resolution 367, introduced by my distinguished colleague, the gentleman from California (Mr. BROWN), proposes that United Nations Day be declared a permanent international holiday. I concur with this suggestion and support his resolution.

It is my fervent hope that we shall all live to see a day when the United Nations shall command more respect in our country and the world than it presently does. Sad to say, this organization has lost the faith and respect of many Americans because of the arbitrary and prejudiced actions of a few. Nonetheless, this has not diluted the viability and meaning of the central principles upon which the organization was founded.

In many areas of nonpolitical endeavor, the United Nations is making a series of contributions to the well-being of all mankind which will be long remembered after mighty armies and bawling dictators have passed from the international scene.

It is also my hope that the United Nations will be willing in the future to resist the strong on behalf of the weak, particularly in the case of Israel and the Middle East. The strength of the United Nations is in its championing of mighty principles rather than seeking the favor of mighty states. Only moral force based on growing international respect will accomplish for the U.N. what military force will never do.

Therefore, I place my faith and endorsement in an idea which happens to be embodied in an institution. Leaders of institutions change and erroneous policies followed by such institutions change with their passing. Such shall be the case with the United Nations. Its dreams and concepts are too soaring and necessary to be sacrificed because of temporary unfairness of a few. I support the resolution in the humble hope that the U.N. will continue to espouse the cause of all mankind, even Israel.

Mr. FASCELL. Mr. Speaker, tomorrow, October 24, the United Nations organization will celebrate its 24th anniversary. And in many parts of the world, people will pause, recall the events which led to the founding of that organization, reflect on its accomplishments and its failures, and look hopefully to the day when, with the help of the United Nations, peace, freedom, and improved opportunity for human advancement will be obtained.

I believe that all of us can join in those expectations and in wishing the United Nations organization success in helping to make them a reality.

Mr. Speaker, I have the honor to serve this year as U.S. delegate to the 24th General Assembly of the United Nations. The General Assembly is a key organ of the entire United Nations system and is meeting presently in New York City.

In my capacity as U.S. delegate, I have had a good opportunity to become better acquainted with the work of the United Nations and with the problems which confront that organization. The latter, I may mention, are every bit as big and challenging as the problems which face our Nation and the rest of the world community in the second half of the 20th century.

Yet in spite of those problems, and its own shortcomings, the United Nations is a very vital and important organization which can make significant contribution to the cause of peace and human advancement—if its member countries will allow it to do so.

With this and the approaching 25th anniversary of the organization in mind, I suggested earlier this week to the delegates of the 126 countries which belong to the United Nations, that all of our countries use the next 12 months to formulate some conclusions about the role that we would want the United Nations to play in the future.

We should consider where the organization stands today and decide both where it should go in the next 25 years and how it ought to get there.

After making those basic decisions, I believe that we ought to reevaluate the structure of the organization and its affiliated specialized agencies and adapt it to the new requirements which the member countries may impose upon it.

It seems to me, Mr. Speaker, that if all the member countries of the United Nations were to take those steps and agree on reforms necessary to assure that resources channeled through the United Nations may continue to be used wisely and effectively, then the 25th anniversary of the organization will be a truly happy and memorable occasion.

Mr. Speaker, 2 days ago Ambassador Charles W. Yost, the permanent U.S. Representative to the United Nations, spoke at a luncheon arranged by the Cincinnati World Affairs Council. He described, much more eloquently than I can, some of the realities of international life which make the United Nations a very necessary and helpful institution. I believe that his remarks will prove of great interest to my colleagues and I am, therefore, placing them in the RECORD:

ADDRESS BY AMBASSADOR CHARLES W. YOST, U.S. REPRESENTATIVE TO THE UNITED NATIONS

As your representative to the United Nations I deeply appreciate the recognition you are giving here in Cincinnati this week—as others are doing in many parts of the United States—to the United Nations as it reaches the age of 24.

This milestone in the life of this international organization happens to coincide with a moment in our history when the concern of many public-spirited citizens is turning inward to cope with pressing domestic problems—those of our cities, of the aspirations of ethnic minorities, of the search by a new generation of Americans for a more meaningful life. Meanwhile, internationally, one single question—peace in Vietnam—a question to which for historical reasons the United Nations has been able to contribute little—nearly monopolizes our national attention.

It would scarcely be surprising, if, in the clamor of these urgent American concerns, the sound of the UN's 24th birthday party were almost drowned out. Yet if that were to happen—and if ignoring or shrugging off the UN were to become an American habit in future years—this would be an ominous development for our country and for the world.

I do not say this in any mood of utopianism, but in sober realism. After all, a part of realism is the ability to see beyond the ends of our noses. I suggest that, in our hard national interest, we must be able to look *beyond* Vietnam, *beyond* the urgent and glaring crises of the moment, *beyond* our own shores—and address ourselves to the world problems of the 1970's. Among them we will find problems that affect the future security and well-being of our country—but which, because they are worldwide in scope, we cannot solve by ourselves. In their solution the United Nations and its family of agencies must play an important and, in some cases, an indispensable part.

Some of these problems have long since approached crisis proportions.

1. There is the crisis of an ever-mounting global arms race, especially in nuclear weapons and missile systems, which heavily strains the world's resources and yet fails to bring security to either side.

2. There is the crisis of human fertility, which is fast causing the world's population to outrun food supplies, which is aggravating immeasurably all our other problems, and which, unless it is soon brought under control, threatens within our children's lifetime to visit famine and chaos on vast regions of the world.

3. There is the crisis of the poor nations, most of them recently independent, whose insistent demand for a better material life is one of the most inescapable realities of our time.

4. There is the gathering world-wide crisis of the human environment—of depleted resources, polluted air and water, disfigured landscapes, overcrowded and disorganized cities.

5. And, on top of all these, it takes no prophet to foresee recurrent crises of international violence—especially among poor and politically unstable nations—any one of which, unless there is an impartial police force to keep the peace, could draw the major powers into direct and fatal confrontation.

All five of these world problems—armaments, population, development, environment, peacekeeping—are, in one degree or another, direct concerns of the United Nations. All of them are recurrent themes in UN debates; some of them are the subject of major UN programs and negotiations. Yet it cannot be said that the United Nations, or the community of nations, has any of them anywhere nearly under control.

A few months ago U Thant, speaking from his unique vantage point as Secretary General of the United Nations, spoke on this subject as follows:

"I can only conclude from the information that is available to me as Secretary General that the members of the United Nations have perhaps ten years left in which to subordinate their ancient quarrels and launch a global partnership to curb the arms race, to improve the human environment, to defuse the population explosion, and to supply the required momentum to world development. If such a global partnership is not forged within the next decade, then I very much fear that the problems I have mentioned will have reached such staggering proportions that they will be beyond our capacity to control."

You will notice that the Secretary General estimates that the nations have ten years in which to act. That may sound like a comfortable cushion of time, but it is not. Our situation might be compared to that of a community that has to finish building a dike before the floods come. Whether the next flood will come in ten years, or twenty, or five, is a matter of educated guesswork at best. But building dikes is a slow business. Even with ten years to go, there is not a single day to be lost.

The "dike" of which I speak, of course, is the United Nations, together with all the international agencies and programs that promote its purposes. Next year the United Nations' 25th anniversary will be duly celebrated with speeches and commemorative ceremonies. But the observances that really count will be renewed efforts to make the UN a more effective instrument of peace and progress among nations, and a more reliable dike against chaos and disorder.

Those efforts, as U Thant correctly pointed out, must be made by the member states. The UN, after all, has virtually no power of its own. Its success rests entirely on the readiness of its members to put their power at its service, and to subordinate their parochial concerns to the common cause of a more peaceful and secure world.

No country has a more vitally important contribution to make to this process than the United States. All five of the world problems I mentioned have three things in common that we Americans should remember: first, if not solved they threaten our own nation; second, we cannot solve them alone; third, they cannot be solved without us. As a nation uniquely great in its wealth and power, and deeply committed to the ideals of peace and progress, our country simply must continue to bear its share of the responsibility for the UN's future development as an instrument of world order. Other members must also do their part; but they will understandably look for leadership to the American Government and people.

As for the American Government, I can assure you that its support for the United Nations remains firm. Last December, even before his inauguration, Mr. Nixon with Mr. Rogers paid a call on Secretary General Thant at the U.N. headquarters. Their purpose was to give evidence, as Mr. Nixon put it at the time, of "our continuing support of the United Nations and our intention in these years ahead to do everything that we can to strengthen this organization as it works in the cause of peace throughout the world."

The President's appearance to address the General Assembly on September 18 was a further reaffirmation of that American intention. In his address the President spoke frankly of doubts that have arisen concerning the future world role of the United States.

"As for the United States," he said in reply, "I can state here today without qualification: We have not turned away from the world."

And the President concluded this part of his address with these words:

"It would be dishonest, particularly before this sophisticated audience, to pretend that the United States has no national interest of its own or no special concern for its own interests.

"However, our most fundamental national interest is in maintaining that structure of international stability on which peace depends and which makes orderly progress possible."

During its first nine months, the Nixon Administration has adopted concrete policies aimed at precisely that national interest in the "structure of international stability." It deliberately and firmly moved, insofar as lies in its power to move, from an era of confrontation to an era of negotiation. It seeks urgently to engage the Soviet Union in negotiations for limitation of strategic weapons and in negotiations to help settle the conflict in the Middle East. It proposes a greater emphasis on the United Nations Development Program and other international agencies as channels for American assistance during the Second Development Decade. It vigorously and concretely supports United Nations efforts to help nations grow more food and reduce their rates of population growth; to protect the world's threatened environment and to share the benefits of space exploration.

These are proofs that the United States Government remains steadfast in its support of the United Nations. However, much more needs to be done by our Government and other governments before the United Nations can even come close to carrying out the missions we have assigned to it. Of course the Government of our free society cannot exceed what the people are willing to accept. Your support for the United Nations, and for our country's more effective participation in it, is a vital necessity if it is to succeed and if we and our children are ever to live in a safer world.

In saying this I have in mind particularly our children. To one like myself, who has been associated with the United Nations in one way or another since the days when the Charter was being written, it is still hard to realize that this institution—possibly the greatest political innovation of the twentieth century—is no longer new. It is older than today's college generation; older than a great proportion of our men in uniform; older than nuclear weapons, network television, Communist China, the space age, and all of those looming crises I was discussing a moment ago. Unless the United Nations is capable of continuous self-renewal—unless it can face new problems, accept new ideas, new blood, new young people—it will become obsolete and irrelevant just at the time when humanity needs it most.

It is encouraging, therefore, to see that in the preparations for next year's celebration of the United Nations' 25th anniversary, there has developed a strong accent on youth. Plans are being discussed now for a World Youth Congress to be held at the United Nations next year, composed of representatives of the young people of each member state. There are proposals to increase the recruitment of young people as international civil servants in the United Nations and in an international volunteer service corps. And our Government has also supported the inclusion of young people in the delegations of member states to next year's General Assembly itself.

Long after the last shot in Vietnam has been fired, the great problems of the family of man will continue to demand the devoted efforts of leaders and citizens, old and young, in every nation. If, as we review the record of the United Nations, we find that the efforts made in that organization are not good enough, let us not forget that the responsibility for that state of affairs lies with us, the members. As Adlai Stevenson once said, it is a bad idea to mock the UN's weakness, for when we do we are mocking ourselves.

Let us then dedicate ourselves—as he did himself in his last years—to making the UN strong enough to carry out our purposes, strong enough to preserve our civilization from our own excesses, strong enough to create a world fit for our children and our children's children.

Mr. FRASER. Mr. Speaker, the United Nations has not yet reached middle age. Next year we will celebrate the 25th anniversary of the signing of the United Nations Charter. And as it rapidly approaches 30, thought an age worthy of distrust by some, I hope the next 6 years see the United Nations grow stronger and gain in the trust and respect it receives from our citizens.

We are all familiar with the historical arithmetic of the two world wars. Add 25 years to the year World War I ended, 1918, and we reach 1943. By 1943, World War II was already 4 years in progress if we date its start from the invasion of Poland by Hitler.

If we add 25 years to the year World War II ended, 1945, we reach 1970, next year. We cannot overlook the great tragedies being currently played out upon the international stage. But, world war III has not started. We cannot give all the credit, however much there may be, to the United Nations for forestalling another worldwide holocaust. But we can recognize, and do today during this special order, the great contributions the U.N. has made to establishing harmony among nations.

It is to acknowledge this success that I join with my colleagues in supporting the resolve that October 24 be a permanent international holiday.

One aspect of the United Nations rightly receives the most public attention. This is that the U.N. provides a forum in which nations in conflict can verbalize their disagreements rather than making armed crossings of international borders.

I certainly believe this to be the United Nation's raison d'etre. But I am also impressed by the performance of the specialized agencies of the United Nations. One of these, the International Labor Organization, was awarded the 1969 Nobel Peace Prize October 20. The ILO is the third U.N. organization to be honored in this manner. The United Nations High Commission for Refugees received the 1954 Nobel Peace Prize and the U.N. Children's Fund was recognized in 1965.

Mr. Phelps Phelps, former U.S. Ambassador to the Dominican Republic and Governor of Samoa, recently sent a letter to the New York Times concerning the activities of the agencies under the Economic and Social Council. He expresses very well the deep respect I have for the activities of these agencies.

The letter follows:

U.N. ACHIEVEMENTS

To the Editor:

Many assessments of United Nations accomplishments, or the absence of them, will be made on U.N. Day, Oct. 24 this year—the eve of its 25th anniversary. Many may be expected to assert that the value of the U.N.—lacking power to implement cease-fires and peace—is questionable. In assessing only political aspects, the activities of agencies under the Economic and Social Council are often overlooked. Yet these have proved invaluable to underdeveloped or developing nations.

Among these agencies are the U.N. Development Program, which sent 8,000 specialists throughout the world to promote economic and social progress, and in association with UNIDO, emphasizes regional organization, industrial expansion and social advancement. These cooperate with the Food and Agriculture Organization for improving and diversifying agriculture in developing countries.

Also frequently overlooked are the activities of UNESCO in training and education, of UNICEF, concerned with the welfare and education of children everywhere, of W.H.O.

for its health activities, and I.L.O., now expanding in vocational rehabilitation and advice on employment problems: also UNITAR, aiding research in U.N. political problems and training of diplomats, UNCTAD with its programs stimulating all aspects of trade and financing.

Not the least are the activities of the U.N. Human Rights Committee, which has ratified this year the Convention to Eliminate Racial Discrimination, its plans on behalf of youth, and the rights of women, not only in work, but in marriage and divorce.

Many U.N. agencies cooperate with the World Bank, the I.M.F., IDA, and the U.S. AID programs to make funds available for utilities and industrialization.

Therefore, those assessing the U.N. should consider these social and economic accomplishments.

PHELPS PHELPS.

Jersey City, N.J., October 16, 1969.

GENERAL LEAVE TO EXTEND

Mr. BROWN of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

RELATIONSHIP OF SMOKING TO HEALTH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. PREYER) is recognized for 15 minutes.

Mr. PREYER. Mr. Speaker, earlier this year those of us who serve on the Committee on Interstate and Foreign Commerce spent several weeks listening to expert testimony regarding the relationship of smoking to health. I heard all of those witnesses and I have read and reread their testimony. This effort to get the facts convinces me that we have not proved either that smoking causes lung cancer and other diseases or that it does not.

As nonscientists asked to decide whether a legal product such as tobacco should be prohibited from enjoying the same advertising privileges as other legal products and, indeed, whether the Government might move to other actions against the use of tobacco, we need conclusive scientific evidence that tobacco is harmful. Yet these hearings left us with more questions than answers. For example:

First. Why is cancer of the windpipe almost unknown when smoke passes through it to and from the lungs and it has the same lining as the lungs?

Second. What are we to accept as fact when expert witnesses testified regarding nicotine that, first, it constricts blood vessels; second, it expands blood vessels; and third, it has no effect on blood vessels.

Third. Why is the lung cancer rate in England twice as high as in the United States although Englishmen smoke one-half as much per capita as Americans?

Fourth. Why does the Public Health Service blame cirrhosis of the liver on alcohol, and heart disease on smoking although their own 1964 study shows that the statistical association between cirrhosis of the liver and smoking is higher than that between smoking and heart disease?

Fifth. Why did the overwhelming number of witnesses who testified on the basis of their own research indicate that they found no proof of a relationship between smoking and health whereas almost all of the contrary testimony came from people who based their statements on the research of others?

Sixth. Why is it that the raw data on which one of the most serious charges—that heavy smoking will shorten your life 8 years—is not released for independent evaluation?

Seventh. Why is it that, according to the Public Health Service, smokers who have stopped smoking have more ill health than those who presently smoke or never smoked?

Mr. Speaker, these are only a few of the questions that disturb me. Only recently scientists revealed that a study in Europe of identical twins—where one smokes and the other does not—failed to indicate any difference in the death rate.

I am impressed that thoracic surgeons from throughout the country have written me and sent me articles written by their colleagues which say that, on the basis of their own surgical experience, they doubt the validity of some conclusions made in the 1964 Surgeon General's report.

Secretary Finch recognized this gap in our knowledge about tobacco and health when he announced several months ago that he was urging a cooperative research program on the subject.

Clearly, we need a new, unbiased, completely scientific study of the relationship between tobacco and health.

Today, I am introducing a bill to set up a commission to determine whether such a relationship really exists.

This Scientific Research Commission on Smoking and Health would consist of seven members—all scientists. Six would be named by the Secretary of Health, Education and Welfare—three of them nominated by the Public Health Service and three by the tobacco industry. Because the legislation would require that the three nominated by one group be acceptable to the other, we will insure a commission of scientists respected by both sides of this controversy. A seventh member would be a scientist nominated by the six members mentioned above.

This group of respected experts in science would hear all the evidence, would subject research and those who do it to the scrutiny of their peers and, I am confident, answer the questions that bother so many of us today.

It would be a group free to conduct its own original scientific research and it would be independent of HEW or any Federal agency.

It is an intelligent and a fair way to protect the interests not of any one group of people but of all the people.

HOPE COMES TO ABRAHAM KAHALOA THROUGH NAB'S JOBS PROGRAM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Hawaii (Mr. MATSUNAGA) is recognized for 10 minutes.

Mr. MATSUNAGA. Mr. Speaker, I rise to commend one of the most valuable training efforts that has been devised to develop our Nation's manpower resources: the JOBS—job opportunities in the business sector—program, sponsored by the National Alliance of Businessmen.

This is one program that has really proved its worth, and I hope that it will continue to receive the full and enthusiastic support of the administration and the Congress.

We lit a candle of hope for the poor and disadvantaged of this country in 1964 by the passage of the Economic Opportunity Act. In declaring the war on poverty, the Congress affirmed its belief that the country can only achieve its full economic and social potential when every citizen is given the opportunity to develop to the full extent of his capabilities and to participate in, and contribute to, the workings of our society.

The JOBS program, initiated in 1968 by the National Alliance of Businessmen, involved the private sector and the Federal Government in a partnership to hire and to train the hard-core unemployed. This program represented the first major involvement of the business community in manpower programs designed to aid disadvantaged individuals.

The success of the JOBS program can be nowhere better illustrated than in the story of Abraham Kahaloa of Hawaii.

Star-Bulletin writer Russ Lynch has written an excellent article about Mr. Kahaloa's struggles to extricate himself from the welfare rolls, from debt, and from the ranks of the hard-core unemployed through federally funded job training and the job placement work of the National Alliance of Businessmen's JOBS program. Because of the opportunity provided by the JOBS program, Mr. Kahaloa is now on the road to providing a better life for himself and his family.

Thomas Wolfe has written:

> To every man his chance—to every man, regardless of his birth, his shining, golden opportunity—to every man the right to live, to work, to be himself, and to become whatever thing his manhood and his vision can combine to make him—this . . . is the promise of America.

The JOBS program certainly will help to provide the opportunity for the fulfillment of that promise. As we seek to convert welfare recipients to income-earning jobholders, hopefully we can see an expansion of the JOBS program to permit an even greater emphasis on finding work for young jobseekers and providing them with meaningful opportunities to share in the abundance and blessings of this great Nation.

I am pleased to submit for inclusion in the RECORD the article, "JOBS Is Hope for Abraham," from the October 9, 1969, issue of the Honolulu Star-Bulletin:

JOBS IS HOPE FOR ABRAHAM

(By Russ Lynch)

Four years ago, Abraham Kahaloa of Makaha gave up his struggle against pressing debt collectors and for a year joined the hard-core unemployed on Oahu's Leeward coast.

He relied on locally caught fish and poi to feed himself, his wife and eight children—three more had already been adopted out to relatives—and clothed his family with what little welfare money he was entitled to.

Today, the same Kahaloa—equipped with a new basic education and skilled job training—is fully employed as a second cook with Hawaiian Tug & Barge Co.

He is still taking on-the-job training, enjoys his work, has traveled all around the Islands and to the Mainland with the firm's vessels and finally, at age 38, is on the road to a better life for himself and his family.

Behind Kahaloa's success in pulling away from the down-and-out situation he had fallen into is federal-funded job training and the job placement work of the National Alliance of Businessmen's JOBS (jobs in the business sector) program.

Plus, of course, a genuine desire to improve himself.

Kahaloa told the Star-Bulletin how he was attracted into the job training program and how he wound up in such a hopeful position with the Dillingham Corp.'s maritime subsidiary.

During his jobless period, he started going to Model Cities meetings in the Makaha area where he learned about job training courses available in Honolulu under the Manpower Development and Training Act.

He went through a six weeks briefing through the MDTA programs, looking around at industries and services in which jobs were available.

Then he successfully completed an 18-week basic education course at the Honolulu Community College.

(He had tried adult education evening classes before, but "couldn't learn anything" in the two hour sessions, "because by the time you go the next night you've forgotten what you learned the last time.")

He took the cook's training course at the Community College, still under MDTA programs, and was finally ready for the National Alliance of Businessmen's program.

The NAB's JOBS program placed him with Dillingham's maritime division, where he quickly became second cook on the Dillingham-owned oceanographic research vessel, M.V. Mahi.

Ironically, Kahaloa first approached Hawaiian Tug & Barge for a job when he was only 18, but due to a lack of education and no job skill, he was not accepted.

Now he is on the job, learning new skills by performing them under the guidance of Dillingham's maritime food service manager, Hubert White, and the more experienced cooks.

Also under White is another former unemployed man, Alexander Kauhola, referred to the MDTA training programs through the State Employment Office.

Kauhola worked in a Waikiki restaurant for a time after undergoing his basic cook's training and then moved to the Dillingham subsidiary to take on-the-job training like Kahaloa's.

Dillingham's maritime services hired 29 men referred from the NAB's JOBS placement program in July and August.

Part of the reason for the Dillingham Corp. support of the program, of course, is the fact that Lowell S. Dillingham, president of the corporation, is Honolulu metropolitan chairman for NAB.

But retired Adm. H. S. Persons, appointed by Dillingham as JOBS executive director, made clear that Lowell Dillingham's personal enthusiasm and that of other JOBS workers has spread throughout the community.

Since the JOBS program started in April, 1968, and through September, Persons told the Star-Bulletin, a total of 866 people had been placed in jobs. Of the 866, a total of 616 are still employed.

LEGISLATION TO SAVE AMERICA'S CRUMBLING COMMERCIAL FISHING INDUSTRY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. SANDMAN), is recognized for 10 minutes.

Mr. SANDMAN. Mr. Speaker, New Jersey has more than 100 miles of ocean front and an equal amount of bay front. Commercial fishing over the years has been one of New Jersey's major industries.

In recent years, however, while world fishing has increased, the relative position of the United States has declined, critically affecting the local fishing industry in areas such as southern New Jersey.

Last year the total fish catch of the United States was the second smallest since 1942. America's share of the total world catch of fish dropped to 5 percent from 13 percent in 1956, thereby moving the Nation to sixth place from second place in worldwide catch.

While America's annual production has varied little since 1945, the world catch of fish has increased more than threefold. At the same time, the United States consumes about 12 percent of the total catch, making it the world's largest market for fish. The United States now imports more than three-fourths of the fish it consumes.

As a resident of southern New Jersey for most of my life, I have found that our fishing equipment and methods are at least 40 years too old. Our fishing fleet is technically outmoded. The boats are too slow and ill equipped. Most of the small, independent fishermen spend at least two-thirds of the work day traveling to and from the fishing grounds. As a result, our fishermen suffer higher unemployment and lower incomes than other workers of comparable age and skills.

Because the U.S. fishing fleets are in such dire shape, we cannot adequately compete with Russian ships and other foreign fleets that increasingly work waters near the American 12-mile limit.

I think it is high time we realize that we are in competition with countries which are superior not only in methods but production. The smallest Russian ship is about twice the size of our largest ship in the commercial fishing fleet. Their mother ships house canneries and freezing units which can function effectively at sea for 6 to 8 months at a time. These foreign vessels are fishing off American shores and are taking a good many of the catches which should be found in American canneries.

The increase of foreign fishing in American waters has a related significance to sport fishermen as well. Tourism is New Jersey's No. 1 industry and fishing comes close to being the No. 1 sport for everyone, young and old, male and female. The disappearance of fishing as a sport for everyone could be a serious blow to the State's large resort industry.

There should be a special effort to sustain the fishing industry which many scientists believe to be the source of our major food supply in the years to come.

The two existing programs which involve the commercial fishing fleets; namely, the Fishing Fleet Improvement Act and the fisherman's loan fund, have suffered the last few years due to insufficient funds.

I am aware that the Subcommittee on Fisheries and Wildlife Conservation of the Committee on Merchant Marine and Fisheries has worked long and hard on this problem, conducting extensive hearings before reporting out the Fishing Fleet Improvement Act. This legislation which recently passed in the House of Representatives included provisions for a 2-year extension of the program, broadening it to include the reconditioning, conversion, and remodeling of ships, and authorizing an appropriation increase from $10 to $20 million. Because the Fishing Fleet Improvement Act, a semigrant program to cover 50 percent of the cost of constructing new fishing boats in the United States, has operated unsuccessfully for 8 years due to underfunding, it is my hope the funds requested by the committee as well as the administration will be approved.

The Fishing Fleet Improvement Act also includes a provision to extend the fisherman's loan fund for 4 years. This program was initiated in 1956 authorizing the Secretary of the Interior to make loans for financing and refinancing the operations, maintenance, replacement, and repair of fishing gear and vessels and for research into the basic problems of the fisheries.

In 1965, the program was amended to remove the 3-percent annual interest rate and a formula was adopted to provide for an annual payment to the Treasury from the loan fund of interest on the cumulative amount of appropriations available as capital to the fund taking into consideration the average cost of all outstanding interest-bearing Treasury obligations of comparable maturity. In 1965, the interest rate was 4 percent. It was anticipated at that time, the interest rate would not rise above 5 percent.

On August 6, 1969, however, the Department of the Interior's Bureau of Commercial Fisheries announced that interest rates on fishery loans approved by the Bureau would be increased from 6½ to 7½ percent.

In addition, the high interest rates charged by commercial lending institutions have led to an unprecedented demand for fisheries loans from the Department, requiring the Bureau to limit such loans to $40,000 per transaction.

The fisherman's loan fund is due to expire in June 1970. Presently, there is only $1 million left in the fund. A $40,000 limitation on each of the remaining loans which can be given this year would barely scratch the surface in paying for the extensive engine repairs and new equipment required.

To make a more effective program, I am introducing a bill in the Congress of the United States today to provide for a system of low-interest loans for the

construction of new ships and new equipment. This proposal would improve the commercial fishing industry throughout the country and also stimulate related industries such as the ship builders and suppliers. My bill would appropriate $50 million so that all worthy applications which have been turned down may be reconsidered and expedited.

I am tired of being Santa Claus to the rest of the world. On the surface, it sounds like a great idea for all the do-gooders to encourage the United States to spend American tax dollars on developing the underdeveloped nations of the world. However, it would sound better to me if for the first time we would try to improve and develop some of the underdeveloped American industries first. This I think is a step that should have been taken a good many years ago.

President Nixon, during the campaign, and Vice President AGNEW, during a recent speech in Miami emphasized the importance of improving and modernizing our fishing fleet, which the Department of the Interior has indicated could be done in the next 7 years at a cost of $210 million.

This goal could be accomplished by coupling the new provisions of the Fishing Fleet Improvement Act with the enactment of my proposed legislation.

I believe my proposal, which has also been cosponsored by two distinguished members of the Subcommittee on Fisheries and Wildlife Conservation, the gentleman from Oregon (Mr. DELLENBACK) and the gentleman from Alaska (Mr. POLLOCK), would improve the commercial fishing industry by making the necessary money available to those worthy applicants who have received less money than they needed, or who could not afford to apply due to high interest rates.

TAX REFORM

(Mr. SCHADEBERG asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHADEBERG. Mr. Speaker, the entire question of tax reform this year has filled many pages of the CONGRESSIONAL RECORD, of newspapers, and of professional journals. An endless number of hours have been spent in public and private discussions on the topic.

The Janesville Gazette, Janesville, Wis., recently ran a lead editorial on the issue. It consisted of a letter from an anonymous taxpayer to the Internal Revenue Service. The Gazette reproduced it without comment because the letter is comment enough in itself. I would like to do the same. Therefore, without further adieu, the letter:

DEAR ETERNAL REVENUE: Enclosed is my tax form, all filled out as you requested. You will notice that I owe you $86.23 and you are probably looking around in the envelope for the check. Well, you can stop looking because it ain't there. Let me explain.

You will notice that you took out upwards of $1,000 on me last year, which is usually enough under ordinary circumstances. But what with the expenses of the war and all, the government had to have the surtax to make ends meet. That's what did me in, and that's why I owe you $86.23.

I was all set to pay up when I found to my surprise that I didn't have the money. I guess I have been throwing my money around carelessly on stuff like rent and food and clothes and doctor bills. All these nonessentials took about everything I made, and I didn't even have $86.23 left over for you.

Well, that put me in a sweat. I knew that if I didn't come up with the money, you might have to cut back on some vital program like foreign aid. Then I remembered that my congressman just got a big pay raise, so I figured I would put the bite on him.

I called him up collect, and he turned me down flat. Told me congressmen had to eat too, but he said beans and bacon was good enough for him. He said it cost a lot of money to live in Washington and he was pretty strapped himself. He did promise to give me his heartiest handshake the next time he was in the district, though.

I was pretty low by this time until I remembered an item I read in the paper about companies that don't pay hardly any taxes because of this oil depletion allowance. Now it happens that I got an old '57 Chevy that uses oil awful bad. I have been meaning to get it fixed as soon as I get a little money ahead, which probably will be never. But anyway, I thought I might qualify for that allowance because it uses so much oil. But I checked with your man here in town and he said no dice, bud.

So there you are. About all I can tell you is I guess I have been doing like the government and spending more than I make. They call it a deficit, and that's what I got. But my $86.23 is just a drop in the bucket compared to their $400 billion or so, and I hope you will look at it in that light.

I don't want to tell you how to run your business or anything, but why don't you give the government a call and see if you can't get my $86.23 added on to that national debt? I don't see where that little bit more would make that much difference, and it would be a big help to me.

I will keep you in mind and will send you the money after I get my car fixed, whenever that is. I hope you won't worry about it, because I would rather owe it to you all my life than beat you out of it.

Yours truly,

A TAXPAYER.

COAL DUST CAN BE REDUCED BY VENTILATION AT THE FACE

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous material.)

Mr. HECHLER of West Virginia. Mr. Speaker, some dramatic progress has been made in the reduction of coal dust through the use of high pressure axial flow fans. The Bureau of Mines has reported some extremely useful experiments, the results of which demonstrate that we are not being overoptimistic in our efforts to bring the coal dust levels in the pending coal mine health and safety legislation down to progressively lower amounts. In fact, I feel that the results of these Bureau of Mines experiments give support to the provisions of an amendment I support to require coal miners affected by the beginning stages of pneumoconiosis to be moved to an area where the respirable coal dust level is no more than 1.0 milligrams per cubic meter of air. The report follows:

THE EFFECT OF VENTILATION ON RESPIRABLE COAL MINE DUST

Recent experiments by the Bureau of Mines have indicated that increasing the ventilation rate and controlling the air flow pattern across the face would result in lower concentrations of respirable dust. This concept was also in accordance with the theory of small dust particle behavior and air motion.

To demonstrate the effectiveness of control ventilation, high pressure axial flow fans have been used in three mines, the Pittsburgh, Sewickley, and Pocohontas Seams. By maintaining air velocities between 70 and 100 feet per minute across the coal face, it was demonstrated that significant reductions in the concentration of respirable dust could be attained. In the mine in the Pittsburgh Seam, the average dust concentration was reduced from 5.72 to 2.56 mg/m³ or a reduction of 65 percent. In the Sewickley Seam the mine had existing dust control procedures somewhat better than that normally encountered in coal mines. Here it was possible to reduce the dust concentration from 3.0 to 0.66 mg/m³ or a reduction of 78 percent. In the latter case, however, there had been some reduction in production between the baseline experiment and the control experiment. However, when a correction for production deficiencies is made, the dust concentration would still be less than 1 mg/m³.

In the Pocohontas Seam a dramatic reduction was not attained. This particular seam is very friable and dust control is known to be a difficult task. Additionally, the incoming air was badly contaminated. However, under these adverse circumstances, it was possible to reduce the average dust concentration from 5.6 mg/m³ to 3.5 mg/m³.

Further studies are being planned and executed in other coal mines and the Bureau of Mines is purchasing an additional axial flow fan for experimental purposes.

Based on these limited studies, it would appear that it should be possible after further experience in mines using controlled ventilation, to reduce the respirable dust concentration to a value of 3 mg/m³ and, in time, in certain mines to an even lower value. These calculations were based on the production rate of the mines. In the case of the Pittsburgh Seam experiment, production was approximately 500 tons per shift. In the other two seams, the production rate was approximately 200 tons per shift. It has not been possible as yet to study the effect of increased production on dust concentrations while maintaining the desired air flow across the face.

It is evident that before the results summarized herein can be generally applied, it will be necessary to develop equipment not now available to the industry, permit industry time to set up production facilities to manufacture this equipment, and to assure its distribution throughout the industry. More important, time is required to develop skills on the part of operators of mining machines and similar equipment which they do not now possess. We have found that one of the most sensitive factors in attaining low dust levels is the skill and attitude of the machine operator. In short, the best known technology is not a match for a poorly operated machine.

FEELING OF PRIDE IN PUBLIC EXPRESSIONS BY THE VICE PRESIDENT OF THE UNITED STATES ON MATTERS OF GREAT IMPORTANCE IN OUR NATION

(Mr. FLOWERS asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. FLOWERS. Mr. Speaker, I know that many loyal Americans share with me a deep feeling of pride in the Vice President of the United States for his recent public expressions on matters of great importance in our Nation. Mr.

AGNEW has demonstrated with great firmness and clarity that he believes in a strong America moving forward in all areas and yet mindful of the sincere wishes of her people—both the sometimes silent majority, as well as the vocal minority.

Our Vice President has spoken out in criticism of the leadership and objectives of the Vietnam Moratorium Day Committee and further movement of this kind, and it was not unexpected that this would aggravate those of whom he spoke.

Some members of the news media and other supporters of the October 15 demonstrations now cry "foul" and "shame" and attempt to deride and ridicule him and his position. Mr. Speaker, I would remind these people that less than 1 percent—by even the most liberal estimate—of the citizens of our great Nation have participated in these demonstrations of dissent which are dividing us. The vast and overwhelming majority at least are willing to support our Government. It would seem to me that by all reasonable standards, these so-called demonstrations should be directed at the Communists and not at our own Government.

Mr. Speaker, I would take this opportunity then to commend Vice President AGNEW for expressing his convictions in the forthright manner that he has, and I assure him that there are many of us who share those same feelings. It is a source of encouragement to me that someone in the high office of Vice President of the United States will stand up to "tell it like it really is" for all to hear.

OIL DEPLETION ALLOWANCE

(Mr. VANIK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. VANIK. Mr. Speaker, today, the Senate Finance Committee recommended a 4½-percent reduction in the oil depletion allowance from 27½ percent to 23 percent on both foreign and domestic production. The action of the Senate Finance Committee is totally unacceptable to those who had reasonable expectations and hopes of tax reform. A reduction in the depletion allowance to 23 percent is no tax reform at all since 23 percent is the average utilization of the present depletion allowance. The law provides so many other gimmicks that a 23-percent allowance represents the average needs of the oil producing industry.

It is absolutely incredible that the Senate Finance Committee should have restored the privilege of the depletion allowance for the benefit of American investors involved in the production of oil outside of the United States.

There is no rational legislative reason for extending the privilege of the depletion allowance to foreign produced oil. The combination of the depletion allowance and the foreign tax credit have made most of these profits tax free.

These tax-free profits of American investment in foreign oil have corrupted and misdirected American foreign policy in many oil-rich countries. This has resulted in American policies of costly military assistance in support of temporary rulers who will undoubtedly be removed when their people find out what is going on. There is no reason for the American taxpayer to subsidize these activities.

The action of the Senate Finance Committee on oil depletion and other vital provisions of the tax bill make a sham of tax reform.

I hope that the average taxpayer will watch what is going on and remember who done him in.

REEXAMINATION URGED OF THE ROLE OF CONGRESS WITH RESPECT TO ITS CONSTITUTIONAL POWER AND RESPONSIBILITY TO DECLARE WAR

(Mr. MCCLOSKEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous material.)

Mr. MCCLOSKEY. Mr. Speaker, I rise to urge a reexamination of the role of Congress with respect to our constitutional power and responsibility to declare war. I am particularly concerned with the role of Congress in the commencement, maintenance, and eventual termination of the policy of U.S. military assistance in Southeast Asia.

It represents no lack of confidence in our President or his present policies for Congress to carefully reexamine its own role in the conduct of our Vietnam policy. A resolution has been signed by 108 of us, supporting the President in his expressed determination to withdraw our remaining ground combat forces in Vietnam at the earliest practicable date. I believe that the President has, and deserves, broad bipartisan support in his efforts to reduce our massive military efforts in Vietnam while yet giving to the present Saigon government every reasonable opportunity to protect those of its people who desire such protection.

The President necessarily has the primary control over foreign policy. As Commander in Chief of the Armed Forces, he may be called upon from time to time to make decisions which cannot await the deliberations of Congress.

Nevertheless, it is the primary responsibility of Congress, not the President, to determine the Nation's spending priorities, to raise armies, and to initiate the revenue measures which support such armies. Perhaps most important of all, the Constitution reposes in Congress, not the President, the sole power to declare war.

On August 10, 1964, by the Gulf of Tonkin resolution, Congress abdicated this power, delegating to the President the power to resist aggression with armed force in Vietnam. Later that same resolution was cited by President Johnson as his authority to escalate U.S. action in Vietnam to the level of a major war, requiring expenditures of approximately $30 billion per year. In conducting this war, it is possible that the United States has been led unwittingly into achievement of one of the earliest goals of communism, to wit: involvement of the capitalist countries in insurgency wars in distant lands, thereby endangering their economic stability and strength.

Under the Gulf of Tonkin resolution we now find ourselves bogged down in an infantry war 8,000 miles from home, in a country where winning of that war rests not on American abilities, resources or will, but rather on the nationalistic spirit and will to fight of two competing groups of Vietnamese.

That war costs us $30 billion per year; it costs the Russians and Chinese less than $2 billion per year. That war has endangered the stability of the American economy; it has been the major contributing cause of a spiraling inflation which has badly hurt large segments of our own population, as well as diminished our ability to effectively compete in international trade. Yet that war is undeclared. Congress has no more than acquiesced in the successive decisions of two Presidents, President Johnson's decision to escalate; President Nixon's decision to deescalate with such deescalation predicated upon conditions which only North Vietnam or South Vietnam can meet.

Our policy has never been to militarily defeat the North Vietnamese. Our military mission has been to assist in protecting South Vietnam from an insurgency of its own people and from intrusion of North Vietnamese army personnel from the north. Our hope, since 1954, has been that with enough assistance the South Vietnamese would be able to form a new nation and that the stamina and perseverance of our own forces would cause the North Vietnamese and Vietcong to suffer a decline in their ability to conduct a successful war in the south. Our military men have been instructed to assist the South Vietnamese Army. Our civilian personnel have been instructed to "build a new nation."

With these national policies in effect, it is quite clear that individuals instructed to carry out those policies have either been unable or unwilling to fairly apprise their superiors or the American public of their chances of ultimate success. Even today, there are no American military and State Department officials whom I have found willing to say that the South Vietnamese can "go it alone" 5 years from now if all U.S. combat forces are withdrawn. Both military and State Department leaders will say, "It is possible that the South Vietnamese can make it on their own but only if there is no aggression from the north." There is, of course, no way we can stop aggression from the north so long as the North Vietnamese stand firm in the resolve expressed 23 years ago in their Declaration of Independence.

Long ago we recognized that the geography and terrain of South Vietnam, a country some 800 miles in length with jungle cover for innumerable penetration routes from the north and west, would allow aggression from the north so long as the nationalistic will of the Vietnamese continued. General Westmoreland conceded in 1967 that closing the port of Haiphong and full-scale bombing of the north with conventional weapons could not prevent the North Vietnamese from continuing indefinitely the type of war they were then conducting in South Vietnam.

It seems clear that the North Viet-

namese and Vietcong learned from the Tet offensive in 1968, as General Washington learned in the early battles of the Revoluntionary War, that guerrilla forces could not necessarily afford pitched battles with the superior firepower, mobility, and discipline of regular troops. Consequently, since the summer of 1968, we have seen General Giap's forces withdrawing to a policy of limited infantry contact with an emphasis on attack by rocket and ambush. They have carefully husbanded their forces with the result that today, in October 1969, there are estimated to be more combat personnel of the Vietcong and North Vietnamese located in South Vietnam and along the Laotian and Cambodian borders than there were a year ago. There is no indication whatsoever that the North Vietnamese and Vietcong have abandoned their fight or their steadfast intention to continue the fight until the last foreign forces have left the country. Vietnam is one country, not two. The slogan "Vietnam for the Vietnamese" appears to be as important to these people as the Monroe Doctrine has been to the American people.

In my judgmcnt, then, there is no indication that the preservation of 500,000, 300,000, or 100,000 troops in South Vietnam will materially affect the ultimate question which must be answered: Can 17 million South Vietnamese, with nearly 900,000 men under arms and the finest equipment and training that America can provide, build a nation and withstand the aggression of the North Vietnamese, a nation of 16 million armed with the best equipment and material which can be supplied by Russia and China? The answer to this question does not lie in how long American forces remain in Vietnam; it lies in whether or not the will to fight and to create a new nation in South Vietnam is equal to the nationalism and will to fight of the North Vietnamese and the Vietcong. This war can be won or lost only by Vietnamese, not by Americans.

For these reasons, and because of the tremendous adverse effects of this war on America, its institutions, and its people, it is my belief that the Congress of the United States should forthwith vote to rescind the Gulf of Tonkin resolution, effective December 31, 1970; that we should commend President Nixon for the substantial reduction in ground combat forces he has already directed and suggest to the President that our remaining combat forces be withdrawn at the earliest practicable date consistent with the safety of American troops and those South Vietnamese who desire to retire behind the shield of the South Vietnamese Army or to seek sanctuary elsewhere. I would further propose that we seek the assistance of the United Nations—and other nations in creating a free city or sanctuary zone in South Vietnam which would be protected by neutral Asian forces under the direction of an international commission or the United Nations itself. The purpose of this free city or sanctuary zone would be to provide safety to those Vietnamese who would fear retribution in the event of a change in the present government of South Vietnam, or by reason of the nature of the government which will hopefully one day govern a unified Vietnam.

I would further propose, in order that such a free city or sanctuary zone not prevent ultimate unification of all of Vietnam, that such city or zone be of limited duration, its government to be assumed after a fixed period of years by the government which then has jurisdiction over the terrain surrounding such sanctuary zone.

It is with these sentiments, Mr. Chairman, that I place in the RECORD at this point the Gulf of Tonkin resolution of August 10, 1964, and today introduce, for the consideration of the House, a resolution to amend the Gulf of Tonkin resolution, terminating its authority, effective December 31, 1970.

The above-mentioned material follows:

GULF OF TONKIN RESOLUTION

Maintenance of International Peace and Security in Southeast Asia

Pub. L. 88-408, Aug. 10, 1964, 78 Stat. 384, provided that:

"Whereas naval units of the Communist regime in Vietnam, in violation of the principles of the Charter of the United Nations and of international law, have deliberately and repeatedly attacked United States naval vessels lawfully present in international waters, and have thereby created a serious threat to international peace; and

"Whereas these attacks are part of a deliberate and systematic campaign of aggression that the Communist regime in North Vietnam has been waging against its neighbors and the nations joined with them in the collective defense of their freedom; and

"Whereas the United States is assisting the peoples of southeast Asia to protect their freedom and has no territorial, military or political ambitions in that area, but desires only that these peoples should be left in peace to work out their own destinies in their own way: Now, therefore, be it

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress approves and supports the determination of the President, as Commander in Chief, to take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression.

"SEC. 2. The United States regards as vital to its national interest and to world peace the maintenance of international peace and security in southeast Asia. Consonant with the Constitution of the United States and the Charter of the United Nations and in accordance with its obligations under the Southeast Asia Collective Defense Treaty, the United States is therefore, prepared, as the President determines, to take all necessary steps, including the use of armed force, to assist any member or protocol state of the Southeast Asia Collective Defense Treaty requesting assistance in defense of its freedom.

"SEC. 3. This resolution shall expire when the President shall determine that the peace and security of the area is reasonably assured by international conditions created by action of the United Nations or otherwise, except that it may be terminated earlier by concurrent resolution of the Congress."

H. CON. RES. 426

Resolved by the House of Representatives (the Senate concurring), That the joint resolution entitled "Joint resolution to promote the maintenance of international peace and security in Southeast Asia," approved August 10, 1964 (78 Stat. 384; Public Law 88-408), is hereby terminated as of December 31, 1970, pursuant to the authority of Section 3 of such joint resolution, except that such joint resolution may be extended by concurrent resolution of the Congress prior to December 31, 1970.

LIST OF COSPONSORS

Mr. McCloskey, Mr. Button, Mr. Gude, Mr. Halpern, Mr. Mosher, and Mr. Reigle.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. ADAMS, for October 23 through October 27, on account of official business.

Mr. JONES of Tennessee (at the request of Mr. ALBERT), for today, on account of official business.

Mr. WOLFF (at the request of Mr. CELLER), for October 23, on account of official business.

Mr. MONAGAN, for October 27 through November 11, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. SANDMAN, for 10 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. STOKES); and to revise and extend their remarks and include extraneous matter:)

Mr. PREYER of North Carolina, for 15 minutes, today.

Mr. MATSUNAGA, for 10 minutes, today.

Mr. LOWENSTEIN, for 60 minutes, on November 5.

Mr. RYAN, for 60 minutes, on November 5.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. DULSKI in three instances and to include extraneous matter.

Mr. HALPERN during the debate on the Anderson of Illinois amendment under the 5-minute rule on H.R. 13827.

(The following Members (at the request of Mr. LANDGREBE) and to include extraneous matter:)

Mr. BROWN of Michigan.
Mr. PETTIS.
Mr. THOMPSON of Georgia.
Mr. MCKNEALLY in three instances.
Mr. ZWACH.
Mr. HORTON.
Mr. WYMAN in two instances.
Mr. DUNCAN in two instances.
Mr. SCHWENGEL in three instances.
Mr. ASHBROOK in two instances.
Mr. FINDLEY.
Mr. DAVIS of Wisconsin.
Mr. KLEPPE.
Mr. DERWINSKI.
Mr. LUKENS in two instances.
Mr. CONTE.
Mrs. HECKLER of Massachusetts in two instances.
Mr. HALPERN.

(The following Members (at the request of Mr. STOKES) and to include extraneous matter:)

Mr. DINGELL.
Mr. GIAIMO.
Mr. DE LA GARZA in two instances.
Mr. ANNUNZIO in three instances.
Mr. BINGHAM in two instances.
Mr. RARICK in three instances.
Mr. FLOOD.
Mr. ST. ONGE in two instances.
Mr. STOKES in three instances.
Mr. PEPPER.
Mr. OLSEN in two instances.
Mr. RYAN in four instances.
Mr. LONG of Maryland in two instances.
Mr. MURPHY of New York.
Mr. FASCELL in two instances.
Mr. HUNGATE.
Mr. ROSENTHAL in five instances.
Mr. MATSUNAGA.
Mr. MANN.
Mr. EDWARDS of California.
Mr. GIBBONS in two instances.
Mr. FRIEDEL in two instances.
Mr. CAREY in two instances.
Mr. HANNA in two instances.
Mr. FOUNTAIN in two instances.
Mr. O'NEAL of Georgia in two instances.
Mr. MELCHER in two instances.
Mr. ZABLOCKI in two instances.

ADJOURNMENT

Mr. STOKES. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 7 minutes p.m.) under its previous order, the House adjourned until Monday, October 27, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1277. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administration of the community action program and selected manpower programs under titles I and II of the Economic Opportunity Act of 1964, Los Angeles County, Calif., Office of Economic Opportunity, Department of Labor; to the Committee on Education and Labor.

1278. A letter from the Comptroller General of the United States, transmitting a report on foreign aid provided through the operations of the U.S. Sugar Act and the International Coffee Agreement, Department of Agriculture, Department of State, and Agency for International Development; to the Committee on Government Operations.

1279. A letter from the National Shipswriter, Navy Club of the United States of America, transmitting the annual audit of the club for 1968–69, pursuant to law; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. McMILLAN: Committee on the District of Columbia. H.R. 13565. A bill to validate certain deeds improperly acknowledged or executed (or both) that are recorded in the land records of the Recorder of Deeds of the District of Columbia; with amendments (Rept. No. 91–589). Referred to the Committee of the Whole House on the State of the Union.

Mr. McMILLAN: Committee on the District of Columbia. H.R. 13837. A bill to amend the Healing Arts Practice Act, District of Columbia, 1928, to revise the composition of the Commission on Licensure to Practice the Healing Art, and for other purposes (Rept. No. 91–590). Referred to the Committee of the Whole House on the State of the Union.

Mr. McMILLAN: Committee on the District of Columbia. H.R. 9257. A bill to amend the code of laws of the District of Columbia with respect to facilities for the parking or storage of motor vehicles; with amendments (Rept. No. 91–591). Referred to the House Calendar.

Mr. McMILLAN: Committee on the District of Columbia. H.R. 12673. A bill to authorize the transfer by licensed blood banks in the District of Columbia of blood components within the District of Columbia (Rept. No. 91–592). Referred to the House Calendar.

Mr. McMILLAN: Committee on the District of Columbia, H.R. 13564. A bill to provide that in the District of Columbia one or more grantors in a conveyance creating an estate in joint tenancy or tenancy by the entireties may also be one of the grantees; without amendment (Rept. No. 91–593). Referred to the House Calendar.

Mr. DULSKI: Committee on Post Office and Civil Service. Census and Statistical Systems of Certain Countries in Europe. (Rept. No. 91–594). Referred to the Committee of the Whole House on the State of the Union.

Mr. MAHON: Committee on Appropriations. House Joint Resolution 966. Joint resolution making further continuing appropriations for the fiscal year 1970, and for other purposes; without amendment (Rept. No. 91–595). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BENNETT:

H.R. 14474. A bill to extend benefits under section 8191 of title 5, United States Code, to law enforcement officers and firemen not employed by the United States who are killed or totally disabled in the line of duty; to the Committee on the Judiciary.

By Mr. CEDERBERG:

H.R. 14475. A bill to establish in the State of Michigan the Sleeping Bear Dunes National Lakeshore, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. DUNCAN:

H.R. 14516. A bill for the relief of Guillermo Aguirre-Santini; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

306. The SPEAKER presented a petition of Allan Feinblum, New York, N.Y. relative to establishment of an International Peace Institute, which was referred to the Committee on Foreign Affairs.

SENATE—*Thursday, October 23, 1969*

The Senate met at 12 o'clock noon and was called to order by the President pro tempore.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God, our Father, in whose word it is written, "If any man lack wisdom, let him ask God, who giveth to all men liberally and it shall be given him," fulfill this ancient promise in all Thy servants here. Graciously minister to all their needs, granting them newness of life, ample physical strength, sharpened intellects, and serene souls that when evening comes they may be found faithful in their love of Thee and in their service to their fellow man.

In Thy holy name we pray. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, October 22, 1969, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries.

MARITIME PROGRAM—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 91-183)

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was referred to the Committee on Commerce:

To the Congress of the United States:

The United States Merchant Marine—the fleet of commercial ships on which we rely for our economic strength in time of peace and our defense mobility in time of war—is in trouble.

While only one-fourth of the world's merchant ships are more than twenty years old, approximately three-fourths of American trading vessels are at least that antiquated. In the next four years, much of our merchant fleet will be scrapped. Yet we are now producing only a few new ships a year for use in our foreign trade. Building costs for American vessels are about twice those in foreign shipyards and production delays are excessive. Operating expenses also are high by world standards, and labor-management conflicts have been costly and disruptive.

Both government and industry share responsibility for the recent decline in American shipping and shipbuilding. Both government and industry must now make a substantial effort to reverse that record. We must begin immediately to rebuild our merchant fleet and make it more competitive. Accordingly, I am announcing today a new maritime program for this nation, one which will replace the drift and neglect of recent years and restore this country to a proud position in the shipping lanes of the world.

Our program is one of challenge and opportunity. We will challenge the American shipbuilding industry to show that it can rebuild our Merchant Marine at reasonable expense. We will challenge American ship operators and seamen to move toward less dependence on government subsidy. And, through a substantially revised and better administered government program, we will create the opportunity to meet that challenge.

The need for this new program is great since the old ways have not worked. However, as I have frequently pointed out, our budget constraints at this time are also significant. Our program, therefore, will be phased in such a way that it will not increase subsidy expenditures during the rest of fiscal year 1970 and will require only a modest increase for fiscal year 1971. We can thus begin to rebuild our fleet and at the same time meet our fiscal responsibilities.

THE SHIPBUILDING INDUSTRY

Our shipbuilding program is designed to meet both of the problems which lie behind the recent decline in this field: low production rates and high production costs. Our proposals would make it possible for shipbuilders to build more ships and would encourage them to hold down the cost of each vessel. We believe that these two aspirations are closely related. For only as we plan a major long-range building program can we encourage builders to standardize ship design and introduce mass production techniques which have kept other American products competitive in world markets. On the other hand, only if our builders are able to improve their efficiency and cut their costs can we afford to replace our obsolescent merchant fleet with American-built vessels. These cost reductions are essential if our ship operators are to make capital investments of several billion dollars over the next ten years to build new, high-technology ships.

Our new program will provide a substantially improved system of construction differential subsidies, payments which reimburse American shipbuilders for that part of their total cost which exceeds the cost of building in foreign shipyards. Such subsidies allow our shipbuilders—despite their higher costs—to sell their ships at world market prices for use in our foreign trade. The important features of our new subsidy system are as follows:

1. We should make it possible for industry to build more ships over the next ten years, moving from the present subsidy level of about ten ships a year to a new level of thirty ships a year.

2. We should reduce the percentage of total costs which are subsidized. The government presently subsidizes up to 55 percent of a builder's total expenses for

a given vessel. Leaders of the shipbuilding industry have frequently said that subsidy requirements can be reduced considerably if they are assured a long-term market. I am therefore asking that construction differential subsidies be limited to 45 percent of total costs in fiscal year 1971. That percentage should be reduced by 2 percent in each subsequent year until the maximum subsidy payment is down to 35 percent of total building expenses.

We are confident that the shipbuilding industry can meet this challenge. If the challenge is not met, however, then the Administration's commitment to this part of our program will not be continued.

3. Construction differential subsidies should be paid directly to shipbuilders rather than being channeled through shipowners as is the case under the present system. A direct payment system is necessary if our program is to encourage builders to improve designs, reduce delays, and minimize costs. It will also help us to streamline subsidy administration.

4. The multi-year procurement system which is now used for other government programs should be extended to shipbuilding. Under this system, the government makes a firm commitment to build a given number of ships over a specified and longer period of time, a practice which allows the industry to realize important economies of scale and to receive lower subsidies.

5. The increased level of ship construction will require a corresponding increase in the level of federally insured mortgages. Accordingly, we should increase the ceiling on our present mortgage insurance programs from $1 billion to $3 billion.

6. We should extend construction differential subsidies to bulk carriers, ships which usually carry ore, grain, or oil and which are not covered by our present subsidy program.

7. A Commission should be established to review the status of the American shipbuilding industry, its problems, and its progress toward meeting the challenge we have set forth. The Commission should report on its findings within three years and recommend any changes in government policy which it believes are desirable.

THE SHIP OPERATING INDUSTRY

My comments to this point have related to the building of merchant vessels. The other arm of our maritime policy is that which deals with the operation of these ships. Here, too, our new program offers several substantial improvements over the present system.

1. Operating differential subsidies should be continued only for the higher wage and insurance costs which American shipping lines experience. Subsidies for maintenance and repair and for subsistence should be eliminated. Instead of paying the difference between the wages of foreign seamen and actual wages on American ships, however, the government should compare foreign wages with prevailing wage levels in several comparable sectors of the American economy. A policy which ties subsidies to this wage index will reduce subsidy costs and provide an incentive for further efficiencies. Under this system, the operator would no longer lose in subsidies what he saves in costs. Nor would he continue to be reimbursed through subsidies when his wage costs rise to higher levels.

2. At the same time that we are reducing operating subsidies, it is appropriate that we eliminate the "recapture" provisions of the Merchant Marine Act of 1936. These provisions require subsidized lines to pay back to the government a portion of profits. If the recapture provisions are removed, the purpose for which they were designed will be largely accomplished by corporate taxes, which were at much lower rates when these provisions were instituted. We will also save the cost of administering recapture provisions.

3. Many bulk carriers presently receive indirect operating subsidies from the Government because of the statutory requirement that certain Government cargoes must be shipped in U.S. vessels at premium rates. When the Department of Agriculture ships grain abroad, for example, it pays higher rates out of its budget than if it were allowed to ship at world market rates. We will propose a new, direct subsidy system for such carriers, thus allowing us to phase out these premium freight rates and reduce the costs of several nonmaritime Government programs.

4. Ship operators now receiving operating differential subsidies are permitted to defer Federal tax payments on reserve funds set aside for construction purposes. This provision should be extended to include all qualified ship operators in the foreign trade, but only for well-defined ship replacement programs.

5. Past Government policies and industry attitudes have not been conducive to cooperation between labor and management. Our program will help to improve this situation by ending the uncertainty that has characterized our past maritime policy. Labor and management must now use this opportunity to find ways of resolving their differences without halting operations. If the desired expansion of merchant shipping is to be achieved, the disruptive work stoppages of the past must not be repeated.

6. The larger capital investment necessary to construct a modern and efficient merchant fleet requires corresponding port development. I am therefore directing the Secretary of Commerce and the Secretary of Transportation to work with related industries and local governments in improving our port operations. We must take full advantage of technological advances in this area and we should do all we can to encourage greater use of intermodal transportation systems, of which these high-technology ships are only a part.

EQUAL EMPLOYMENT OPPORTUNITIES

The expansion of American merchant shipbuilding which this program makes possible will provide many new employment opportunities. All of our citizens must have equal access to these new jobs. I am, therefore, directing the Secretary of Commerce and the Secretary of Labor to work with industry and labor organizations to develop programs that will insure all minority groups their rightful place in this expansion.

RESEARCH AND DEVELOPMENT

We will also enlarge and redirect the maritime research and development activities of the Federal government. Greater emphasis will be placed on practical applications of technological advances and on the coordination of Federal programs with those of industry.

The history of American commercial shipping is closely intertwined with the history of our country. From the time of the Colonial fishing sloops, down through the great days of the majestic clipper ships, and into the new era when steam replaced the sail, the venturesome spirit of maritime enterprise has contributed significantly to the strength of the nation.

Our shipping industry has come a long way over the last three centuries. Yet, as one of the great historians of American seafaring, Samuel Eliot Morrison, has written: "all her modern docks and terminals and dredged channels will avail nothing, if the spirit perish that led her founders to 'trye all ports.'" It is that spirit to which our program of challenge and opportunity appeals.

It is my hope and expectation that this program will introduce a new era in the maritime history of America, an era in which our shipbuilding and ship operating industries take their place once again among the vigorous, competitive industries of this nation.

RICHARD NIXON.

THE WHITE HOUSE, *October 23, 1969.*

EXECUTIVE MESSAGE REFERRED

As in executive session, the President pro tempore laid before the Senate a message from the President of the United States submitting the nomination of Philip C. Wilkins, of California, to be U.S. District Judge for the eastern district of California, which was referred to the Committee on the Judiciary.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMENDATION OF SENATORS ON PASSAGE YESTERDAY OF EXPORT EXPANSION ACT

Mr. MANSFIELD. Mr. President, regrettably, I had to leave the Senate nec-

essarily yesterday prior to the vote on the passage of S. 2696, the export expansion measure. Fortunately, I was able to witness a large portion of the discussion and can say unequivocally that the bill managers—the distinguished Senators from Maine and Minnesota (Mr. MUSKIE and Mr. MONDALE) joined with great legislative skill and ability to defend the measure reported by the Committee on Banking and Currency and steer it on to its successful passage.

With this achievement, may I say, Senator MUSKIE and Senator MONDALE have marked themselves as a legislative team of unexcelled capacity in the Senate. Their strong advocacy and devoted efforts have added great distinction to already abundant records of outstanding public service.

The distinguished Senator from Utah (Mr. BENNETT) is equally to be commended for his splendid cooperation and for offering his own strong and sincere views on the question of developing new dimensions in our trade policies with other nations. Though the Senate voted a broader foreign trade posture for the Nation, it is not to say that the position of Senator BENNETT, Senator TOWER, and others was not urged competently and effectively.

The Senate, I think, can be justly commended for disposing of the export expansion proposal yesterday and for acting expeditiously and with full regard for the views of all Members.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the executive calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The PRESIDENT pro tempore. The nominations on the executive calendar will be stated.

DEPARTMENT OF COMMERCE

The bill clerk read the nomination of Harold C. Passer, of New York, to be an Assistant Secretary of Commerce.

The PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

FEDERAL POWER COMMISSION

The bill clerk read the nomination of Albert Bushong Brooke, Jr., of Maryland, to be a member of the Federal Power Commission.

The PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

FEDERAL MARITIME COMMISSION

The bill clerk read the nomination of James V. Day, of Maine, to be a Federal Maritime Commissioner.

The PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

ENVIRONMENTAL SCIENCE SERVICES ADMINISTRATION

The bill clerk proceeded to read sundry nominations in the Environmental Science Services Administration.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

FILIPINO SOLDIERS IN VIETNAM

Mr. SYMINGTON. Mr. President, in the Washington Daily News of yesterday, October 22, appeared an editorial entitled "Filipino Soldiers in Vietnam." The first two paragraphs of that editorial read as follows:

An under-the-table tussle is going on between the Nixon Administration and Senator Stuart Symington's Foreign Relations sub-committee. The issue: whether to make public the terms under which the Philippines sent 2,000 troops to South Vietnam in 1966 to aid the Allied effort.

Despite the Administration's wishes, the sub-committee's findings will be published (or leaked) fairly soon.

That is not correct.

For some time there has been agreement between the State Department and the Subcommittee on Foreign Commitments as to what testimony with respect to the Philippines could be published and what could not. But, at the request of the State Department, the publication of this testimony will be held until after the Filipino elections—that is, November 11.

As to the contents of that transcript, the author of the editorial should either check back with his source or wait until it is released before making statements as to what subcommittee members said concerning the facts developed.

I ask unanimous consent that this editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FILIPINO SOLDIERS IN VIETNAM

An under-the-table tussle is going on between the Nixon Administration and Sen. Stuart Symington's Foreign Relations subcommittee. The issue: whether to make public the terms under which the Philippines sent 2,000 troops to South Vietnam in 1966 to aid the Allied effort.

Despite the Administration's wishes, the sub-committee's findings will be published (or leaked) fairly soon. They will show that the United States increased military aid to Manila and is paying part of the cost of maintaining the Filipino battalion in Vietnam.

It doesn't take a crystal ball to predict what comes next. The political and journalistic opposition to the Vietnam war will leap on the disclosure, charging that we are using Filipino troops and larger numbers of South Koreans as "mercenaries."

Before the howling starts, it might be useful to make a few small points.

One is that you can agree or disagree with Lyndon Johnson's decision to intervene massively in Vietnam. But that after he made it, it was only normal to try to get as much Allied help there as possible.

Furthermore it was in the self-interest of the Philippines and South Korea to help stop Communism from developing a victorious momentum in Southeast Asia. To suggest that they sent troops to Vietnam merely for Yankee dollars is a smear.

Both countries, in fact, have special historic and security ties to the United States and would continue to get economic and military aid whether they fought in Vietnam or not. That they used Mr. Johnson's request for troop contributions to get additional aid is neither sinister nor mercenary.

It is a natural political reaction and most countries would do the same. The sub-committee should not act shocked. Has no member accepted a campaign contribution after doing someone a favor?

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. SYMINGTON. I am glad to yield to the distinguished majority leader.

Mr. MANSFIELD. Mr. President, for the RECORD, I think it should be stated that, at my request, the distinguished chairman of the subcommittee has given me an opportunity to go over some of the hearings which I had missed attending and I want to thank him publicly for his graciousness, as always, in that instance.

Mr. SYMINGTON. Mr. President, the able majority leader is very kind. We have the honor to have him on our subcommittee. We know of his knowledge with respect to that part of the world, and, as always, he has been most constructive and helpful in the work we are trying to do.

IS VICE PRESIDENT AGNEW BECOMING A SECURITY RISK?

Mr. YOUNG of Ohio. Mr. President, it was with amazement that I read on the front page of the Washington Post of today that Vice President AGNEW yesterday charged our colleague Senator EDMOND S. MUSKIE of Maine, "with playing Russian roulette with U.S. security." This for the reason Senator MUSKIE had proposed a 6-month unilateral halt in multiple warhead—MIRV—tests.

Well, now the senior Senator from Ohio is beginning to wonder if our Vice President is afflicted with some virulent form of foot-and-mouth disease. The Vice President's penchant for intemperate remarks, to use a charitable term, was at one time a source of amusement for Americans. His statements during the campaign and since caused him to be considered somewhat of a national jester. However, it is no laughing matter when a jester who happens to be Vice

President of the United States begins to take himself seriously and to impugn the patriotism of millions of Americans, including one of our most distinguished national leaders, the junior Senator from Maine, Senator ED MUSKIE, a former Governor of that great State and presently serving his second term as U.S. Senator.

It is true that our distinguished colleague, Senator ED MUSKIE, the Democratic nominee for Vice President in last year's election, recently suggested that it would be a wise action on our part to halt MIRV tests as this would be an encouraging step to stimulate Soviet-American efforts "to control the escalation of nuclear weapon systems before it is too late." Our Vice President denounced Senator MUSKIE's proposal as "a classic example of confused thinking."

It is astounding that the Vice President, who evidently likes to see his name in print, denounces our distinguished colleague Senator MUSKIE in terms that imply that he is a security risk. I repudiate Vice President AGNEW's conclusion, that "no responsible person would propose that the President play Russian roulette with U.S. security, yet that is what Senator MUSKIE just did."

The PRESIDENT pro tempore. The Chair regretfully advises the Senator from Ohio that his time has expired.

Mr. YOUNG of Ohio. I ask unanimous consent that I may proceed for 5 additional minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. YOUNG of Ohio. I yield.

Mr. MANSFIELD. Before the Senator continues, may I call to his attention the fact that there is now in the Committee on Foreign Relations a resolution seeking to do what I understand the distinguished junior Senator from Maine advocated. If my memory serves me correctly, it was submitted by the distinguished Senator from Massachusetts (Mr. BROOKE), and has 42 cosponsors.

It would be my suggestion that, perhaps, in order to get this matter out of the stage of semantics, it would be well for the chairman of the Committee on Foreign Relations and the ranking Republican member, the distinguished Senator from Vermont (Mr. AIKEN), to consider holding hearings on this matter as soon as it is appropriately possible.

Mr. YOUNG of Ohio. I express my thanks to the distinguished majority leader. I concur in his suggestion, and I am very glad that he has spoken on this subject.

Mr. CHURCH. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. YOUNG of Ohio. Mr. President, I yield to the Senator without losing my right to the floor.

Mr. CHURCH. Mr. President, I wish to commend the distinguished Senator for his typically forthright statement this morning.

It seems to me that anyone who is genuinely concerned, not only with the security of the country, but also the survival of the human race has reason to question the MIRV weapon. This weapon could easily be the doomsday weapon which takes us beyond the point where any effective control of the arms race is any longer possible. That is a grave matter indeed, when one considers the potential for destruction involved in these weapons and the importance of bringing them within control, if this is at all possible.

Mr. President, I commend the Senator from Maine for having come forth, as he did, with his proposals. As the distinguished majority leader has pointed out, many other Senators on both sides of the aisle feel the same way. For their concern to be characterized as playing Russian roulette seems to me to be beneath the dignity and responsibility of the office of the Vice President of the United States.

Mr. YOUNG of Ohio. Mr. President, I thank the distinguished Senator from Idaho and am in complete agreement with the views he expressed.

Last Sunday the Vice President apparently had another attack of foot-and-mouth disease. At that time he stated that the Vietnam moratorium demonstration was the work of "impudent snobs who characterized themselves as intellectuals."

The truth is that the Vietnam moratorium was the largest, most broadly based demonstration against our policies in intervening on a huge scale and involving more than 500,000 men of our Armed Forces in a civil war in South Vietnam and waging an immoral, undeclared war in a small distant country of no importance whatsoever to the defense of the United States. This was a peaceful demonstration in accord with American tradition and specifically sanctioned in our Constitution in the Bill of Rights which we Americans revere. On moratorium day, October 15, millions of Americans stayed away from work, school, and home to talk, listen, and above all to demonstrate to administration leaders a broad-based demand for immediate peace in Vietnam. Probably 30 million American men, women, and their daughters and sons of high school and college age participated in that peaceful demonstration.

The Vice President's vicious attack on those who participated in the moratorium deeply offended millions of Americans who did nothing more than exercise their constitutional right. Furthermore, his remarks constituted a personal insult to those Members of the Congress, including the senior Senator from Ohio, and a number of other Senators, who encouraged and endorsed this peaceful demonstration of the overwhelming sentiment in the Nation for peace.

Over the years, by tradition the Vice-Presidency of the United States is an office in which the incumbent has very little to do and, in fact, no constitutional duty at all other than to preside over the Senate and to cast his deciding vote in event of a tie. The Nation has been blessed with many outstanding Vice Presidents who through the force of their character and ability have expanded the scope and influence of that high office. It seems clear, however, that for the good of our Nation, the incumbent should limit himself to his constitutional obligations and duties.

Unfortunately, Americans in New Orleans listened to the Vice President say regarding the Vietnam moratorium:

> If the Moratorium had any use whatever, it served as an emotional purgative for those who feel the need to cleanse themselves of their lack of ability to offer a constructive solution to the problem.
>
> A spirit of national masochism prevails, encouraged by an effete corps of impudent snobs who characterize themselves as intellectuals. It is in this setting of dangerous oversimplification that the war in Vietnam achieves its greatest distortion.
>
> Great patriots of past generations would find it difficult to believe that Americans would ever doubt the validity of America's resolve to protect free men from totalitarian attack. Yet today we see those among us who prefer to side with an enemy aggressor rather than stand by this free nation.

He assailed the patriotism and integrity of those participating in a peaceful march against the Vietnam war which has brought such terrible tragedy in the snuffing out of priceless lives of 50,000 Americans and the maiming and injury of 260,000 wounded in combat. This in addition to lives of our servicemen lost in what the Pentagon terms "accidents and incidents."

The PRESIDENT pro tempore. The time of the Senator from Ohio has expired.

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that I may proceed for 5 additional minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

(At this point, Mr. MCINTYRE assumed the chair.)

Mr. YOUNG of Ohio. Mr. President, President Nixon, according to news reports, spent a routine day in the White House on October 15. However, it is safe to say that when he looked out of the White House windows and saw the thousands of men and women marching for peace and for immediate withdrawal of our Armed Forces from Vietnam, he must have been deeply impressed. If the President is sincere in his desire to bring an end to our involvement in Vietnam—and I believe he is—then he should repudiate the virulent attack of his Vice President on those who participated in the moratorium.

In that connection, the President should also repudiate Gen. Earle Wheeler, Chairman of the Joint Chiefs of Staff, for speaking out in the same manner in support of the views of Vice President AGNEW. General Wheeler had the effrontery to denounce the moratorium day demonstrators as "people who need a bath." Is this the sort of "intelligence" the Chairman of the Joint Chiefs of Staff of our Armed Forces receives? Is it any wonder that our involvement in Vietnam has been such a tragedy to Americans when over the years Gen. Earle Wheeler is one of those who bears the most responsibility for the debacle? His statement is not only untruthful, but it manifests the irresponsibility on the part of many generals and admirals of our Armed Forces that has contributed to the disaffection and dis-

illusionment of so many millions of Americans. General Wheeler may in the past have fooled some generals. Also a President. I feel certain that his statement will not mislead President Nixon. I feel certain that our President must have looked out of the White House window and witnessed the long line of marchers peacefully participating in this demonstration, citizens from all walks of life desiring to express their feelings to their leaders, in the finest tradition of our Nation. It is high time that General Wheeler learned that it is the responsibility of generals to defend the Nation, not to make national policy, not to assail the patriotism of citizens.

Now, with Mr. AGNEW in effect denouncing Senator MUSKIE as a security risk and General Wheeler making this asinine statement, Americans should be justified in asking President Nixon, "Are men such as Mr. AGNFW and General Wheeler the real security risks?"

Mr. DOLE subsequently said: Mr. President, in view of the remarks of the Senator from Ohio (Mr. YOUNG), I wish to point out for the RECORD that Senate Resolution 211, introduced by Senator BROOKE and other Senators, concerning MIRV, does not call for unilateral cessation of testing. It talks of negotiated treaties with the Soviet Union with regard to MIRV's and other reentry vehicles.

There might have been an inference left that the Vice President unjustly criticized Senator MUSKIE because some reference was made to MIRV. Senate Resolution 211 refers to negotiated agreements with the Russians with respect to MIRV, and not a unilateral cessation of testing.

APPOINTMENT BY THE VICE PRESIDENT

The PRESIDING OFFICER. On behalf of the Vice President and pursuant to Public Law 83-420, the Chair appoints the Senator from Texas (Mr. YARBOROUGH) to be a member of the board of directors of Gallaudet College, in lieu of former Senator Brewster.

A NEW PRESCRIPTION NEEDED FOR LATIN AMERICA

Mr. CHURCH. Mr. President, recent developments in Bolivia dramatically call attention once more to the steadily deteriorating position of the United States in Latin America.

To paraphrase the old World War II joke—which in this context is not very funny—another one of our oil companies is missing.

The scenario which we see unfolding in Bolivia looks very much like an instant replay of what we saw earlier in Peru—a military government comes to power in an illegal coup d'etat and then seeks to consolidate its political base through demagogic appeals to anti-Americanism by seizing a large American-owned company. The principal difference between the Peruvian and the Bolivian cases is that whereas the Peruvian expropriation of the International Petroleum Co. climaxed a dispute of many years, the Bolivian expropriation of the Gulf Oil Co. comes after a period of reasonably good relations.

It also comes almost on the eve of the much-heralded announcement of the Nixon administration's Latin American policy—after being in office for more than 9 months and after a series of turbulent trips to Latin countries by the President's special emissary, Gov. Nelson Rockefeller.

Whatever policy the President announces will be no better than the analysis of the problems with which it is designed to deal. The gravity of these problems can scarcely be overstated. Is it not the saddest of commentaries that popular feeling against the United States south of our borders has grown to such an extent that the surest way to gain public favor is to seize an American-owned company?

We seriously mislead ourselves if we attribute these actions and attitudes to a spread of communism or Castroism. Such a facile analysis completely overlooks the really significant political change currently taking place in Latin America, which is the rise of a kind of Nasserism. This phenomenon has nothing to do with Castro, and anybody who thinks it does is 10 years behind the times. General Ovando, who nationalized the Gulf Oil Co. in Bolivia, is the same man who, almost exactly 2 years before, reputedly gave the order for the killing of Che Guevara. He is also the same man who, scarcely 6 months before, was being wined and dined in Washington as the guest of the Chief of Staff of the U.S. Army.

Surely this should tell us something about the bankruptcy of our past policies. The real threat to our national interest in Latin America does not come from Havana—or from Moscow, either, for that matter. Nor, it should be abundantly apparent by now, is the Latin American military a reliable instrument to preserve or protect our best interests. Nor, it should be equally apparent, is the U.S. foreign aid program. In the period 1962 through 1968, Bolivia received a grand total of $290 million in U.S. foreign assistance of all kinds. This amounts to something more than $70 for every Bolivian—in a country with a per capita gross national product of only $140.

Yet these have been the mistaken bases of U.S. policy toward Latin America in the recent past—a phobia about the threat of communism, a reliance on the military to provide stability, and a belief that with foreign aid we could somehow buy ourselves added influence and favor. On all counts, our fears have been exaggerated and our reliance misplaced.

We are witnessing an entirely new phenomenon in Latin America and one which is contrary to many widely held North American conceptions. I hope very much that the policy which the President is going to announce next week will really be a new policy and not a restatement of the old policy which has produced such negative results. Failing a fundamental reassessment of what has gone wrong and why, the same old prescription will serve no better in the future, if the only change is to stick a fancy new label on—and propose increased dosages from—the same old AID bottle.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administration of the community action program and selected manpower programs under titles I and II of the Economic Opportunity Act of 1964, Los Angeles County, Calif., Office of Economic Opportunity, Department of Labor, dated October 23, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the opportunities for increasing the effectiveness of the conservation operations program, Soil Conservation Service, Department of Agriculture, dated October 22, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administration of the Collbran Job Corps Civilian Conservation Center under the Economic Opportunity Act of 1964, Collbran, Colo., Department of the Interior, Office of Economic Opportunity, dated October 21, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on unused engineering and design effort in the military construction program. Department of Defense, dated October 22, 1969 (with an accompanying report); to the Committee on Government Operations.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the City Council of New Orleans, La., praying for the enactment of legislation to correct deficiencies in the hurricane protection system; to the Committee on Public Works.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, with amendments:

S. 2314. A bill to amend section 4 of the Revised Organic Act of the Virgin Islands relating to voting age (Rept. No. 91-497).

EXECUTIVE REPORTS OF COMMITTEE ON ARMED SERVICES

Mr. STENNIS. Mr. President, from the Committee on Armed Services, I report

favorably the nominations of 1,378 captains and 120 first lieutenants, for temporary appointment in the Marine Corps.

Since these names have already been printed in the CONGRESSIONAL RECORD, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Joseph C. Abrams, and sundry other officers, for appointment in the Marine Corps.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. BYRD of West Virginia:

S. 3064. A bill for the relief of Dr. Rogelio T. Lim; to the Committee on the Judiciary.

By Mr. METCALF (for himself, Mr. BURDICK and Mr. MOSS):

S. 3065. A bill to amend the Rural Electrification Act of 1936, as amended, in order to authorize loans under such act to be made in the territory of Guam without regard to certain limitations prescribed by such act; to the Committee on Agriculture and Forestry.

By Mr. MOSS:

S. 3066. A bill to facilitate the entry into the United States of aliens who are underground hard-rock miners; to the Committee on the Judiciary.

(The remarks of Mr. Moss when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. METCALF:

S. 3067. A bill to amend title 44, United States Code, to provide for consumer, labor and small business representation on advisory committees under the coordination of Federal Recording Services, and for other purposes; to the Committee on Government Operations.

(The remarks of Mr. METCALF when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MCGOVERN (for himself, Mr. YARBOROUGH, Mr. BURDICK, Mr. JACKSON, Mr. NELSON, Mr. EAGLETON, Mr. HARRIS, Mr. HUGHES, Mr. MANSFIELD, Mr. MCGEE, Mr. METCALF, Mr. MONDALE, and Mr. MOSS):

S. 3068. A bill to improve farm income and insure adequate supplies of agricultural commodities by extending and improving certain commodity programs; to the Committee on Agriculture and Forestry.

(The remarks of Mr. MCGOVERN when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. JACKSON (for himself) and Mr. ALLOTT) (by request):

S. 3069. A bill to authorize the Secretary of the Interior to establish a volunteers in the park program, and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. JACKSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MILLER (for himself, Mr. DOLE, Mr. EASTLAND, Mr. HOLLINGS, Mr. JORDAN of North Carolina, and Mr. YOUNG of North Dakota):

S. 3070. A bill to encourage the development of novel varieties of sexually reproduced plants and to make them available to the public, providing protection available to those who breed, develop, or discover them, and thereby promoting progress in agriculture in the public interest; to the Committee on Agriculture and Forestry.

(The remarks of Mr. MILLER when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 3066—INTRODUCTION OF A BILL RELATING TO VISAS FOR HARD-ROCK MINERS

Mr. MOSS. Mr. President, I introduce a bill which provides that during the 2 years after its enactment no alien shall be ineligible to receive a visa or excluded from admission into the United States under section 212(a)(14) of the Immigration and Nationality Act if such alien is to be employed as an underground hard-rock miner upon entry into the United States.

I am doing this to make it possible for the hard-rock mining companies in my State of Utah, and elsewhere, to recruit hard-rock miners overseas and bring them to the United States. I have been advised that there are not enough domestic workers available to meet the needs of these mining companies.

The companies have sought to have such workers placed on the schedule C, Pre-Certification Division of the Immigration and Naturalization Service without any success. The Immigration Service has taken the position that there are hard-rock miners available at Calumet, Mich., but the companies inform me that they have attempted to recruit the Calumet miners without success. They now feel they must turn to manpower from overseas—in Mexico, the Scandanavian countries, and elsewhere. My bill is an attempt to help them do this.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3066) to facilitate the entry into the United States of aliens who are underground hard-rock miners, introduced by Mr. Moss, was received, read twice by its title, and referred to the Committee on the Judiciary.

S. 3067—INTRODUCTION OF A BILL TO PROVIDE FOR CONSUMER, SMALL BUSINESS, AND LABOR REPRESENTATION ON BUDGET BUREAU ADVISORY COMMITTEES

Mr. METCALF. Mr. President, I introduce, for appropriate reference, a bill to amend the Federal Reports Act of 1942 so as to provide for consumer, small business, and labor representation on Budget Bureau advisory committees.

These advisory committees are presently coordinated through the Advisory Council on Federal Reports, which refers to itself as "the official business consultant" to the Bureau of the Budget. This Council, in the words of Robert H. North, chairman of the private Fund Q Committee, through which this advice to the Government is funded, "is wholly business oriented, being sponsored and financed by associations through the American Society of Association Executives and other respected business organizations."

The Council has arranged appointment of the following 16 advisory committees:

Air Transportation, Banking, Chemicals, Equal Employment Opportunity Surveys, Fats and Oils, Meat Packing, Natural Gas Pipelines, Petroleum and Natural Gas, Public Utilities—Coordinating Committee, Public Utilities—Financial Reports, Public Utilities—Operating Reports, Radio and Television Broadcasting, Railroad Reports to Federal Agencies, Retail Trades, Scientific and Research Activities, and Wholesale Trades.

Mr. President, so often in Government-business relationships, the original and laudable purpose of legislation is altered drastically through the years. That is true in this case. I know of no statutory basis for the claim of the Fund Q Committee that the Advisory Council on Federal Reports is the "official business consultant to the Federal Bureau of the Budget."

The legislation upon which the Council bases its advisory role—Public Law 77-831, second session—does not create such an advisory council. That law, the Federal Reports Act of 1942, was designed to cut down on unnecessary paperwork and questionnaires, especially those affecting small businesses, and maximize the usefulness of information collected by one agency to other Federal agencies and the public.

The Bureau of the Budget, which administers the act, says it seeks "the benefit of advice by interested parties outside the Government—those interested either as consumers of data or as respondents to the inquiry." Yet, you will find neither small businessmen nor consumer representatives on the committees which advise the Budget Bureau.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, the name, affiliation, and title of each member of 15 Budget Bureau advisory committees, as of September 23, 1969. The membership of the 16th committee, on air transportation, is being revised, the Budget Bureau tells me, and is not presently available. I invite all readers to try to find one real, live small businessman or labor or consumer representative on any of these 15 committees, from the Banking Committee's Chairman Charles Agemian, executive vice president of Chase Manhattan Bank, to the Wholesale Trade Committee's Harold O. Smith, Jr., executive vice president of the U.S. Wholesale Grocers Association.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

ADVISORY COUNCIL ON FEDERAL REPORTS

(Roster for 1969, updated as of Sept. 23, 1969)

Chairman: Charles W. Stewart.

Vice Chairman: Leo V. Bodine, Carl H. Madden, Robert H. North.

Treasurer: G. H. Gaynor.

Executive Secretary: Russell Schneider.

AMERICAN RETAIL FEDERATION

A. Arthur Charous, Manager, Division of Economic Research, Sears, Roebuck and Company, Chicago, Ill.

Eugene A. Keeney, Executive Vice President, American Retail Federation, Washington, D.C.

Herbert S. Landsman, Executive Vice President, Federated Department Stores, Inc., Cincinnati, Ohio.

AMERICAN SOCIETY OF ASSOCIATION EXECUTIVES

William E. Dunn, Executive Director, Associated General Contractors of America, Washington, D.C.

James G. Ellis, Washington Office, Automobile Manufacturers Assn., Washington, D.C.

Robert H. North, Executive Vice President, International Association of Ice Cream Manufacturers, Washington, D.C.

CHAMBER OF COMMERCE OF THE UNITED STATES

G. H. Gaynor, Executive Assistant, United States Steel Corporation, Pittsburgh, Pennsylvania.

Carl H. Madden, Chief Economist, Chamber of Commerce of the U.S., Washington, D.C.

Albert G. Matamoros, Chief Economist, Armstrong Cork Company, Lancaster, Pennsylvania.

FINANCIAL EXECUTIVES INSTITUTE

Carl M. Blumenschein, Senior Vice President, Finance, Container Corporation of America, Chicago, Illinois.

Daniel W. Potter, Treasurer & Secretary, Raymond Engineering, Inc., Middletown, Connecticut.

James J. Rutherford, Managing Director, Financial Executives Institute, New York, New York.

NATIONAL ASSOCIATION OF MANUFACTURERS

Leo V. Bodine, Executive Vice President, National Association of Manufacturers, Washington, D.C.

Wayne E. Kuhn, Omark Industries, Inc., Portland, Oregon.

Robert H. Stewart, Jr., Manager, General Economics, Planning & Economics Department, Gulf Oil Corporation, Pittsburgh, Pennsylvania.

Members-at-large

Burton N. Behling, Vice President, Association of American Railroads, Washington, D.C.

William H. Finigan, Director, Marketing Research, The National Cash Register Company, Dayton, Ohio.

E. W. Gaynor, Comptroller, Parts Division, Chrysler Corporation, P.O. Box 1718, Detroit, Michigan.

Robert S. Quig, Vice President, Ebasco Services Incorporated, Two Rector Street, New York, New York.

Charles W. Stewart, President, Machinery & Allied Products Institute, Washington, D.C.

Vincent T. Wasilewski, President, National Association of Broadcasters, Washington, D.C.

N. R. Wenrich, Manager, Business Research, Merck & Company, Inc., Rahway, New Jersey.

Active past chairmen

T. M. Brennan (1962–1965), 47 Dogwood Lane, Rockville Centre, New York.

Jos. F. Miller (1965–1968), Executive Vice President, National Electrical Manufacturers Association, New York, New York.

T. G. Redman (1959–1961), Vice President, Swift and Company, Chicago, Illinois.

T. E. Veltfort (1950–1952), Managing Director, Copper & Brass Fabricators Council, Inc., New York, New York.

Merrill A. Watson (1956–1958), President, National Footwear Manufacturers Association, New York, New York.

COMMITTEE ON AIR TRANSPORTATION

Scope: To advise the Bureau of the Budget with regard to opportunities for paperwork reduction in reporting and record keeping requirements of Federal agencies and on any opportunities to effect improvements in the accuracy and usefulness of Federal statistics.

Budget Bureau Staff Assigned: Harry B. Sheftel.

Membership being revised.

COMMITTEE ON BANKING

Scope: To advise the Bureau of the Budget on Federal reporting and record retention requirements for the purpose of reducing the burden imposed upon the banking industry and to improve statistical and other information to be collected by Federal agencies.

Budget Bureau Staff Assigned: Edward T. Crowder.

Chairman

Charles A. Agemian, Executive Vice President, The Chase Manhattan Bank, New York, N.Y.

Secretary

Franklin A. Gibbons, Jr., Vice President and Comptroller, The Riggs National Bank, Washington, D.C.

Members

Thomas R. Atkinson, Deputy Manager, The American Bankers Association, New York, N.Y.

C. H. Baumhefner, Executive Vice President, Bank of America, NT&SA, San Francisco, Calif.

Frank Forester, Jr., Vice President and Comptroller, Morgan Guaranty Trust Company, New York, N.Y.

Denton A. Fuller, President, Liberty Trust Company, Cumberland, Md.

Saul B. Klaman, Director of Research, National Association of Mutual Savings Banks, New York, N.Y.

Wesley Lindow, Executive Vice President and Secretary, Irving Trust Company, New York, N.Y.

Arthur Ringler, Executive Vice President, Chemical Bank New York Trust Co., New York, N.Y.

Edward T. Shipley, Comptroller, Wachovia Bank & Trust Company, Winston-Salem, N.C.

Mr. Paul L. Smith, Senior Vice President, Security First National Bank, Los Angeles, Calif.

Walter F. Thomas, Executive Vice President, Manufacturers Hanover Trust Company, New York, N.Y.

Wm. T. Heffelfinger, American Bankers Association, Washington.

COMMITTEE ON CHEMICALS

Scope: To advise the Bureau of the Budget in regard to opportunities to reduce the paperwork burden on industry resulting from the reporting and record-keeping requirements of the Federal agencies, and to make recommendations to improve the accuracy and usefulness of Federal statistics.

Budget Bureau Staff Assigned: Harold T. Lingard.

Chairman

N. R. Wenrich, Manager of Business Research, Merck & Company, Inc., Rahway, New Jersey.

Secretary

Marjorie V. Campbell (Miss), Director, Information Service, Manufacturing Chemists' Association, Washington, D.C.

Members

Crayton K. Black, Manager—Trade Relations, Dyes & Chemical Division, Organic Chemicals Department, E. I. du Pont de Nemours & Co., Inc., Wilmington, Delaware.

Morse G. Dial, Jr., Regional Vice President, Union Carbide Corporation, Washington, D.C.

Dr. Jack D. Early, Monsanto Company, Washington, D.C.

Dr. Aimison Jonnard, Manager—Long Range Planning, Esso Chemical Co., Inc., New York, New York.

W. D. Kavanaugh, Manager, Washington Office, American Cyanamid Company, Washington, D.C.

Lewis E. Lloyd, Economist, The Dow Chemical Company, Midland, Michigan.

John J. O'Donnell, Tax Attorney, Allied Chemical Corporation, New York, New York.

COMMITTEE ON EQUAL EMPLOYMENT OPPORTUNITY SURVEYS

Scope: To advise the Bureau of the Budget on problems which will arise in connection with equal employment opportunity reporting and record keeping requirements and special surveys, and to make recommendations as to ways of avoiding or minimizing such problems.

Budget Bureau Staff Assigned: Karen Nelson.

Chairman

G. H. Gaynor, retired, not replaced.

Members

W. L. Barnes, Assistant Director, Personnel Services, North American Aviation, Inc., El Segundo, California.

Joseph E. Baudino, Vice President, Westinghouse Broadcasting Company, Washington, D.C.

Harry S. Benjamin, Jr., Director, Legal Staff, General Motors Corporation, Detroit, Michigan.

Charles G. Caffrey, Washington Representative, American Textile Manufacturers Institute, Washington, D.C.

David D. Doughty, Counsel, Personnel Relations Conference, Air Transport Association, Washington, D.C.

Paul M. Hawkins, Counsel, Health Insurance Association of America, Washington, D.C.

Arthur F. Hintze, Director, Government Labor Relations Service, Associated General Contractors, Washington, D.C.

Alfred E. Langenbach, Vice President, First National Bank, Chicago, Illinois.

W. R. Hill, Jr., Manager, Payroll Administration, Public Service Electric & Gas Co., Newark, New Jersey.

S. W. Mahon, Westinghouse Electric Corporation, 3 Gateway Center, Pittsburgh, Pa.

Donn R. Marston, Machinery & Allied Products Institute, Washington, D.C.

Lambert H. Miller, General Counsel, National Association of Manufacturers, Washington, D.C.

Charles F. Mulligan, Senior Statistician, Eastman Kodak Company, Rochester, New York.

Eugene F. Rowan, Director, Personnel Relations, J. C. Penney Company, Inc., New York, N.Y.

Melvin Sandler, Director, Employee Relations, American Hotel & Motel Association, New York, N.Y.

S. W. Seeman, Assistant Vice President, Personnel Administration, Penn Central Company, Philadelphia, Pa.

Mrs. Jean Sisco, Divisional Vice President, Personnel & Industrial Relations, Woodward & Lothrop, Washington, D.C.

Robert H. Stewart, Jr., Manager, General Economics Planning & Economics Department, Gulf Oil Corporation, Pittsburgh, Pa.

N. R. Wenrich, Manager, Business Research, Merck & Company, Inc. Rahway, New Jersey.

Don White, Employee Relations Counsel, American Retail Federation, Washington, D.C.

COMMITTEE ON FATS AND OILS

Scope: To advise the Bureau of the Budget concerning opportunities to reduce the paperwork burden imposed upon establishments engaged in the production, processing and consumption of oils, and to advise the Bureau on ways to improve Federal statistical programs to better serve the needs of government and industry users of Federal statistics.

Budget Bureau Staff Assigned: Harold T. Lingard.

Chairman

T. J. Totushek, Cargill, Incoporated, Minneapolis, Minnesota.

Members

Charles R. Bergstrom, Anderson, Clayton & Co., Inc., Houston, Texas.

Arval L. Erikson, Economic Advisor, Oscar Mayer & Company, Madison, Wisconsin.

Herbert Harris, Treasurer-Controller, National By-Products, Inc., Des Moines, Iowa.

Martin Hilby, Vice President, Riverside Industries, Marks, Miss.

C. H. Keirstead, The Glidden Company, Cleveland, Ohio.

Malcolm R. Stephens, President, Institute of Shortening & Edible Oils, Inc., Washington, D.C.

Harold V. Knight, Lever Brothers Company, New York, N.Y.

Harry H. Kriegel, J. Howard Smith, Inc., Fort Monmouth, New Jersey.

R. E. Miller, Buying Dept., Procter and Gamble Company, Cincinnati, Ohio.

J. W. Moore, Vice President, A. E. Staley Manufacturing Co., Decatur, Illinois.

Boardman Veazie, Commercial Research Dept., Swift and Company, Chicago, Illinois.

Donald B. Walker, Ralston-Purina, St. Louis, Missouri.

COMMITTEE ON MEAT PACKING

Scope: To advise the Bureau of the Budget on reporting, statistical, and record keeping problems arising from the requirements which Federal agencies propose for issuance to the meat packing industry, and to assist the Bureau of the Budget in developing needed statistical programs relating to the meat packing industry.

Budget Bureau Staff Assigned: Harold T. Lingard.

Chairman

T. G. Redman, retired, not replaced.

Secretary

J. Russell Ives, Director, Department of Marketing, American Meat Institute, Chicago, Illinois.

Members

A. C. Bruner, Treasurer, East Tennessee Packing Company, Knoxville, Tennessee.

Howard Dexter, Controller, The Rath Packing Company, Waterloo, Iowa.

Earl R. Frank, Comptroller, The E. Kahn's Sons Company, Cincinnati, Ohio.

J. W. Kelly, Office of Controller, Armour Foods, Armour and Company, Chicago, Illinois.

E. A. Holloway, Controller, Cudahy Company, Phoenix, Arizona.

Robert B. Hunter, Vice President & Treasurer, Tobin Packing Company, Inc., Rochester, N.Y.

J. B. Kilgore, Controller, Wilson & Company, Inc., Chicago, Illinois.

John Killick, Exec. Secretary, The National Independent Meat Packers Association, Washington, D.C.

L. J. Kurkowski, Controller, John Morrell & Company, Chicago, Illinois.

L. Blaine Liljenquist, President and General Manager, Western States Meat Packers Association, Washington, D.C.

Leonard H. Pedersen, Assistant Controller, Oscar Mayer & Co., Inc., Madison, Wisconsin.

Robert F. Potach, Controller, George A. Hormel & Co., Austin, Minn.

James W. Seifert, Controller, The Wm. Schluderberg-T. J. Kurdle Co., Baltimore, Maryland.

Jack B. Sullivan, Comptroller, Stark Wetzel & Company, Inc., Indianapolis, Indiana.

Wm. G. Torrace, V. P. & Controller, Hygrade Food Products Corp., Detroit, Michigan.

COMMITTEE ON NATURAL GAS PIPELINES

Scope: To advise the Bureau of the Budget on report forms and related record-keeping requirements issued by federal agencies to companies in the natural gas pipeline field in order to improve such forms and to make recommendations to simplify reporting requirements and reduce the burden of reporting.

Budget Bureau Staff Assigned: Harry B. Sheftel.

Chairman

E. H. Hasenberg, Natural Gas Pipeline Company of America, Chicago, Illinois.

Members

W. Page Anderson, Director, Rates and Certificates, Panhandle Eastern Pipe Line Co., Kansas City, Mo.

Daniel L. Bell, Jr., Columbia Gas System Service Corp., New York, N.Y.

I. D. Bufkin, Texas Eastern Transmission Corp., Houston, Texas.

William F. Cummer, United Gas Pipe Line Company, Shreveport, Louisiana. Alternate: J. D. McCarty, United Gas Pipe Line Co.

Robert L. Cramer, Florida Gas Transmission Co., Winter Park, Fla.

Theodore I. Gradin, American Gas Association, New York, New York.

B. K. Hoeldtke, El Paso Natural Gas Company, El Paso, Texas.

Harry A. Offutt, Treasurer, Consolidated Gas Supply Corp., Clarksburg, West Va.

C. W. Radda, Northern Natural Gas Company, Omaha, Nebraska.

Walter E. Rogers, Executive Director, Independent Natural Gas Association of America, Washington, D.C.

Robert H. Stewart, Jr., Manager, General Economics Gulf Oil Corporation, Pittsburgh, Pa.

COMMITTEE ON PETROLEUM AND NATURAL GAS

Scope: To advise the Bureau of the Budget on report forms relating to the petroleum and natural gas producing and processing industries; to reduce the burden imposed upon these industries as a result of Federal reporting and record-keeping requirements; and to advise the Bureau in connection with opportunities to improve Federal statistical programs to serve the needs of both government and industry.

Budget Bureau Staff Assigned: Harold T. Lingard.

Chairman

Robert H. Stewart, Jr., Manager, General Economics, Planning & Economics Department, Gulf Oil Corporation, Pittsburgh, Pa.

Members

E. W. Brindle, Standard Oil Company (Indiana), Chicago, Illinois.

C. J. Carlton, Economics Department, Standard Oil Co. of California, San Francisco, Calif.

James S. Cross, Manager, Economics Department, Sun Oil Company, Philadelphia, Pa.

Theodore I. Gradin, Director, Bureau of Statistics, American Gas Association, New York, New York.

E. H. Hasenberg, Co-ordinator of Certificates, Natural Gas Pipeline Company of America, Chicago, Illinois.

Edward R. Heydinger, Manager, Economics & Statistics Dept., Marathon Oil Company, Findlay, Ohio.

John E. Hodges, Director, Department of Statistics, American Petroleum Institute, Washington, D.C.

Melvin L. Mesnard, Economic Analyst, Independent Petroleum Association of America, Washington, D.C.

B. L. Jones, Mobil Oil Corporation, New York, New York.

Carl E. Richard, Controller's Department, Humble Oil and Refining Co., Houston, Texas.

A. J. Bradford, Comptroller's Department, Texaco, Inc., New York, New York.

Frank Young, Continental Oil Company, New York, New York.

PUBLIC UTILITIES COORDINATING COMMITTEE

Scope: To advise the Bureau of the Budget and to coordinate, as may be desirable, the work of the Committees on Financial Reports and Operating Reports to better serve the purposes of the Advisory Council on Federal Reports and the needs of the Bureau of the Budget and the gas and electric utilities industries; also to assist in the selection of special advisory panels qualified to advise the Bureau of the Budget on any reporting forms and plans concerning which the two Committees would not be adequately qualified to advise the Bureau.

Budget Bureau Staff Assigned: Mr. Harry B. Sheftel.

Chairman

Robert S. Quig, Vice President, Ebasco Services Incorporated, New York, N.Y.

Members

Miles J. Doan, Vice President, The Cincinnati Gas & Electric Co., Cincinnati 1, Ohio.

Theodore I. Gradin, Director, Bureau of Statistics, American Gas Association, New York, N.Y.

G. H. McDaniel, Head, System Operations, American Electric Power Service Corp., New York, N.Y.

John Thornborrow, Assistant Managing Director, Edison Electric Institute, New York, N.Y.

COMMITTEE ON UTILITIES—FINANCIAL REPORTS

Scope: To advise the Bureau of the Budget on financial reporting forms and related requirements issued by federal agencies to companies in gas and electric utilities field in order to improve such reporting forms and plans and where possible to simplify them and reduce the burden of reporting.

Budget Bureau Staff Assigned: Mr. Harry B. Sheftel.

Chairman

Robert S. Quig, Vice President, Ebasco Services Incorporated, New York, N.Y.

Vice Chairman

Miles J. Doan, Vice President, The Cincinnati Gas & Electric Co., Cincinnati 1, Ohio.

Secretary

Theodore I. Gradin, Director, Bureau of Statistics, American Gas Association, New York, N.Y.

Members

Robert R. Fortune, Vice President, Pennsylvania Power & Light Co., Allentown, Pennsylvania.

Arthur E. Gartner, Controller, Consolidated Natural Gas Co., New York, New York.

John Geiger, Head, Financial & Statistical Section, Pacific Power & Light Company, Portland, Oregon.

Robert A. Jeremiah, Controller, Long Island Lighting Company, Mineola, New York.

J. C. Johnson, Assistant Comptroller, Southern Services, Inc., Atlanta, Georgia.

Albert J. Klemmer, Auditor, Rochester Gas & Electric Company, Rochester, New York.

Frank H. Roberts, Controller, Northern Natural Gas Company, Omaha, Nebraska.

Mr. C. M. Allen, Vice President and Treasurer, Panhandle Eastern Pipe Line Company, Kansas City, Missouri.

William E. Sauer, Superintendent, Regulatory & Statistical Accounting Department, Peoples Gas Light & Coke Co., Chicago, Illinois.

Robert C. Sloan, Assistant Treasurer, Columbia Gas System, Inc., New York, New York.

Alfred E. Softy, Accounting Director, Edison Electric Institute, New York, New York.

William T. Sperry, Assistant to Comptroller, Public Service Gas & Electric Co., Newark, New Jersey.

Douglas M. Tonge, Asst. Secretary & Asst. Treasurer, American Electric Power Service Corp., New York, New York.

COMMITTEE ON PUBLIC UTILITIES—OPERATING REPORTS

Scope: To advise the Bureau of the Budget on utilities operating reporting forms and related requirements issued by federal agencies to companies in gas and electric utilities field in order to improve such reporting forms and plans and where possible to simplify them and reduce the burden of reporting.

Budget Bureau Staff Assigned: Harry B. Sheftel.

Chairman

Robert S. Quig, Vice President, Ebasco Services Incorporated, New York, New York.

Vice chairman

G. H. McDaniel, Head, System Operations, American Electric Power Service Corp., New York, N.Y.

Secretary

John Thornborrow, Assistant Managing Director, Edison Electric Institute, New York, N.Y.

Members

Fred W. Braga, Assistant Comptroller & Statistician, The Detroit Edison Company, Detroit, Mich.

Donald E. Rose, Assistant Treasurer, New England Power Service Company, Boston, Mass.

Theodore I. Gradin, Director, Bureau of Statistics, American Gas Association, New York, N.Y.

James I. Poole, Jr., Vice President-Sales & Rates, Natural Gas Pipeline Co., of America, Chicago, Ill.

Francis Quinn, Budget & Statistics Department, Transcontinental Gas Pipe Line Corp. Houston, Tex.

E. A. Willson, Vice President, Northern States Power Company, Minneapolis, Minn.

R. C. Wilson, Manager, Rate Department, Washington Gas Light Company, Washington, D.C.

COMMITTEE ON RADIO AND TELEVISION BROADCASTING

Scope: To advise the Bureau of the Budget on reporting procedures, mainly Federal Communications Commission questionnaires, issued to radio and television stations and to make recommendations towards the simplification, consolidation and improvement of such reporting.

Budget Bureau Staff Assigned: Harry B. Sheftel.

Chairman

Joseph E. Baudino, Vice President, Westinghouse Broadcasting Company, Washington, D.C.

Members

Douglas A. Annello, General Counsel, National Association of Broadcasters, Washington, D.C.

Arthur W. Arundel, President WAVA, Arlington, Virginia.

Alfred Beckman, Vice President, American Broadcasting Company, Washington, D.C.

Robert Cochrane, Assistant General Manager WMAR–TV, Baltimore, Maryland.

Joseph DeFranco, Attorney, Columbia Broadcasting System, Washington, D.C.

George J. Gray, Vice President, AVCO Broadcasting Corporation, Washington, D.C.

Howard Monderer, Assistant General Attorney, National Broadcasting Company, Washington, D.C.

Roger Newhoff, President, Eastern Broadcasting Corporation, Washington, D.C.

Roger B. Read, Vice President, Taft Broadcasting Company, Cincinnati, Ohio.

Robert L. Heald, President, Federal Communications Bar Association, Washington, D.C.

Daniel W. Shields, Executive Assistant to the President, Steinman Stations, Lancaster, Pennsylvania.

COMMITTEE ON RAILROADS

Scope: To advise the Bureau of the Budget with respect to federal reporting and record keeping requirements applicable to railroads and subject to review by the Bureau of the Budget under the Federal Reports Act, and to such related problems of coordination and planning of statistical and reporting programs covering railroads as the Bureau may refer to the Committee.

Budget Bureau Staff Assigned: Harry B. Sheftel.

Chairman

Burton N. Behling, Vice President, Association of American Railroads, Washington, D.C.

Members

L. W. Adkins, Vice President, Accounting & Taxation, Louisville & Nashville Railroad, Louisville, Kentucky.

P. L. Conway, Jr., Assistant Vice President, Economics & Finance Department, Association of American Railroads, Washington, D.C.

W. R. Divine, Vice President and Comptroller, Southern Railway System, Washington, D.C.

W. N. Ernzen, Vice President and Comptroller, Chicago, Burlington & Quincy Railroad, Chicago, Illinois.

J. T. Ford, Jr., Assistant Vice President & Comptroller, Chesapeake & Ohio/Baltimore & Ohio Railroads, Baltimore, Maryland.

C. E. Fuller, Comptroller and Traffic Manager, Genesee & Wyoming Railroad Company, Retsof, New York.

Charles S. Hill, Comptroller, Penn Central Company, Philadelphia, Pa.

H. A. Nelson, Vice President & General Auditor, Southern Pacific Company, San Francisco, Calif.

COMMITTEE ON RETAIL TRADES

Scope: To advise the Bureau of the Budget with respect to federal reporting and record keeping requirements applicable to the retail trades and subject to review by the Bureau of the Budget under the Federal Reports Act, and to such related problems of coordination and planning of statistical and reporting programs covering the trades as the Bureau may refer to the Committee.

Budget Bureau Staff Assigned: Paul F. Krueger.

Chairman

Eugene A. Keeney, Executive Vice President, American Retail Federation, Washington, D.C.

Secretary

Arthur Sturgis, Jr., Director Research & Taxation, American Retail Federation, Washington, D.C.

Members

A. Arthur Charous, Manager, Division of Economic Research, Sears, Roebuck and Company, Chicago, Illinois.

S. Kent Chrisensen, Vice President, Natl. Assn. of Food Chains, Washington, D.C.

Don J. Debolt, Executive Director, Menswear Retailers of America, Washington, D.C.

Nathan B. Epstein, Vice President, Lerner Stores Corporation, New York, New York.

William Girdner, Melville Shoe Corporation, New York, New York.

Elias S. Gottlieb, Corporate Research Director, R. H. Macy & Co., Inc., New York, New York.

Robert C. Heller, Asst. Secretary & Treasurer, F. W. Woolworth Company, New York, New York.

Alfred E. Kuerst, Vice President, L. S. Ayres & Company, Indianapolis, Indiana.

Thomas H. Jenkins, Research Director, National Retail Hardware Association, Indianapolis, Indiana.

Herbert S. Landsman, Executive Vice President, Federated Department Stores, Inc. Cincinnati, Ohio.

Eleanor G. May, Research Director, Woodward and Lothrop, Washington, D.C.

Irving Phillip, Controllers Congress, National Retail Merchants Association, New York, New York.

COMMITTEE ON SCIENTIFIC AND RESEARCH ACTIVITIES

Scope: To advise the Bureau of the Budget on the improvement and simplification of Federal government reporting forms and related procedures concerned with scientific and technical personnel and research and development expenditures in industry, and to advise the Bureau of the Budget as to statistical programming in these fields, with particular reference to industry needs for statistical information.

Budget Bureau Staff Assigned: Margaret E. Martin, Harry B. Sheftel.

Chairman

John W. Reynard, Assistant Manager, Personnel Division, Employee Relations Department, E. I. du Pont de Nemours & Company, Inc., Wilmington, Delaware.

Members

H. Dwight Blondefield, Executive Assistant, Advanced Programs and Marketing, Autonetics Division, North American Rockwell Corporation, Anaheim, California.

C. A. Church, Manager, Educational Relations & Recruiting, General Electric Company, New York, New York.

R. C. Cunningham, Director, Staff Programs, Engineering, Westinghouse Electric Corporation, Pittsburgh, Pa.

Virginia A. Dwyer, Economist and Actuary, Finance Division, Western Electric Company, New York, New York.

N. O. Heyer, Manager, Manpower Planning, International Business Machines Corporation, Corporate Headquarters, Armonk, New York.

B. F. Holcomb, Executive Assistant, United States Steel Corporation, Pittsburgh, Pa.

Wayne E. Kuhn, Omark Industries, Inc., Portland, Oregon.

George E. Norman, Jr., Vice President, Burlington Industries, Inc., Greensboro, North Carolina.

David Novick, Cost Analysis Department, The Rand Corporation, Santa Monica, California. Alternate: Milton Margolis.

J. H. Pond, Personnel Manager, Employment & Personnel Department, The Martin Company, Denver, Colorado.

Victor Schneider, General Motors Corporation, Detroit, Michigan.

Robert H. Sommer, Managing Director, National Association of Accountants, New York, New York.

N. R. Wenrich, Manager, Business Research, Merck & Company, Inc., Rahway, New Jersey.

C. C. Coyne, Director, Financial & Service Department, Gulf Research & Development Corp., Pittsburgh, Pa.

COMMITTEE ON WHOLESALE TRADES

Scope: To advise the Bureau of the Budget on reporting, record keeping and statistical problems arising from the activities and recommendations of Federal agencies relating to wholesale industries, to reduce the burden of paperwork imposed upon the wholesale industries by these requirements, and to make recommendations for the improvement of Federal statistics needed by Government and industry.

Chairman

James E. Allen, President, the Henry B. Gilpin Co., Oxon Hill, Maryland.

Secretary

Paul L. Courtney, Executive Vice President, National Association of Wholesalers. Washington, D.C.

Members

Gilbert Campbell, Albemarle Motor Company, Charlottesville, Virginia.

W. D. Jenkins, President, Radio Supply Company, Richmond, Virginia.

Frank J. Mulvey, National Auto Service Co., Inc., Washington, D.C.

Hugh N. Phillips, President, Frank Parsons Paper Company, Washington, D.C.

Harold O. Smith, Jr., Executive Vice President, U.S. Wholesale Grocers Association, Washington, D.C.

Mr. METCALF. Mr. President, I know something of the background of the legislation from which these advisory committees grew. It was laudable legislation, developed in hearings by my predecessor, Senator James E. Murray, who then chaired the Small Business Committee. The early days of World War II brought with them all sorts of Federal forms and questionnaires related to rationing and the war effort. This worked a special hardship on small businessmen. They went to Senator Murray. The Federal Reports Act of 1942 was the consequence. It makes sense to keep down duplicative

paperwork and I am in full accord with the goals of that statute.

What I do question is the one-sided information which the Budget Bureau receives, through its arrangement with the advisory committees from big businesses. I criticize and seek to halt the use of these committees to withhold from the public information which it has the right to know and should be able to obtain readily.

In elaboration of this point, I ask unanimous consent to have printed in the RECORD an article, "Unheralded Committees Molding Statistics Via the Budget Bureau," by Miss Jan Nugent, which appeared in the November 26, 1968, issue of the Journal of Commerce.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNHERALDED COMMITTEES MOLDING STATISTICS

(By Jan Nugent)

WASHINGTON, November 25.—Probably the best-known sounding board through which government hears the advice and opinions of the corporate community is the Business Council, whose regular meetings swarm with government policy-makers and attendant journalists.

However, there is another device through which business groups influence the federal establishment's less glamorous daily contacts with the business world. This is by participation in little-known industry committees which advise the Bureau of the Budget on its duties as supervisor of government statistic collection.

Statistics are not the most dramatic of the federal establishment's efforts, even though they are an essential one. But the clash between the government's right to know and a corporation's right to privacy is a daily one in many industries.

STATISTICS GUIDE POLICY

And since legislation and future regulatory decisions are often based on such economic data, how, when and whether it is collected helps mold government policy.

The Budget Bureau acts as traffic cop for all Federal Government statistics-gathering. Under the Federal Reports Act, it must approve any questionnaire sent by a federal agency to more than 10 persons.

For advice on how to improve data-gathering efforts and minimize reporting burdens, the Budget Bureau calls on committees set up by the Advisory Council on Federal Reports. ACFR has 20 standing committees in various sectors, such as banking, equal employment opportunity, radio and TV broadcasting, and sets up special panels to deal with government surveys in other areas.

"We are not in the policy area," explained ACFR Executive Secretary Russell Schneider. "The Business Council is in the area of policy problems . . . we are in procedure and how you do it."

"It is hard to separate policy and procedure, but we try hard to do that," he continued.

There is general agreement that this Budget Bureau-business cooperation has provided sound technical advice to simplify and improve government data-gathering efforts.

But it has not been immune from criticism. Corporate executives and Congressional committees have criticized the Budget Bureau for not doing more to defoliate "the federal paperwork jungle."

Other government agencies complain that at times this overview procedure cramps their style, interferes with policy decisions and squelches studies necessary to their work.

WHERE'S THE LINE?

Their objections, generally, arise over where the narrow line between procedure and policy is drawn.

Disgruntled FTC staffers cite the fate of an FTC proposal to study the 1,000 largest corporations about five years ago. The Budget Bureau okayed the project after a stormy meeting where some of the business representatives allegedly objected to its purpose. Later, several sources contend, other company officials made their objections known on Capitol Hill. When FTC's budget came up, Congress not only refused to appropriate money for the work, but for the next three years specifically forbade any such survey.

Budget officials who participated point out that the final survey was much improved because of advice given by the Business Advisory Committee. They also point out that the project was cleared by Budget, which has the final responsibility of weighing all the arguments and making the final decision.

An FTC official conceded that anyone has a right to take his complaints to Congress. "My criticism is that they (business) use this (advisory committee procedure) as a vantage point to see what is coming their way," he said.

Ranking officials of USDA and the Budget Bureau have also clashed when some proposed USDA studies were scuttled at Budget.

Only recently, a meeting was convened at Budget Bureau which illustrates the kind of problems business advisory committees deal with.

On Nov. 7, the Advisory Committee on Public Utilities objected strongly to Federal Power Commission proposals to require separate reporting of all professional retainer fees paid for advertising, public relations, legal services, etc. Previously, large utility companies were required to report individually to FPC only annual retainers which exceeded $25,000.

The meeting was closed, and Budget officials said the minutes were not available. However, sources who attended report that the utility company spokesmen repeatedly asked FPC why it needed this type of detailed information. They contended that providing the data would be burdensome and expensive and wanted to know why it was necessary.

The public utilities segment of the power industry has supported FPC's proposal, contending it is possible under present rules to write off as legal and public relations expenses what are really political and lobbying activities.

FPC's final ruling, which waits at least partially on Budget Bureau clearance, has not yet been announced.

Mr. METCALF. Mr. President, Miss Nugent referred to the fate of a Federal Trade Commission proposal to study the 1,000 largest corporations, after one of the Budget Bureau advisory committees objected. One of the most experienced members of the FTC, Commissioner Everett MacIntyre, commented earlier this year on the extraordinary control which the Bureau of the Budget—and, I would add, its industry advisory committees—has over the regulatory agencies through the Federal Reports Act of 1942. The distinguished senior Senator from North Carolina (Mr. ERVIN) inserted the full text of Mr. MacIntyre's remarks in the CONGRESSIONAL RECORD of January 27, 1969, and they appear on page 1835 of the RECORD. I ask unanimous consent to have printed at this point in the RECORD that portion of Commissioner MacIntyre's remarks which deals with the Federal Reports Act of 1942.

There being no objection, the remarks were ordered to be be printed in the RECORD, as follows:

4. The Federal Reports Act of 1942

Passage of the Federal Reports Act of 1942 accorded to the Bureau of the Budget another important right to review and control over the activities of regulatory agencies. Curiously enough, as is often the case, the Act was passed under circumstances and for reasons considerably different from those in which it would be used.

It will be recalled that passage of the Federal Reports Act was occasioned by the proliferation of governmental questionnaires and requests for information and other forms which were the direct result of the activities of the Office of Price Administration. The nation was literally engulfed in a blizzard of paperwork concerning rationing output, prices, and any other conceivable type of information, both private and public.

E. g., for the purpose of ensuring successful prosecution of the war, the OPA required literally hundreds of thousands of questionnaires be filled out by farmers and housekeepers who needed a few gallons of oil for lighting and other purposes around their homes. For this purpose, however, it proved not only unnecessary but was much resented by the many citizens who were required to wait their places in long lines at various post offices throughout the country for a determination whether the questionnaires were properly filled out and their requests indeed necessary.

The Act provides that requests for information originating with any governmental agency and directed to more than nine respondents must receive clearance by the Bureau of the Budget. Requests for such clearance must be accompanied by a detailed explanation of the questionnaire, such as technicalities of implementation, manner of selecting the respondents, whether the information is to be collected by mail or personal interview, etc., etc. In addition, the request must be justified in depth. This would include a statement why the information is sought and how it will be used; why the particular number of respondents and not less has been selected; how much time it will take a respondent to answer the questionnaire, etc., etc. In ruling upon such requests the Bureau of the Budget must also be satisfied that this is the only practical method of getting the necessary information and that it is not available through some other governmental or more readily accessible private source.

The power of review within the Bureau of the Budget extends so far as to permit forbidding collection of all or a part of the information sought. In case of the traditionally used questionnaire, for example, the Bureau of the Budget may withhold clearance for its issuance altogether or it may strike certain questions—a matter entirely within its discretion.

Congress, in its haste to pass this bill, however, did not heed the warning of those questioning its extent, although this point was the subject of considerable debate. Specifically, some members of Congress felt that while the bill was ostensibly aimed at the elimination of unnecessary and presumably duplicate reports the way it was phrased gave the Director of the Bureau of the Budget a good deal more control over the collection of information than was necessary under the circumstances and perhaps even intended by Congress had it considered all the ramifications of the bill. As it turned out, the Act permits the Bureau of the Budget to exercise a good deal of control over the investigative functions of the independent agencies. With respect to the Federal Trade Commission this represents a

drastic departure from the theory of its creation. One of the Commission's most important functions arises out of the mandate to investigate and publicize business conditions harmful to the continued good health of the economy and to do so independently and outside of the control of the executive. Any control over its ability to investigate or a substantive review of the information it seeks will naturally adversely affect the independence of the Commission.

There is no doubt that the purpose for which the Act was conceived—to cut costs to the government and to avoid unnecessary harassment of citizens and business—has considerable merit. If, however, it becomes an instrument of control over some types of investigations, specifically those of independent regulatory agencies—and this in fact has occurred—it would appear that the authority the Act vests in the Bureau of the Budget needs to be reexamined.

Mr. METCALF. Mr. President, my experience indicates that in some instances the advisory committees frustrate the collection and publication of information which the public is entitled to have. I first became aware of this several years ago in endeavoring to track down the donations made by various electric utilities. I found that a number of rightwing extremist organizations were receiving regular contributions from power companies. These companies however, usually did not report the contributions to the Federal Power Commission. When I asked the FPC to request the utilities to itemize expenditures in certain accounts we would find a whole flock of extremist organizations such as the Southern States Industrial Council. That is the pompous group, some Members may recall, which thinks the kiddies who collect for UNICEF are aiding and abetting a Communist front, and which held that the Civil Rights Act of 1964 was "clearly of Communist origin." This fall, SSIC has been complaining to Congress about the Equal Employment Opportunity Commission, an agency with severely limited powers, which has, nevertheless, revealed the fact that the electric utility industry discriminates against Negroes and Spanish-surnamed persons more than any other industry.

Power company contributions to such organizations are often tucked into operating expense accounts, so that the cost is borne by the utility customers, rather than by the stockholders, as should be the case with such political expenditures. I asked the FPC whether it could simply ask each major utility whether it contributed to certain organizations, and, if so, determine how the utilities accounted for the donations in their books. The FPC said that would not be possible, because of the requirement in the Federal Reports Act of 1942 that "no Federal agency shall conduct or sponsor the collection of information, upon identical items, from 10 or more persons" unless certain conditions had been met. Among those conditions was and is the approval of the Budget Bureau Director. He, in keeping with custom if not the law, refers such queries to one of his utility advisory committees, some of whose members represent companies practicing the shoddy bookkeeping to which I object, and none of whose members represent the customers who are required to pay for this dubious charity on the part of the utilities.

Another example involves the reporting of professional fees by electric utilities. Two years ago the Federal Power Commission recommended reporting all such fees—which include fees for attorneys, public relations, and advertising, among other things—rather than just those payments exceeding, in the case of the large utilities, $25,000 a year. The FPC docket of comment on the proposed revision was preponderantly favorable, including supporting letters from a number of power company emloyees. The American Public Power Association, representing municipally owned electric utilities, excellently stated the case for the FPC's "right to know" regulation in this statement:

COMMENTS OF THE AMERICAN PUBLIC POWER ASSOCIATION

(Proposal of FPC to Revise Schedule for Reporting Charges for Professional and Other Consultative Services, Docket No. R–332)

The American Public Power Association, representing more than 1,400 local publicly owned electric utilities in 46 States, Puerto Rico, and the Virgin Islands, submits this statement in support of the Federal Power Commission's proposed amendment of the FPC schedule "Charges for Professional Services" of FPC Form No. 1 and FPC Form No. 2.

APPA has a direct interest in the suggested change because nearly 1,000 publicly-owned power systems purchase electricity at wholesale from private power companies subject to the jurisdiction of the Commission.

At the present time, the Federal Power Commission requires electric utilities to report specified information on outside professional services for which payment is made in the amount of (1) $5,000 by a Class B utility, (2) $10,000 by a Class A utility having operating revenues under $25,000,000, and (3) $25,000 by Class A utilities having operating revenues of $25,000,000 or more. The proposed revision would require reporting on all outside professional and other consultative services.

IMPORTANCE OF REGULATION

Present FPC requirements in this schedule are clearly insufficient. Electric utilities, normally monopolistic within a specific area, and recipients of certain governmental powers, require effective regulation in order to protect the public against abuses. Effective regulation is impossible without public disclosure of all relevent facts, and present regulations provide large loopholes which encourage secrecy by private power companies.

Freedom of information is, in itself, a worthwhile goal. In signing the 1966 Freedom of Information bill, President Johnson said that "freedom of information is so vital that only the national security, not the desire of public officials or private citizens, should determine when it must be restricted." This particular legislation was directed toward disclosure to individuals by Government agencies; however, a similar principle applies to private utility disclosures.

Just as the individual citizen must be protected from governmental abuses, the individual consumer must be protected from abuses by a seller. In the general marketplace, the consumer is protected by direct competition between sellers. In the electric industry, there is no direct competition, so the consumer must be protected by indirect competition and by effective regulation.

Public policy dictates that utilities, which supply an essential public service, operate in a "fishbowl". Both electric consumers and regulatory agencies must have access to full knowledge of a particular utility and its expenditures. Since 1948, FPC regulations have required less than full disclosure of professional fees paid by private power companies.

PAST ABUSES

Information that would cast an unfavorable public light upon private power companies has been withheld in the past. Some of this information has been disclosed through public hearings. Undoubtedly, much has never been disclosed. Some examples of situations indicating the need for systematic, industry-wide, full disclosure include the following:

1. In 1953 and 1954, hearings held by the Subcommittee on Antitrust and Monopoly of the Senate Judiciary Committee disclosed that Arkansas Power and Light retained certain State legislators as well as various lawyers throughout the State for political action purposes.

2. At the same hearings, it was disclosed that Mississippi Power and Light secretly retained counsel in the North Central Mississippi Electric Power Association area for political activities to defeat the formation of a public utility district.

3. In 1941, the Federal Power Commission investigated expenditures by five Northwest private power companies, which totalled over one million dollars, half of which was charged to operating expenses. These expenditures included the following:

a. Contributions to various "front" organizations for partisan political purposes;

b. Repayment of a loan made by utility employees for political activities;

c. Payments to former opponents of the utilities;

d. Payments to prominent citizens;

e. Extensive advertising by the utilities during political campaigns; and

f. Expenditures in contesting a public utility district condemnation suit.

4. In 1963, private power companies began an extensive propaganda campaign called "Project Action," geared to encourage consumers to support private power and oppose public power. It is undeterminable how much money was spent on this program, as the 1963 reports of private power companies to the FPC do not mention the campaign.

5. In 1964, Senator Lee Metcalf and Vic Reinemer, authors of "Overcharge," wrote to 103 private power companies in response to an advertisement which stated that these companies would "answer any question you may have quickly, without making a federal case of it." They asked the companies what attorneys and legal firms were retained by their respective companies in 1963, and what was the compensation for each. Of the 103 companies, only 20 responded accurately to the question, four of which retained no attorneys.

6. One of the major lobbying efforts against the Dickey-Lincoln School Project was by the Electric Coordinating Council of New England. Yet, only the Fall River Electric Light Company reported to the FPC a "Proportionate share of expense of participation in Electric Coordinating Council of New England—$99.09", under Account 426.4, which should show "all expenditures incurred by the respondent during the year for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation or ordinances."

A public hearing should not be required in order to expose the ways in which private power companies spend their consumers' dollars. Present regulations allow some private power companies to hide any expenses totalling less than $25,000. This type of regulation can only encourage secrecy. Proposed regulations would tend to discourage such secrecy and prevent the abuses illustrated by the above examples.

VALUE OF DISCLOSURE

Proper disclosure of professional fees will benefit consumers, State commissions, wholesale customers, and the Federal Power Commission:

1. Consumers have a right to know what is included in their electric bills. They have a right to know if they are paying for the molding of public opinion, for the promotion of a political candidate, or for the takeover of a municipal electric system. And they have a right to protest if they feel they are being charged unfairly for these activities. Without access to the facts, a consumer is unable to protect himself.

2. State commissions were designed to protect consumers from possible monopolistic abuses by private power companies. They have sole jurisdiction over retail rates. A recent report by the Subcommittee on Intergovernmental Relations of the Senate Committee on Government Operations indicated that most State commissions have such a small staff and low budget that they are unable to perform adequately their regulatory functions. Access to detailed information regarding professional fees paid by private power companies will greatly enhance the ability of the commissions to determine proper retail rates by ascertaining what should be included in operating expenses.

3. Private power companies charge their wholesale customers on the basis of the companies' costs. If information regarding professional fees is available to wholesale customers, they can more accurately determine the fairness and validity of the rates they are charged.

4. The Federal Power Commission has jurisdiction over wholesale rates of most private power companies. Full knowledge of professional fees will aid the FPC in determining the propriety of a specific wholesale rate schedule.

The American Public Power Association urges the FPC to amend the schedule "Charges for Professional Services" as proposed.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and other matters referred to by the Senator from Montana (Mr. METCALF) will be printed in the RECORD.

The bill (S. 3067) to amend title 44, United States Code, to provide for consumer, labor, and small business representation on advisory committees under the coordination of Federal Recording Services, and for other purposes, introduced by Mr. METCALF, was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

S. 3067

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3506 of title 44 of the United States Code is amended by inserting "(a)" before the word "Upon" and by adding at the end thereof the following new subsections:

"(b) No advisory committee which includes among its members individuals who represent the interests of business or commercial enterprises may be used by the Director to assist or advise him in or with respect to the administration of this Act unless that advisory committee includes among its members one or more individuals who are chosen from private life to represent the economic interests of consumers, labor and small business within the United States. Not less than one-third of the membership of any such advisory committee which is composed of three or more members shall be individuals so chosen to represent the economic interests of consumers.

"(c) All records, minutes and other information of any advisory committee appointed to carry out the provisions of this chapter shall be available for public inspection and copying in accordance with regulations established by the Director.

"(d) In addition to publication in the Federal Register, the Director shall establish procedures for giving timely, conspicuous, public notice, by such means as he deems appropriate, to persons interested in the conduct of the business of advisory committees appointed under this chapter."

SEC. 2. The amendment made by this Act shall take effect on the first day of the second month beginning after the date of enactment of this Act.

Mr. METCALF. Mr. President, the Budget Bureau deliberated about the proposed regulation revision for months, then last November—2 days after the election—Robert S. Quig, vice president of EBASCO and Chairman of the Council's Public Utility Coordinating Committee, came to Washington and informed Budget Bureau officials of his desire to cut down on the voluminous amount of information flowing into the FPC. This matter of reporting detail on professional fees was discussed at length as a case in point. At that meeting and another a few weeks later, the leaders of the Nation's largest industry soberly told the Budget Bureau people that their fancy, third-generation computers simply could not bank and retrieve, say, the names of local attorneys retained and the annual pay of each, without a great deal of expense and bother.

Had the Budget Bureau accepted the suggestion which I have made to it from time to time during the past 4 years, and broadened the membership of its advisory committees, it would have quickly learned what experienced accountants for large municipal utilities have advised me. It is easy to report, in detail and at no extra cost, expenditures made for professional services and other items pertinent to regulators and the public. Or, the Budget Bureau people could have noted the point well taken by the Senate committee which considered this legislation almost 30 years ago, and pointed out that "major utilities have their own accountants and lawyers, not to mention computers, that can furnish this information without any problem." But the intent and use of the Federal Reports Act of 1942 have diverged further and further apart, my advice regarding broadening advisory committees has not been taken, and the Budget Bureau did not adopt the sound "right to know" recommendations of the FPC, although calling for more disclosure than had been required in the past.

In this connection, a special word is in order regarding the aforementioned gentleman who heads three of these 15 Budget Bureau advisory committees, the three that have to do with utilities. He is Mr. Robert S. Quig, vice president of EBASCO, a well-known utility service corporation. He is Chairman of the Budget Bureau's Public Utilities Coordinating Committee, the Committee on Public Utilities—Financial Reports, and the Committee on Public Utilities—Operating Reports.

Recently the Subcommittee on Intergovernmental Relations, in connection with hearings on S. 607, the Utility Consumers' Counsel Act, inquired of industry witnesses regarding the number and amount of utility rate increases pending before State commissions. My old friend Edwin Vennard, formerly managing director of Edison Electric Institute, the power company trade association, and others suggested that Mr. Quig was the man to go to for such information. So we went to Mr. Quig. He said he did not have the information. So the subcommittee had to go to each of the State utility commissions to get it. Mr. Quig makes speeches about the need for "more sophisticated forms of communications" between utilities and the public. But he, as the utility's chief information man, could not provide the public and a Senate subcommittee with the most important information which the public wants and needs—information on what the utilities are planning to do to the customers' pocketbook.

Last year Mr. Quig reacted adversely to the publication of information supplied to the subcommittee by State utility commissions. This information, published as Senate Document 56 in the 90th Congress, dealt with commission organization, staff, budget and jurisdiction. It was a straightforward factual account. Yet Mr. Quig, in an article in the March 14, 1968, issue of Public Utilities Fortnightly, said this publication "puts into the hands of all people a document which I fear will be used as a source book."

Mr. President, is it not strange that the chief information man of our Nation's largest industry is fearful of providing factual material to the public? Mrs. Virginia Knauer, the President's consumer adviser, has not been fearful of providing the public with information from Senate Document 56. And is it not strange that this same fearful man happens to be the Budget Bureau's principal industry adviser regarding utility information?

On December 20, 1968, Executive Director Erma Angevine of the Consumer Federation of America specifically requested representation of CFA on three of the Budget Bureau advisory committees. On January 21, 1969, the request was denied by the Budget Bureau. The Budget Bureau said it would be pleased to consult and notify. But the Bureau refused to open up the advisory committee to representatives of the consuming public, this despite the Budget Bureau's statement in its own house organ—Statistical Reporter, July 1968—that a prime objective of the Federal Reports Act of 1942 is the insurance that "the informational needs of the Government, and through it, of the public, are adequately met in the most efficient manner," and despite the statement in the same article that the Budget Bureau should receive "the benefit of advice by interested parties outside the Government—those interested either as consumers of data or as respondents to the inquiry."

Mr. President, the leadership of the Senate has wisely pointed out that this is a good time for the Congress to exer-

cise legislative oversight, to review the mass of legislation that has been passed by preceding Congresses and see what refinement and updating is needed. My proposal fits into this category.

Some provision should be made to give adequate voice to the small businessmen whose plight the original legislation sought to ameliorate. On committees such as the one on equal employment opportunity surveys, representatives of employees and minority groups should certainly be accorded equality with representatives of employers. The officials at the Budget Bureau exercise awesome power over the regulatory process in their approval, disapproval, or modification of governmental requests for information. It is past time when these officials should be exposed to the give-and-take of colloquy between the producers and consumers of our Nation's basic goods and services.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the exchange of correspondence between the Consumers Federation of America and the Budget Bureau, the text of the Federal Reports Act of 1942, and the article, "ACFR Simplifies Reports Procedures," by Robert H. North, chairman of the Fund Q Committee, which appeared in the July 1968 issue of Association Management, and a copy of the bill.

The material presented by Mr. METCALF is as follows:

CONSUMER FEDERATION OF AMERICA,
Washington, D.C., December 20, 1969.

Mr. CHARLES J. ZWICK,
Director, Bureau of the Budget,
Washington, D.C.

DEAR MR. ZWICK: On behalf of Consumer Federation of America, I wish to request representation on the following three committees established to advise the Bureau of the Budget on Federal reports: (1) Public Utilities—Coordinating Committee; (2) Committee on Public Utilities—Financial Reports; and (3) Committee on Public Utilities—Operating Reports.

We understand that the current membership of these committees, with the exception of a single member of the staff of the Bureau who serves as "meeting chairman," is composed entirely of representatives of privately-owned utilities. CFA believes that as currently constituted these committees are grossly inadequate to advise the Bureau regarding the desirability of Federal reports affecting the public interest.

Membership of these committees presently includes personnel from companies and trade associations which have resisted Federal regulation of their activities, actively advocated weakening of Federal regulatory agencies, and strenuously fought to cripple or kill competitive consumer-owned systems. In addition to persons employed by individual companies, the committees' membership in each case includes a representative of the Edison Electric Institute and the American Gas Association—organizations devoted to advancing the interests of participating companies. No one represents consumers.

While some may argue that the influence of the committees is diluted by the Bureau's access to information and arguments provided by Federal agencies involved in the proposed reporting requirements under review, we must observe that there is no guarantee that these agencies adequately guard the interests of consumers when faced with the concerted force of industry opposition.

In any event, the Federal Reports Act and Bureau policy indicate the desirability of a direct consumer role in reporting reviews. Under the Act, the Bureau may give "interested persons an adequate opportunity to be heard or to submit statements in writing." One of the most useful methods of implementing this provision would be to provide consumer representation on advisory committees. A number of Federal departments and agencies now have consumer representatives on similar committees.

Statements of Bureau policy indicate support for such consumer consultation: The *Statistical Reporter* (July, 1968) contains a statement prepared by the Office of Statistical Standards which discusses the role of the advisory committees and declares that ". . . an important part of many reviews is consultation with others who are concerned with and knowledgeable about the subject matter of the inquiry." In addition to government sources, the article notes: "An equally important consultation procedure is designed to give the Office the benefit of advice by interested parties outside the Government—those interested either as consumers of data or as respondents to the inquiry." We believe to fulfill this responsibility the Bureau will wish to consider the viewpoints of both users and utilities simultaneously.

Those who pay electric and gas bills—which too frequently encompass documented overcharges—have a clear interest in regulatory reporting requirements that is equal to or greater than that of those who send out the bills. Failure to take fully into account the consumers' point of view can only distort any Bureau decision. We believe give-and-take debate in open committee sessions would help rectify the present procedural deficiency. We do not believe reliance on secret or semi-secret sessions with self-described business-oriented industry executives serves the public interest.

I look forward to hearing from you regarding my request.

Sincerely,

MRS. ERMA ANGEVINE,
Executive Director.

BUREAU OF THE BUDGET,
Washington, D.C., January 21, 1969.

Mrs. ERMA ANGEVINE,
Executive Director, Consumer Federation of America, Washington, D.C.

DEAR MRS. ANGEVINE: The Director has asked me to reply to your letter of December 20 proposing that your Federation be represented on three industry committees of the Advisory Council on Federal Reports which are advisory to the Bureau of the Budget on Federal reports requested of business, and subject to review under the Federal Reports Act. The committees are: the Committee on Public Utilities—Coordinating Committee; the Committee on Public Utilities—Financial Reports; and the Committee on Public Utilities—Operating Reports.

Pursuant to our general policy of welcoming the counsel of any parties interested in matters subject to our review under the Federal Reports Act, we would be pleased to hear views of your organization on any of the matters on which we consult the committees you mention. Whenever we consult these committees we will notify your organization so that arrangements can be made to secure your views on the matters under review. If you desire, we would also be glad to place your organization on our mailing list for the "Daily List of Reporting Forms and Plans Received for Approval" (specimen copy attached), so that if you wish to make your views known on any of these proposed reports under review by us, you can contact us and make arrangements to do so. We do not believe, however, that it would be desirable to extend the membership of business advisory committees, which are consulted as representatives of respondents, to include non-business interests.

Normally we look to the sponsoring agencies to justify their proposals to collect information from the public as both necessary and sufficient to serve the purpose for which they are intended. Although we will be glad to consult with you when these proposals come to us for review, to facilitate orderly and expeditious procedures and handling, I trust that you will continue to represent your interests in these programs before agencies which administer them.

Please feel free to contact Mr. Edward T. Crowder (395–3772), Assistant Director for Clearance Operations of this Office, on any questions arising out of your interest in our review program.

We appreciate very much your interest in this important matter.

Sincerely yours,

RAYMOND T. BOWMAN,
Assistant Director for Statistical Standards.

An act to coordinate Federal reporting services, to eliminate duplication and reduce the cost of such services, and to minimize the burdens of furnishing information to Federal agencies

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Reports Act of 1942".

SEC. 2. It is hereby declared to be the policy of the Congress that information which may be needed by the various Federal agencies should be obtained with a minimum burden upon business enterprises (especially small business enterprises) and other persons required to furnish such information, and at a minimum cost to the Government, that all unnecessary duplication of efforts in obtaining such information through the use of reports, questionnaires, and other such methods should be eliminated as rapidly as practicable; and that information collected and tabulated by any Federal agency should insofar as is expedient be tabulated in a manner to maximize the usefulness of the information to other Federal agencies and the public.

SEC. 3. (a) With a view to carrying out the policy of this Act, the Director of the Bureau of the Budget (hereinafter referred to as the "Director") is directed from time to time (1) to investigate the needs of the various Federal agencies for information from business enterprises, from other persons, and from other Federal agencies; (2) to investigate the methods used by such agencies in obtaining such information; and (3) to coordinate as rapidly as possible the information-collecting services of all such agencies with a view to reducing the cost to the Government of obtaining such information and minimizing the burden upon business enterprises and other persons, and utilizing, as far as practicable, the continuing organization, files of information and existing facilities of the established Federal departments and independent agencies.

(b) If, after any such investigation, the Director is of the opinion that the needs of two or more Federal agencies for information from business enterprises and other persons will be adequately served by a single collecting agency, he shall fix a time and place for a hearing at which the agencies concerned and any other interested persons shall have an opportunity to present their views. After such hearing, the Director may issue an order designating a collecting agency to obtain such information for any two or more of the agencies concerned, and prescribing (with reference to the collection of such information) the duties and functions of the collecting agency so designated and the Federal agencies for which it is to act as agent. Any such order may be modified from time to time by the Director as circumstances may require, but no such modification shall be

made except after investigation and hearing as hereinbefore provided.

(c) While any such order or modified order is in effect, no Federal agency covered by such order shall obtain for itself any information which it is the duty of the collecting agency designated by such order to obtain.

(d) Upon the request of any party having a substantial interest, or upon his own motion, the Director is authorized within his discretion to make a determination as to whether or not the collection of any information by any Federal agency is necessary for the proper performance of the functions of such agency or for any other proper purpose. Before making any such determination, the Director may, within his discretion, give to such agency and to other interested persons an adequate opportunity to be heard or to submit statements in writing. To the extent, if any, that the Director determines the collection of such information by such agency is unnecessary, either because it is not needed for the proper performance of the functions of such agency or because it can be obtained from another Federal agency or for any other reason, such agency shall not thereafter engage in the collection of such information.

(e) For the purposes of this Act, the Director is authorized to require any Federal agency to make available to any other Federal agency any information which it has obtained from any person after the date of enactment of this Act, and all such agencies are directed to cooperate to the fullest practicable extent at all times in making such information available to other such agencies: *Provided*, That the provisions of this Act shall not apply to the obtaining or releasing of information by the Bureau of Internal Revenue, the Comptroller of the Currency, the Bureau of the Public Debt, the Bureau of Accounts, and the Division of Foreign Funds Control of the Treasury Department: *Provided further*, That the provisions of this Act shall not apply to the obtaining by any Federal bank supervisory agency of reports and information from banks as provided or authorized by law and in the proper performance of such agency's functions in its supervisory capacity.

SEC. 4. (a) In the event that any information obtained in confidence by a Federal agency is released by that agency to another Federal agency, all the provisions of law (including penalties) which relate to the unlawful disclosure of any such information shall apply to the officers and employees of the agency to which such information is released to the same extent and in the same manner as such provisions apply to the officers and employees of the agency which originally obtained such information; and the officers and employees of the agency to which the information is released shall in addition be subject to the same provisions of law (including penalties) relating to the unlawful disclosure of such information as if the information had been collected directly by such agency.

(b) Information obtained by a Federal agency from any person or persons may, pursuant to this Act, be released to any other Federal agency only if (1) the information shall be released in the form of statistical totals or summaries; or (2) the information as supplied by persons to a Federal agency shall not, at the time of collection, have been declared by that agency or by any superior authority to be confidential; or (3) the persons supplying the information shall consent to the release of it to a second agency by the agency to which the information was originally supplied; or (4) the Federal agency to which another Federal agency shall release the information has authority to collect the information itself and such authority is supported by legal provision for criminal penalties against persons failing to supply such information.

SEC. 5. No Federal agency shall conduct or sponsor the collection of information, upon identical items, from ten or more persons (other than Federal employees considered as such) unless, in advance of adoption or revision of any plans or forms to be used in such collection,

(a) The agency shall have submitted to the Director such plans or forms, together with copies of such pertinent regulations and other related materials as the Director shall specify; and

(b) The Director shall have stated that he does not disapprove the proposed collection of information.

SEC. 6. The Director is authorized to make such rules and regulations as may be necessary to carry out the provisions of this Act.

SEC. 7. As used in this Act—

(a) The term "Federal agency" means any executive department, commission, independent establishment, corporation, owned or controlled by the United States, board, bureau, division, service, office, authority, or administration in the executive branch of the Government; but such terms shall not include the General Accounting Office nor the governments of the District of Columbia and of the Territories and possessions of the United States, and the various subdivisions of such governments.

(b) The term "person" means any individual, partnership, association, corporation, business trust, or legal representative, any organized group of persons, any State or Territorial government or branch thereof, or any political subdivision of any State or Territory or any branch of any such political subdivision.

(c) The term "information" means facts obtained or solicited by the use of written report forms, application forms, schedules, questionnaires, or other similar methods calling either (1) for answers to identical questions from ten or more persons other than agencies, instrumentalities, or employees of the United States or (2) for answers to questions from agencies, instrumentalities, or employees of the United States which are to be used for statistical compilations of general public interest.

SEC. 8. Any person failing to furnish information required by any such agency shall be subject to such penalties as are specifically prescribed by law, and no other penalty shall be imposed either by way of fine or imprisonment or by the withdrawal or denial of any right, privilege, priority, allotment, or immunity, except when the right, privilege, priority, allotment, or immunity, is legally conditioned on facts which would be revealed by the information requested.

SEC. 9. There are hereby authorized to be appropriated annually out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this Act.

Approved, December 24, 1942.

[From Association Management, July 1968]

ACFR SIMPLIFIES REPORTS PROCEDURES

(By Robert H. North, CAE Chairman, Fund Q Committee)

Few association executives and businessmen are aware of the valuable services performed by the Advisory Council on Federal Reports, official business consultant to the federal Bureau of the Budget. It is a resource available to association executives and their members concerned with government questionnaires, statistical programs and record-keeping requirements. ASAE supports the Council through its "Fund Q" solicitation.

Federal departments and agencies are constantly intruding on business activities, frequently through requests for information on a widening area of business concern. To help association executives advise their members of the Council's services and benefits, the committee has prepared the the following article which can be reprinted in their own association publications:

"Your association is repeatedly asked for guidance on answering government questionnaires, particularly whether or not an employer must complete and return a particular form. Federal demands for information are delving into ever-widening areas of business life.

"Fortunately, there is a business-run organization in Washington, D.C. established for the purpose of helping businessmen by providing available guidance and especially by advising the powerful Bureau of the Budget on ways to cut down on the reporting burdens of business. It is the Advisory Council on Federal Reports, 1001 Connecticut Ave., N.W., Washington, D.C. 20036, which is officially connected with the Bureau of the Budget. For 25 years this Council has been attacking the paperwork problems of business through panels of businessmen selected by their qualifications to find the faults in government forms and recommend ways to correct them. The Council is wholly business-oriented, being sponsored and financed by associations through the American Society of Association Executives and other respected business organizations.

"The Council gives this advice to businessmen:

"1. Requests for information from the federal government, regardless of how made, are subject to the Federal Reports Act and Bureau of the Budget approval if issued to more than 9 persons. Such governmental gathering of information may be by letter, telegram, questionnaire, reporting form, application or personal interview, and may be on any subject. Excluded by the Act are the income tax forms and a few others. Copies of the Act are available from the Advisory Council on Federal Reports.

"2. If Budget Bureau approval is not evident (approval is usually indicated in the upper right-hand corner of the fact sheet accompanied by an expiration date), response should be delayed long enough to make inquiry regarding the legal status of the request. This may be done, in confidence, through the Advisory Council on Federal Reports.

"3. Do *not* discard unapproved requests for information. Such unauthorized questionnaires or requests should be sent or reported to the Advisory Council for investigation in order that they may be killed by the Budget Bureau, or having merit, may be reviewed and formally approved.

"4. Response to federal questionnaires and other kinds of requests for information can be voluntary or compulsory. If a request is compulsory, the form or instructions should clearly cite statutory authority. If response is voluntary, this fact will *not* be indicated, in accordance with Budget Bureau policy.

"5. Businessmen having problems with government questionnaires may ask the Council for clarification which will be obtained as soon as possible and in confidence.

"6. Address your questions to the Council through your association headquarters office and we will immediately contact its staff."

S. 3068—INTRODUCTION OF AGRICULTURAL STABILIZATION ACT OF 1969

Mr. McGOVERN. Mr. President, I introduce for appropriate reference, for myself and Senators YARBOROUGH, BURDICK, EAGLETON, HARRIS, HUGHES, JACKSON, MANSFIELD, MCGEE, METCALF, MONDALE, MOSS, and NELSON the Agricultural Stabilization Act of 1969.

As many Senators know, the Food and Agriculture Act of 1965, the basic authority under which current farm programs are administered, expires at the

end of next year. It falls to the 91st Congress, therefore, to set the course for the agricultural policies of the 1970's.

Without new legislation we will revert to the laws in effect prior to 1965. The most certain result of that route would be a drop of at least $1 billion, and probably much more, in farm income, with serious secondary consequences throughout the economy.

In the case of wheat the Secretary of Agriculture would, after determining that supplies exceed demand, proclaim a marketing quota program subject to a grower referendum. If approved, participation would be mandatory. Domestic food wheat would be covered by marketing certificates to bring total returns to between 65 and 90 percent of parity, and there would be no diversion payments. If producers disapproved the program they would be left with a bare price support of 50 percent of parity for those who complied with acreage allotments.

For feed grains, an absence of new legislation would mean price supports through loans and purchases at between 50 and 90 percent of parity, set low enough to discourage excess production and accumulation of stocks by the Commodity Credit Corporation.

In the case of cotton there would also have to be a referendum, this one based on acreage allotments. Again there would be no price support or diversion payments. If the referendum were approved the support would be between 65 and 90 percent of parity; if not, those who complied with allotments would receive a minimum of 50 percent.

For dairy, if we do not act, authority for the creation of class I base plans would terminate. The one class I plan now in existence in the Puget Sound market would expire, and all other marketing orders would be deprived of the opportunity to establish these plans which, if necessary improvements are made, offer great promise of success.

In the case of wool, the old laws provide for price supports through loans or purchases at the discretion of the Secretary at not more than 90 percent of parity. There would be no direct price support payments.

In essence, a failure to act would mean that we might have a system capable of limiting supplies or of maintaining farm income at reasonable levels. In all likelihood we could not do both. The central means of preventing the accumulation of mountainous surplus would be to reduce price supports to the point where production would be uneconomic. Hundreds of thousands of farms would fail. On the other hand, if we wanted to assure that farm people would have returns commensurate with their investments of land, labor and capital, we would soon accumulate surplus stocks beyond anything yet imagined.

Obviously, neither of these approaches is acceptable. Certainly we must act before present programs expire. It would be irresponsible not to. The job we have is to determine the form of our action.

FARMERS ARE UNITED

Mr. President, I want to emphasize what I regard as one of the most important aspects of this bill from our viewpoint as legislators.

For many years we have, it seems to me, demanded an unusual degree of unanimity from a scattered and isolated farm population. We have asked time and again that the millions of farmers in all parts of this country come to the Congress with a single voice and a single plan which is acceptable to all.

Secretary of Agriculture Clifford Hardin expressed this view most recently when he appeared before the House Agriculture Committee on September 24. He said:

> This surely is a time when farmers and farm groups, acting through their enlightened self-interest, must find as much common ground as possible.

The Senate should be aware that farmers have taken that admonition seriously, and that the bill I introduce today represents the combined effort and has the combined support of one of the most broadly based farm coalitions we have seen in many years.

They began meeting in Washington in January, with 17 groups represented. This was not a prestructured coalition. Goals had to be adjusted and producers of one commodity had to acquire an understanding of the needs of producers of other farm products.

By July the outline of a specific package bill had taken shape. Additional support has since been found. The Agricultural Stabilization Act of 1969 now has the support of some 22 national farm organizations and commodity groups. They include the National Farmers Union, the National Grange, Midcontinent Farmers Association, National Farmers Organization, Grain Sorghum Producers' Association, Soybean Growers of America, National Association of Wheat Growers, National Milk Producers, Pure Milk Products Cooperative, Peanut Growers Cooperative Marketing Association, North Carolina Peanut Growers Association, Virginia Peanut Growers Association, Western Cotton Growers Association, National Potato Council, National Corn Growers Association, American Rice Growers Cooperative Association, United Grain Farmers of America, Webster County, Nebraska Farmers Organization, National Wool Growers Association, Farmers Cooperative Council of North Carolina, Virginia Council of Farmers Cooperatives, and National Rice Growers Association.

Therefore, Mr. President, if it has been a lack of farm unity which has been holding up the provision of parity returns for agriculture, it seems to me that we are now left without an obstacle. Farmers are united behind this bill.

There is good reason for them to be united. They have recognized that their economic survival hangs in the balance. I hope we, too, will be aware of this simple truth in our deliberations.

DISMAL FARM OUTLOOK

Mr. President, agriculture today remains in deep trouble. The statistics leave no room for doubt about the outlook facing family farmers in this country.

The disposable personal per capita income of farm operators still holds at slightly over two-thirds of the income of other Americans.

For their production they receive, respectively, 1942 prices for wheat, 1944 prices for corn, 1952 prices for livestock, and 1942 prices for cotton. Yet they pay enormously inflated 1969 prices for all of their production expenses, and galloping 1969 interest rates for the dollars they must borrow in order to stay in business. And farm debt now approaches $50 billion.

But it is difficult to read statistics in human terms. When we talk about this problem we are discussing the plight of people like a young man in my State, just getting started in farming, who rented land, kept careful track of his expenses, managed his farm expertly, had an unusually good crop, and ended up with red ink at the end of the year. We are talking about efficient farm operators who are sinking deeper and deeper in debt. We are talking about farms that just a few years ago were considered of optimum size for efficient production but whose owners are today, because of rising costs and depressed prices, told they are marginal and should consider leaving the farm for some nonexistent job for which they have no training or experience.

We are talking about economic stagnation in huge sections of the country and in thousands of rural towns and cities.

NATIONAL NEED

But the significance of this issue goes far beyond the concerns of rural people. It is my firm conviction that Members of Congress from every part of the country, including those from city districts with no farmers at all among their constituency, have cause to be alarmed about the economic outlook in agriculture.

They should be concerned, first, because each decline in rural America has ripple effects throughout the country—where the farmers buy about $37 billion each year in production goods and services, and where he sells enough produce to keep some 14 to 16 million people employed in processing and marketing.

They should be concerned because when we ignore the economic problems of farm people we do not dispose of them; we do no more than move them to other parts of the country where their solution is more difficult and more costly. The Nation's farm population today stands at less than half of the 1950 figure, and the total rural population has not changed since that year. All of the population increase which has occurred in the past 20 years has been in already overcrowded cities. The uneven split in economic growth between rural and urban areas has force hundreds of thousands of Americans into cities which are obviously ill-equipped to handle the influx.

We all have reason to be concerned about agriculture lest we lose, by default, the family farm system which is the productive marvel of the world, and endanger our access, as consumers, to the lowest cost, highest quality food that anyone, anywhere, anytime has enjoyed.

It is appropriate to note at this point, Mr. President, that in the 1947–49 base period, we spent 24.6 percent of our income for food. By 1968 we were spending

only 16.8 percent. Moreover, the vast bulk of what increase there has been in food costs can be attributed not to the farmer, who gets only 40 cents out of each dollar the consumer spends, but to higher processing and marketing costs. Of the $89.5 billion consumers spent for food in this country last year only $28.9 billion went to the original producer—$60.6 billion in costs were added after the food left the farmers hands. There is no bigger bargain in this country today than that supplied by agriculture. And it would still be the biggest bargain if we supplied full parity to family farmers, fulfilling what has been the declared policy of our farm programs for more than 30 years.

We should be concerned, too, because of the importance of farm exports. The United States is the world's largest exporter of farm products, accounting for some 20 percent of world agricultural trade. Last year commercial agricultural sales abroad earned more than $5 billion worth of dollar exchange, contributing greatly to an improved balance-of-payments posture. Moreover, the abundance of our farms has accomplished much and holds vastly greater potential for the encouragement of development abroad through food-for-peace concessional sales and grants.

The legislation I introduce today is, therefore, in no sense a sectional or parochial bill. It speaks to critical needs of our largest single industry, and it will be helpful to every member of our society.

AGRICULTURAL STABILIZATION ACT

The basic thrust of the bill is an extension of the Agriculture Act of 1965, with a series of important amendments.

It authorizes and improves the class I base plan for milk, with steps to allow wider use of this important marketing tool. It extends the cotton program without change. The corn and feed grains programs would continue, with a new price floor set at 90 percent of parity. It extends the voluntary wheat certificate program, under which farmers receive full parity for domestic food wheat, and adds a certificate on exported wheat to bring total returns on that portion of the crop to between 65 and 90 percent of parity—a minimum of 55 cents more under the current adjusted parity ratio.

The bill also contains a permanent extension of the existing cropland adjustment program and of the rice program presently in effect. It provides authority for a price support program for soybeans and flaxseed, with prices set at not less than 75 percent of parity whenever an acreage diversion program is in effect.

Finally, it includes authority for emergency reserves, or consumer protection reserves, of wheat, feed grains, soybeans, and cotton, to protect the consumer against crop failures and to protect the farmer against price-depressing sales of Commodity Credit Corporation stocks. And it includes extension and broadening of the Agricultural Marketing Agreements Act to authorize marketing orders on any farm commodity when requested by producers.

A more detailed description of the bill's provisions has been prepared, and I ask unanimous consent that a summary be printed in the RECORD at the conclusion of my remarks.

Mr. President, it is my view that the time has come to begin making solid progress toward the goal we have been promising farmers for many years but have never delivered since the farm price decline began in the early 1950's. Farmers have been patient. They have complied in large numbers with programs designed to work down the burdensome surpluses accumulated during the 1950's. They have continued to supply food abundance at prices which in many cases have failed to return the costs of production.

Parity returns are, by definition, no more than equality with the rest of our society. The programs of the 1970's will not keep faith with farmers unless they contain a firm commitment to that goal.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the summary will be printed in the RECORD.

The bill (S. 3068) to improve farm income and insure adequate supplies of agricultural commodities by extending and improving certain commodity programs, introduced by Mr. MCGOVERN (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

The summary, presented by Mr. MCGOVERN, is as follows:

SUMMARY OF COALITION FARM BILL BACKED BY 22 ORGANIZATIONS

Title I—Dairy.—Extends Class I Base Plan with clarifying amendments. Provides authority for self-financing of advertising, research and promotion programs. Changes procedure for support of manufacturing—support would be based on all components of milk instead of butterfat. (No additional costs.)

Title II—Wool.—Extends Wool program. (No additional costs.)

Title III—Feed grains.—Increases price support loan from $1.05 to $1.15 per bushel. Increases direct payment from $.30 per bushel to $.40 per bushel. Limits amount "projected yield" can be adjusted as result of natural disaster. (Total additional cost—$350 million.)

Title IV—Cotton.—Extends Cotton program. (No additional costs.)

Title V—Wheat.—Provides authority for export certificate between 90 and 65 percent of parity (cost is calculated on 65 percent of parity return or $.55 per bushel by 500 million bushels). Limits amount "projected yield" can be adjusted as result of natural disaster. Provides that one-half of wheat certificate value can be paid at time of sign up. (Total additional cost—$275 million.)

Title VI—Soybeans and flaxseed.—Authorizes acreage diversion program for soybeans and flaxseed for such year as the total stocks of soybeans—CCC, Farm Reseal and Commercial—exceed as of August 31, 150 million bushels or 15 percent of the previous year's utilization, whichever is less. (On August 31, 1969 soybeans stocks approximated 300 million bushels. This relatively small carryover would trigger a program in 1970 but only involving the diversion of 2 to 3 million acres of soybeans. Cost is based on this diversion level.) (Total additional cost—$25 to $35 million.) (Provides 75 percent of parity price support loan for participants in the acreage diversion program.)

Title VII—Consumer protection reserve.—Provides for three types of reserves to be held respectively by the Commodity Credit Corporation, by producers under an extended loan program, and by producers under three-year extended loan agreements. CCC sales for unrestricted domestic use would be prohibited at less than parity if stocks were below reserve levels. (No additional costs.)

Title VIII—Marketing orders.—Extends market order authority to any commodity subject to approval by majority of affected producers. Sets up advisory committee to help write market orders. Order may provide: (a) Market supply control ranging from grading standards to marketing allotments subject to approval of two-thirds of affected producers. (b) Pooling of sale proceeds where commodity is sold on use-classification basis. Public hearings on terms and conditions of the market order. Secretary of Agriculture would develop market order following public hearings. Producer referendum with two-thirds vote required for operation of the market order. (No additional costs.)

Title IX—Cropland adjustment.—Removes limit of $245 million on amount of funds that can be appropriated for the Cropland Adjustment Program.

Title X—Rice.—An acreage diversion program for rice is authorized if the national rice allotment is established at less than that for 1965. (The Title provides stand-by authority which has not been used to the present time.) (No additional costs.)

THE COALITION FARM BILL TO EXTEND AND IMPROVE THE 1965 FOOD AND AGRICULTURE ACT—THE MCGOVERN-YARBOROUGH BILL

Mr. YARBOROUGH. Mr. President, it gives me great pleasure to join with the able and distinguished Senator from South Dakota in introducing this bill which will strengthen the agricultural economy of America.

Mr. President, our bill will help all Americans, farmers and consumers alike. Unanimously endorsed by a coalition of 22 major farm organizations, this bill will permanently extend and improve the Food and Agriculture Act of 1965 which is scheduled to expire next year. It will aid the embattled farmers and ranchers who must sell their products at 1942 prices, but have to support their families at 1969 prices. It is intended to prevent the collapse of the agricultural economy which feeds and clothes America, to assure adequate food and fiber at reasonable prices, and to guarantee that we will continue to have $6 billion in agricultural commodities for export and a balance of payments which permits us to trade freely abroad without incurring an excessive trade deficit.

In the past two decades Americans have reaped great benefits from the modernization and streamlining of the agricultural industry. Following World War II American consumers paid 25 percent of their disposable income for food; today we pay only 17 percent. This compares with figures ranging from 28 to 40 percent in Europe and close to 50 percent in the Soviet Union. Not only does this improvement save each individual American more money to spend on other items, but it also frees billions of dollars which go back into the national economy.

But despite these tremendous improvements for consumers and the national economy as a whole, the farmers and ranchers have been left out in the cold. While the cost of living and the costs of

agricultural production have risen, the income for an individual farmer or rancher has lagged far behind. He pays 1969 prices, which are nearly 50 percent higher than 20 years ago, when the price index stood at 83.5 compared to 125.0 today. But he sells cotton at 1942 prices; he sells livestock at 1952 prices; he sells wheat at 1942 prices; he sells corn at 1944 prices; in fact, he often sells his products below his actual cost of production.

While the farmers and ranchers and I would rather that he receive a fair price in today's market, the fact is that he does not. He simply cannot survive in our inflated economy without the help provided by the farm program.

The Senator from South Dakota and I have introduced our bill in order to allow farmers and ranchers to stay on their land, to maintain production of America's essential food supplies, and to induce young men to stay in agriculture rather than flee to the cities. Although this bill will not remedy all that ails the agricultural industry, it will assure survival.

An important aspect of the bill is that it will be an investment with a good return. While the total cost of the bill's increases over 1969 will be approximately $660 million, it should raise farm income about $1.3 to $1.4 billion. Equally important, the administration's farm program budget for next year will be cut $600 to $700 million, because of the savings gained from various readjustments. The income improvements in our bill, therefore, would require no net increase over the 1969 farm program budget.

This vital bill extends the cotton program, the Wool Act, and the corn and feed grains program with some strengthening amendments, and it authorizes a class I base plan for milk producers. It also extends the wheat certificate program, providing for issuance of certificates worth 65 cents per bushel on export wheat. Establishing a soybean and flaxseed price support program, it provides for acreage diversion in relation to them when necessary to avoid surpluses. It also authorizes an emergency reserve or consumer protection reserve of cotton, feed grains, wheat and soybeans.

In addition, the already existing rice program legislation and cropland adjustment authorizations are extended indefinitely. The 1964 food-stamp program is permanently continued with necessary appropriations and the bill provides that an applicant who cannot afford the minimum cash payments for stamps can work or perform other services to pay for them.

Mr. President, I congratulate the coalition of farm organizations who have joined together to speak with one voice in advocating this comprehensive legislation. Their united and responsible approach to the farm crisis is a credit to all their members and to the agricultural industry. The member groups of this broad based coalition are: National Farmers Union, National Grange, Midcontinent Farmers Association, National Farmers Organization, Grain Sorghum Producers' Association, Soybean Growers of America, National Association of Wheat Growers, National Milk Producers Federation, Pure Milk Products Cooperative, Peanut Growers Cooperative Marketing Association, North Carolina Peanut Growers Association, Virginia Peanut Growers Association, Western Cotton Growers Association, National Potato Council, National Corn Growers Association, American Rice Growers Cooperative Association, United Grain Farmers of America, Webster County, Nebr., Farmers Organization, National Wool Growers Association, Farmers Cooperative Council of North Carolina, Virginia Council of Farmers Cooperatives, and National Rice Growers Association.

This bill is truly an investment in America and the returns will be great. For the money we invest, we get back a reliable food supply at the cheapest real cost to consumers ever achieved by any major nation in history. We will guarantee a stable agricultural economy domestically and insure a favorable balance of trade on farm and ranch exports. And perhaps most importantly, we will help farmers and ranchers stay on their land, turning out those products which feed and clothe our Nation.

Mr. NELSON. Mr. President, I am pleased to join in the sponsorship of this legislation to extend and revise several of our commodity programs in accordance with the general agreement of more than 20 of our Nation's farm groups and commodity organizations.

The Food and Agricultural Act of 1965, which this bill amends, is the basis of several important commodity programs which expire at the end of next year. It is my hope that the Senate Agriculture Committee will be able to give this proposal and other similar bills thorough consideration over the coming months and come up with a final measure that will stabilize farm prices and improve farm income for our Nation's agricultural community.

While I am in general agreement with most of the basic provisions of this legislation, I do have some strong reservations about the modifications to the class I base plan program for milk producers as provided for in this bill. A number of dairy farmer organizations in Wisconsin and other major dairy States have expressed grave concern over the potential effect that these class I amendments may have on the movement of milk and the prices that that milk may bring in various class I markets. They fear that it will not be possible for producers from major dairy States, such as Minnesota and Wisconsin, to receive equitable prices for their milk in class I base plan markets, even if the milk is needed there.

It is my hope that both the Senate and House Agriculture Committees will study this matter of restrictive markets that may develop from these amendments and place clear language in the bill that will not only prevent barriers from being established to restrict the interstate sale and shipment of milk but will also guarantee that all farmers shipping milk to a market receive equitable prices for that milk.

S. 3069—INTRODUCTION OF A BILL ESTABLISHING A VOLUNTEERS IN THE PARK PROGRAM

Mr. JACKSON. Mr. President, on behalf of the ranking minority member of the Senate Interior Committee (Mr. ALLOTT) and myself, I introduce for appropriate reference a bill to authorize the Secretary of the Interior to establish a Volunteers in the Park program, and for other purposes.

This proposed legislation was submitted and recommended by the Secretary of the Interior, and I ask unanimous consent that the letter from the Secretary accompanying the draft bill be printed in the RECORD following my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 3069) to authorize the Secretary of the Interior to establish a Volunteers in the Park program, and for other purposes, introduced by Mr. JACKSON, for himself and Mr. ALLOTT, by request, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The letter presented by Mr. JACKSON is as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., July 9, 1969.

HON. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed is a draft of a bill "To authorize the Secretary of the Interior to establish a Volunteers in the Park program, and for other purposes."

We recommend that the bill be referred to the appropriate committee for consideration, and we recommend that it be enacted.

The bill authorizes the Secretary of the Interior to employ individuals without compensation, in volunteer programs in and relating to areas administered by the National Park Service. Authority is included to provide transportation, uniforms, lodging, and subsistence as may be necessary or appropriate. Volunteers would not be considered as Federal employees except for purposes of the Federal Tort Claims Act and statutes pertaining to compensation for injuries. Restrictions on appointments of personnel contained in Title II of the Revenue and Expenditure Control Act of 1968 would not apply to such volunteers.

Volunteer work is a traditional and basic value of American life. Voluntary service is associated with citizenship, and it has helped to improve conditions in neighborhoods, cities, and across the Nation. Volunteers representing all segments of our population are today working in the fields of health, education, welfare, cultural affairs, and community activities. We believe there is a need for the special volunteer services many persons and organizations could provide in interpreting the parks and providing other visitor services, and we believe the enactment of the enclosed bill would encourage such volunteers.

We envision the park volunteer as a private citizen accepting an appointment, without compensation, to a specific job for a limited period. The job would be complementary to, and in addition to, the tasks of the regular career employees, and would not diminish their roles.

Duties would center on interpretation and visitor services. Examples of duties which would be performed by park volunteers are:

Special information services to visitors.

Assisting in archeological digs.
Special research projects.
Interpreting historical events.

Volunteers would provide the supplemental skills needed to bolster the interpretive efforts of the National Park Service at such areas as Independence National Historical Park, Pennsylvania (the nation's birthplace), Fort Union Trading Post National Historic Site, Montana-North Dakota (a remnant of the Missouri River fur trade), and Yellowstone National Park, Idaho-Montana-Wyoming (outstanding displays of bear, deer, and moose).

Volunteers would be selected largely from areas close to the park at which they are to be employed, and on the basis of skills which are generally unavailable in the regular staff, such as special writing ability, ability to stimulate young visitors, etc. Individuals from conservation groups, the various Scouting organizations, Chambers of Commerce, ski clubs, for example, would be considered for appointment as park volunteers.

Costs of the volunteer program will be taken from regular operating expenditures. We estimate that there is a need for work of a specialized nature to be done by approximately 300 volunteers in the first year and grow to substantial numbers in the next 5 years. We estimate that the cost of equipping and servicing a volunteer will be approximately $270 per volunteer:

Uniforms and/or uniform accessories	$40
Meals per year	75
Transportation	75
Pins, awards, merit badges, etc	8
Medical examination	7
Orientation and training	40
Miscellaneous	25
Total per volunteer	270

The Bureau of the Budget has advised that there is no objection to the presentation of this proposed legislation from the standpoint of the Administration's program.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

A bill to authorize the Secretary of the Interior to establish a Volunteers in the Park program, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior (hereinafter referred to as the Secretary) is authorized to recruit, train, and accept without regard to the Civil Service Classifications laws, rules, or regulations the services of individuals without compensation as volunteers for or in aid of interpretive functions, or other visitor services or activities in and related to areas administered by the Secretary through the National Park Service.

SEC. 2. The Secretary is authorized to provide for incidental expenses, such as transportation, uniforms, lodging, and subsistence.

SEC. 3. (a) Except as otherwise provided in this section, a volunteer shall not be deemed a Federal employee and shall not be subject to the provisions of law relating to Federal employment, including those relating to hours of work, rates of compensation, leave, unemployment compensation, and Federal employee benefits.

(b) For the purposes of the tort claim provisions of title 28 of the United States Code, a volunteer under this Act shall be considered a Federal employee.

(c) For the purposes of subchapter I of chapter 81 of title 5 of the United States Code, relating to compensation to Federal employees for work injuries, volunteers under this Act shall be deemed civil employees of the United States within the meaning of the term "employee" as defined in section 8101 of title 5, United States Code, and the provisions of that subchapter shall apply.

SEC. 4. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

SEC. 5. This Act may be cited as the "Volunteers in the Parks Act of 1969."

S. 3070—INTRODUCTION OF A BILL RELATING TO THE DEVELOPMENT OF CERTAIN PLANTS

Mr. MILLER. Mr. President, I introduce for myself and Senators DOLE, EASTLAND, HOLLINGS, JORDAN of North Carolina, and YOUNG of North Dakota, a bill to encourage the development of novel varieties of sexually reproduced plants and making them available to the public by making protection available to those who breed, develop or discover them.

The principal features of this bill are as follows:

First. The new law will be administered by a new bureau to be created within the U.S. Department of Agriculture. This bureau would be called the Plant Variety Protection Office. It would be headed by a commissioner appointed by the Secretary of Agriculture. The Commissioner of Plant Variety Protection would be assisted by a plant variety protection board. This board would be made up of approximately equal representation from the private or seed industry sector on the one hand, and the Government or public sector on the other. The review board would be empowered to make advisory decisions on appeals from decisions of the examiner. It would also advise the Commissioner concerning the rules and regulations which supplement the act.

Second. Applications for plant variety protection would be handled much as industrial patent applications are. The breeder would submit a detailed, written description of his new variety in which he would put forth his claims for novelty, for stability, and for reproductibility. A sample of basic seed would be deposited to protect the public interest.

Third. Breeders using the system would be charged fees so that the whole program would be essentially self-supporting. The fee would vary somewhat depending on whether extra copies of the certificate of protection are desired, whether an appeal is made, an assignment is involved, or whether there is a delay in payment, but the basic application fee is expected to be $50.

Fourth. Any sexually reproduced plant other than hybrids, fungi, and bacteria would be protectable under the new act. A breeder or developer would have 1 year after commercial sale of the variety to apply for protection. This scheme would be available to foreign breeders to the extent their governments afford like privileges to nationals of the United States.

Fifth. Once approved by the Plant Variety Protection Office, a certificate of plant variety protection would be issued. This certificate would allow the owner to imprint some such statement as, "U.S. Protected Variety" on his label, thus notifying the public of the protected status of his variety. Or, should the applicant desire, he could additionally elect to protect his variety under the certification system, in which case the variety could be sold only as certified seed, which fact would be made evident on the special certification label.

Sixth. Applications or certificates of plant variety protection would be assignable. The proprietor could grant or convey an exclusive right to the use of his varieties in the United States or any part of it.

Seventh. The term of protection presently proposed, for all crops, would be 17 years. This is the same period of protection granted asexual plants under the Plant Patent Act.

Eighth. Infringement of the right granted would occur when anyone, without authority, first, sells or offers for sale the protected variety; second, reproduces the variety as a step in the production of another variety of hybrid; third, imports or exports the variety into or from the United States; or, fourth, multiplies the novel variety as a step in marketing such as producing seed for growing transplants for sale.

Ninth. The law would include a special exemption for farmers. They would be allowed to produce seed of a protected variety for their own use.

Tenth. Defense of the right granted would be through civil action. In such actions, certificates of plant variety protection would be presumed valid and it would, therefore, be incumbent on the defendant in the civil action to establish invalidity or other defenses. Should the court decide in favor of the plaintiff, damages would be awarded which, in no event, would be less than a reasonable royalty for the use made of the protected variety by the infringer.

Eleventh. At his option, the proprietor could elect to require that all seed sold be certified, and this provision would be subject to enforcement by the Federal Seed Act officials for such seed moving in interstate commerce.

This legislation is designed to serve as a stimulus for investment of corporate funds in variety research and development of planting seed. It is the intention that the legislation would result in benefits in the form of new and improved varieties with increased yields, greater disease resistance, insect resistance, increased protein, oil, fiber strength, quality of vegetables, and many other crop improvements unknown today to the plant breeders.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a resolution passed by the Iowa Seed Council on October 15, 1969, recognizing the need for a National Plant Variety Protection Act and approving the principles embodied in the bill I am introducing today.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the resolution passed by the Iowa Seed Council, will be printed in the RECORD.

The bill (S. 3070) to encourage the development of novel varieties of sexually reproduced plants and to make them available to the public, providing protection available to those who breed, develop, or discover them, and thereby promoting progress in agriculture in the

public interest, introduced by Mr. MILLER (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

The resolution, presented by Mr. MILLER, is as follows:

RESOLUTION PASSED BY IOWA SEED COUNCIL ON OCTOBER 15, 1969

Whereas, new varieties of plants that are asexually reproduced can be protected under the present Plant Patent Act; and

Whereas, new varieties of plants that are sexually reproduced cannot be protected under the present Plant Patent Act; and

Whereas, the breeder, developer or discoverer should be afforded the opportunity to obtain protection for new varieties of plants that are sexually reproduced in order to encourage research and development of such new varieties and to promote continuing progress in agriculture;

Now, therefore, be it resolved that the Iowa Seed Council (Advisory Council composed of representatives of the Iowa Seed Dealers Association, Iowa Crop Improvement Association, Iowa Department of Agriculture, and Iowa State University) does hereby recognize the need for a national plant variety protection act for the protection of new varieties that are sexually reproduced and approves the principles embodied in the National Plant Variety Protection Act.

ADDITIONAL COSPONSORS OF BILLS

S. 1958

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Oklahoma (Mr. HARRIS), I ask unanimous consent that, at the next printing, the name of the Senator from Alabama (Mr. ALLEN) be added as a cosponsor of S. 1958, the Prevailing Wage Rate Determination Act of 1969.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2004

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Rhode Island (Mr. PASTORE), I ask unanimous consent that, at the next printing, the name of the Senator from South Carolina (Mr. THURMOND) be added as a cosponsor of S. 2004, to amend the Communications Act of 1934 to establish orderly procedures for the consolidation of applications for renewal of broadcast licenses.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2993

Mr. CRANSTON. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from New Mexico (Mr. MONTOYA) be added as a cosponsor of S. 2993, the Veterans' Education and Training Assistance Amendments Act of 1969.

The PRESIDING OFFICER. Without objection, it was so ordered.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATION BILL, 1970—AMENDMENTS

AMENDMENT NO. 253

Mr. McGOVERN. Mr. President, I am submitting today an amendment intended to be proposed by me to the appropriation bill for the Departments of Labor, and Health, Education, and Welfare—(H.R. 13111). This amendment which I ask to have printed increases the House-approved appropriations for four student aid programs.

One item covered by this amendment is the educational opportunity grant program. Educational opportunity grants average about $500 each and go to students from families with low-level incomes. These are families which cannot provide more than $625 toward the educational expenses of the student. Most of them have incomes under $6,000 annually. The House appropriated $159,600,000 for the program, a reduction of $16 million from the budget request. Of this amount $109,388,000 is for administrative costs and the renewal of previously made grants. These costs and renewals we are already committed to, if the program is to continue at all. Under the House proposal there would be only $50,212,000 for new first-year grants, which would help about 100,000 students. This represents the same level of operation as for the last fiscal year. I am proposing that we appropriate $209,388,000 for this program. This will approximately double the amount of money available for new educational opportunity grants. We should not settle for stagnation in the improvement of the condition of those with low incomes. This program must grow if an increasing number of students from low-income families are to enter college.

Another item covered by this amendment is the student loan program under title II of the National Defense Education Act. These loans are for students who have financial need. Preference is given to those of greatest need. Two-thirds of these loans have been made to students from families with incomes of less than $7,500. I am proposing that we increase the Government's capital contribution to this program from $222.1 million to the full authorization level of $275 million.

Not long ago this Chamber passed a bill permitting subsidies to banks to encourage their making guaranteed loans to students. This does not, however, reduce our responsibility to National Defense Education Act direct loans. In fact, the provision for subsidies to guaranteed loans only makes more urgent our passage of this amendment. Guaranteed loans are primarily for those from families in the middle- to upper-income levels. NDEA loans, as we have seen, are based on need and are aimed at those in the lower-income levels. If we engage in the subsidy of loans to those in the higher-income levels, simple justice demands that we provide adequate funds for those with less income. It may seem attractive to have only a guaranteed loan program for each dollar of Federal expenditure, but while this may appear financially advantageous, it is socially disasterous. We must ask the question of who, not just how many. Without adequate NDEA loan funding the answer to "who benefits?" is lower."

In addition, we must not forget other benefits which flow from the NDEA loan program. Under this program many young people are encouraged to enter the teaching profession by provisions that forgive 10-percent of their loan for each year they teach up to 5 years. Not only is teaching encouraged, but under relatively new provisions, teaching in economically and educationally deprived areas is given the extra encouragement of 15 percent forgiveness per year.

A third item covered by this amendment is the work-study program. This program provides economic assistance to students who find it necessary to work their way through college. This is designed for students whose education will cost more than their parents can afford. Preference is given to children from low-income families, those with incomes below $3,200 for a family with two parents and one dependent child. There is no question that there are many students in college today who would not be there if it were not for this program. My amendment proposes to increase the House-approved appropriation work-study by a modest $22.54 million—from $152.46 to $175 million. But even this modest increase will provide assistance to about 45,000 students—students from families that might otherwise not be able to send their children to college.

The fourth program for which I am asking an increase over the House appropriation is the special services for disadvantaged students in college. This program provides educational assistance and enrichment to students whose socioeconomic background has resulted in an elementary and secondary education which is inadequate for college. This program is a modest attempt to compensate for some of the inadequacics of the public education system. We need it if these students are to develop fully. By raising the effectiveness of disadvantaged students this program helps not only them, but the whole Nation. The House appropriated $10 million for this activity. I ask that it be raised to $15 million.

The effect of this amendment is to increase the chances for children from economically deprived families to attend college. Monetarily the proposal is modest—an increase of $130,228,000 over the House measure. Its potential effect is great—about 200,000 additional students will benefit from these increases.

We should adopt this amendment for two very good reasons: First, we owe it to the children from poor families. In the land of opportunity there should be no financial barrier to higher education. How are we going to explain to the child of a poor laborer or farmer why he must stay at home while others go to school, draft deferment in hand, to pursue careers which will be denied to him?

Second, we owe the benefits of this amendment to ourselves. In an age so beset by difficult problems, we need an educated citizenry as never before. When financial difficulties come between a student and his education, they also come between the young person and his contribution to the improvement of our society.

Mr. President, for the sake of these students and for the sake of this Nation I urge the Members of this body and especially the members of the Appropriations Committee to carefully con-

sider the amendment which I have proposed.

Of the programs that I have mentioned today, only one, the educational opportunity grants, has advanced funding. This is a feature which should be adopted for all educational appropriations. As we sit here considering education appropriations, the school year for which most of them are intended has already begun. This means that once the money is finally appropriated many of the programs will be useless or considerably reduced in effectiveness. It also means that quite frequently surpluses remain in program budgets at the end of the year. These surpluses are then misinterpreted as funds not needed by the program rather than as what they really are—funds appropriated too late to be useful. This unfortunate situation reduces the effectiveness of our educational institutions and the effectiveness of our tax dollars. Let me take this opportunity to urge both the administration and the Congress to establish advanced funding for all educational programs.

The PRESIDING OFFICER. The amendment will be received, printed, and will lie on the table.

NOTICE OF HEARINGS ON NATURAL GAS SUPPLIES

Mr. MOSS. Mr. President, natural gas is a fuel vital to the American economy and to the comfort and well-being of our people. Patently, adequate supplies of natural gas are a matter of primary importance.

I and other members of the Committee on Interior and Insular Affairs and its Subcommittee on Minerals, Materials, and Fuels, have become increasingly concerned over reports that our Nation is facing a critical shortage of natural gas. Unequivocal statements to this effect have been made by the new Chairman of the Federal Power Commission, Mr. John Nassikas, and in Commission staff studies.

Accordingly, I announce that the Subcommittee on Minerals, Materials, and Fuels of the Committee on Interior and Insular Affairs will hold public hearings on November 12 and 13 on supplies of natural gas. The hearings will begin at 10 a.m. in the committee room, 3110 New Senate Office Building. The purpose of the hearing will be to ascertain what the situation is with respect to supplies of natural gas, and what action Congress and other branches of the Government should take in the circumstances.

The subcommittee is inviting the Secretary of the Interior, the Chairman of the Federal Power Commission, and other officials concerned with production and distribution of natural gas to appear at these hearings and give us facts and recommendations.

We shall also be glad to hear the views of the gas industry, both producers and distributors, as well as those of the public.

The participation of any Member of the Senate will of course be most welcome.

Mr. President, as a background for these hearings, I ask unanimous consent that the summary and conclusions of the staff report of the Federal Power Commission on "Natural Gas Supply and Demand," dated September 1969, be printed at this point in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NATURAL GAS SUPPLY AND DEMAND

(Staff report of the Federal Power Commission)

SUMMARY AND CONCLUSIONS

Our analysis of the national gas supply and demand relationship leads us to conclude that:

A major new government-industry program is needed immediately to insure the continued growth of natural gas service during the next decade. The program must be directed to speeding up the exploitation of the natural gas resource base and the development of supplementary gas sources. Basic elements for consideration should include: exploration incentives; Federal government leasing policies, both onshore and offshore; policies for imports of pipeline natural gas and liquefied natural gas; priorities for gas use in a short supply situation and Federal and private R&D expenditures for synthetic fuels.

Specific findings in this report which lead to the above conclusion are summarized as follows:

1. The national reserves to production (R/P) ratio (excluding Alaska) will drop from the current 14.6 levels to 10.2 by the end of 1973. Even a substantial improvement in reserve additions during the 1969–73 period above that experienced during the past five years will not prevent the R/P ratio from dropping to about 11 in 1973. Under no foreseeable circumstances will it be possible to hold the R/P ratio at its present level. Even under a greatly accelerated exploration program there is no single producing area, such as South Louisiana for example, which has sufficient potential for the development of new reserves at the timing and magnitude required to halt the decline in the national R/P ratio (Chapter II).

2. A critical analysis of "total U.S. proven reserves" by area and category of gas (Chapter II) reveals that:

A. Regional gas supply deficiencies are probable even when the national R/P ratio is still at or even above the 10 level.

B. The R/P ratio for South Louisiana will drop to the critical level of 8 in 1973 after which production growth will be at progressively slower rates.

C. The uncommitted portion of the total proven reserve inventory will have been exhausted by 1974 at which time the natural gas industry's capacity for growth will be limited.

3. The undiscovered natural gas resources of the contiguous states of the U.S. are estimated to be from two and a half to five times the current proven reserve inventory of 282 billion Mcf. The problem is to change the natural gas from the undiscovered resource category to the proven reserve category at the pace required to meet increasing demands and under economic conditions which will permit natural gas to retain its important role in the energy mix (Chapters II and IV).

4. U.S. natural gas requirements will continue to increase through 1973 at an average annual rate of 6.0 percent—the same average growth rate experienced during the most recent five year period. In order to meet these requirements Canadian imports are forecast to increase at an average annual rate of about 11 percent—a slightly higher growth rate than in recent years—and domestic production is forecast to increase at an average annual growth rate of 5.8 percent—a slightly lower growth rate than in recent years (Chapter III).

5. The U.S. gas industry and its customers will be increasingly dependent on supplementary sources of gas in the years beyond 1973 and particularly during the 1980's. The most promising of these sources include:

A. *Synthetic Gas from Coal:* The estimated cost of synthetic gas from coal has been cut in half during the past 20 years and is expected to be competitive with pipeline natural gas at several locations by the end of the next decade. U.S. coal resources are almost unlimited (Chapter IV, Page 65).

B. *LNG Imports by Ocean Tanker:* LNG technology, already fully developed and operational in Europe and North Africa, will soon provide a world-wide natural gas trade. Estimated cost of imported LNG to U.S. northeast coast cities is now nearly competitive with domestic pipeline delivered natural gas and one specific plan for such LNG service has been announced (Chapter IV, Page 60).

C. *Alaskan Natural Gas:* The historic Prudhoe Bay discovery has enlarged the already substantial Alaskan natural gas potential by several orders of magnitude. The Prudhoe Bay petroleum field will likely be one of the world's largest and opens the possibility of major natural gas production in the U.S. arctic. Transportation via LNG tanker or by pipeline will be costly and difficult, and unlikely within the next five years (Chapter IV, Page 48).

D. *Canadian Imports:* The natural gas resource base of Canada, including the Canadian arctic, is estimated to be as large as that of the contiguous United States and is in a very early stage of development. The Canadian natural gas industry is healthy and growing very rapidly. We foresee an average 11 percent annual gain in Canadian export sales to the U.S. market during the 1969–1973 period and even higher annual sales gains for the years beyond 1973 assuming mutually agreeable prices. For its full development the Canadian natural gas industry must seek exports and the U.S. is the most logical customer (Chapter IV, Page 54).

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Robert D. Olsen, Sr., of Alaska, to be U.S. marshal for the district of Alaska for the term of 4 years, vice George A. Bayer.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Thursday, October 30, 1969, any representations or objections they may wish to present concerning the above nomination, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

DRAFT REFORM

Mr. KENNEDY. Mr. President, in today's newspapers there are three articles of great interest to those of us who are concerned with the reform of the Selective Service System.

The New York Times, in the first of these articles, reports the decision of Federal Judge Lloyd F. MacMahon, holding that a local board acted illegally in

refusing to grant a registrant a student deferment. Certainly the local board which acts in such a high-handed manner is a great exception to the Selective Service System; nevertheless, as the story suggests, a thorough review of the whole system from top to bottom is urgently required and far-reaching reforms badly needed.

The second article, from the Washington Post, deals with another aspect of the Selective Service System which has previously caused concern here in Congress. Two cases are presently pending before the U.S. Supreme Court, Breen against Selective Service Board No. 16, and Gutknecht against United States, dealing with the delinquency regulations of the Selective Service System and the use of induction as punishment. These regulations, and especially General Hershey's interpretation of them, have come before the court in other cases, and it is revealing that the second highest legal officer in the U.S. Government has declined to sign Justice Department briefs upholding these regulations.

The final article in the New York Times indicates broad support for a system of random selection to replace the current oldest-first method. For more than 3 years now, a number of us have urged adoption of random selection. I am glad to note we are moving closer to it.

The hearings I have previously announced, which will be held in the Administrative Practice and Procedure Subcommittee, will develop further areas where administrative reform of the system is both necessary and practical.

I ask unanimous consent that these articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Oct. 23, 1969]

U.S. JUDGE IRKED BY DRAFT BOARD—BLOCKS INDUCTION OF STUDENT AS "BLATANTLY LAWLESS" ACT

(By Edward Ranzal)

Federal Judge Lloyd F. MacMahon denounced yesterday members of a Mount Vernon, N.Y., draft board for their "blatantly lawless" refusal to grant a deferment to a University of Bridgeport student.

He vacated an order of induction for Thomas J. Walsh, 24 years old, of Eastchester, N.Y., and permanently enjoined Mount Vernon's Local Board 10 from inducting the student into the armed forces under its order of last June 10. The judge held that the draft board had acted illegally when it arbitrarily denied the student a hearing for reclassification.

Judge MacMahon said:

"The draft board's overzealous, high-handed and erroneous handling of this man's plight hardly inspires confidence in the system. Rather, it is this kind of treatment which has alienated the youth of the nation, bred disrespect for law, sparked the disorders which has alienated the youth of the nation, bred disrespect for law, sparked the disorders which have torn a gap between generations and ripped open the very structure of society.

"It feeds the clamor for abolition of the whole Selective Service System, from top to bottom, not only by mounting numbers of defiant young men but also by the President and many members of Congress, where no less than 43 bills to change the draft laws are pending.

"At the very least, those entrusted with the awful power of conscripting the nation's young men into the armed forces in time of war or other military ventures owe a duty of the most searching examination of the facts, scrupulous fairness, sensitive care, compassionate hearing, patient consideration, cautious action and deliberate and rational decision within the law.

"We afford no less to the worst criminal in our society."

ALL APPEALS DENIED

Mr. Walsh, who is a junior at the Connecticut university, received a 2–S student deferment until Dec. 12. He "fell behind his class," the judge noted, and on Dec. 12, 1968, his draft board reclassified him 1–A, available for military service. Last June 10 he was ordered to report for induction on July 9, but he did not receive the notification until after the induction date.

On July 3 he applied for a 1–S deferment and requested a personal appearance before the board. Four days later the board, without granting a personal appearance, denied his request. Appeals were taken within the system, and all were denied. He was ordered to report for induction on Aug. 13.

On Aug. 12 Mr. Walsh brought action in Federal court, contending that the draft board had never considered his request for reopening his classification. Judge MacMahon stayed the induction temporarily.

"Plainly," Judge MacMahon said," Congress intended to mandate 1–S deferment to undergraduate students who had fallen behind their class but who were, nevertheless, satisfactorily pursuing a full-time course of instruction."

Judge MacMahon said Mr. Walsh fitted into the category of a full-time student and was entitled to a 1–S deferment. He held that failure of the board to hear his request for reclassification was "blatantly lawless."

[From the Washington Post, Oct. 23, 1969]

U.S. SOLICITOR BALKS AT TWO DRAFT BRIEFS

(By John P. MacKenzie)

Solicitor General Edwin N. Griswold has refused to sign two Justice Department briefs to the Supreme Court defending the 1967 Selective Service Act and the rules of Gen. Lewis B. Hershey.

In a breaking of department ranks that has few precedents the government briefs were filed yesterday over the signature of Attorney General John N. Mitchell, with the Solicitor General's signature missing.

Griswold, 65-year-old former dean of the Harvard Law School, declined to comment. The extent of his disagreement with Mitchell could thus only be gauged by his previous statements, including a brief two years ago in which he said Hershey had "invited" local draft boards to use the induction power to punish dissent.

The principal issue in one case before the court is whether Selective Service has the power from Congress and the Constitution to speed up the induction of young men in reaction to delinquency resulting from their turning in or destroying draft cards.

In the other case the question is whether Congress has the right to prohibit civil suits by draftees challenging their classification before the men are in uniform.

Both cases are at the heart of the war dissenters' and civil liberties groups' quarrel with Hershey, who two weeks ago was relieved as Selective Service director effective Feb. 16. Griswold, who enjoys the support of former Attorney General Ramsey Clark, clashed with Hershey over similar questions last year.

On that occasion Hershey tried to file his own brief in the Supreme Court, bypassing Griswold, but the government's top officer for high court litigation withheld his consent and the court did not accept the brief. Griswold resolved the split by offering a brief that contained his own memorandum "for the United States" and a few pages summarizing Hershey's point of view.

The lack of Griswold's signature is expected to be a severe handicap to the government when the cases are argued next month. One legal scholar has said that omitting the Solicitor General's name is "like tying a tin can" to a brief.

The last time this happened was in 1955, when then Solicitor General Simon E. Sobeloff declined to back the Eisenhower administration's position in support of the power to deny security clearances to public employees without letting them confront their accusers.

Warren E. Burger, then Assistant Attorney General in charge of the Civil Division and now Chief Justice of the United States, stepped forward and argued the case and lost. Within a year both Sobeloff and Burger were on the federal bench.

The two Supreme Court cases grew out of the antiwar antidraft protests of the fall of 1967 and Hershey's controversial October 1967 memorandum reminding local draft boards of their power to accelerate induction for some draft law violators. One case is criminal and the other civil.

In the criminal case, David Earl Gutknecht, now 21, threw his draft papers at the feet of a deputy marshal during a demonstration in Minneapolis. He was held delinquent for nonpossession of his draft card and ordered inducted. He is appealing a four-year prison sentence for refusing induction.

[From the New York Times, Oct. 23, 1969]

UNIVERSITY GROUP BACKS NIXON'S DRAFT-LOTTERY PLAN

The Association of American Universities yesterday endorsed President Nixon's proposal for a draft-lottery system to replace the current "oldest first" method.

The association, which is made up of representatives of 42 major American universities, made the endorsement here as part of a series of public pronouncements on issues affecting their campuses.

Dr. Nathan M. Pusey, president of Harvard University and the new head of the association issued the statement on the draft after the association's annual meeting at the Plaza Hotel.

The statement said it favored a policy of limiting draft eligibility to one year in a young man's life. President Nixon's plan, which was reported out of the House Armed Services Committee last week, proposes that men be liable for the draft only during their 19th year.

Dr. Pusey made public a telegram sent to President Nixon last August by David D. Henry, president of the University of Illinois and the former head of the association, which said in part that the proposed amendment of the draft law "would be a powerful factor in reducing campus tension."

NEW POLICY EXPLAINED

The Harvard president said the association's new policy of taking sides on public issues was "the inevitable consequences of developments since World War II, when an increasing amount of university research became funded by the Federal Government."

In its policy statements yesterday, the organization also urged more Federal funds and legislative support for medical and health education, endorsed a bill currently before the House that would establish a national program of institutional grants to oversee Federal aid to graduate research projects, and called for more Federal support for international education programs.

No stand was taken on the Reserve Officers Training Corps program, which has come under fire from campus activists recently. Dr. Pusey said that the issue "did not seem as urgent" as the other matters taken up at yesterday's meeting.

The association was formed early this century by the heads of various prominent uni-

versities to promote graduate studies. Its member universities now grant about 60 per cent of the nation's doctorate degrees and receive 75 per cent of all Federal grants for graduate studies.

ADDRESS BY SENATOR MONTOYA BEFORE AMERICAN INDIANS CONVENTION

Mr. McGOVERN. Mr. President, on October 7, the Senator from New Mexico (Mr. MONTOYA) addressed the National Congress of American Indians Convention in Albuquerque, N. Mex. The well-attended convention was a particularly important occasion for Senator MONTOYA. It is well recognized by Senators that he has long fought for greater opportunities for the American Indian.

The new administration has a particularly important responsibility to help the American Indians improve their standard of living, and insure them the right of all American citizens: the right to share in the wealth of this great Nation. In this regard Senator MONTOYA's remarks to the NCAI convention are very timely.

Mr. President, I ask unanimous consent that Senator MONTOYA's remarks before the National Congress of American Indians Convention be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

ANNUAL CONVENTION OF THE NATIONAL CONGRESS OF AMERICAN INDIANS

You honor me by your invitation to speak with you today. I want to take this opportunity to thank your president, Mr. Wendell Chino, with whom I have discussed Indian Affairs from time to time—and who was very kind to invite me to address you today. Today's afternoon session is entitled "Federal Communities." Briefly, I would like to share with you in the next few minutes some of my own thoughts on this subject—thoughts I offer to you for discussion, elaboration, and finally, perhaps, further development of your own ideas in this most important area.

The first priority in any discussion of Federal Indian policy in my opinion is the issue of termination of federal supervision of Indians, and Indian lands without consent. This policy, perpetrated in the past through an ill-conceived notion that such a policy will improve the economic and social well-being of the American Indian, must be eliminated. I, Senator Anderson, and several others have in the Congress co-sponsored a Senate resolution (Senate Res. 34), introduced by Senator George McGovern (D. S.D.), that includes language which firmly establishes that it is not the intent of the Senate to support such leigslation now or in the future. I would like to point out that the present Administration, contrary to some recent remarks in the past few months, is on record as supporting this philosophy.

President Nixon, on September 27, 1968, and at that time a candidate for the Presidency, issued a statement to the National Congress of American Indians in Omaha, Nebraska, and I quote, "termination of tribal recognition will not be a policy objective, and in no case will it be imposed without Indian consent." end quote. I call this to the attention of the delegates assembled, and recommend that you hold President Nixon to his promise! In March, 1968 the late Senator Robert Kennedy stated in a Senate hearing on this subject, "termination policy as many have pointed out, has thoroughly 'poisoned the well' of meaningful dialogue among government officials, legislators and the Indian people." I say it is time to act on the concerns of Senator Robert Kennedy and promote a closer working relationship between the Indian people and government officials.

The second issue of federal policy requiring action, and support by you, and of course by the Congress, is the critically important need for the federal executive to reform the archaic administrative structure now in existence. The Indian people need a unified, coordinated federal administrative structure, one that is a separate executive department dedicated to improving and expanding Indian opportunities. Simply to criticize the Bureau of Indian Affairs or the Division of Indian Health Services as inadequate is not the answer. I believe there should be recommendations for meaningful revisions in the existing structure, that the federal executive as now organized is not capable of providing the necessary assistance to meet Indian problems.

I recommend also that you submit to the President a well planned carefully thought-out design for a reorganization of Federal Indian Affairs programs. Place the present Administration on notice that you can and will continue to assert your right to self-determination; that it is your right, and that you can and will organize tribally and nationally to exert your influence and share in the wealth of this—the richest nation in the world.

The role of the Congress in all this seems clear. It must be the sense of the Congress to insure the right of self-determination for the Indian people; it must insure the protection of Indian lands; it must seek to provide the assistance necessary for Indian people everywhere to maximize the human and natural resources potential of the Indian people and their lands; it must support the right of all tribal governing units and rank and file tribal members to participate and share in the health, education, and welfare assistance provided by the various federal assistance programs; and finally the Congress should insure the right of all Indians to enjoy the same rights an privileges of all American citizens.

The role of this Convention and all Indians everywhere I hope, among other objectives, will be to make their voices heard, in groups as you are assembled here, and as individuals. The slow but real progress that can be seen by the American Indian has been made possible through an organized, unified effort. This I believe, is a most important development and should be encouraged and strengthened.

The role of our national governmental leadership is also clear. New circumstances and new demands of the American Indian—must be met with equally new administrative directions, new philosophy, and new leadership.

President Nixon has said that "termination of tribal recognition will not be a policy objective"—let him state so with actions;

President Nixon has said, "the right of self-determination of the Indian people will be respected," I call on him to back this statement with a commitment of funds and executive reorganization to better implement these funds;

President Nixon said, "My Administration will promote the economic development of the reservation." I call on him to release greatly needed construction funds to build roads, and construct hospitals and clinics so desperately needed both on and off Indian reservations.

It is for the Nixon Administration to back up these promises made in Omaha last year with specific legislation, funds, and a statement of policy now, this year. The need for action is long overdue. The Indian people have been neglected for too long.

Today ¾ of all Indian families exist on a below-poverty-level income;

Indian health statistics are closer to health standards in underdeveloped nations in Asia and Africa. Average life expectancy (44 years) for the Indian people is 20 years below the national average;

50% of the water used by Indian families come from unsanitary open wells;

Housing conditions on and off reservations are a national disgrace.

This evidence, in my own State and throughout the U.S. shows dramatically the urgency for our present Administration to state as a matter of national policy to expand federal economic and social development assistance to the American Indian.

The American Indian, the true native peoples of this diverse and great country, must be provided with the opportunity to choose between assimilation into the mainstream and maintaining their cultural identity. Indian culture can and will add greatly to America's grand scheme of total cultural advancement.

Here in New Mexico we are proud of the rich heritage maintained by the American Indian culture. It is at once one of the beauties of America, the many diverse cultures that live in harmony with each other. We must preserve that heritage for generations yet unborn.

Thank you.

GRINGOS AND GENERALS

Mr. JAVITS. Mr. President, "Gringos and Generals," written by Roberto de Oliveira Campos, and published in the August-September issue of Interplay, should be required reading for every Member of Congress as we approach the annual foreign aid debate.

Dr. Campos, a brilliant and distinguished economist, served as Brazil's Ambassador to the United States from 1961 to 1964 and more recently as the Minister of Economic Planning and Coordination of the Government of Brazil. Dr. Campos was one of the principal members of the Pearson Commission whose recommendations on worldwide development assistance have been made public—in time to assist the planning of the United Nations family for the second development decade of the 1970's and to assist individual donor and recipient nations in their economic planning efforts for this decade.

In his perceptive article, Dr. Campos catalogs the difficulties prevailing in Latin American countries which hinder economic development, and presents a brilliant analysis of the present and changing role of the military takeover in Latin America.

In discussing the trade and aid controversy, Dr. Campos comes to the disturbing conclusion that Latin America is faced with the bleak prospect of "less aid and less trade." In describing the alliance and its successes and failures, Dr. Campos notes that—

Some of its basic ideas have percolated through the body politic and are now part of the contemporary political and economic wisdom.

Finally, Dr. Campos' introduction states:

Finally even though, in this age of jets and missiles, geographic proximity has lost much of its strategic relevance, and, even though lacking nuclear power, the developing countries of the Western Hemisphere are a source

more of discomfort than of danger, the fact remains that Latin America has a special relevance in the context of the West. Among the underdeveloped continents, it is the one with the best prospects for self-supporting growth and for moving ahead into the industrial age.

This quotation puts into excellent context the reasons why I strongly feel that Congress should continue the funding of our Latin American programs at least at the levels the administration has requested.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GRINGOS AND GENERALS

(By Roberto de Oliveira Campos)

The name "Latin America" is a semantic oversimplification that conceals enormous regional disparities: (1) between Spanish and Portuguese America; (2) between the homogeneous societies of European stock (Argentina, Uruguay and Chile), the dualistic Indian-Spanish societies (Peru, Bolivia, Ecuador and Mexico), and the "melting-pot" societies such as Brazil and Venezuela; and (3) between the industrially developed economies of, say, Argentina, Mexico and southern Brazil and the largely agricultural economies of Ecuador and Paraguay. So anyone who discusses Latin America runs the risk of indulging in "glittering generalities into which the future will write its own meaning."

There are, on the other hand, several reasons why the topic is timely. Far-flung adventures, costly in blood and treasure and fertile in disenchantment, have diverted American attention in the past few years from the Latin American scene. But even though, in this age of jets and missiles, geographical proximity has lost much of its strategic relevance, and even though, lacking nuclear power, the developing countries of the Western Hemisphere are a source more of discomfort than of danger, the fact remains that Latin America has a special relevance in the context of the West. Among the underdeveloped continents it is the one with the best prospects for self-supporting growth and for moving ahead into the industrial age.

It is also the one which has the greatest affinities, as regards both culture and institutions, with the Western World. In fact, if we were to use the now fashionable terminology, the Third World, to describe the underdeveloped nations—characterized by hesitant experiments with capitalist and socialist ideologies as well as with authoritarian or democratic models, and leaning toward neutralist foreign policies—Latin America could better be described as a peripheral area of the industrialized West than as a component of the Third World.

Another factor which makes a review of the Latin American scene timely is the change of administration in the United States. This phenomenon stimulates the search for originality, and creates the need for a new image and a fresh approach. Foreign policy, unburdened by resentment and, one hopes, untouched as yet by routine, may still be pliable.

Last but not least, it is a fact that if we in Latin America—God forbid—continue to practice the "arithmetic of rabbits," there will, at the turn of the century, be twice as many Latin as North Americans in this hemisphere.

In terms of development, Latin American performance has been reasonably good in the postwar period, despite the problems created by political instability, inflation and sluggish export growth in some countries, and the deterioration of the terms of trade vis-à-vis the industrialized world. The gross national product increased at an average rate of 4.7 percent per annum; industrial production rose by some six percent; even agriculture, relatively neglected because of the fascination exerted on Latin Americans by the sense of power engendered by industrial growth, grew by some four percent per year. The growth in food production has, however, been inadequate to cope with the combined effects of the demographic explosion and the rise in urban incomes.

About 90 percent of all investment in the region has come from domestic sources though the foreign sector brought a crucial contribution in technology and import financing. And although the annual income per head in Latin America still averages only $350—only one-tenth and one-fifth, respectively, of the North American and West European averages—it is nevertheless three times greater than the Asian and African average.

In a daring oversimplification, I shall briefly run through a catalogue of the difficulties prevailing in Latin American countries.

There is, first of all, the question of improving agricultural productivity, in the interest of lowering inflationary food costs, increasing export availabilities and raising rural incomes, thus broadening the market for industrial production. To cite agricultural productivity first is not to downgrade industrial development, which alone can provide expanding job opportunities for the urban unemployed and the rural underemployed. It is simply to recognize the fact that industrialization, strange as it may seem, is an easier matter than agricultural modernization, since its technologies can much more easily be transplanted.

THE CRADLE AND THE PLOUGH

Second, there is the return of the crafty Malthusian Devil, which we all thought had been exorcised by the revolution in agricultural technology. It was revived by the introduction of antibiotics, which led to a much greater decline in mortality than in fertility. There is some hope, however, that the "second-strike" biochemical revolution of "the pill" may again restore the balance.

With a yearly increase of around three percent, Latin America has the fastest growing population in the world. Only in a few countries—Argentina, Chile and Uruguay—is population planning not a priority problem. While Mexico and Venezuela have managed to reconcile high rates of development with a demographic explosion, they nevertheless have to contend with the increasingly serious problem of providing employment for the burgeoning labor force.

This race subtracts resources that could be used for improving the standard of living and capital tooling, and creates tantalizing employment problems in a continent where roughly a third of the labor force is unemployed or underemployed.

Third, there is the problem of inflation, which for some obscure astrological reason affects most adversely those countries which lie wholly or partly south of the Tropic of Capricorn: Argentina, Brazil, Uruguay and Chile. Substantial progress has been made lately in stabilization programs (despite an inflationary relapse in Chile), after growing disappointment with the manipulation of inflation for forced savings and development, and blistering evidences of social conflict. A contribution the economists can perhaps make is to distinguish between price inflation, an all-too-familiar phenomenon, and price inflammation of the Latin American variety, which is purely and simply a disease of the social body.

Fourth, there is the question of the changing nature of the industrialization process, which in most countries can no longer be based mainly on import-substitution but must depend on expanding internal and external markets. This, in turn, will require boosting rural incomes through increased agricultural productivity, improving the pattern of income distribution to enlarge urban consumption, and moving much more boldly than has been politically feasible to date toward regional integration and better access to industrialized markets.

One of the most important ideological contributions of the Alliance for Progress was its emphasis on social development as a means toward stable and sustained growth, at tolerable levels of social friction. Even though the concept of the Alliance failed to capture the public imagination in Latin America, some of its basic ideas percolated through the body politic and are now part of the contemporary political and economic wisdom.

Most aspects of recent Latin American social performance in this context are negative, but some are positive. The darkest area would seem to be the absurdly unjust pattern of income distribution. According to ECLA's estimates for 1965, half of the population of Latin America received, in all, only 14 percent of total income, while 31.5 percent went to individuals in the top income brackets, comprising only five percent of the population. The brighter aspect is that, in most of the major countries, fiscal reform policies are now in force which will compel a substantial income redistribution. This is not only a humanitarian desideratum but an imperative for the creation of an expanding internal market. Since the inception of the Alliance for Progress, there has been not only a concentrated drive for fiscal reform, but a considerable increase in programs and expenditures for health, education and housing.

Agrarian reform laws have been passed in several countries, although actual progress has been exasperatingly slow. But undoubtedly one has to chalk up as a positive factor a much greater awareness of the problem of social development, and its acceptance as an essential part of government programs and planning.

One must start with two unhappy premises: first, that there appears to be no correlation between economic development and political development, and, second that political development is even less an exportable commodity than is economic development.

The issue of political development has been sharply brought to the fore by the recent ascendancy of the military in some of the larger countries of Latin America. This is described by many as an authoritarian relapse interrupting a desirable evolution toward democracy. But generalizations in this field are hazardous. It is necessary, in particular, to determine whether the military intervention was the cause, or merely the consequence, of the "political crisis."

STAGES IN POLITICAL DEVELOPMENT

It should be stressed that Latin America's progression from oligarchic and traditionalist forms of government to democratic pluralism is likely to be slow, hesitant and painful. One reason for this may be common to all developing countries. Another is more closely linked to behavioral patterns of Latin American politics, which, as one American sociologist puts it, reflect the traditional values of particularism, personalism and paternalism.

The analysis of the ascendance of military regimes in Brazil, Argentina and, more recently, in Peru, requires a consideration of the role that the military could and should play in the political life of developing countries. The first point is that the new generation of military leaders in Latin America shows little resemblance to the personalistic, "caudillo" type that characterized the first postwar wave of military regimes, such as those of Perón in Argentina, Rojas Pinilla in

Colombia and Perez Jiminez in Venezuela. We are dealing, in short, with a different breed, the technocratic variety, much less personalistic and much more concerned with institutional modernization.

The second point is that the ascendance of the military is not a peculiar Latin American anti-democratic deformation, but a fairly widespread phenomenon in the developing world. This seems to reflect the peculiar stresses of the modernization process, and involves much more complex motivations than the lust for power, the anti-Communist obsession, or the defense of conservative interests, which are supposed to underlie military movements in Latin America. These other motivations, discernible in quite a few instances, are:

1) Nation-building after recent decolonization, when the military are the only national group equipped with at least rudimentary administrative skills, and capable of serving as an integrating force in the face of dissident tribes, castes and religions;

2) Modernizing reforms, in the face of legislative impasses created by the resistance of traditionalist groups dominating the political process, thus creating the need for an enlargement of the executive power; and

3) Crisis management, in the case of the breakdown of social discipline after populist regimes which, by raising extravagant expectations of welfare and social justice well beyond the capabilities of the existing institutions and resources, have led the countries into social turmoil and economic chaos. There have been in Latin America too many engineers of chaos disguised as defenders of freedom.

The first motivation is certainly relevant in the African and Asian context, though not meaningful to Latin America, where national unification has long been attained. The recent abandonment by the Brazilian military of their traditional role of arbitrators, and by the Argentinian of their tutorial role, in favor of direct engagement in the political arena, must therefore be explained in terms of the other sociological components.

TRANSITION PAINS

In a broader context, the basic problem of Latin American politics is the transition from the elitist oligarchic regimes to pluralistic democratic models, in the context of a paternalistic, particularistic and personalistic set of values. In some cases, such as that of Mexico, after a bitter period of social convulsion, a regime of "consensus authoritarianism" has been established, which allows, within the confines of a single party, sufficient room for the play of interest and the expression of grievances so that tensions have thus far been absorbed and political stability maintained, although there are signs that the agglutinative power of the Revolution may now be thinning out. Other countries, such as Costa Rica and Chile—fairly homogeneous societies—have attempted a direct transition to democratic pluralism with apparent success, although it is unclear at this stage whether the frequent legislative impasses will not usher in radical solutions in Chile, Venezuela, after a long period of "caudillismo," is now trying a hopeful pluralistic democratic experiment.

In Brazil and Argentina, this transition was first attempted through the "populismo" of Vargas and Perón. In both cases, inflation and economic stagnation finally ensued, brought about by utopian promises of welfare without any prescriptions for manageable growth.

After the downfall of the populist dictators, the "political class" failed repeatedly in the task of managing the transition. It was slow in accepting reforms, the splinter "personalistic" party system led to legislative impasses, and utopian promises continued to be regarded as the basic raw material of political success. In short, democracy deteriorated into demagoguery.

The assertion of authoritarian discipline and the hypertrophy of executive powers may well be the price to be paid in situations of "crisis management," when prolonged inflation has broken down social discipline, confronting the nation with the sinister combination of inflation cum stagnation. For, then, the society becomes brittle, with no margin for social accommodation, and inflation invariably assumes the features of a bloodless civil war.

Nobody has really discovered the secret for readily converting into successful electoral stuff the brutal measures needed to cure a long-term inflation accompanied by populist repression of politically sensitive prices, resulting in stagnation in basic investment and distortion of its pattern. The consumer is resentful because of the elimination of subsidies to consumer needs (housing, food); the politician, because of the slash in vote-yielding appropriations; the business groups, because of credit restraints. All, to be sure, are against inflation, provided the bitter anti-inflationary medicine is taken only by his neighbor.

WEAKNESSES OF AUTHORITARIAN RULE

But to try to understand the transitional role of the military in the process of modernization and development is not to ignore the perils of this role. Authoritarian governments have often failed to control inflation and to promote capital accumulation. And several developing countries have had success in solving the problem of accumulation while maintaining substantially open economies and relatively free political systems. All that this proves is that no comfortable generalization is possible. If it is absurd to claim that the destruction of democracy is necessary for capital accumulation, it is equally naive to deny that in some developing countries, at certain times, there is a typical situation of crisis management, which cannot be solved through normal constitutional processes. Any objective assessment would indicate that in both Brazil and Argentina, under an alliance of military and civilian technocrats, economic performance improved markedly and long-awaited institutional reforms were enacted.

Let me now put forth some of the reasons which counsel only a temporary predominance of the military in the political arena. The military mind is susceptible to some peculiar deformations. There is, first, the propensity to expand the notion of national security to the point of curtailing individual liberties beyond the legitimate requirements for the restoration of social discipline. On the economic front, this may also lead to reserving to the state economic operations that could safely and much more effectively be conducted by private enterprise.

Second, there is the vulnerability to xenophobic nationalism. This leads to ambivalence. On the one hand, there is the desire to accelerate investment and growth. On the other hand, excluding foreign investment from resource development results in slowing down the rate of growth. A further contradiction is added when the potential for productive investment is reduced by military expenditures.

Third, the seduction of authoritarianism. Used to imposed discipline, the military has little patience with the art of democratic compromise. Moreover, personal criticism, inevitable in the democratic debate, is often resented as an attack on the "military institution," eliciting authoritarian reactions.

Fourth, there is the problem of communication. Except in the military regimes of the "populist" charismatic type, there is a tendency to underestimate the importance of political parties to coalesce diffused aspirations into intelligible work programs and to act as channels for popular communication, the articulation of interests and the expression of grievances. This may lead to isolation and rigidity, concealing rather than eliminating the buildup of social and political tensions.

Let us look at the current dilemmas that have to be faced by the United States in formulating policies to assist in the economic development of Latin America, *e.g.*, the aid burden, the aid relationship, and the trade-versus-aid controversy.

THE AID AND TRADE CONTROVERSY

There appears to be in the United States a feeling of both fatigue and disenchantment with foreign aid. This is due partly to excessive expectations. False analogies with the Marshall Plan—where the problem was simply that of reconstructing a physical structure and putting to use existing human skills—helped in creating expectations of dramatic and immediate yields. Then there is the bitter frustration and the enormous cost of the Vietnam involvement. Third, there is the feeling that the aid burden is not adequately shared with other industrialized countries, some of which are enjoying balance-of-payments surplus, while the U.S. continues to suffer a deficit. Fourth, there is a vastly exaggerated idea of the real burden of aid.

The truth is that the aid burden has steadily declined in the present decade. Measured as percentage of GNP, the net share of aid of the US has declined from 0.75 percent in 1960 to 0.70 percent in 1967. The same is true for the other big donor countries, with the exception of Germany and Japan. Thus, the magnitude of aid, which in 1967 averaged 0.75 percent of GNP of the member-countries of the Development Assistance Committee, fell well behind the target of one percent of GNP accepted at the United Nations Commission on Trade and Development (UNCTAD) Conference in New Delhi. In terms of proportion of GNP devoted to aid, the United States ranks presently as the ninth largest contributor, surpassed by France, Portugal, Netherlands, West Germany, Belgium, the United Kingdom, Switzerland and Japan.

The real aid burden has been further reduced by the improvement in the terms of trade of the industrialized countries vis-a-vis the developing nations. Price relationships have so benefited the industrialized nations that the purchasing power of exports of developing countries fell by 19 points between 1953 and 1967, of which not less than 10 points was during the current decade. Thus, part of the real resources yielded for aid by taxpayers of donor countries has been recaptured in the form of lower import prices for their consumers.

The burden of aid has been further moderated by the system of tied procurement. At the same time that the grant component was shrinking, procedures linking aid to exports of goods and services became so widespread that by now no less than 80 percent of all aid is "tied." This growth of "tying" reflects the adverse balance-of-payments position of certain donors, particularly the U.S. and the stiffer competition for export markets. But the movement proved very contagious. The result has been a loss in the flexibility of planning by developing countries, and an increase in the real cost of their imports; and the transformation, for the donor countries, of unselfish development assistance into schemes for export promotion.

This brings about the vexing question of the aid relationship. A few points must be clearly stressed at the outset. Effective use of aid resources is fundamental if the objective of aid is to promote development. Hence the concern of donors with the performance of the receiving countries is a legitimate one. However, the definition of performance criteria is hardly an exact science and, in practice, is subject to fads. Infrastructure, education, agriculture, encouragement to the private sector, all these have in recent years taken turns as "the" development fad in donor countries.

And it appears that a new fad is now emerging, which consists in measuring the performance of receiving countries in terms of political development. As this is even less quantifiable and scientific than the former criteria, it can be anticipated that it will bring about confusion and irritation if it is used. The evaluation of performance by international organizations is far preferable to bilateral procedures which often generate a feeling of dependence and antagonism. This is in fact the most cogent argument for multilateralization of aid.

The importance of a pragmatic approach to the problem of performance evaluation can hardly be overstressed. There has in fact been a healthy evolution in the US aid philosophy, three different periods being easily distinguishable. During the Dulles era, aid was *ideological*, in the sense that it was designed to reward political allegiance; in the Kennedy area, it became *idealistic*, in the sense that it was used as a leverage to promote supposedly desirable social reforms. Later, in the Johnson era, it became essentially *pragmatic*, its basic criterion being not social change or political allegiance, but the effectiveness of the utilization of resources. Perhaps it should remain so, for the variety of national situations is enormous, and there is no development formula of general applicability. Moreover, the leverage of aid has been vastly overestimated as an instrument to promote reforms and modernization. Aid is aid, and not a panacea.

A BLEAK PROSPECT

Political disenchantment and an exaggerated view of the aid burden make the prospects bleak indeed for aid expansion. This underlines the urgent need for bolder moves in the field of trade. Acceleration of exports from developing countries should therefore be an important element in the global strategy for development. Ideally, aid and trade should be complementary rather than alternative, for, on the one hand, the expansion of trade may require structural changes that could only be financed by aid, and on the other, some countries do not have the resource flexibility for a substantial expansion of trade in the short run.

The alarming note in the present policy perspective is that we are faced with rather negative prospects on both counts: in aid, because of disenchantment, and in trade, because of a recrudescence of protectionism in the U.S. We are in fact faced with the bleak prospects of less aid and less trade.

Some basic facts may be recalled. The share of the developing countries in world trade has declined from 27 percent in 1953 to less than 20 percent in 1965. Growth in the exports of primary products was 4.7 percent per annum between the same period while the growth in trade of manufactured products was 9.3 percent.

If part of the blame lies with the developing countries that practiced overvalued exchange rates or neglected the export sector, and if another part is explainable in terms of technological advances in the production of synthetics or savings of raw materials, a large measure of guilt lies squarely with the developed countries themselves. In the case of non-competing tropical products, they have raised barriers to exports from the developing countries by fiscal charges and, to a lesser extent, quantitative restrictions. In addition, violent price fluctuations in basic commodities had deleterious effects on planning and growth.

There is in fact a bitter irony in that the developing countries are expected to carry out politically difficult economic and social transformations, while developed countries consider it politically impossible to effect relatively minor changes in their trade structure. Even the economic folklore reflects their double standards of judgment. The competitive ability of the developed countries in world markets is described as "productive efficiency"; the timid inroads of low-cost manufactures of developing countries in industrial markets are described as "market disruption."

WHERE RESPONSIBILITY LIES

If the developed world is serious about helping developing countries—because the sharing of progress is not only a humanitarian necessity but a requisite for world peace and stability—then the problem of trade must be urgently reconsidered, lest the availability of foreign exchange become a strangling constraint on the growth of developing countries.

Such measures must include commodity agreements for a few products, compensatory financing to stabilize export earnings, but chiefly the elimination of fiscal charges on non-competing products and abatement of protectionist and subsidization measures for non-competing primary products. Since it is recognized that the most dynamic field for trade expansion is the commerce in manufactures, urgent consideration should be given to implementing the scheme for preferential treatment to manufactures from developing countries, a principle that was agreed to at the UNCTAD conference held in New Delhi, but which has remained theoretical.

USEFUL MEASURES

A constructive scheme was recently worked out with the participation of important elements of the US business community at the Bogota meeting of the Inter-American Council for Commerce and Production (CICYP). According to this scheme, the United States would, for a year, give unilateral preferences to processed and manufactured products of the developing world on a non-discriminatory basis. But it would narrow such concessions to cover only the Latin American countries if, within a year, the European countries failed to take similar measures, or if the Common Market preferences in favor of African primary products, which discriminate against Latin America, were to remain in force.

This measure would be at the same time an invitation for a worldwide liberalization of trade and a recognition of the special position of Latin America, as the only main unsheltered area in world trade.

Of course, there are many clues but no key for understanding the process of development. This is an elusive key indeed. Finding it would require a proper blend of emotion and rationality; the moderation of utopian longings and the raising of the level of efficiency; the conciliation between patient capital accumulation and welfare aspirations. Finding this key should be the object of everyone's effort, the purpose of man's quest, and eventually the substance of our reward.

A LETTER FROM CUBA: THE HUNGER STRIKE IN LA CABANA PRISON

Mr. DODD. Mr. President, on September 30, I placed in the RECORD an appeal on behalf of the 85,000 political prisoners in Castro's jails which I had received from the Hartford Committee of Relatives and Friends of Cuban Concentration Camp Prisoners.

A few days ago, I received a second communication in the form of a letter smuggled out of Cuba to this country by a Cuban resident who had recently visited an imprisoned relative in the infamous La Cabana prison. For obvious reasons, the names of the sender and the recipient cannot be revealed. But because I feel that this criminal situation must be repeatedly brought to world attention, I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks the full text of the letter.

From fragments of information like this, it has become possible to put together a reasonably accurate picture of the 20-day hunger strike in La Cabana prison which took place in the month of August. According to this letter, the prisoners demanded deportation from the country or death.

So long as Cuban refugee flights to this country are continued, it seems to me that we should take the stand with the Cuban Government that the many thousands of political prisoners should be placed at the head of the list, rather than letting Castro select all those who are flown to the United States, as has been the case up until now.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HAVANA,
September 5, 1969.

DEAR FRIEND: I hope that when you receive this you are well. We here are . . . well I should not even tell you about it. To start with the general situation here could not be worse specially with the food situation that is very bad. We do not know how we are able to go from one day to the next, specially at the end of the month, because at least at the beginning they give you a little more of rice and a few ounces of beans without any spices and if it is vegetables and fruits one gets none of them as when there are bananas they are for the children.

The other side is what is occurring at "La Cabana" prison. Before in the month of August there was a 20 days hunger strike because of the food, the visits to prison and the mail.

After 20 days those in the upper floors gave up but seven days ago the hunger strike was renewed for the same reasons but now they say that they also demand deportation from the country or death.

Yesterday I went to "La Cabana" I spent the whole day there and it was horrible. I cannot believe I am back home, it is unbelievable we are not all dead or imprisoned as we were over one thousand relatives and friends screaming and telling the military all of the horrors they are doing. We were all hysterical. They started with their guns hitting us and shoving us from the streets saying we could not remain. We even called them s.o.b.

Well J . . . for much I may bring to your attention of what happened yesterday this would not even half describe it

The prisoners have said that after Saturday if they do not solve their problems they would not even drink water. There are (5) five thousand in this determination so I only beg that the world does not let these amount of prisoners die. You can imagine how we feel, those of us who have a little of ourselves in there. Yesterday we all agreed that we had to find a way the whole world finds out what is happening there with all Christians. The reality is that we are all going mad and we do not know what to do.

Well J . . . I will not tire you with all the horrible calamities we are undergoing. See what you can do with all our friends that I ask to be remembered to.

I thank you.

PARVIN FOUNDATION'S SOURCE OF FUNDS

Mr. THURMOND. Mr. President, yesterday the Washington Evening Star published an extremely important Associated Press story concerning the source of the funds which supported the Parvin

Foundation's Salary to Supreme Court Justice William O. Douglas.

As Senators will recall, the basic source of the Parvin Foundation's funds came from a deal centering around the Hotel Flamingo in 1959. At that time, Albert Parvin donated 2,085 shares of Flamingo stock worth $1.1 million to set up the foundation, after consultation with Justice Douglas.

Now the Associated Press reveals that the actual sale of the hotel in 1960 was masterminded by Meyer Lansky, one of the Nation's most notorious mobsters. AP says that Lansky got a $200,000 "finder's fee" for arranging the sale to a Florida group of investors. According to the contract signed by Parvin and Lansky, Lansky was to receive quarterly installments of $6,250 beginning January 2, 1961. Under these terms, Parvin would have been paying money to Lansky until October 1968.

Mr. President, this information shows that Parvin had a continuous business involvement with one of America's most clearly identified gangsters for the whole period of time that Justice Douglas was associated with the Parvin interests, except for the final 6 months.

Justice Douglas' involvement in a mobster operation speaks for itself.

Mr. President, I am sorry that I did not have this particular information when I spoke on the Senate floor about this matter on June 18. However, I am not surprised that it has come to light. At that time I said:

> The history of most of the major casinos, including those associated with the Parvin Foundation's interests, has been intertwined with the worst elements in American society. An Associate Justice of the U.S. Supreme Court can only bring the Court into disrepute by associating himself with the profits of such enterprise.

Mr. President, I said in the same speech that the Hotel Flamingo "bore the worst possible image in the public mind and in many newspaper and magazine articles over the period, and is, indeed, almost the primary example of a notorious enterprise."

At that time, I could judge only by the public reputation of the Flamingo. Now it is clear that more than "image" is involved. We have the direct involvement of gangsterism in the enterprise, an involvement that continued for most of the period in which Justice Douglas was in the group.

This information merely adds one more concrete link to gambling interests. I went into all these links in great detail last June 18; and for those who are interested, I refer to the daily CONGRESSIONAL RECORD, pages 16458–16465.

Mr. President, I ask unanimous consent that the article entitled "Mob-Linked Deal Supported Foundation Douglas Headed," published in the Evening Star, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Oct. 22, 1969]

MOB-LINKED DEAL SUPPORTED FOUNDATION DOUGLAS HEADED

(By Jean Heller)

LAS VEGAS, NEV.—A major source of financial support for the foundation which Supreme Court Justice William O. Douglas headed for nine years came from a deal set up by Meyer Lansky, one of the nation's most notorious mobsters.

Under a contract signed by Albert Parvin, Lansky was paid $200,000, for acting as middleman in setting up the 1960 sale of the Flamingo Hotel here. Parvin, former head of the Parvin-Dohrmann Co. of Los Angeles, was president and 30 percent owner of the company seeking to sell the hotel-casino, Hotel Flamingo, Inc.

The Flamingo was sold to a group which included Florida hotelmen Samuel Cohen, Morris Lansburgh and Daniel Lifter.

The $200,000 was a finder's fee which Lansky received for introducing the sellers to the Florida men interested in buying the hotel.

Parvin used a portion of the proceeds from the sale of the Flamingo to help set up the Albert Parvin Foundation.

Parvin said Justice Douglas aided him in creating the foundation. Douglas later served as its president and only salaried officer.

It could not be determined if Douglas ever learned of or was told of the background of the Flamingo sale at any time during his association with the foundation. Douglas was asked for comment but declined to discuss the matter. Parvin could not be reached for comment.

A federal grand jury in New York is reported to be looking at the dealings of Parvin, Parvin Dohrmann Co. and other individuals and companies in an investigation, but this probe apparently is unrelated to the Flamingo sale.

(United Press International reported Monday that Nevada gambling officials are investigating Parvin Dohrmann because of allegations included in a complaint filed against the company last week by the Securities and Exchange Commission. That complaint charges the firm with fraudulent activities.

(A grand jury in New York which is investigating attempts to influence government agencies has been given evidence, also cited by the SEC, that Martin Sweig, the now-suspended administrative assistant to House Speaker John W. McCormack, worked with Nathan Voloshen of New York to arrange a meeting between Parvin Dohrmann officials and SEC officials last May.

(The SEC had suspended sales of Parvin Dohrmann stock during an investigation of the company. That suspension was lifted several days after the meeting with Parvin Dohrmann officials).

According to a contract signed by both Parvin and Lansky, "Lansky has given Flamingo Hotel Flamingo, Inc. certain information regarding prospective purchasers and as a result of such information, Flamingo . . . has contacted a prospective purchaser and is presently negotiating the terms for the sale of its property. . . .

"Flamingo recognizes and acknowledges that it has been solely through the information and advice supplied by Lansky that the sale may be made. . . .

"Flamingo acknowledges that Lansky has been the finder of the purchaser of the property belonging to it, and as a result of Lansky's services in supplying the information as to the purchaser and advising Flamingo thereof, that he is entitled to payment for the services thereon. . . .

"Flamingo agrees to pay Lansky and Lansky agrees to accept as payment from Flamingo the sum of $200,000."

The agreement was dated May 12, 1960, more than a month after the Cohen-Lansburgh-Lifter group applied to Nevada authorities for approval of the Flamingo purchase. On June 1, the sale was given final approval by the Nevada Gaming Commission.

The terms of the contract stipulated that Parvin's company would pay Lansky the $200,000 fee in quarterly installments of $6,250 beginning Jan. 2, 1961. Under those terms, Parvin should have made the final payment to Lansky in October 1968.

Lansky's name has come up repeatedly in recent investigations of organized crime. Sen. John L. McClellan's permanent investigations subcommittee, for example, describes Lansky as "one of the country's top gangsters."

Frank Johnson, chairman of the Nevada Gaming Control Board, was asked about the state's official attitude toward any Lansky involvement in gambling activities here.

"He is not the kind of man we want doing business in this state," Johnson said. "And that's putting it as mildly as I can."

The purchase price of the Flamingo was $10.5 million. Parvin was the principal stockholder with more than a 30 percent share of the company which sold the hotel-casino. Harry Goldman, Parvin's partner in Parvin-Dohrmann—a multimillion dollar-a-year hotel supply business in Los Angeles—held 7 percent. Other stockholders included singer Tony Martin and actor George Raft.

Parvin said in an interview in 1964 that four years earlier he contacted Douglas and sought his help in setting up the foundation. Douglas agreed.

Tax records of the Parvin Foundation dating back to 1962 show that Douglas was serving as president at an annual salary of $12,000. Proceeds from the Flamingo sale show up regularly through 1968 as one of the foundation's largest assets.

Foundation tax records prior to 1962 are not public information.

Douglas came under sharp congressional criticism last spring for his involvement with the foundation, especially when it was disclosed that he wrote Parvin telling him that an Internal Revenue Service investigation of the foundation was "a manufactured case."

In May, Douglas resigned as president of the foundation.

The Parvin Foundation has also had an interest in several Las Vegas hotels and casinos by virtue of the Parvin Dohrmann stock it held. Parvin Dohrmann owns three casinos here, the Aladdin, the Fremont and the Stardust.

Harvey Silbert, secretary of the foundation, said it severed all its gambling ties in May—the same month Douglas resigned as foundation president—when it sold its share of Parvin Dohrmann. Silbert also said the Flamingo mortgage was paid off earlier this year.

Parvin has sold out his interest in Parvin Dohrmann as well, but still maintains the foundation.

In June, after Parvin sold out, Parvin Dohrmann and Denny's Restaurants Inc. announced they would merge, but the plans were canceled earlier this month. Several days later both firms and their officers found themselves embroiled with the Securities and Exchange Commission.

The SEC complaint, filed in Federal District Court in New York, alleges violation of anti-fraud, report-filing and credit provisions of the federal securities laws in connection with the now defunct merger plans. The SEC also accused Parvin of filing a false and misleading proxy statement with the commission.

It is not known how long Lansky and Parvin knew each other prior to their 1960 business dealings, but Lansky had known the three principal purchasers of the Flamingo for some time.

Records of the Nevada Gaming Control Board show that Cohen, Lansburgh and Lifter are associates in a number of large Miami Beach hotels including the San Souci, Deauville, Sherry Frontenac, Casablanca and Versailles. Additional Florida records show they also have associates in the Crown Hotel, the Eden Rock Hotel and the Waikiki Motel, all also in Miami Beach.

According to a report prepared by the Gaming Control Board's investigative staff and read into the record at the board's hearing on the sale of the Flamingo, Lansky ap-

proached the three members of the Florida group in 1957 with an offer to sell them the Havana Riviera Hotel in Havana, Cuba.

The group declined the offer, the report said, after Lansburgh went to Havana to evaluate the property and learned of the growing strength of Fidel Castro. It was fear of Castro that caused Lansburgh to drop the matter with Lansky.

The trio was approached again by Lansky in late 1959, the report stated, when Lansky asked if they might be interested in making a loan on a motel north of Miami Beach. They told Lansky they weren't interested.

All three individuals, according to the report, acknowledged that they knew Meyer Lansky and his brother, Jake, but stated:

"We have never received any money from Meyer or Jake Lansky, or any of their associates; never paid any money to them; and, there has been no association where they might say they have any part of our business in any way."

POLITICAL RIGHTS FOR WOMEN

Mr. PROXMIRE. Mr. President, recently I received a letter from the National Federation of Business and Professional Women's Clubs supporting the ratification of the United Nations Convention on the Political Rights of Women. The membership of the fine organization includes federations in every State, the District of Columbia, Puerto Rico, and the Virgin Islands and has a total membership of over 180,000 members. This year the federation is celebrating its 50th anniversary. The members of this organization exhibit the qualities which the Convention on Political Rights for Women seeks to recognize on an international level. The successes of these women are undeniable proof that women are ready to assume the full political rights reserved to men for so many generations.

I have read over the national legislative platform of the federation and ask unanimous consent that it be printed in the RECORD as an example of the new responsibilities women are willing to assume. This platform deserves careful consideration by every Member of Congress. The adoption of the federation's goals—particularly the ratification of the Convention on Political Rights for Women—would represent a great stride in guaranteeing the political equality of women.

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

NATIONAL LEGISLATIVE PLATFORM ADOPTED BY THE NATIONAL CONVENTION, ST. LOUIS, MO., JULY 20–24, 1969

ACTION ITEMS

Item 1. Constitutional Amendment: Support legislation to amend the Constitution of the United States to provide that equality of rights under the law shall not be denied or abridged on account of sex.

Item 2: Actively work for pending legislation providing for: (a) a broadened head-of-household benefit under the Internal Revenue Code; (b) increased personal exemption and credit for dependents under the Internal Revenue Code; and (c) a more equitable distribution of the tax burden.

Item 3: Propose and support legislation to provide: (a) uniform laws and regulations for men and women as to working hours, working conditions, rates of pay, equal employment opportunity, including retirement for age; (b) equal treatment for working men and women in the area of survivor and retirement benefits; and (c) increased child care deduction under the Internal Revenue Code.

Item 4: Propose and support state legislation to provide for uniform jury service and uniform qualifications in the selection of men and women to serve on grand or petit juries in any court.

Item 5: Propose and support legislation to bring about more effective crime control and law enforcement.

POLICY ITEM

Support measures within the framework of the Constitution of the United States that promote peace and strengthen national security and make more effective the United Nations and such other international organizations of which the United States is a participant, without relinquishment of our basic freedoms.

Special note is called to the United Nations Convention pending before the United States Senate on the political rights of women and to the long-standing support for ratification of this convention by the Federation.

WENDELL WILLKIE

Mr. JAVITS. Mr. President, this month is the 25th anniversary of Wendell Willkie's death, yet he is remembered still for his dream of "One World" and his life's commitment to it.

From time to time in the years since Wendell Willkie's death, authors and others have caught the spirit of the man and found it of continuing pertinence to our contemporary life. I ask unanimous consent, therefore, that an editorial written 2 years after Willkie's passing and published in the Indianapolis, Ind., News, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TORCH STILL BURNS

Two years ago, in the bright beauty of an October afternoon, Wendell Willkie came home to Indiana, to return to the rich earth from which he sprang. On a green hillside over which flamed the tapestry of October, the man whom Indiana gave to the world was laid to rest. On the place where he slept, the leaves came drifting down from the hackberry and linden sentinels for his eternal rest.

The great voice that had been raised for freedom was still. But even death can not quench a dream, and a flaming spirit lives beyond mortality. Wendell Willkie had fired the thoughts of men, and touched their hearts, and the world picked up his torch. His words live, and his dream moves on toward realization. Greatness does not die.

Symbolic recognition of that truth is afforded, as fully as can be expressed in stone, by the memorial that has just been placed at his grave. This is truly a shrine to freedom. It has the idealism of the cross, the sword of the spirit, the torch of humanity, the book of inspiration, and the laurel of victory.

It is the torch and the book that will carry the message of Wendell Willkie to those who come in the years ahead to the East Hill cemetery in Rushville, there to pay homage to one who was a friend to all mankind. There is no fire in the granite torch. Rather the flame is in the words graven on the book that all may read as they rest and meditate. They are the words that were Mr. Willkie's creed:

"I believe in America because in it we are free—free to choose our government, to speak our minds, to observe our different religions.

"Because we are generous with our freedom, we share our rights with those who disagree with us.

"Because we hate no people and covet no people's lands.

"Because we are blessed with a natural and varied abundance.

"Because we have great dreams and because we have the opportunity to make those dreams come true."

Mr. Willkie lived those words, as all Americans should live them. And his heritage to his fellow countrymen is contained in these other lines on the book, taken from his speeches and "One World":

"There are no distant points in the world any longer—our thinking in the future must be worldwide.

"We must establish beyond all doubt the equality of men.

"The world is awakening at last to the knowledge that the rule of people by other peoples is not freedom.

"Freedom is an indivisible word—we must be prepared to extend it to every one, whether they are rich or poor, whether they agree with us or not, no matter what their race or the color of their skin.

"The only soil in which liberty can grow is that of a united people—we must have faith that the welfare of one is the welfare of all—we must acknowledge that all are equal before God and before the law.

"Only the productive are strong, only the strong are free.

"It is inescapably true that to raise the standard of living of any man anywhere in the world is to raise the standard of living by some slight degree of every man, everywhere in the world.

"Whenever we take away the liberties of those whom we hate we are opening the way to loss of liberty for those we love.

"The moral losses of expediency always far outweigh the temporary gains.

"The test of a people is their aim and not their color."

Those words still speak to a world that has yet to know their full meaning. They are as true as the ages. And as long as there are living men to read them, and warm hearts to respond, the spirit of Wendell Willkie will endure. His torch still burns.

ARCHIBALD RUTLEDGE, THE POET LAUREATE OF SOUTH CAROLINA

Mr. HOLLINGS. Mr. President, I hope Senators will grant me indulgence today if I was somewhat poetic. I do so because I am paying tribute to a man who is close to my heart and to the hearts of readers throughout the world who cherish beautiful poetry.

Today is the 86th birthday anniversary of Archibald Rutledge, who since 1934 has been the distinguished poet laureate of South Carolina. Mr. Rutledge has written movingly about his beloved native State, but indeed, his true title should be poet of the South. For it is the South, both old and new, with which this great writer has had a lifelong affair of heart. The reader sees and feels the beauty of the Southern mountains in his poetry. He joins the poet beside the slow-moving rivers. He watches the harvest of the corn and cotton. He understands the rapport between hunter and dog, and hears the singing of the birds on an early morning. I think, perhaps, Archibald Rutledge himself is characterized in one of his four-line poems, entitled "The Few." It says:

The songs that poets sing are mortal, too;
But most miraculously in a few
The granite of eternity lies hid.
The great song builds its own proud pyramid.

Mr. Rutledge's biography is a veritable "who's who" in the world of literary achievement. He has had his writings published since he was a teenager. He is a member of the International Society of Poets Laureate, and was elected by that society as Nature Poet Laureate of America. He is South Carolina's elector to the Hall of Fame. Mr. Rutledge is the author of 87 published books, of which his most recent collection—Deep River—is used by all American universities and by the Sorbonne in Paris and Oxford and Cambridge in Great Britain. His works have been translated into many languages, and he personally has recorded 75 of his poems for the Library of Congress. More than 60 have been set to music, and many appear in other anthologies and textbooks. Incidentally, Deep River has won 61 gold medals. He also has the John Burroughs medal for poetry. Of his writing, the noted critic of the London Times says:

This is the clearest and most splendid poetry this reviewer has read in 50 years.

Mr. Rutledge belongs to Phi Beta Kappa, the American Society of Arts and Letters, the American Poetry Society, and the South Carolina Poetry Society. His writing has brought him 23 honorary degrees.

Mr. President, the man honored today was born in tiny McClellanville, S.C., and perhaps this more than any other factor shaped his life. He left South Carolina as a student and taught English for 33 years at Mercersburg Academy in Pennsylvania. But when he retired, Mr. Rutledge returned to his family home and began another labor of love—the restoration of his boyhood home, Hampton Plantation.

Despite a life of accomplishment and accolade, Archibald Rutledge chooses the quiet life rather than seek the attentions of the world of admirers. Of himself, he says:

I am not a joiner, but a leisure-time hunter, forester, archeologist.

I have read many of his poems. To me, their beauty and grace are a continuing source of inspiration, as in his moving poem, "The Silent Hills." It speaks eloquently, not only of the poet, but of a philosophy of life which many men grope for in this age of plastic and steel and computers.

I commend Archibald Rutledge today. His life, his writings have given life and love and happiness to others. He was given the genius of poetry, the artistry of seeing the world around him, and the perception and tenderness of expressing it—and has been greatly blessed by these gifts. To you, Mr. Poet Laureate, I wish many more birthdays and much happiness.

ADDRESS BY SENATOR GOLDWATER BEFORE ASSOCIATION OF OLD CROWS

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the RECORD the text of a speech which I delivered on October 21 before the sixth annual banquet of the Association of Old Crows at the Washington Hilton Hotel, in this city.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY SENATOR BARRY GOLDWATER, OF ARIZONA, BEFORE THE SIXTH ANNUAL BANQUET OF THE ASSOCIATION OF OLD CROWS AND THE FIRST SYMPOSIUM ON ELECTRONIC WARFARE, OCTOBER 21, 1969

Mr. President, ladies and gentlemen, it is a privilege to be with you here tonight on the occasion of this important annual conference, and it is refreshing to be referred to as a "Crow."

I suspect there are many people in Washington that would tell you quite freely that Barry Goldwater is a real bird. What they mean is that Barry Goldwater is a Vietnam hawk.

I sincerely thought I had reached the pinnacle in that particular department until a few days ago when I suggested that if the Communists continued to block any and all efforts to achieve a peaceful settlement in Paris that we should bomb the Port of Haiphong and destroy the railroad which runs along the Red River Valley from Communist China. And that is when I really achieved the ultimate. I was described in numerous radio broadcasts as a "hawk of hawks."

On the subject of Vietnam, I willingly admit to the status of a hawk. In fact, I am indeed proud to be counted among those Americans who believe that when our nation is committed to war in the name of human freedom every effort should be made to win that war.

And by this I do not mean to imply that I am against peace. I want peace as much as any other concerned person in this great land of ours. But I do not want a fraudulent peace. I do not want peace at any cost. I do not want a peace which would dishonor us in the eyes of the other nations of the world. And I do not want a peace that would cost us heavily in lives, blood and respect.

We have all heard a great deal about the recent Vietnam Moratorium demonstrations. These were promoted in the name of peace. As such, they attracted some support from persons honestly concerned with the prolonged war in Vietnam and who seemed to think that they could perhaps hasten its end by taking to the streets. I am here to tell you that this is not the way policy is made or can be made in a Republic. Democratic processes provide other legitimate means for changing any official policy with which Americans might disagree. That is what our free election system is all about. That is why American citizens are provided with the right to vote. The ballot box is provided to serve those who would continue existing policies and officials or replace them with others who hold a different view.

Some leaders of the Moratorium claim that by protesting and demonstrating in the streets peace advocates in this country could show the President of the United States that there exists in this country a desire for an end to the bloodshed in Vietnam.

Having discussed the war with President Nixon on repeated occasions, I can assure you that he needed no announcements from the Vietnam Moratorium Committee, no demonstrations by the SDS, no new flood of speeches by the political doves to impress upon him the fact that there is unhappiness and dissatisfaction throughout the land because of the war in Vietnam.

Who, I am forced to ask, do these people think they are fooling? Certainly not the President of the United States, nor the Department of Defense, nor any of the military services, nor not many of the members of Congress. The President and everyone else concerned have been living with this problem day and night for many, many months. The Administration didn't need a lot of hoopla to convince it that Americans are weary and frustrated over the progress of events in Vietnam. Nor did it need any reminding of the fact that the majority of Americans are dedicated to the cause of an honorable peace.

I say now and I've said before that the Moratorium served no useful purpose for our nation or our government but did serve an important propaganda objective for the Communist enemy. Statements from Hanoi, from Moscow and from Peking make it abundantly clear that the Moratorium was used—wittingly or unwittingly—as prime ammunition for the Communist propaganda machine.

And I want to say now that there were along with the responsible Americans who demonstrated on October 15 some whose objective was not peace but a Communist victory.

As a matter of fact, some spokesmen were very clear about it. One Senator said, and I use the quotes attributed to him by the *New York Times* on October 16:

"I think history would see nothing wrong if Nixon does preside over the first military defeat of this country, but would regard it instead as a measure of great statesmanship."

I don't think we have to concern ourselves here or anywhere with what history would see in a complete and immediate withdrawal of American forces from Vietnam. Of much more immediate concern is what the majority of patriotic, upstanding and honorable Americans would think of their nation defaulting on an honorable commitment and surrendering to a Communist enemy. They wouldn't wait for history and they wouldn't call it statesmanship. Most Americans would call it an unconscionable act of cowardice. They would see it as the most costly move ever made by the United States in a military operation.

You don't have to accept my word. Former Defense Secretary Clark Clifford said it all when he described a proposal to withdraw American troops from South Vietnam by December, 1970, as "unrealistic and impractical" and an action which would result in—and I use his precise words—"a bloodbath."

Mr. Clifford, like everyone else who has any knowledge at all of military operations and strategy, realizes that such a withdrawal would cause the collapse of the military and the collapse of the government in South Vietnam. It would lay South Vietnam and all of Southeast Asia wide open to Communist conquest and terrorism.

It is one thing for people who dislike war to take to the streets and yell for withdrawal of American military forces as a means of promoting peace. It is quite another to take the responsibility for defaulting on our commitments and breaking faith with this nation's young men who have fought and bled and died in Vietnam.

Have you ever thought what would happen if one of the nation's foremost doves were suddenly to find himself President of the United States, Commander-in-Chief of the Armed Forces and the strategic leader of 200 million Americans as well as the rest of the free world?

Of course, we'll never know for sure. But based on the actions of three Presidents of varying degrees of philosophical leanings, I would say that it is a lead-pipe cinch that none of the doves would move any faster in the direction of disengagement than President Nixon is doing at this very moment.

It is not enough just to make a big noise in the name of peace and then demand impossible military actions such as complete and immediate withdrawal of troops. That is easy. It is simplicity itself. But it carries with it not one ounce of responsibility for what might happen to American lives and to our own national strategic interests if such action were to be taken by the person in authority.

Leadership in these times is not easy. In Vietnam and at home President Nixon is faced with hard decisions, some of which are bound to be unpopular. And it stands to

reason that his task is made more difficult by people who demonstrate and shout easy answers to tough questions. As I said before, the shouting is easy, but the doing takes some guts. I say we are fortunate to have in the White House a man of sound judgment and high courage who has had the honesty and directness to inform the emotional crowds with their banners and their signs that policy is not made in the streets.

And while I am at it, let me say that I hope that policy will continue to be made in the White House, in the State Department and in the Department of Defense. In light of what I have read in the newspapers in the last couple of days, I sincerely hope that no part of our official policy will be made in the office of U.N. Secretary General U Thant. Mr. Thant does not strike me as the kind of man whose record is such that he can be counted upon to serve in the post of "broker" to work out a viable, political situation in South Vietnam.

I, for one, remember Mr. Thant's efforts in connection with the Cuban missile crisis. I also remember the part he played in the Middle Eastern situation just prior to the war of June, 1967. Neither situation convinced me that he is a man whose judgment is superior and whose political concerns are entirely objective.

I notice that the same people who are urging that U Thant be assigned the role of broker in Vietnam are those who supported the Vietnam Moratorium. For example, one Senator claims that President Nixon was wrong to treat the Moratorium as something which made him a target. He said the President should have treated it as "something in which he could have played a part."

This is patently ridiculous on its face.

Can you imagine the President of the United States participating in a movement that was aimed against what he himself thought was the best course for this Nation to pursue?

Can you see him playing a part in suggestions about presiding over the first military defeat of this country?

Can you see the President of the United States approving pro-Viet Cong statements by people who insisted on waving the enemy flag?

Can you see the President of the United States turning his back on American fighting men and on American prisoners of war and on our South Vietnamese allies?

Perhaps others can see this happening, but I can't. I know Richard Nixon, and I think he's right.

Now the leaders of this anti-Vietnam war offensive tell us that they plan to escalate their efforts every month until the United States military involvement is ended. I understand that November 13, 14 and 15 are the dates fixed for the next round of demonstrations.

We also hear ominous rumblings which claim the protests in December will lead to riots and violence. I can only say that if this happens it will be a disgrace for an honorable Nation. Already our troops and our fighting men in Vietnam have had their morale severely shaken by the spectacle of thousands of people running through the streets and shouting their disapproval with what our fighting men are trying to accomplish. I believe anything that causes one single American military man unhappiness and discouragement in the pursuit of his assignment in Vietnam is indefensible.

But I am fully aware that such sentiments are not shared by the President's Vietnam critics and by those professional agitators who oppose any and all facets of American defense. Because of this, it is my hope that patriotic Americans will make a special effort on November 11, Veterans Day, to show their gratitude to the men in Vietnam. I am not here suggesting any kind of demonstrations or public display of patriotic emotions. Rather, I am suggesting that concerned Americans use this opportunity to write to a serviceman in Vietnam, or perhaps to the parents of such a serviceman, to express their quiet, heartfelt gratitude.

HEADSTART WORKS AS BILINGUAL TRAINING PROGRAM

Mr. YARBOROUGH. Mr. President, I recently received a letter which shows the great promise that Headstart gives of allowing our Mexican-American children of becoming productive citizens.

Bilingual Headstart programs, like bilingual education programs, are the hope of the future.

I am proud that the Senate has passed the poverty extension act and that Headstart will receive a reasonable if not ideal authorization. I hope the Members of the other body will also see the merit of these poverty programs and speedily pass the authorization bill.

Mr. President, I ask unanimous consent that the letter of October 14, 1969, from Mr. Jack R. Tarvin and its attachment be printed in the RECORD.

There being no objection, the letter and attachment were ordered to be printed in the RECORD, as follows:

FORT WORTH PUBLIC SCHOOLS,
Fort Worth, Tex., October 14, 1969.

Senator RALPH YARBOROUGH,
Washington, D.C.

DEAR SENATOR YARBOROUGH: Knowing of your interest in Federal Aid to Education, I thought the enclosed letter written by a Headstart aide and reproduced in her church paper would be of interest to you.

Respectfully,

JACK R. TARVIN,
Director, Federal Programs.

(NOTE.—The following account by Diane Dowdey has been prepared by her at my request for publication in the *Messenger* and even more widely, we hope. Diane, a freshman at Paschal High School and a member of South Hills Christian Church, participated in the Headstart program in connection with a Camp Fire girl religious growth project. As her minister I have consulted with Diane on requirements for the project, but the Headstart participation was her own idea, and I think one of the most remarkable fruits of her project—Jeff Hassell, Minister, South Hills Christian Church.)

"MERRY-GO-ROUND

"Where's the horse for a Negro child?
'Cause, Mister, I want to ride.
Down South, where I come from
White folks and colored can't sit side by side.
On the trains there's a Jim Crow car;
On the buses we sit at the back.
But there ain't no back to a merry-go-round,
So, Mister, where's the horse for a child that's black."

—LANGSTON HUGHES.

Although we have come a long way from the conditions this poem describes, I spent my summer with five-year-old children who got to ride a merry-go-round for the first time this summer. I worked as a volunteer for Headstart at Alexander Hogg Elementary School. Headstart lasted from June 16 to August 8. At Alexander Hogg, there were fifty-six children, five teachers, five aides, and volunteers.

In my particular class there were nine children; one Anglo, Edward; two Mexican-Americans, Delia and Annabelle; and six Negroes, Dewayne, Jerome, Lisa, Alice, Pamela and Jeanette. Headstart is supposed to help underprivileged children catch up with the experiences of better-off children. They were told stories. Some of the children had never heard "The Gingerbread Boy" or "Cinderella." They were exposed to many facets of school, such as coloring, cutting, pasting, staying in line, using public restrooms, and being with teachers and children.

Neither Delia nor Annabelle spoke English at the beginning, although they understood it. At the end they preferred English to Spanish. Many of the children who spoke English could not carry on a conversation or answer questions, simply because they did not know how. In most instances, you could not ask a child, "What is your name?" and get a response. They had to be told to say, "My name is——" followed by the complete name. Many of them had no idea of their last name.

The children were given milk and doughnuts in the morning and a hot lunch at noon. Annabelle did not eat much except milk, mashed potatoes, and ice cream. When the dentist came, we found out why. Her teeth were so rotten that she could not chew anything, but subsisted on things she could suck.

The children also had a medical checkup, and a nurse came once a week. Lisa had a droopy eyelid that did not open completely. We mentioned it to the nurse, who arranged for an operation at St. Joseph's Hospital. Her problem could only be corrected if caught before the age of seven. It is probable that if Lisa had not gone to Headstart, her problem would have gone unnoticed and untreated because her family could not have afforded it. Federal funds paid for Annabelle's dental appointments and Lisa's operation.

If I looked out the window, I could see the Continental National Bank Building twelve blocks away, yet some of these children had never been downtown. They went on field trips to Six Flags, Leonard's, Vandervoort's Dairy, the zoo, Heritage Hall, and the Coca-Cola Bottling Company.

At Six Flags the children rode two rides and saw the animals. The Leonard's trip included a bus tour of downtown Fort Worth and a ride on the subway and escalators. They saw a lady decorate a cake and were given a cookie in the bakery department. In the pet shop they saw fish, hamsters, lizards, turtles, gerbils, and were completely captivated by a monkey.

At Vandervoort's Dairy, the children saw milk being processed and put into cartons. The ice cream they received was quickly eaten. One little girl, Mildred an Anglo (the one I felt sorriest for) could not go into the storage room because she had no shoes and the floor would burn her feet. The Headstart teachers tried to get shoes for her through proper channels and contacted six welfare agencies. At the end of Headstart, Mildred possessed six pairs of shoes—all different.

We went to the zoo the same day we went to the dairy. The children went through the Herpetarium and saw the other animals. As a sort of special treat, they saw the baby tiger in the incubator, and the preparation of the animals' lunches.

All these field trips had been planned for all Headstart children in every school and the transportation had been school busses. Our school decided to go to Heritage Hall and we went in cars. The children fully enjoyed this trip except Dewayne, who declared the minute he got inside Heritage Hall that he was not going through. The Indians might get him! After a while one of the workers, a Negro man, talked him into going. And he had more fun than any of the others. Our guide was an Indian girl, which added to the excitement.

Like Heritage Hall, our trip to Coca-Cola Bottling Company was taken just by our school. This trip was probably the most enjoyed one because the guide talked on their level. The machines were very noisy and Lisa found them scary, but the other children found the conveyor belt fascinating.

On almost all trips the children received a souvenir to make the memory lasting.

Besides these trips, each child went on an

individual trip with an adult. Most of them went to the park and rode the rides. They also got to eat out on these trips. Two boys went to Carswell Air Force Base, and after they came back, the Air Force had two new volunteers. One lady took a child swimming in her pool. This one-to-one trip was very important in the growth of the child. We tried to have men take some children because out of the nine children in my class, only three had fathers living at home.

The children grew this summer in many ways. I was glad that I got to be a part of this growth and said that they did not have these experiences before they were five. These children got on a merry-go-round for the first time this summer. They will need our help to get off the merry-go-round called poverty.

NATIONAL BUSINESS WOMEN'S WEEK

Mr. HRUSKA. Mr. President, this week we celebrate National Business Women's Week. A national salute is given to the thousands of business and professional women who participate so actively in American commerce and who add new dimension to the fields of law, medicine, social sciences, and the humanities. Often in the forefront of civil service and responsibility, business and professional women of America endeavor to stay informed on the problems of the day, and contribute their talents toward finding solutions.

The National Federation of Business and Professional Women's Clubs is one gathering point for the women of whom I speak. This fine organization has 180,000 members in more than 3,800 clubs across the Nation. I am pleased to salute the National Federation of Business and Professional Women for its contribution.

Mr. President, it is particularly appropriate during National Business and Professional Women's Week, to pay special tribute to a Nebraskan whose singular qualities are in the best tradition of leadership and service exemplified by the Federation. Mrs. Haven Smith, of Chappell, Nebr., has recently been appointed by President Nixon as Chairman of the President's Task Force on Rural Development. The Task Force was created to review the effectiveness of present rural assistance programs, and to make recommendations as to what might be done in the private and public sectors to stimulate rural development. I ask unanimous consent to have printed in the RECORD several articles and an editorial on the appointment of Mrs. Smith, published in Nebraska newspapers.

Mrs. Smith, who presently serves as national chairman of the American Farm Bureau Women, and as the only woman on the board of directors of the American Farm Bureau, has received awards from the University of Nebraska, the National Daughters of the American Revolution, and is an honorary international member of Beta Sigma Psi. Mrs. Smith was selected by the French Government this year as one of six women to make a good will tour of France. In 1968 and 1969, Mrs. Smith made a similar good will tour of eight South American countries. Mrs. Haven Smith represents the kind of talent and energy seen in American business and professional women, and I am proud to join in saluting her.

There is another outstanding professional Nebraskan woman whom I must mention today: Miss Sarah Jane Cunningham, a lawyer of McCook, Nebr., who merits the thanks and best wishes of all of us for her service to the community and the State of Nebraska. Miss Cunningham is the immediate past president of the National Federation of Business and Professional Women.

Mr. President, it is a privilege to salute these two outstanding Nebraska women and to extend congratulations to all business and professional women across the Nation. I wish them continued success.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Lincoln (Nebr.) Journal, Sept. 29, 1969]

MRS. HAVEN SMITH HEADS RURAL UNIT—TASK FORCE GOAL: STIMULATION OF GROWTH IN U.S. FARM AREAS

WASHINGTON.—Sen. Carl T. Curtis said Monday he was informed by the White House that Mrs. Haven Smith of Chappell, Neb., has been selected to be chairman of the President's task force on rural development.

Mrs. Smith has long been a leader among farm women of the nation.

The White House announcement said the purpose of the task force is to review the effectiveness of the present rural assistance programs and make recommendations as to what might be done in the private and public sectors to stimulate rural development.

"I am very delighted that Nebraska is represented on this task force," Sen. Curtis said.

"Mrs. Smith is very articulate. She's traveled a great deal. I feel that she can speak for all phases of rural life."

He said the preliminary announcement from the White House indicates that the task force will not deal with the mechanics of farm programs but overall development of rural areas.

Sen. Curtis said this task force "may well be a prelude to launching a rural affairs council which I have proposed, or something similar under a different title."

In June, Curtis presented a memorandum to President Nixon privately in which he urged, such a council to "give rural America a voice in the high councils of the office of the president."

[From the Lincoln (Nebr.) Journal, Sept. 29, 1969]

QUALIFICATIONS OF NEW RURAL UNIT LEADER TOLD

Mrs. Haven Smith of Chappell has been active in local, state and national farm women's groups for nearly two decades and has previously served in advisory capacities in government.

In 1955 she was named by Secretary of Agriculture Ezra Taft Benson to a 15-member advisory committee to the U.S. Department of Agriculture to review the government's current research program into home economics.

In 1956 she acted as consultant to the Women's Affairs Division of the Department of Labor, which sought to advance the status of women and their contributions to the national economy.

Mrs. Smith was appointed to the National Commission of Community Health Services in 1963. She served on the National Livestock and Meat Board and as director of the Agriculture-Hall of Fame. She was appointed national vice chairman of the 4-H Club Builders' Council in 1951.

Wife of a Duell County wheat farmer, Mrs. Smith has been an active leader in Farm Bureau. She was a member of the board of directors of Nebraska Farm Bureau and of American Farm Bureau Federation. She served as state president and chairman of Associated Women of the Nebraska Farm Bureau Federation before being elected regional director and then national * * * committee of the Farm Bureau.

She was elected deputy president of Associated Country Women of the World and in 1953 was selected as one of three American women to visit Switzerland, representing United States club women in an exchange of Swiss-American friendship.

Mrs. Smith has received numerous awards for her civic and community service. The University of Nebraska presented her with a Distinguished Service award in 1956. Four years later, she was given another Distinguished Service award for her service to agriculture and education by the Land Grant Colleges. In 1967 the Freedom Foundation at Valley Forge selected her as having made one of the best speeches on freedom in America in 1966.

Mrs. Smith is a University of Nebraska graduate.

[From the Omaha, Nebr., World-Herald, Sept. 29, 1969]

MRS. SMITH WILL DIRECT FARM STUDY

WASHINGTON.—Sen. Carl T. Curtis said Monday he was informed by the White House that Mrs. Haven Smith of Chappell, Neb., has been selected to be chairman of the President's task force on rural development.

Mrs. Smith has long been a leader among farm women.

The White House announcement said the task force will review present rural assistance programs and recommend what might be done to stimulate rural development.

"I am very delighted that Nebraska is represented on this task force," Sen. Curtis said. "Mrs. Smith is very articulate. She's traveled a great deal. I feel that she can speak for all phases of rural life." He said the White House announcement indicates that the task force will not deal with the mechanics of farm programs but over all rural development.

Sen. Curtis said this task force "may well be a prelude to launching a rural affairs council which I have proposed, or something similar under a different title."

In June Curtis presented a memorandum to President Nixon privately in which he urged such a council to "give rural America a voice in the high councils of the office of the president."

[From the Lincoln (Nebr.) Evening Journal, Oct. 4, 1969]

RURAL AFFAIRS COUNCIL

President Nixon's appointment of a task force on rural development, along with his reported interest in a permanent Rural Affairs Council, could herald a brighter day for rural and small town America.

The emphasis here is on the word "could."

The task force, and the Council which would be its natural outgrowth, could do an immense amount of good—if:

If the leadership of the task force is forceful and far-sighted enough to shake up some national attitudes and institute some dramatic programs.

If the administration—and the members of the task force, for that matter—really take their mission seriously.

If the country at large is prepared to take the necessary steps to keep this essential segment of the nation economically healthy and to use the potential strengths of rural America to ease the evident burdens of urban America.

The idea of a Rural Affairs Council has been broached to the President by Nebraska Sen. Carl Curtis and has been favorably received, according to the senator.

Curtis' idea is that this body would be a

counterpart to the Urban Affairs Council which operates out of the White House, with the imaginative and effective Daniel Moynihan as its head, and which is charged with spawning new programs and concepts to deal with the peculiar problems of the cities and their people.

Curtis lists as the goals of a Rural Affairs Council: increase farm income, better the image of the farmer, bring jobs to rural America, make rural areas more appealing and foster a better understanding and relationship between rural and urban people.

It can be hoped that something of this nature might spring from the task force on rural development named by the President a few days ago.

It is a distinct honor for Nebraska and for Mrs. Haven Smith of Ogallala that she has been picked by Mr. Nixon as chairman of the task force.

But the position will be far more than an honorary one, if it is to accomplish its purpose. And it will require a willingness to enlist all sources of research and suggestion, to welcome fresh and innovative ideas and not to be hidebound to any preconceived concepts or philosophies.

Nebraskans and rural Americans generally should wish Mrs. Smith well in her endeavors.

In both the Rural Affairs Council and the task force, consideration of government farm policy is to be taboo. Perhaps that is just as well, although it is a little hard to see how the overpowering problem of the rural economy, low farm prices, can be attacked without getting into price support and production control programs. But it is easy to see, too, how the whole effort could bog down on the controversies of this issue.

Aside from that limitation, however, the task force should not shrink from any possible avenue of developing rural America, no matter how radical or controversial it might seem.

If it is simply to recite the same old shibboleths of traditional rural thinking, it will not fulfill its assignment; and it will not warrant transformation into a full-fledged Rural Affairs Council.

CHIMEL AGAINST CALIFORNIA

Mr. McCLELLAN. Mr. President, I have been concerned for some time that the U.S. Supreme Court has, through its decisions in the criminal justice area, been seriously weakening the Government's effort to combat the growing menace of crime in the United States. On several occasions I have spoken on the floor of the Senate on this subject. The statistics that are available dramatically portray the source of my concern.

Since 1960, the Supreme Court has reviewed 112 Federal criminal cases and 144 State criminal cases in which it has handed down written opinions. The Supreme Court has chosen to reverse 60 percent of the Federal convictions it has considered, and 80 percent of the State convictions it has considered. In addition, it has granted 85 percent of the habeas corpus petitions presented to it in which it chose to hand down written decisions.

It has been suggested in some quarters that the Court has merely been enforcing the law and that, if blame is to be assigned, it should be assigned to the police for bringing about these reversals. What this position ignores is that the Supreme Court has not only been enforcing the law, but it has been making it, too. Indeed, since 1960, in the criminal justice area alone, the Supreme Court has specifically overruled or rejected the reasoning of 25 of its own precedents—often by the narrowest of 5-to-4 margins. Seventeen of these decisions involved a change in constitutional doctrine—without the intervention of a constitutional convention. Seven of these decisions represented a new interpretation of statutory language—without intervening congressional action. Only one of these decisions may be classified as modifying the common law, an area in which the Court traditionally has had freer rein in developing the law.

It has also been contended by some that these reversal decisions are having no adverse impact on law enforcement and on the rising incidence of crime. This contention is not supported by the facts. Indeed, since 1960, while our population has increased 11 percent, serious crime has overall increased 122 percent. Robbery alone has increased 142 percent; burglary, 104 percent. Operating under the new standards and requirements imposed by recent Supreme Court decisions, moreover, police clearance—solving—of serious crimes has experienced a steady, across-the-board decline. For example: The clearance for robbery has dropped 25.9 percent, and the clearance for burglary 38.8 percent. Verdicts of not guilty in robbery cases have increased 23 percent and in burglary cases 53 percent.

Mr. President, most recently, it has come to my attention that local law enforcement is now beginning to feel the ill effects of the recent Supreme Court decision of *Chimel* v. *California*—395 U.S. 752 (1969)—which, in line with the Court's recent tradition of handing down decisions seriously weakening law enforcement's ability to combat crime, further hamstrings law enforcement by greatly curtailing the right of police officers to make searches of premises incident to a lawful arrest. In brief, what the Court did in Chimel was overrule its previous decisions—*United States* v. *Rabinowitz*, 339 U.S. 56 (1950); *Harris* v. *United States*, 331 U.S. 145 (1947)—holding that law enforcement authorities could search the place where an arrest is made in order to find and seize things connected with the crime and held that a search incident to arrest is limited to the immediate area for weapons or easily disposable evidence. In Chimel the police, having probable cause to arrest the defendant for the burglary of a coin shop, based on admissions the defendant made to a neighbor, arrested the defendant in his house, and in a search of the house incident to the arrest, uncovered numerous items—primarily coins—but also several medals, tokens, and a few other items. The entire search took between 45 minutes and 1 hour, and it was on the basis of the items uncovered in the search that the defendant was convicted of burglary. The California Supreme Court sustained the search as constitutionally reasonable, basing its decision on the Supreme Court precedents, including Rabinowitz and Harris. The Supreme Court, however, set aside the search as unreasonable and reversed the conviction.

Justice White, joined by Justice Black in a dissent in Chimel, states that the majority rule "proscribes searches for which there is probable cause and which may prove fruitless unless carried out immediately," 395 U.S. at 781. He says:

> The rule will have no added effect whatsoever in protecting the rights of the criminal accused at trial against introduction of evidence seized without probable cause, since such evidence could not be introduced under the old rule. *Id.*

Justice White continues as follows:

> Nor does the majority today give any added protection to the right of privacy of those whose houses there is probable cause to search. A warrant would still be sworn out for those houses, and the privacy of their owners invaded. The only possible justification for the majority's rule is that in some instances arresting officers may search when they have no probable cause to do so and that such unlawful searches might be prevented if the officers first sought a warrant from a magistrate. Against the possible protection of privacy in that class of cases, in which the privacy of the house has already been invaded by entry to make the arrest—an entry for which the majority does not assert that any warrant is necessary—must be weighed the risk of destruction of evidence for which there is probable cause to search, as a result of delays in obtaining a search warrant. Without more basis for radical change than the Court's opinion reveals, I would not upset the decisions of this Court. (395 U.S. at 781–82)

Justice Harlan, in a reluctant concurring opinion, states as follows:

> The only thing that has given me pause in voting to overrule *Harris* and *Rabinowitz* is that as a result of *Mapp* v. *Ohio*, 367 U.S. 643 (1961), and *Ker* v. *California*, 374 U.S. 23 (1963), every change in Fourth Amendment law must now be obeyed by state officials facing widely different problems of local law enforcement. We simply do not know the extent to which cities and towns across the Nation are prepared to administer the greatly expanded warrant system which will be required by today's decision; nor can we say with assurance that in each and every local situation, the warrant requirement plays an essential role in the protection of those fundamental liberties protected against state infringement by the Fourteenth Amendment. (395 U.S. at 769)

Justice Harlan's statement was a portent of the devastating effect the Chimel decision was to have on the forces of local law enforcement. Indeed, the State has submitted to the Supreme Court a petition for rehearing in which it has been joined by 36 State and territorial attorneys general.

I am in receipt of a copy of a motion to file as amicus curiae and brief of the attorney general of Colorado and the Denver, Colo., Police Department, as amicus curiae, in support of California's petition for rehearing. The brief presents to the Supreme Court two factual examples of the devastating effect of Chimel on local police work.

These two examples graphically show how our law-enforcement officers are increasingly being restricted by court-imposed special rules of criminal procedure. They give flesh and bones to the antiseptic statistics I noted above. As the brief states:

> [T]wo murder cases are described in which the application of the *Chimel* rule to the facts of each case has created a Constitutional straitjacket for the police with regard to the recovery of the murder weapons. In each case, the *Chimel* limitation on arrest-

based searches granted to the associates of the defendant a 'zone of immunity' in which the murder weapons could be removed; as a result, subsequent warrant-based searches for the weapons were fruitless.

With 36 territorial and State attorneys general joining in the petition for rehearing, I am sure that there are numerous examples from other jurisdictions which point out the crippling effect that the Chimel decision is having on local law enforcement.

Mr. President, this kind of justice—this deterioration in the protection of society—is justifiably causing American people everywhere to become disillusioned and disturbed. They want this trend in lawlessness and the handcuffing of the police to stop—and rightly so. All around us the forces of crime and subversion are rapidly advancing. We must use all the constitutional power and legal weapons that can be made available to stem the tide of lawlessness. We must stop excusing crime and the invoking of strained and unwarranted technicalities to shield criminals and release them on society.

Mr. President, I ask unanimous consent to have inserted immediately following my remarks the description of the two Colorado murder cases contained in pages 5 to 16 of the petition for rehearing.

There being no objection, the description was ordered to be printed in the RECORD, as follows:

[In the Supreme Court of the United States, October term 1968, Chimel v. California—No. 770]

PETITION FOR REHEARING MOTION FOR LEAVE TO FILE A BRIEF AS AMICUS CURIAE

CASE NO. 1—HOMICIDE, DENVER, COLO.[1-3]

On July 7, 1969 the victim, a bartender, was shot to death in the parking lot of his tavern by two youths whom he had chased off earlier for prowling cars. The murder weapon was a .22 caliber automatic pistol.

Witnesses described the killers and their car; several days later, detectives learned that uniformed officers had stopped a similar car on the night of the shooting and had taken the names and addresses of A and B, the occupants of the car. Photographs of A and B, together with photographs of others,[4] were shown to the witnesses who tentatively identified A and B as the killers. This investigation was completed on July 12 and on that date a pick-up for homicide was placed on A and B.

On the afternoon of July 12, Officers Haze and Mayes made inquiries at the address that had been given by B. They learned that this was his girl friend's house, and that B had not been seen in the neighborhood for about a week. The officers then went to A's home and were told by A's mother that he was not home; when apprised of the seriousness of the offense, however, A's mother produced him and he was arrested at 6:00 p.m.

A told the officers that B was staying at his mother's house and A agreed to take the officers to this house. Homicide Detectives Mullins and McCormick responded to B's mother's house at about 6:20 p.m. B's mother told the officers that B was not there, but Detective McCormick who had gone to the side of the house arrested B in the side doorway as B was attempting to escape. A search of B's person was made revealing no weapons. Because of the Chimel rule, no search was made of the room occupied by B, or of any part of his mother's house, for the murder weapon or other evidence. B's mother, his younger brother and several other people were in the house at the time. Consent to search the house was asked for and refused. B was taken to Denver Police Headquarters where he was advised of his rights and denied any involvement with the killing.

Detective Mullins called the Denver Police Department Attorney (Legal Coordinator) who responded to Headquarters at about 7:00 p.m. to draft search warrants for the murder weapon and clothes worn by the killers on the night of the shooting.[5] The Legal Coordinator advised that A and B should be placed in line-ups so that a positive identification of the suspects could be made by witnesses to support the search warrants.[6] Line-ups were held with counsel present for the suspects.[7] A was not identified and was released. B was positively identified by at least three witnesses as one of the assailants; however, by the time the line-ups were concluded, night had fallen and the Colorado Rules of Criminal Procedure barred the execution of a search warrant at night.[8]

The next morning, Detectives McCormick, Martin, Burkhard and Legal Coordinator Carrington procured search warrants for the houses of B's mother and his girl friend, seeking a .22 caliber automatic pistol, ammunition and the clothes worn by the killers. No evidence was found at the girl friend's house.

When the warrant was executed at B's mother's house, the mother, B's brother and a neighbor lady were present. The warrant was shown to B's mother who made searching inquiries of the officers as to whether they were sure that the murder weapon was an automatic. Upon being convinced that only an automatic was being sought, B's mother nodded to the neighbor lady who left and returned with a .22 caliber *revolver* wrapped in a "T" shirt. The neighbor stated that B's mother had given her the revolver the night before for "safe-keeping." The revolver was routinely checked but was not the murder weapon. No other weapon was found.

The police in this case simply do not know whether the murder weapon was at B's mother's house when B was arrested. A search of B's room and other areas of the house under his control[9] for the murder weapon would have been permissible prior to *Chimel* as incident to B's arrest. Such a search might have turned up the murder weapon, or it might not; however, the officers, in obedience to *Chimel's* mandate, made no search. One thing is certain; if, in fact, the weapon was in the house, B's mother and brother had all night to search for and dispose of it. B's mother, understandably, wanted to protect B, as shown by her lying to the police in stating that he was not there when they came to arrest him, and by her giving the revolver to the neighbor. It was only when she was sure that an automatic was being sought that she had the neighbor produce the revolver. The police will probably never know whether the weapon was in the house when B was arrested; but, given B's mother's disposition to dispose of evidence they *can* be sure that, if it was there, it was removed before the warrant-based search was made.

CASE NO. 2—HOMICIDE, DENVER, COLO.

X, Y, and X's girl friend Z, along with several others, "crashed" a party at a private home in the early morning of August 17, 1969. They were told to leave and in leaving they exchanged words with other guests at the party. X, Y, and Z went to X's car nearby and got a rifle out of the trunk. A group of the party guests were standing outside of the house and a shot was fired at X's car, whereupon someone in X's car fired 8 shots into the crowd killing the victim.

Detectives McCormick and Isenhart were assigned to investigate and on the morning of August 17th questioned witnesses who identified photographs of Y as being in the group who crashed the party. At 11:00 a.m. on the 17th, Y was arrested at his home by officers Duyker and Davin. Y told the officers that X had done the shooting and that X and Y had taken the rifle into X's house. Y further told the officers that Z, X's girlfriend, another suspect in the shooting, was living with X.

Y agreed to take the officers to X's house. As the officers, Davin, Duyker, and Secrist, approached, X apparently tried to escape by running out of the back door but he was arrested as he ran around the house. Officers entered the house and arrested Z inside of the house. A search of Z's immediate area revealed no weapons. No further search was made.

Approximately ten persons were in the house at the time, including X's brother, who became abusive and ordered the officers out of the house. The officers left and called the detectives who procured a search warrant to search the house for the rifle. It took approximately an hour and a half to draft the warrant and find a judge to sign it. During this period, the officers remained outside of the house; but they did not stop or search any persons leaving the house. When the house was searched pursuant to the warrant, the rifle was gone.

The defendant, X, told the police that when he was arrested, the rifle was in the house. The conclusion is inescapable; while the police waited for the search warrant, one of X's friends removed the murder weapon. A pre-*Chimel* search for the weapon incident to Z's arrest in the house would doubtless have located the weapon; but the officers knowing that the *Chimel* rule would make the weapon inadmissible, were forced to take no action to secure this vital evidence until it was too late.[10]

These two cases are not unique to Denver, nor is the problem confined to homicides; in many minor crimes the impact of the *Chimel* rule has also been felt.[11] The two described cases illustrate that, despite the gravity of the offense and the really excellent police work involved in each case, *Chimel* can frustrate the best efforts of the officers.

Analysis of these two strikingly similar cases leads to the following conclusions:

1. Unlike the situation in the *Chimel* case itself, there was clearly no time to get a search warrant before the arrests. In each case, the police had just learned where persons sought for wanton killings were staying. Arrests of co-suspects had just been made in the presence of witnesses; and the police had no way of knowing that the word of the first arrest would not be immediately relayed to the second suspects, enabling them to flee. (As a matter of fact, two of the second suspects, e.g. "B" and "X", did attempt flight when the police approached.)

Further, it *must* be realized that delay in the arrest of a potentially armed and dangerous murderer is not a luxury that either society or the police can afford. There is an overriding duty to the public to take such suspects into custody *and to seize their weapons* before they can kill again; for the police to delay arrest in cases like these would be a serious dereliction of duty, especially as it may often take many hours[12] to procure a valid search warrant. Concededly, neither of these cases involved "hot pursuit" as envisioned in *Warden v. Hayden*, 387 U.S. 294, 87 Sup.; Ct. 1642 (1967);[13] but it is obvious from the facts that speed in making the arrests was essential.

2. Once the officers entered the houses to arrest the suspects, they were committed. In both cases, friends and/or family of the arrestees were present when the arrests were made, and the probability that an attempt would be made to get rid of the murder weapon was great. Probable cause to search for the murder weapon existed in both cases;[14] but, *Chimel* prohibited a warrantless search on pain of having any weapons that were found being held to be inadmissible.

Footnotes at end of article.

A consent to search was refused in each case.

3. A search warrant, then, must be procured. What alternatives are open to the police, while the warrant is being procured, to ensure that evidence will not be removed?

A. May the police remain on the premises, prevent the persons there from leaving, and follow them from room to room?

The *Chimel* majority decision certainly gives the police no authority for so doing, and Justice White, in his dissenting opinion, points out that such a course of conduct on the part of the officers would constitute an invasion which "would be almost as great as that accompanying an unlawful search." (37 USLW 4613 at 4620 footnote 5.)

Detaining persons, inside the house, for whom there is no probable cause to arrest could easily result in a civil suit against the officers for false arrest or false imprisonment; and the authority of officers to remain on the premises against the will of an owner or co-occupant is questionable at best. Thus, in addition to risking possible civil liability, the officers might find a court excluding even the evidence seized *pursuant to a search warrant* because the officers exceeded their authority by remaining on the premises while the search warrant was being procured.

B. May the officers leave the house itself but position themselves just outside the house; and, until the search warrant arrives, search persons leaving the house for the murder weapons or other evidence?

Again, there is no authority in the *Chimel* opinion for such a search, and, in the absence of probable cause to arrest a person, such a search would almost certainly be held illegal. Even a "frisk" for weapons, on less than probable cause to arrest, under the doctrine of *Terry v. Ohio*, 392 U.S. 1 (1968) would be doubtful, since that case is expressly tied to the necessity of the protection of the officer rather than a search for evidence. Again, the risk of a civil suit in battery or assault against an officer making such a search is apparent; as a matter of fact, a person searched by an officer as he was leaving the suspect house might even claim that an assault on the officer was justified as validly resisting an unlawful search.

C. The police, then, as a final alternative, may leave the premises, search no one leaving the premises, and wait for the search warrant to be procured. This is exactly what was done in the two cases described. In one of the cases, it is *known* that the murder weapon was removed by friends of the defendants while the police waited for the warrant. In the other case, it is known that the defendant's mother removed *at least* one weapon from the house in the overnight period that it took to secure a valid search warrant; whether the murder weapon itself was removed will probably never be known.

The two described cases illustrate vividly one further point, and this is that any reviewer of police actions is scaling the heights of naivete if he doubts that a suspect's relatives or cohorts will not attempt to get rid of evidence against him, given the opportunity. In both cases, the first impulse of those not arrested was to remove the evidence against the parties who were arrested. Among many of those with whom the police deal on a day to day basis, it is not even necessary for the person secreting the evidence to be close to the suspect; frustration of any police purpose is considered an end in itself.

The Fourth Amendment should not be used to create a zone of immunity for those who wish to accommodate a friend or relative by disposing of evidence against him; yet, this is precisely the result that *Chimel* has brought about in the described cases. The problem for the police, as illustrated by these cases, is that the language of the *Chimel* opinion is so broad in proscribing warrantless searches that the police literally do not know what the new limits on their conduct are. As a result, they must use the "safest" procedure available to them, the warrant procedure, *even though the delay involved may render the securing of a warrant a futile gesture.* Justice Stewart writing for the *Chimel* majority speaks of "well recognized exceptions" to the warrant requirement but he does not elaborate on the exceptions.[15] *Chimel* provides no guidelines whatever for the police as to when a warrantless search of premises, beyond the arrestee's "immediate area," may be permitted; and the decision thereby opens the widest possible door for judicial "second-guessing" of an officer's split-second decision on the scene. In the described cases, for instance, a warrantless search and recovery of the murder weapons might well have been justified as being made under "exigent circumstances"[16] but, with no guidelines in the opinion to go by, a trial or appellate court could as easily find that no emergency existed and that the searches violated the *Chimel* rule.

In each of the cases described, the remaining evidence against the suspects consists of just that type of evidence which this Court has condemned as unreliable: confessions[17] and lineup identification.[18] Respondent's Petition for Rehearing, p. 7, points up the irony of *Chimel* excluding physical evidence of highly probative value in view of the Court's pronouncements on the other types of evidence. The described cases bear the irony out with force; in a murder case, the murder weapon is a vital item of physical evidence; yet, here, the police were foreclosed from securing such evidence. The purpose of this brief is to support Respondent's cogent legal arguments for rehearing with practical examples of cases of major importance in which *Chimel*, as written,[19] has stymied effective police action despite the officer's best efforts to act within the law. The inability of the police to recover, lawfully, the weapons used in two murder cases is indicative of the impact of *Chimel* on local law enforcement. The two cases in Denver, which have arisen in the few months since *Chimel*, may be multiplied a thousand fold throughout the country; consider, for instance, the impact of *Chimel* on rural police departments where the number of persons authorized to issue search warrants is limited. We most respectfully urge the Court to grant Respondent's Petition for Rehearing in the case of *Chimel v. California* so that an opportunity might be presented for spokesmen for law enforcement, on every level, to make known to the Court the impact of this decision on our function of protecting the safety of the people of this country. Further, as a result of such rehearing the Court would have an opportunity to consider the establishment of the guidelines in this area which the police so desperately need.[20]

FOOTNOTES

[1-3] Both cases described have been filed by the Denver District Attorney but neither case has come to trial. For this reason, the names of defendants are not published.

[4] Per Simmons v. United States, 390 U.S. 377, 88 Sup. Ct. 967, (1968).

[5] The possibility of watching the house while procuring a warrant was considered; but, even if such a watch was set up, there would be no authority to search persons entering or leaving the house.

[6] This decision was based on the tightening of search warrant requirements enunciated by the Supreme Court in Spinelli v. United States, 393 U.S. 410, 89 Sup. Ct. 584, (1969).

[7] Per: Gilbert v. California, 388 U.S. 263, 87 Sup. Ct. 1951, (1967) and United States v. Wade, 388 U.S. 218, 87 Sup. Ct. 1926, (1967).

[8] Colorado Rules of Criminal Procedure, Rule 41 requires that for a search warrant to be served at night the affiant must be "POSITIVE" that the property sought is on the premises to be searched. The officers in this case were reasonably sure, but could not be "positive," that the weapon and evidence sought was at B's mother's house.

[9] Harris v. United States, 331 U.S. 145, 67 Sup. Ct. 1098 (1947); United States v. Rabinowitz, 339 U.S. 56, 70 Sup. Ct. 430 (1950); both overruled by Chimel v. California, 37 U.S.L.W. 4613 (1969).

[10] Participating officers were asked why they did not keep the persons in the house or search them when they left. They each answered that they felt that they had no legal authority to do either, and they feared civil suits for false arrest or "civil rights violations".

[11] For example, half an hour after the theft occurred, an officer entered a house to arrest defendant for the theft of some liquor. Defendant and his parents were sitting in the kitchen. After defendant's arrest, the officer found the liquor in the refrigerator. The officer had to be told that his search was illegal under the Chimel rule, despite the likelihood that the parents would dispose of the liquor.

[12] Consider, for instance, the unavailability of an issuing magistrate. In rural areas this can create a real problem. Aspen, Colorado presents an example of this; there is only one judge authorized to issue warrants in Aspen. If this judge is unavailable or out of town, Glenwood Springs, 45 miles away, contains the nearest issuing officer. In the winter, in this mountainous area, snow covered roads might necessitate a 3 or 4 hour round trip to procure a search warrant, and sometimes the roads are impassable.

[13] Where the police entered the suspect's house "within minutes" of the crime.

[14] This is evidenced by the fact that judges issued search warrants for the houses in question in both cases.

[15] 37 U.S.L.W. 4613 at 4617. In the Chimel opinion Justice Stewart footnotes his reference to exceptions to search warrants requirements. The footnote (37 U.S.L.W. 4613 f.8) simply says, "See Katz v. United States, 389 U.S. 347, 357-358." A reading of the pages referred to in Katz (prohibiting warrantless eavesdropping) seems to point to another footnote. Justice Stewart who also wrote Katz postulates the warrant requirement in that decision—"subject only to a few specifically established and well-delineated exceptions." 389 U.S. 347 at 357. This sentence is footnoted (389 U.S. 347 f.19) to say, "See e.g. Carroll v. United States, 267 U.S. 132 . . . McDonald v. United States, 335 U.S. 451 . . . Brinegar v. United States, 338 U.S. 160 . . . Cooper v. California, 386 U.S. 58; Warden v. Hayden, 387 U.S. 294 . . ."

Of these "exceptions" Carroll, Brinegar, and Cooper deal with searches of automobiles, Warden v. Hayden deals with "hot pursuit", and McDonald deals with exigent circumstances. When, as here, the Court condemns, with one stroke, a basic police procedure that had been sanctioned by the Court for 19 years, a series of footnotes can hardly be considered "guidelines" for the policeman on the street, or for those attempting to advise him.

[16] cf, McDonald v. United States, 335 U.S. 451, N. 15 supra.

[17] Miranda v. Arizona, 384 U.S. 436, 86 Sup. St. 1602, (1966); Escobedo v. Illinois, 378 U.S. 478, 84 Sup. Ct. 1758 (1964).

[18] Gilbert v. California, U.S. v. Wade, Supra n. 7.

[19] It is no part of the argument of this brief that Mr. Justice Stewart, who wrote the majority opinion, would knowingly inhibit valid, constitutional, police procedures. The thrust of this brief is that Chimel has created problems not readily foreseen, even by Justice Stewart, and that rehearing should be granted to give the Court an opportunity to consider the practical problems its decision has created.

One Chimel-related problem is of most extreme concern to the police. How does Chimel affect a full-scale riot situation where an en-

tire police force is tied up on the streets and there is clearly no time to get search warrants? Suppose officers enter an apartment after observing sniper fire from the window of that apartment; and they arrest the sniper, with his rifle, in the doorway. A large cache of weapons is found in the bedroom of the apartment, concealed in a closet. Will these weapons be inadmissible? Seemingly, the search for the weapons would be justified as "hot pursuit" under Warden v. Hayden, 387 U.S. 294 (1967), yet the language in Chimel, forbidding warrantless searches, is so broad that a Court so inclined could easily justify suppression of the weapons as a Chimel violation.

[20] For example, the Denver Police Department Order concerning Chimel (appendix A) was an attempt to guide the officers. The order speaks of "securing the premises" (in paragraph 3–A); yet, the cases described herein, which arose after the order was issued, illustrates the practical impossibility of "securing" premises when others are present.

UNILATERAL CEASE-FIRE IN VIETNAM

Mr. GOLDWATER. Mr. President, my remarks today are occasioned by disturbing reports in the newspapers which seem to indicate that Senate Republicans may have taken a position in favor of a unilateral cease-fire in Vietnam. I am sure all Senators realize that this suggestion was made by our minority leader, the distinguished Senator from Pennsylvania (Mr. SCOTT), and that it gave expression to his own personal feelings.

However, every story I have seen and every mention that I have heard on television and radio concerning this recommendation identified Senator SCOTT as the Republican leader of the Senate. It is my fear that the uninitiated and the casual reader and listener may come quite understandably to the erroneous conclusion that Senator SCOTT was speaking on behalf of the Republican Members of the Senate. I, for one, wish to make it very plain that while I recognize that the Senator from Pennsylvania has been duly selected as minority leader of my party, I do not accept his personal recommendations on any and all subjects. At this time I wish to disassociate myself firmly and completely from the minority leader's recommendation that the United States move unilaterally to bring about a cease-fire in Vietnam.

I notice in this morning's newspapers that Senator SCOTT said he is not in the habit of clearing his ideas with the White House before they are made public. I think it would be helpful if he would also state that he is not in the habit of clearing such statements with all members of his own political party in the Senate.

In his recommendation, Senator SCOTT seems to think the United States must take the initiative on the question of cease-fire in Vietnam. I should merely like to ask how many times, in how many situations, must we always stick our necks out and take the initiative in trying to reach an agreement with an unreasonable enemy. The list of times when we have unilaterally ceased our bombing and taken other measures to encourage reciprocity from the Vietcong or Hanoi is long and impressive. However, none of the actions brought the least sign or activity from our Communist adversaries aimed at deescalating the war and bringing about a peaceful solution.

It is my firm conviction that further unilateral action on our part will merely convince the Communists once again that we are afraid of them and that we are willing to go to any lengths to bring about peace. Such action will convince them all over again that if they wait long enough the United States of America will throw up its hands and surrender.

GI BILL ALLOWANCES

Mr. MONDALE. Mr. President, I was greatly disturbed to learn that President Nixon had threatened to veto the bill increasing educational allowances for 1,285,000 veterans, war orphans, and widows of the Vietnam era by 46 percent. The administration's position that a 13-percent increase is all that could be justified is very surprising.

I have received a number of letters from veterans struggling through school on the GI bill. Many have gone into debt or been forced to work long hours at part-time jobs in order to be able to buy the necessities of life. In some cases, tuition costs have risen by 46 percent or more in 1 year.

The Committee on Labor and Public Welfare carefully considered the question of what increase would be appropriate. The committee report details the sharp rise in both living and education costs since the Korean GI bill program and since the last adjustments in the present program's allowances. Although the report was not yet printed when the President wrote to the Senator from Texas (Mr. YARBOROUGH) to express his views, certainly the same data were available to his administration.

Mr. President, the committee bill would merely provide allowances sufficient to cover about 98 percent of the average tuition, board, and room costs for those now in the program. This compares with the 99 percent of costs which were covered under the Korean program. One of my constituents, noting that he and his fellow servicemen "have fought in a war we cannot understand," asked if "we are considered less worthy than our predecessors?"

I, for one, will not condone such unfair treatment. Considering the rate at which the cost of education is rising, these new allowances are very modest and may soon prove to be too low again. I cannot understand how the President can recommend such dubious investments as the supersonic transport program while finding fault with these fully justified increases in educational allowances. I note again that he was silent when the House of Representatives recently added more than $1 billion to his recommended Navy budget.

I ask unanimous consent that several of the letters I have received be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

COLLEGE OF ST. SCHOLASTICA,
Duluth, Minn., July 2, 1969.

DEAR SENATOR MONDALE: I am a teacher from Duluth, Minnesota and have been attending classes this summer at Cincinnati University. It was here I read of a bill being introduced which would promote and ensure more financial help for veteran G.I.'s who wish to continue college.

I have two brothers who have returned from service overseas a year ago—one was in Vietnam, the other was in Germany. They are now both in school taking advantage of the $125 monthly allowance now available but have had to borrow several hundred more to stay in school, because, as has been seen, the available amount is not enough.

I am writing to ask you to support the bill appropriating more financial aid to veterans who wish to continue their education.

Thank you for your efforts to ensure speedy action on a bill much needed by veteran G.I.'s interested in continuing school.

Sincerely yours,
SISTER YOLANDA CALLIGURE.

MINNEAPOLIS, MINN.,
August 4, 1969.

Senator WALTER MONDALE,
U.S. Senate,
Washington, D.C.

HONORABLE SENATOR: We, of Delta Kappa Gamma, wish to express our hope that you will vote in favor of the increase of monthly payment—$130 to $175 for the education of the Viet Nam Veteran.

Prices have risen so only the wealthy can take advantage of the G.I. benefits. Tuition, fees, books, all have increased.

These veterans need their education now. Their lives were interrupted—some have spent several years in the Orient. Please see that this bill is passed. These young voters will remember your caring.

Sincerely,
RITA CAREY.

SEPTEMBER 30, 1969.

Senator WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: Thank you for the letter you wrote, dated May 28, 1969, in response to my letter asking your support for S. 338.

In your letter, you stated that you would support legislation of interest and benefit to veterans.

As you know, the House passed H.R. 11959, which is a cut down version of S. 338. I understand that it is tied up in a Senate committee, of which you are a member. What is holding it up? If Sen. Yarborough is not satisfied with it, and plans to change it so that it will have to go back to the House, thank him, but, tell him our tuition and fees at Moorhead State College (and, I assume all other Minn. State Colleges) were increased by 48% this Fall, and we need the money now.

I certainly hope you are not the one that is holding this bill up. If not, then who is, and why? Can we expect an increase in GI Bill this year? If so, when?

Thank you.

Sincerely,
CHARLES D. APULI.

AUSTIN, MINN.,
July 14, 1969.

Senator WALTER MONDALE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: Thank you for your prompt attention to my previous request for information on Federal educational benefits available.

However, I now have a different problem. I have just learned of the differences between

previous "G.I. Bill" benefits and those available to us now, specifically, educational benefits. Can you tell me we are considered less worthy than our predecessors? We have fought in a war we can't understand, a war most of us do not believe in. Yet the great majority of us went to Viet Nam, accepting our government's justifications of our presence there.

Now I find there are considerable gaps between our "G.I. Bill" and that of our fathers. Are not the bullets we faced at Da Nang, Chu Lai and Ham berger Hill just as deadly as those in Tarawa, Leyte and Guadalcanal? Are those killed and injured not just as permanent as in former wars?

I realize there is not too much you can do. However, a group of us feel perhaps, if we knew who to contact, our opinions could be of some importance. I would appreciate it if you would put me in contact with whoever could be of the most help in this matter.

Respectfully,

P. O. HAMILTON.

MANKATO, MINN.,
October 18, 1969.

Senator WALTER MONDALE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MONDALE: I would like to voice my support of the Educational Rate Increase bill, S. 338 for veterans.

This increase is necessary because at Mankato State College last year my tuition was always under $100 for 14 or 15 credits. This year it costs $141 for that same number of credits. The rising cost of living is hard enough to match without without rising educational costs.

Thank you for your efforts.

Sincerely,

DAVID JORGENSON.

JACKSON, MISS.

Senator WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.

HONORABLE MR. MONDALE: Sir, I would like to know what your opinion is on the Senate Labor and Public Welfare subcommittee for Veterans Affairs approved legislation on an increase of GI education and training allowances by 46 percent and making the increased payments retroactive to September 1, and how you will stand on this issue.

I am still serving on active duty however, my service agreement is completed 17 March 1970 and at which time I will reside in my home town of St. James, Minnesota and again attend Mankato State College.

I feel that this is a step forward, however, it is not enough to attend school and raise a family with today's cost of living increases.

Any information that you could give me would be greatly appreciated.

Thank you.

Sincerely,

RONALD W. EASTERDAY.

NINETY-NINTH BIRTHDAY ANNIVERSARY OF MARY McCONNELL BORAH

Mr. JORDAN of Idaho. Mr. President, on Friday of last week one of the truly great women of Idaho—Mary McConnell Borah, widow of U.S. Senator William E. Borah and daughter of William J. McConnell, also an Idaho Senator and later our State's third Governor—celebrated her 99th birthday anniversary.

The Idaho Daily Statesman, in commemoration of this remarkable lady's 99th year, published in its Sunday, October 19, edition a delightful interview with Mrs. Borah, written by Dabney Taylor, of Boise.

In order that Senators and the innumerable other readers of the CONGRESSIONAL RECORD might share in the historically pertinent recollections of this distinguised woman, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WIDOW OF FAMOUS "LION" SENATOR MARKS BIRTHDAY IN OREGON—IDAHO'S "LITTLE BORAH" LOOKS BACK ON HER FIRST 99 YEARS

(By Dabney Taylor)

"I was cradled in politics," Mary McConnell Borah remarked, "and that cradle received me almost a century ago. You see I was born in Moscow, Idaho, Oct. 17, 1870 and that makes me 99 years old."

"Little Borah," as Washington called her, is the widow of one of the immortals of the United States Senate. 'The Lion of Idaho' filled the senate gallery with spell-bound listeners to his oratorical roars.

As she looked from the windows of her retirement apartment at the deep green grass of the Portland (Ore.) lawn, Mrs. Borah recalled that before her birth her father, W. J. McConnell, was deeply engaged in helping to bring Idaho from a territory into statehood.

"This," she said, "was accomplished when I was almost 21 years old. But don't think," she quickly interjected, "I was allowed to vote. At that time the 19th amendment, which gave the vote to women, was only a gleam in a suffragette's eye."

"Then," Mary Borah reflected, "the women in a candidate's family had quite a different role to play and the wives did not go out in the hustings with their husbands as sort of a co-candidate. I cannot quite approve of this, but then, attitudes change."

"But, don't think for a moment the women were not expected to function. For example, we cooked for, and served, endless suppers, picnics, luncheons, receptions. Candidates when they arrived in town, with or without their families, always were house guests at the homes of fellow politicians.

"We were also expected," Mrs. Borah continued, "then as now, to remember every one's name. Heaven help you if there was a moment of faltering, you could lose the vote of the entire family, including the hired man." The witty and sprightly lady laughed, she could, being gifted by the gods with almost complete recall.

"When Idaho became a state father decided to run for the United States Senate and and he and George L. Shoup were elected as Idaho's first senators. During his campaign my mother introduced me to a young lawyer from Boise, William E. Borah. He had come to help father campaign and after we met he seemed to think nothing of frequently making the long trip from Southwest Idaho to the chill north where Moscow was located, just to help father.

"Later," she said demurely, "when father returned from Washington to run for governor, Billie Borah helped elect him as Idaho's third governor.

"Because mother was very delicate, and quite timid about meeting strangers, father decided to take me to Boise to act as his hostess and part time secretary. Mother and my two sisters, Carrie and Olive, remained in Moscow to keep the store, and this is not a quip, we did own the general store in town.

"I was very much surprised and pleased," Mrs. Borah quirked an eyebrow, "to find Billie Borah was to be administrative assistant in the governor's office. You see, he was a very serious student and disliked social functions, but Boise was very gay and he did take me to a few affairs and we had lovely horseback rides in the foothills.

"One of the great lessons I learned about this time was never to say anything to reporters that I did not want to see in print. It occurred one day when some reporters came into the office and asked for news. I told them I could not stop to talk as I was very busy writing a speech for the governor. When this item appeared in the next morning's paper, father was not very pleased.

"Finally Billie urged me to make up my mind to marry him so that I could go east with him on our honeymoon where he was called on some legal cases. So," she related, "we were married on April 21, 1895 at the Cyrus Jacobs' home with Frank Blackinger as best man. My honor maid was Mamie Jacobs.

"Where did we go on our honeymoon?" an elfish chuckle punctuated the story, "we took the Cannon Ball to a small town a few miles from Boise called Caldwell . . . well, anyway we were serenaded by the town band and a few weeks later we did go east and it made up fully for my disappointment.

"When Billie was elected U.S. Senator in 1907," she continued, "shortly after we reached the capital, we were summoned to dine with President Theodore Roosevelt. As we walked down the long White House hall where an aide sat at a desk with the dinner chart before him, he handed me an envelope and announced I was to sit at the president's left. I simply uttered a gasp and put my hand over my mouth. This amused the aide.

"After we were seated there was an awful moment of silence, on my part as I wracked my brain for something to chat about. Suddenly, I was inspired to mention having visited with William Allen White, the noted journalist, at Emporia, Kansas, on our way east. Mr. Roosevelt, who was his great friend, responded eagerly and said, "I have just presented his book 'Strategems and Spoils' to the French ambassador M. Jusserand. I think it the greatest political story ever written.

"He talked away, and left me to gaze at his daughter Alice Longworth who was nonchalantly eating hot asparagus without removing her long white kid gloves and let the melted butter run merrily down her fingers. This, while I was making every effort to keep my white tulle gown, trimmed with pink rosebuds, which I thought went well with my blond hair, from having one spot. I knew I would have to wear it many more times and I did." She continued, "Later the famous Nick Longworth, Congressman from Ohio, and Alice, became our good friends and Alice and I went often to the Capitol to hear speaking in both the House and Senate. Alice was very political and would leave her own dinner party to dash to the Hill to listen to an important debate.

"I well recall the exceptional woman Lou Hoover. She graduated from the Stanford engineering school, making higher marks, incidently than her husband President Herbert Hoover, a classmate, then a lifemate. One of her remarks was a classic of understatement, 'I only want to be a background for Bertie!' The intelligent women of my day were tactful.

"A lady who was grossly underrated, and I think, most unfairly criticized, was Florence Kling Harding. She was a handsome woman from a fine Ohio family and brought much to her marriage with President Harding. She was very gracious and democratic and made contact with all classes of people in a most kindly manner," Mrs. Borah said earnestly.

"Everyone was simply crazy about Mrs. Calvin Coolidge with her lovely, big brown eyes. She was most dedicated in attending endless functions and meetings and was simply showered with invitations," she reminisced. "Grace made a famous remark, 'One church, one club, one husband and one political party.' I have lived up to her precepts and am still a dedicated Republican." Mary Borah ran her tiny hands over a long chain of ivory elephants which she wore. Her collection of some 3,000 of these pachyderms were sold at auction when she left 2101 Connecticut Avenue to live in Portland.

"Billie died on a bleak winter day in 1940,"

she fingered her worn wedding ring "He had been senator for Idaho for almost 40 years. I decided to remain in Washington, my roots had grown deep, but a few years ago I moved to Portland to be with my sister Olive Leuderman who lives in this same building with me. Her daughters, my nieces, also live here.

"I suppose people would like to know how I lived to such a majestic age and I can only say that I have never felt the urge to partake of the grain, the grape or the weed, but I eat everything set before me. Still, I may have to go on a diet, I gained a pound last month, I now weigh 69 pounds."

Then the interview was over until next year.

THE PESTICIDE PERIL—LXX

Mr. NELSON. Mr. President, international concern about the problems of persistent pesticides was raised in San Francisco last week by a group of Czechoslovakian scientists.

The seven Czechoslovakian scientists are currently visiting the United States in preparation for the 10-year anniversary conference of the International Association on Water Pollution to be held there in 1970.

As reported by the San Francisco Examiner, the scientists indicated that Czechoslovakia banned DDT because the country was alarmed by the dangers to man from this chemical agent. Although one of the scientists noted that the long-term effects of the buildup of DDT residues in man are not yet known, he said that "it has been proved that it accumulates in the body. We are afraid of the physiological aspects."

Czechoslovakia is one of at least three countries who have banned the use of DDT. The others include Denmark and Sweden.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY CZECHS BANNED DDT

Czechoslovakia today, and for the past several years, has banned the use of DDT and controls the use of other pesticides and detergents to avoid polluting the nation's waters.

This was revealed here yesterday by Dr. Vladimir Madera, one of seven scientists and air and water pollution experts from this nation now visiting the Bay Area.

These controls were exerted in his country, Dr. Madera said, before it became a problem, because it was recognized these materials were "too dangerous to man."

He conceded it is not yet known that DDT is toxic, "but it has been proved it accumulates in the body. We are afraid of the physiological aspects," he said.

TOXIC

Dr. Madera, who has visited the United States before in exchanges of research and knowledge on pollution problems, and has worked as a consultant in other nations, recited one case in the United States where a food colorant was at first accepted as harmless, but discovered 10 years later to be toxic.

The pollution expert and his companions are here under sponsorship of the International Association of Water Pollution, which will hold its 10-year anniversary conference in San Francisco in 1970.

They expect to have as many as 4000 delegates from more than 50 nations attend, according to Dr. Erman Pearson.

Dr. Pearson, professor of engineering at the University of California, will serve as president of the 1970 world conference here.

Dr. Pearson said yesterday he believes the United States will be forced to seek similar legal remedies to water pollution problems ultimately.

"But legislation must give reasonable time for development of other materials without these harmful effects," he said.

Dr. Madera and the other leader of the Czechoslovakian group, Dr. Karel Symon, discussed the control of water quality in their own country and throughout Europe, as well as common European practice of reclaiming and treating the same water through as many as eight stages for use, for domestic or industrial purposes.

Dr. Pearson added:

"In Czechoslovakia as in Europe and the central United States, most water supplies are mixtures of waste waters and natural supplies. We take out the materials that are harmful.

"We're generally dealing with used waters. We must not think there is an inexhaustible supply of virgin waters around, because there aren't."

SECRETARY HARDIN'S APPROACH

Mr. DOLE. Mr. President, as a member of the Committee on Agriculture and Forestry, I wish to apprise Senators of the attitude and efforts which are characterizing the attempt to arrive at meaningful and satisfactory agricultural legislation.

On Tuesday of this week, Secretary of Agriculture Clifford Hardin met with the committee for an informal, frank, and highly informative discussion of the progress which the formulation of farm policy is making in Congress. In a wide-ranging conversation, Secretary Hardin briefed the committee on the Department's thinking, the viewpoints of the House Committee on Agriculture, and his personal assessment of the problems and possibilities in this year's efforts to draft acceptable legislation. The Secretary emphasized that his idea was to discuss all the issues, to bring to light all the objections, and to try to arrive at something which the Senate and House could accept and enact without the time-consuming conference or floor debate.

The attitude of the Secretary is both commendable and novel. It is refreshing to have a spokesman for the Department who does not come up on the Hill and attempt to ram his preconceived ideas down the throats of the House and Senate. Such tactics were the rule in the past and only served to stir emotions and precipitate extended debate. With this new approach and the fresh atmosphere it brings, the public stands a much better chance of seeing worthwhile farm legislation enacted. I wish to express my appreciation for Secretary Hardin's approach and to encourage Senators to respond in kind.

VICE PRESIDENT AGNEW'S RIGHT TO FREE SPEECH

Mr. GOLDWATER. Mr. President, much has been made in the press of the recent remarks of Vice President AGNEW on at least two occasions during the past 2 weeks.

It seems to me that this is a question of whose ox is being gored.

When the liberals feel like it, they speak just as openly and sometimes as harshly about conservatives as Vice President AGNEW has spoken about those with whom he finds himself in disagreement.

I think that the Vice President of this country has a right to free speech as much as any other American citizen.

I ask unanimous consent to have printed in the RECORD an excellent article written by David Lawrence, entitled "Agnew's Right to Free Speech," and published in today's Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AGNEW'S RIGHT TO FREE SPEECH

Some of the so-called "liberals" may unwittingly be creating the impression that, while their kind of dissent comes under the heading of "free speech," the outspoken remarks of Vice President Agnew in recent days are not covered by the same kind of constitutional privilege.

One Democratic senator now says that when Mr. Agnew, in a speech in Mississippi, declared that school officials had made "a strong case" for delaying desegregation in certain districts, this was an "unwarranted, unethical and grossly improper" attempt to influence the Supreme Court. He suggests that the vice president should devote his time to his "only constitutional duty"—namely, presiding over the Senate.

But the vice president of the United States has additional duties. He has the task of understudying the President and training himself for a job that fate may suddenly require him to take over.

Spiro Agnew announced immediately after election that he was an independent-minded person who would say what he believes, whether or not it agreed with the views of the President. He has the right, of course, to make speeches, and surely it will be conceded at least that he can talk on any subject that a senator can tackle in a public speech.

Only this week, Sen. Sam J. Ervin Jr., D-N.C., declared that constitutional government would perish in the United States if trends set by the Warren Court are not reversed. He prepared a detailed criticism of the legal course set by the Supreme Court and made a public address about it.

The vice president, as presiding officer of the Senate under the Constitution, would seem to be permitted the same rights as any member of the upper house. Senators have never put a limit on the topics they discuss in public speeches, and the vice president certainly has a similar privilege to delve into any subject, however controversial it may be.

Agnew made a speech for instance, in New Orleans last week that aroused nationwide attention. He condemned the proponents of the Vietnam "Moratorium" and said that the demonstrations were encouraged by "an effete corps of impudent snobs who characterize themselves as intellectuals."

The vice president, speaking at a fund-raising dinner for the Republican party, was endeavoring to defend the Republican administration against the attacks of political opponents. Agnew said that today "subtlety is lost and fine distinctions based on acute reasoning are carelessly ignored in a headlong jump to a predetermined conclusion." He added:

"Thousands of well-motivated young people, conditioned since childhood to respond to great emotional appeals, saw fit to demonstrate for peace. Most did not stop to consider that the leaders of the Moratorium had billed it as a massive public outpouring of sentiment against the foreign policy of the President of the United States.

"Most did not care to be reminded that

the leaders of the Moratorium refused to disassociate themselves from the objective enunciated by the enemy in Hanoi."

Agnew is the kind of man who doesn't mind criticism. But he also doesn't hesitate to respond as he pleases to those who make what he deems fallacious and ill-founded attacks on the foreign policy of the United States.

As for "putting pressure" on the Supreme Court through public speeches, many senators have expressed themselves frankly about the departure of the high court from the proper exercise of judicial authority. President Nixon himself said recently there is a need for justices who will interpret the Constitution strictly and not assume legislative functions.

President Franklin D. Roosevelt in the 1930s not only discussed what he felt were the shortcomings of the Supreme Court of that period, but sought from Congress the enactment of legislation which would enlarge the court from nine to possibly fifteen members and enable him to pick justices whose views were in accord with his own and thus attain a "liberal" majority.

It hardly seems consistent for the "liberals" today to deny either Vice President Agnew or anybody else the right to discuss public issues on which the Supreme Court may have to rule or the right to make speeches denouncing protest movements, especially those which have the effect of giving aid and comfort to the enemy in the midst of a war.

SENATOR ERVIN SPEAKS BEFORE THIRD ANNUAL NAVY JUDGE ADVOCATE GENERAL'S CONFERENCE

Mr. YARBOROUGH. Mr. President, last Thursday, October 16, 1969, the distinguished Senator from North Carolina (Mr. ERVIN), chairman of the Constitutional Rights Subcommittee of the Committee on the Judiciary, spoke before the third annual Navy Judge Advocate General's Conference.

In his remarks to the newly formed Judge Advocate Generals Corps, Senator ERVIN stressed the need for legislative reforms to increase the amount of due process in the procedures for administrative discharges in the Armed Forces.

Because of the importance of Senator ERVIN's proposals and the important part that the Judge Advocate Generals Corps of all branches of service will play in formulating successful reforms, I ask unanimous consent that his speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE NAVY LAWYER'S ROLE IN ADMINISTRATIVE DISCHARGE REFORM

Admiral McDevett and Gentlemen: I appreciate the honor of addressing this third Navy Judge Advocate General's Conference, the second since the Navy Judge Advocate General Corps was created. For many years, indeed, as far back as World War I, it was recognized that the responsibilities of Navy lawyers required that they be singled out and formed into their own corps. Now, finally, 150 years after Army lawyers were organized as a corps, Congress has passed the necessary legislation to give this long-delayed recognition to Navy lawyers.

I am proud of the part I was able to play in making this step a reality. Starting in 1961, when I became Chairman of the Constitutional Rights Subcommittee, I supported legislation to create a Navy Judge Advocate General Corps as an important element of a three-part legislative program to reform military justice and upgrade the quality of legal service in the armed forces. With the creation of the Corps and the passage of the Military Justice Act of 1968, two-thirds of the reform has been accomplished. With your active participation, the third part, reform of th administrative discharge system, can also be achieved.

Although the Navy's is the newest and the smallest legal corps of the three services, I believe that you have a great responsibility and a great opportunity to make your mark in the development of military law. The Navy prides itself on a tradition of service to the country which predates the Constitution. The Navy's role in securing our freedom and keeping it secure over two centuries is something that you as Navy officers share with pride. As members of the legal profession you share another, even older, tradition and that tradition is equally honorable. But tradition is not something received unchanged and unchangeable from the misty past. And as a new corps, the Navy's legal officers have a unique opportunity to initiate a tradition of legal service which the Navy and the country will regard with pride and honor.

Military justice is now in the midst of the greatest ferment since the end of World War II. Recent events have cast doubt on the direction it will take in the coming years. On the one hand, military justice has just been subject to the most thorough reform in two decades. The Military Justice Act of 1968 has expanded the responsibilities of military counsel in special courts-martial. It has significantly increased the stature and the role of the law officer, and acknowledged his new position by making him a federal judge. The military courts have also been significantly improved; first, by permitting waiver of the non-judicial members; and, second, by transforming the Boards of Review into full-fledged appellate courts. In addition, the 1968 reform gives to the military defendant and to his counsel significant new protections.

The Military Justice Act is a hopeful sign, for it demonstrates the country's concern for the citizen's right to receive the best possible justice this country can offer. And it demonstrates to the country that the military services are fully conscious of their obligations to provide first-class justice to the citizen in uniform. As legal advisor, as counsel, and as judicial officer, it will be your task to implement these reforms and make good the promises Congress and the military have made to the individual sailor and the country.

The symbolic importance of last year's reforms is perhaps even more important than the substantive changes that have been made. This is because the military services are going through their worst trial of public confidence in generations. The signs of a loss of confidence are everywhere—in the press, in the public, in Congress, and in the courts. They are seen in the widespread repudiation of our effort in Vietnam; they are evident in the growing rejection of government and authority by our young people; and, I regret to say, they are fueled by unwise or ill-judged actions of the services themselves and by scandals which reach to the very highest levels.

It would be a grave mistake to underestimate the depth and scope of this public feeling. This summer's debate on military appropriations demonstrated that half of the Senate was prepared to deny to the President and to our armed forces a weapon they considered essential to our national defense. Yesterday's events demonstrate that a large segment of opinion in our nation, including respected figures from all walks of life, rejects the considered policy of the President and his military advisors with respect to the war in Vietnam.

Public confidence in military justice is also being tested. In recent months the public has been treated to a series of incidents which, whatever the true facts and explanations, have cast a pall of doubt over the quality of justice dispensed by the armed forces. The recent Green Beret case and the handling of the Presidio incident in San Francisco are only two examples of this. Taken together with the adverse publicity generated by the Arnheiter and Pueblo affairs, it is clear that the reputation of military justice has suffered greatly in the eyes of the American public in recent months.

Serious doubts about the quality of justice administered by the armed forces are also evident in recent court decisions which have been extremely damaging to the armed forces. This past June, the United States Court of Appeals in Washington, D.C. expanded the scope of its review of courts-martial and imposed civilian standards of due process upon military justice. At the same time, the court restricted military jurisdiction over civilians serving with the armed forces in the field. The Supreme Court's decision in *O'Callahan* v. *Parker*, limiting the jurisdiction of military courts to "service-connected" offenses by members of the armed forces, is the most serious evidence of the low repute in which military justice is held in some quarters.

Justice Douglas's constitutional history may be weak, and his comments on military law may be as unfair as they are intemperate, but the explanation for his judicial condemnation of military justice is simple. Some federal courts have a deep-seated suspicion of military justice, and they are seeking in every way possible to restrict the scope of what they view as a decidedly inferior brand of justice.

In my judgment, it would be a profound mistake to underestimate the strength of the trends I have been discussing. Prudence would dictate that the military services take the most pessimistic view of these developments and turn their efforts to making the greatest possible reforms in those areas of military law which are in need of improvement.

The area of military justice in greatest need of overhaul and reform is administrative separations. While it has been traditionally argued that the discharge system is administrative rather than legal in nature, such an attitude ignores realities. So far as the public is concerned, any discharge other than Honorable is a condemnation of the serviceman's performance, his character, his morality, or his honesty. A General Discharge and even more, an Undesirable Discharge, is evidence of character defect or wrong doing, or both. Both these discharges profoundly affect the individual concerned. His military service is terminated, sometimes when he may wish to continue it as a career. His rights to accrued or potential government benefits are impaired. His civilian life is also damaged. He bears the social stigma of being adjudged "undesirable" by the government and he will find that his employment opportunities are severely reduced. Most of those who receive less than Honorable Discharges are youngsters still in their teens, yet the adverse effects will remain for the rest of the individual's life. Sometimes the burden is more onerous than conviction for a crime.

The effects of non-Honorable administrative discharges are so damaging that it is no wonder that more and more attention is being directed towards improving the procedures by which they are awarded. No longer can the armed forces contend that the type of discharge simply reflects the character of the individual's service and thus is a matter entirely within the discretion of the military. In the near future the discharge system will have to accommodate itself to other factors, and the power to issue non-Honorable certificates will have to be balanced by the effects those discharges have on the citizen.

The *O'Callahan* case established a new

principle—that the armed forces have only limited control over a member's actions. I disagree with Justice Douglas' opinion, which in my view is directly contrary to constitutional tradition. I believe the armed forces have a direct interest in the conduct of its members, whether on or off-duty. Nonetheless, the *O'Callahan* case is now law and it may have profound impact on the administrative discharge system. If the military cannot try a man for wrongs committed outside of the military context, can they discharge him administratively for those same acts, or for any behavior not connected with his service? Can they discharge for conduct which is not directly connected with the ability to render fruitful service? Even if the services can discharge for "service-connected" behavior, can they issue an adverse certificate without adhering to criminal law standards of due process?

These and other questions are raised by the *O'Callahan* case, and I do not mean to suggest that I would answer them in the negative. Nor do I predict that the courts will necessarily do so. But the chances of judicial restrictions on the administrative discharge system are directly related to the quality of the system itself and the way it operates. This means that there is an even greater urgency to overhaul discharge procedures.

The responsibility for improving administrative discharge procedures lies in the first instance on the Navy lawyer. It is up to him to convince the non-lawyer members of the Navy that the law and the lawyer must play an important and a decisive role in the operation of the system. This is not a new or outrageous idea. Twenty years ago the service lawyer was recognized as the most important element in the court-martial system. It was an idea then bitterly fought by non-lawyers. But now everyone recognizes the great improvements that resulted from this step and it would be unthinkable to return to the old philosophy of the court-martial.

The administrative discharge system is in the same stage of development as military justice was on the eve of the Uniform Code. Perhaps the most important single change necessary is the recognition that lawyers must play a dominant role in the operation of the discharge system. This means that Navy lawyers must be present at discharge hearings to represent the serviceman, the Navy, and the board itself. It also means that your Corps must play an active role in every stage of the discharge system, from advice to the commander prior to the summoning of a board through to the conclusion of a formal appellate review.

The overriding task of the Corps is to assure the sailor and the public that fair play and due process are the foundations of the administrative separation process. The public must be convinced that the discharge system is more than a summary means of administratively disposing of people who are not wanted in the Navy. It must be seen as a process in which the rights of the individual are equally as important as administrative convenience.

I urge the Corps to take the lead within the Navy in seeking reform. If you are successful, Navy support of legislative reform could be decisive in the months ahead. If the Corps accepts this challenge, I believe the Navy will soon have a new tradition of service to the Nation of which all the country can be justifiably proud.

OPERATION INTERCEPT AND OPERATION COOPERATION

Mr. MURPHY. Mr. President, on September 21, the administration's Operation Intercept program began, aimed at halting the flow of illegal drugs across the Mexican border into the United States. The institution of the program, however, brought long delays in border crossings that caused a furor among businessmen and tourists.

On October 3, I wrote Secretary of the Treasury Kennedy and Attorney General Mitchell suggesting measures to further implement "Operation Intercept" and relieve some of the burdens and lengthy delays that were imposed upon persons who must, for legitimate businesslike purposes, regularly come from Mexico to California. Because of the valid needs of many workers and students who must cross the border, I suggested then that the inspection facilities and number of personnel should be increased as much as was practicable. Further, I urged that special gates and inspection lines be established for those who have imperative reasons for coming into our country.

I was pleased when, on October 10, the Governments of the United States and Mexico announced jointly that Operation Intercept would be superseded by Operation Cooperation. Since that time, Mr. President, I think it has become apparent that the United States has adjusted its border inspection procedures to expedite passage into the country while maintaining our intensified surveillance, and there have been good indications that the Mexican Government is cooperating as a full partner in the program, thus contributing to the long range effectiveness of Operation Cooperation and continued good relations between our two countries in all areas.

Proof of Mexico's full participation in the drug campaign was evident in the recent seizing by the Mexican Army of a 250-acre marihuana farm located in a remote area of southern Mexico. The plantation was equipped with a small airport that enabled its owners, who are believed to be U.S. citizens, to transport marihuana into the United States by plane.

In addition, the Mexican Army has assigned 5,000 of its troops to aid police in locating and destroying opium and marihuana fields and other sources of illegal drugs in that country.

To heighten the spirit and effectiveness of Operation Cooperation, Mr. President, as I have stated in testimony before the Special Subcommittee on Alcoholism and Narcotics of the Labor and Public Welfare Committee, I feel that we must enact further legislation as proposed by the administration to protect the general public from the illicit diversion of drugs from legitimate channels and to make certain that there is a greater accountability of drugs from the Nation's pharmaceutical companies. There are considerable quantities of drugs legally manufactured in the United States that are sold and exported to Mexico and then smuggled back into this country. I strongly urge that the administration's recommendations to curb and control dangerous drugs be acted upon immediately. I think it is imperative that the Federal Government take the initiative in policing and regulating the illegal importation of drugs and alcohol brought into the United States.

We all know how important it is to cut off the supply of marihuana, narcotics, and other dangerous drugs which have become such a severe national problem, particularly among our young people. I am pleased that many of my recommendations submitted to the President last year are now being enacted in steps that I believe will ultimately lead to a dramatic decrease in drugs entering the United States from Mexico, which until now has remained the source of from 85 to 90 percent of marihuana in the United States.

I believe Operation Cooperation has been a big step forward in drug control, and I am confident that its inception will in the long run benefit relations between the United States and Mexico as it also helps alleviate a menace to mankind everywhere.

TREASURY SILVER POLICY OUTLINED CLEARLY, SUCCINCTLY BY ASSISTANT SECRETARY EUGENE ROSSIDES

Mr. BENNETT. Mr. President, this week, at the American Mining Congress convention in San Francisco, the Assistant Secretary of the Treasury, Eugene T. Rossides, was invited to participate in the panel discussion on silver.

He delivered a clear, succinct, and well-reasoned address on the question of the Treasury's silver policy which should receive widespread attention.

Much has been said about the Treasury's policies in this matter, and there has been considerable fog surrounding the question; however, Mr. Rossides in this factual and informative statement has cleared away some of the misunderstandings.

I congratulate Mr. Rossides on this statement and ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE HONORABLE EUGENE T. ROSSIDES

I should like to express my appreciation to the American Mining Congress and to our Co-Chairmen, Mr. Strauss and Dr. McLaughlin, for inviting me here to talk about silver. Since the founding of this great organization in 1898 the American Mining Congress has worked vigorously for safer and more efficient mining practices as well as playing a prominent role in all the major policy decisions which have kept the Government an active participant in the silver market. The Treasury has always welcomed your advice and now that we are approaching the end of that phase of the long monetary history of silver, I think it appropriate that we again exchange views.

At today's meeting I will present the Treasury's view of an appropriate silver and coinage policy during this sensitive period when the market is making its final adjustment to complete independence from the Government as a buyer or seller of silver.

HISTORICAL SETTING

Before outlining the Treasury's current silver and coinage policy and the decision making process by which it was reached, I would like to very briefly review the events of the past decade. I think this is essential to understanding today's silver issues.

The series of events which will culminate in the final withdrawal of the Government from the silver market began in the late

1950's. At that time the Treasury held huge stocks of silver as a result of heavy purchases to sustain the silver price during the long period when the mines were producing far more silver than could be used for coinage and industrial needs. In December 1959 Treasury silver holdings totaled more than 2 billion ounces, nearly all of which was held as reserve against silver certificates.

About this time two trends of major significance to the future of silver became evident. The first was the rapid acceleration in the demand for coins under the influence of an expanding economy and growing use of vending machines. The second key event was that for the first time in modern history rising industrial demand for silver exceeded current production both on a domestic and a worldwide basis. The growing gap between production and consumption was made up in large part from Treasury stocks of free silver which dropped by about 200 million ounces from April 1959 to November 1961, when sales were suspended.

At the same time the Government faced a rapidly growing need for silver to increase the circulation coinage. Obviously this supply could not come from domestic production which was already inadequate to meet industrial demand. In this situation the only practical way to obtain silver for coinage needs was through the gradual retirement from circulation of silver certificates thereby freeing the silver held as a reserve for these certificates. It was thought at that time that the retirement of silver certificates would make available enough free silver to meet the Treasury's coinage needs for many years into the future.

Unfortunately events did not work out that way. Over the next few years the tremendous production of coins required to keep pace with the increasing demands of the economy cut deeply into the Treasury's silver supply. In 1962 and 1963 nearly 200 million ounces of Treasury silver were used for coinage and the demand was still rising. Moreover, by mid-1963, under pressure of private market forces, the price of silver had risen to its monetary value of $1.29 per ounce. A continued price rise much beyond that point would have made it profitable to melt the subsidiary coins for their silver content and thereby threaten the continued circulation of our silver coinage. To prevent such a crisis the Treasury in July 1963 resumed the open sale of silver at the fixed price of $1.29 per ounce.

Over the next two years an adequate volume of silver coinage was maintained in circulation but only at the cost of huge amounts of Treasury silver. In 1964 and 1965 production of silver coins required over 500 million ounces of Treasury silver. During the same period it was necessary to sell an additional 230 million ounces in the open market in order to keep the price at a level which would prevent a wholesale withdrawal of coins from circulation. In short, from 1962 to 1965 the Treasury had to use nearly 970 million ounces of silver in order to maintain an adequate volume of circulating silver coinage. This total was roughly equivalent to 25 years' annual mining production in the United States.

By this time it was obvious that the use of silver in United States coinage for very long into the future was no longer possible. Recognizing this, the Congress in 1965 authorized the production of non-silver dimes and quarters, retaining only the 40 percent silver half dollars as a link to the past.

But the coinage crisis was not over by a long shot. The task now was to produce, during the relatively brief remaining period when it would be possible to keep an adequate amount of silver coins in circulation, enough cupro-nickel dimes and quarters to meet fully the economy's circulation needs.

To the everlasting credit of the men and women of the Treasury's Bureau of the Mint this race was won, although the finish was very close. By May of 1967, when the soaring demand for purchases of Treasury silver forced the final halt to open market sales at the fixed $1.29 price, enough cupro-nickel coins had been produced to tide us over the crisis.

But again the cost in Treasury silver had been high. In 1966 and 1967 another 100 million ounces of silver was used for the Kennedy half dollar and it was necessary to sell nearly 300 million ounces to maintain the $1.29 price. This brought the total amount of Treasury silver used from 1962 through mid-1967 in the attempt to maintain an adequate circulating silver coinage to approximately 1.3 million ounces.

In August 1967 the sale of surplus Treasury silver by the GSA through weekly competitive bids was begun and these sales have continued until the present time. Sales under this program to date have totaled some 220 million ounces. To round out this historical resume, just over 100 million ounces of silver were exchanged for silver certificates during the year preceding the redemption cut-off in June 1968.

THE TASK FORCE REPORT

With this as background, let me now turn to the situation faced by this Administration early this year and review with you the process by which we arrived at our current policy position on silver.

In March 1969 Secretary Kennedy established a special task force of Treasury officials to review all major silver and coinage issues and recommend appropriate administrative actions and where necessary new legislation. I was a member of this group.

The Task Force took as its basic premise that a sound silver policy program should facilitate an orderly withdrawal of the Government as a participant in the silver market consistent with the following essential needs: (1) a strong and efficient monetary system, (2) maximum feasible fiscal return to the taxpayers, (3) minimum inflationary impact on consumer prices, and (4) minimum adverse impact on the balance of payments.

The Task Force first gave attention to determining what portion of the Treasury's supply of silver could be considered surplus to the Government's need over the foreseeable future. We concluded that the total amount of silver available to the Treasury in April of this year that was not directly committed for any future need was about 140 million ounces. This figure was over and above the 165 million ounces of silver which by law had been transferred to the strategic stockpile in June 1968.

In early May the Task Force completed its study and presented a report to the Secretary outlining its recommendations. The recommended program was then reviewed by and received the full approval of the Joint Commission on the Coinage, a non-partisan body established by law to advise the President and the Congress on silver and coinage matters. This 24 member Commission includes 12 members of Congress, 4 members from the Executive Branch, and 8 public members appointed by the President.

The administrative actions endorsed by the Commission were immediately put into effect by Secretary Kennedy. These were (1) lifting of the coin melting ban, and (2) a reduction of the weekly sales of silver by the GSA from 2 to 1½ million ounces.

The Treasury's action in lifting the coin melting ban in May of this year was in our judgment a sound one. At that time the coin melting ban no longer served the purpose cited when it was first put into effect in May 1967, and I might add that a ban on melting coins was without precedent in our nation's history. The original purpose of the ban was to keep the silver dimes and quarters circulating during a period in which there was doubt that supplies of clad coins were fully adequate for commercial needs. But by May of this year virtually all the silver coins had disappeared from circulation and the supply of clad coins was fully adequate for commercial needs.

A secondary purpose of the coin melting ban was to enable the Treasury to build up its reserve of silver coins. However, by May of this year the remaining supply of outstanding silver coins was locked up in private hoards and the inflow to the Treasury had run dry. It is interesting to note, by the way, that lifting the coin melting ban was one of the few issues on which the associations representing both silver users and producers were in accord.

Another important matter to which the Task Force gave careful attention was the question of Treasury silver sales through the General Services Administration. The first consideration was whether the Treasury should continue to sell any silver through the GSA. On this the Task Force recommended that the sale of silver be continued and that it be made clear as nearly as possible how long these sales would be maintained. Let me list a few of the major reasons why this conclusion was reached.

1. The silver being sold is not needed by the Government. The 165 million ounces already transferred to the defense stockpile has been established by the Congress as ample for any future emergency industrial need.

2. The continued sale of silver through the GSA has a favorable effect on the balance of payments. If silver sales were halted, net silver imports over the next year would have to rise by about 75 million ounces. This would increase the balance of payments deficit by perhaps $150 million.

3. Profits on silver sales would add substantially to the Treasury's revenue and since August 4, 1967 this profit has totaled over $100 million.

4. Continuation of Government silver sales would permit the market to adjust in an orderly manner to the inevitable point when the Government must cease to be a supplier, which we now think will be about the end of 1970.

The Task Force then turned to the question of an appropriate rate for sale of the Treasury's silver and concluded that the weekly amount of silver offered through the GSA should be reduced from 2 to 1½ million ounces. The main justification for this action was the belief that since the Treasury would have to halt sales in less than two years, a gradual cut-back in the amount offered would help the market make an orderly adjustment to this fact. It was thought preferable to maintain the 1½ million ounce rate rather than add further uncertainty by phasing out sales at gradually reduced levels.

We recognized that if the intent to maintain the 1½ million ounce sales figure were made clear, participants in the silver market—producers, users, and investors—would have full knowledge of the time and extent of Government activity in the market. During this transition period the market would have ample opportunity to make an efficient adjustment to the time when—like other commodities—the price of silver would be determined entirely by private supply and demand. We felt that removal of uncertainty regarding the future of the Government's silver policy would add a stability to the silver market that should be welcomed by both producers and consumers.

The third administrative action taken by the Treasury with the endorsement of the Coinage Commission was to open the weekly GSA sale of silver to all bidders with no restrictions on the use of the silver purchased. Until that time silver sold by the GSA had to be consumed entirely by domestic industry. This restriction on the use of the silver was established during a period in which the prolonged refiners strike had sharply curtailed the domestic supply of industrial sil-

ver. In recognition of the temporary nature of this restriction, the Treasury in 1967 had signified its intent to remove it as soon as feasible. In our judgment this action was long overdue.

LEGISLATIVE PROGRAM

I would like now to briefly outline the legislative recommendations recommended by the Task Force and which are now under consideration by the Congress. Provisions of this legislation of interest to this group would grant the Secretary of the Treasury authority to mint both a non-silver cupro-nickel half dollar and a non-silver cupro-nickel dollar coin.

The Treasury's request for authority to mint a non-silver half dollar was based on the conclusion that there is an important commercial need for an adequately circulating half dollar that can only be met by minting a non-silver coin. I think the most convincing argument for granting the Treasury this new authority is the fact that only a very small percentage of roughly 1¼ billion silver half dollars—both 40 percent and 90 percent silver—minted since 1963 are actually circulating.

Well over 200 million ounces of silver have already been used to mint this coin. This is equal to the total amount of silver mined in the United States since 1963. As Secretary Kennedy pointed out in a statement to the Coinage Commission, the 40 percent silver half dollar on our past experience is simply a losing proposition. The realistic choice we face is either to abandon this coin altogether or mint it of the same cupro-nickel clad material now used in dimes and quarters. We prefer the latter alternative.

The second major provision of the coinage bill would authorize the Secretary of the Treasury to mint cupro-nickel dollar coins of the same clad material now used in dimes and quarters. Before making this recommendation we gave very careful consideration to the composition of the new dollar coin which would bear a portrait of President Eisenhower. The principal issue was whether the coin should contain silver or be minted of the cupro-nickel clad material used in other coins. This is still an unresolved issue since on last Wednesday the House of Representatives voted for a cupro-nickel dollar coin just a few hours after the Senate voted for a 40 percent silver dollar. This issue will be resolved in the near future.

There are many sound reasons why we believe that a cupro-nickel dollar coin is strongly in the public interest:

1. *The primary purpose of coinage is to effectively serve as a medium of exchange, to buy goods and services. Only a non-silver dollar coin would actually circulate.* The experience with the Kennedy half dollar demonstrates that silver coins will not circulate in significant quantity. The Treasury and the Joint Coinage Commission both concluded that there is a commercial need for a circulating dollar coin that can only be met by a non-silver coin.

2. *Over the next fiscal year the non-silver dollar coin would mean a greater monetary return to the Federal Government than would be realized by a 40 percent silver coin.* S.J. 158 which has passed the Senate would authorize the minting of 100 million 40 percent silver dollar coins a year for three years or until the supply of remaining silver is exhausted. Each 100 million of these coins would mean a return through seigniorage of about $52 million. By contrast, the monetary gain by producing each 100 million non-silver dollar coins would be about $95 million. In addition, if the remaining silver surplus is not used for coinage the Treasury could obtain as much as $50 million more in revenue in 1970 from continued sales through the GSA.

Moreover, if the Congress acts now to authorize the minting of a cupro-nickel dollar coin, the Treasury can move very quickly to mint this coin in volume production, depending, of course, on public demand and available appropriations. We could mint as much as 300 million of these coins by the end of 1970. The total seigniorage, at least in 1970, would certainly be greater for a cupro-nickel than for a 40 percent silver dollar coin. Over a three-year period the seigniorage return on the cupro-nickel coin could approach a billion dollars. The advantage to the public is that this seigniorage return reduces the Government's borrowing needs by an equivalent amount. However, under the provisions of the coinage bill passed by the Senate, the minting of a cupro-nickel dollar coin could not begin until the available silver supply is exhausted which might take several years.

However, it should be emphasized that the major purpose of our coinage system is not to maximize seigniorage but to meet the country's need for an adequate supply of circulating coins. Seigniorage is simply the difference between the face value of a coin and the cost of its component materials. Including silver in a coin reduces seigniorage since silver is obviously more costly than copper or nickel. Although those who advocate the silver dollar assert that this would be equivalent to selling silver for $3.16 per ounce, it is no more logical to put a sale price on the silver in the coin than it would be to compute a sale price on the copper and nickel in dimes and quarters.

3. *Using our surplus silver for dollar coins would significantly increase our balance of payments deficit.* Current annual domestic silver production is less than 40 million ounces compared with industrial consumption of about 145 million ounces. If weekly GSA silver sales are halted because all our remaining surplus silver is reserved for dollar coins, then silver imports for industrial use would have to increase substantially. We estimate that the resulting adverse effect on the balance of payments in the first year could be as much as $150 million.

4. *The final enactment of legislation recommended by the Treasury in addition to providing the economy with needed circulating coinage, would also be a major contribution toward alleviating the unstable conditions that have plagued the silver market for over two years.* The sharp and largely irrational movements in silver prices both up and down have been stimulated by rumors and uncertainties regarding anticipated Government actions. We think the enactment of the Treasury coinage bill will end this uncertainty by finally enabling the Treasury to clearly set forth just how much surplus silver it holds and how long and at what rate this silver will continue to be sold through open competitive bids.

As of September 30 the Treasury stock of silver bullion totaled about 80 million ounces. Of this total about 35 million ounces is in a form readily available for market sale. In addition we estimate that the Treasury's inventory of silver in coins that will be melted into bars totals about 60 million ounces, a figure we consider reasonably accurate within a 10 million ounce range. As of now, the Treasury's total stock of silver, including silver coins, is approximately 140 million ounces. This figure is entirely separate from the 165 million ounces of silver already set aside in the defense stockpile.

The enactment of the Treasury bill would make surplus virtually all of the Treasury's remaining stock of silver except for the relatively small amount that might be required for minting of half dollars in a transition period. We estimate that the silver surplus which could be available over the next year is adequate to continue sales through the GSA at the current rate through the greater part of 1970. At that point the slate would be clean. In this clearly defined period of adjustment producers and users of silver have ample opportunity to gear their operations to eventual complete independence from Government sources of supply.

In summary, the Treasury believes that the administrative actions that have been put into effect with regard to silver together with the prompt enactment of the coinage bill recommended by the Treasury will contribute greatly to a more effective coinage system and facilitate an orderly transition of the silver market to full reliance on private sources of supply.

SUBURBAN ZONING ORDINANCES

Mr. JAVITS. Mr. President, on October 14, I introduced S. 3025, the Urban Land Improvement and Housing Assistance Act of 1969. The bill was cosponsored by the Senator from Michigan (Mr. HART) and the Senator from Pennsylvania (Mr. SCOTT).

In the course of introducing the bill, I noted that the housing crisis is particularly serious in our central cities, where the available land is most limited and most expensive. Nonetheless, the poor are effectively locked into a decaying inner-city housing stock through fragmented, outmoded, and restrictive suburban zoning ordinances.

In an article published recently in the National Observer, Mark R. Arnold noted that the greatest barrier to low- and moderate-income housing in the suburbs is municipal finance. Mr. Arnold writes:

> The plain fact is that under present tax policy it is unprofitable for municipalities to welcome low-cost or high-density housing for large families.

In his article, Mr. Arnold calls for incentives to the suburbs to make low-cost housing opportunities available.

The Urban Land Improvement and Housing Assistance Act of 1969, which I introduced with Senators HART and SCOTT, would encourage States and localities to reform their laws and institutions and to assist them in overcoming obsolescence and fragmentation in zoning, taxing, and building standards. This would be done through Federal incentives—supplementary grants for those impacted local services which would be affected by more intensive land use and expanded low-cost housing.

I ask unanimous consent that the article be printed in the RECORD.

I invite attention also to an article on "New Towns," written by Edmund B. Lambeth, and published in the most recent issue of Washington Monthly. Mr. Lambeth notes the inadequacy of present legislation in this area and emphasizes the role that new town development could play in relieving the pressures on the central cities and directing urban growth. S. 3025 would respond to this challenge by authorizing a program of Federal assistance and loans to States for the establishment of land-development agencies. Such a program, if enacted, would go far to giving government, at all levels, the tools needed to implement a national urban growth policy.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the National Observer, Oct. 20, 1969]

COURTS MAY RULE ON CHALLENGE TO SUBURBAN ZONING—BIG-LOT MINIMUMS MEAN BIG PRICES FOR HOUSING; CRITICS CHARGE EXCLUSION

(By Mark R. Arnold)

There's a new attack on segregation in America.

Its target is the suburbs that ring the nation's cities, where the mechanism of segregation is not the restrictive covenants and discriminatory real-estate policies of old, but local zoning and land-use regulations.

It is a segregation based not on race but on income, and it is placing the suburban dream that has nurtured generations of Americans beyond the resources of increasing numbers of people, white and black.

"Today's suburbs demand an admission price," says urban planner Paul Davidoff, "and more and more people can't pay it." Among those people, he says, are the urban poor, workers with incomes below $8,000, young married couples, and elderly couples who already live in the suburbs but can't afford to stay there if they sell their homes.

NEW-HOME MEDIAN PRICE: $26,700

The median sales price of a new home in the suburbs this year is $26,700, according to the National Association of Home Builders, up from $18,000 as recently as 1963. Many communities offer no new homes in the price range where they are most needed—$15,000 to $25,000, and suburban apartments for growing families are generally available only for the well-to-do.

The problem is this: The soaring costs of land and housing have intensified the demand for modest homes and apartments to absorb the growing population. But the suburbs are swelling, not loosening their entry requirements, decreasing larger minimum lot sizes for houses, tightening up subdivision regulations, rejecting bids for multifamily housing. They are being forced—for reasons to be examined later—to slam the door on people of moderate means.

They can do this because the courts have traditionally held that zoning—partitioning off a community into industrial, commercial, and residential sectors—is a purely local matter. There are 8,800 local zoning boards in the United States—500 in the New York metropolitan area alone, and all operate under a delegation of the state's police power to provide for the general health, welfare, and safety of the community.

SERIOUS QUESTIONS FOR SOCIETY

The National Commission on Urban Problems, which carried out the most comprehensive study of American zoning patterns, recently concluded that local land-use controls are being used to "exclude large numbers of persons from certain areas on the basis of economic status, size of family, or race." The practice, it said, raises "fundamental questions . . . for a democratic society."

Now, for the first time, exclusionary land-use practices are under attack. Items:

A new and controversial Massachusetts law, aimed at forcing suburbs to welcome all income groups, gives a special state appeals board the right to overrule local zoning decisions against low- and moderate-income housing under certain circumstances. In theory the board could compel communities to devote 10 per cent of their housing to lower-income groups.

A new New York State Urban Development Corp. has been granted sweeping powers to build public or publicly assisted housing in any municipality in the state. Veteran urban planner Edward J. Logue, who heads it, says the object is to break through suburban zoning patterns that "promote, under other banners, an *apartheid* residential policy."

A series of legal actions is challenging the Constitutional basis of local zoning autonomy. In two cases about to be initiated, developers in Oyster Bay, New York, and Fairfield County, Conn., will argue that municipal zoning ordinances prohibiting multifamily dwellings do not promote the general welfare and do deprive low-income citizens of their right to equal protection of the law.

THE HEART OF THE CONFLICT

This battle over exclusionary land-use practices may go to the heart of an unresolved conflict over the nature of discrimination in American life. Last year's Federal open-housing law, by removing race as a legally tenable basis for discrimination, in effect set up ability to pay as the sole criterion for housing selection. If the courts should hold that exclusionary zoning practices are themselves discriminatory, then the repercussions would be felt in every suburb in the United States.

The idea that the courts might find such practices discriminatory is not as far-fetched as it might appear. To understand why, it is necessary to look at some of the effects of economic segregation in housing.

First there's the housing market. To meet the expected demand for low- and moderate-income housing, the 1968 Housing Act commits the nation to the building of 6,000,000 subsidized dwelling units over the next decade. Given the shortage of suitable land in central cities, where so many of the poor are now, the assumption is the bulk of that housing will have to go up in the suburbs—in the form of garden apartments, and single-family homes on small lots.

Yet, as Joseph D. Keenan, international secretary of the International Brotherhood of Electrical Workers, told Congress recently: "The plain political fact is that most suburbs resist the location of such housing within their boundaries."

Last week, for example, residents of San Antonio's suburbs were up in arms over a local housing authority bid to hire developers to build 411 homes in the $16,000-to-$21,000 price range for families with incomes below $6,000. Opponents argue the proposal will depreciate the value of neighboring property and overburden the schools.

IMBALANCE BETWEEN JOBS AND PEOPLE

Moreover, there is the growing imbalance between jobs and people. Over half the industrial and commercial buildings constructed in metropolitan areas between 1960 and 1967 were built outside central cities, yet it is in central cities where those who need them most—the poor, the nonwhites and the unemployed—are concentrated. Indeed, as a soon-to-be published report of the U.S. Commission on Civil Rights makes clear, "Jobs for which beginners or relatively unskilled people could qualify—those in manufacturing and retail trades—are the ones for which the trend toward suburban locations is strongest."

"What's all this talk about rebuilding cities?" asks Neil Gold, youthful co-director, with Mr. Davidoff, of the Suburban Action Institute in White Plains, N.Y. "The suburbs have the jobs, the housing, and the land. That's where the resources are. That's where the opportunities are. The only thing not there are the people who need these resources, these opportunities. The thing that needs to be done is to find a way to give them the chance to go to the suburbs like everybody else."

Are such people really barred from suburbs? Not all suburbs are affluent or have restrictive zoning and other land-use regulations, of course. But many do, and the number seems to be increasing.

In the New York metropolitan area, 99 per cent of the vacant land zoned for residences is restricted by zoning to single-family homes. And the size of the minimum permissible house lot in most municipalities is double what it was 20 years ago. Ninety two per cent of the vacant land zoned for residences in Connecticut is reserved for house lots of a half-acre or more, 67 per cent in the Cleveland metropolitan area.

Authorities point out that large-lot zoning sometimes has a variety of justifications such as topography or soil conditions. Sometimes, communities use such zoning to better control the pace of their growth.

Other common land-use practices, however, tend to be exclusionary. Many suburban communities bar any new apartments or townhouses or restrict such construction to high-rise buildings. Says Eugene B. Sieminski, a real-estate economist in Silver Spring, Md.: "Often a community will say okay to one-bedrooms or efficiencies, but no to apartments that will bring in kids."

Another tack is for zoning boards to impose a large minimum square-foot-floor area. For example, the 1,700 square-foot minimum imposed in Bloomington, Minn., a well-to-do suburb of the Twin Cities of Minneapolis and St. Paul, makes it impossible to build a house for under $27,000 in construction costs, according to a study by the National Commission on Urban Problems, headed by former Sen. Paul Douglas.

The Douglas commission says that the suburbs want "all of the cream and none of the milk." And the time-honored sanctity of local zoning decisions permits them to have their way.

"What happens is each suburb says 'we don't want those problems,' and they push them away; they literally zone them out," says Paul Davidoff. "So they all end up in the central city, and you have ghettos, welfare, crime, unemployment, and everything else. But the suburbs pay for it in the end. It's their companies that can't fill their orders because of a shortage of help, the suburban housewife who can't find a domestic, and their homes that are getting the expensive new locks put on the doors."

Mr. Davidoff and Mr. Gold, of the Suburban Action Institute in New York's suburban Westchester County, are mounting an ambitious assault on the nation's zoning codes. With backing from the Taconic Foundation and Stern Family Fund, they are stimulating open-housing groups throughout the New York metropolitan area to hire developers and come up with plans for attractive, low-income housing in their communities.

A FUNCTION OF STATE POLICE POWER

The groups would take options on land, and then petition local zoning boards for rezoning to permit the intended use. If zoning boards refuse—and it is assumed that most of them will—the local groups will take them to state courts. "Zoning is a function of the state police power," notes Mr. Gold, the 32-year-old planning consultant, "and its purpose is to promote the general welfare. If it ignores the poor, we would argue it isn't promoting the general welfare."

Attorneys for Suburban Action also argue that suburban prohibitions on multi-family housing are a violation of Federal law. The argument is that by impeding the freedom of workers to follow their jobs to the suburbs, they restrict interstate commerce. That argument would open the way for litigation in the Federal courts.

Two weeks ago, Suburban Action joined with the NAACP in sponsoring a two-day conference in Chicago aimed at exploring ways to open the suburbs to lower-income groups. It drew representatives of church, civil-rights, labor union, and open-housing groups from various parts of the Midwest. Other conferences are planned for Los Angeles next month and New York City in January.

One likely outcome of the conferences will be a surge of legal challenges to various zoning practices. The U.S. Supreme Court hasn't considered a zoning case in more than 40 years. Some attorneys argue it will have to consider one within the next few years.

"Increasingly," says Richard F. Bellman,

associate counsel of the National Committee Against Discrimination in Housing, "the thrust of legal argument is the effect of governmental action is as important as intent. On that basis the Supreme Court outlawed the poll tax and found it discriminatory. And it said courts have to furnish free transcripts to indigents appealing criminal convictions. If you look at these zoning laws—at their effects—you find them equally discriminatory."

A BARRIER TO LOW-COST HOUSING

Whatever the merits these arguments might have in a court of law, there is one barrier to low- and moderate-income housing in the suburbs that ranks above all others—municipal finances. The plain fact is that under present tax policy it is unprofitable for municipalities to welcome low-cost or high-density housing for large families. Thus the large-lot zoning, the tight sudivision regulations, the rejection of bids for multi-family housing.

"I'll show you why these suburbs are getting more exclusive," says Jack D. Levin, a Bergen County, N.J., realtor, who services the area around Upper Saddle River, a rustic, New York City suburb where the new homes start at $75,000. He takes out his book of listings and thumbs through it. "Here's a $90,000 home, and look at the taxes, $1,000." The picture shows a five-bedroom colonial with gracious lawn and white pillars. "Now look at this one, in a neighboring community." It's an ordinary split level. "$32,900, and the taxes are $904. That's almost as much as the $90,000 home here."

The difference, says Mr. Levin, is that Upper Saddle River has one-acre minimum zoning and the adjoining community a quarter acre. That quarter acre means "more homes to the acre, bigger sewer pipes, more school costs." Taxes in New Jersey have doubled in a decade, Mr. Levin points out, and he adds: "If a home isn't priced above a certain price it doesn't cover the cost to the community of having it there."

Officials of the Parkway School District, which covers the well-to-do western suburbs of St. Louis, estimate it will cost $668 to educate a public-school child this year. To provide $668 in school taxes, a house in the district must be valued at $37,500. To discourage the building of less expensive homes, the Douglas Commission found that local zoning authorities insist on a minimum house lot requirement of a quarter acre.

A MAYOR WOULD BE NUTS

The reasoning of local authorities is that it would be uneconomical for a builder to try to put a house worth less than $37,500 on a lot of a quarter acre. But he might try if the acreage limit were smaller. Two homes on the quarter acre lot might provide more taxes than one house—but they would also increase the burden on community facilities and raise community costs for schools and other municipal services.

It is surely one of the ironies of public policy today that the course most often urged on the suburbs, the opening up of housing opportunities for low- and moderate-income families—is also the most expensive course for them to follow. "A mayor would have to be nuts," says a city planner in Chicago, "to want to do what the Government says he ought to. Can't you just see him telling his constituents: 'Now it may hurt your property values, and overcrowd your schools, and mix you with people you came here to get away from, but don't fret. It will also cost you money.'?"

Washington's newest and most ambitious program for building attractive lower-cost housing is Housing Secretary George Romney's Operation Breakthrough, which would apply mass-production techniques to home construction. The vacant land on which most of those homes will be built is in the suburbs. Yet there is no reason to believe the suburbs will respond to Operation Breakthrough unless they are given bonuses to offset the financial drain of the families they would have to absorb.

There are many ways to build suburban housing at lower cost—the space-preserving cluster-development concept, for example, in which houses share joint walls and courtyards—but in the absence of community incentives, these techniques are not often used to benefit people of low or even moderate means.

Washington then, or the state capitals—if they are given the money they are promised under President Nixon's revenue-sharing plan—must make it worthwhile for the suburbs to lower their price of admission. A model for action, some say, is the impacted-areas program, under which bonuses are paid to communities near Federal installations to defray the costs of schooling children of Federal employes.

Without some incentive system, the growth pattern in metropolitan areas—even allowing that more blacks will become wealthy enough to pay the suburban admission price—will reinforce the existing pattern of segregation by race and by income.

NEW TOWNS: CAN THEY WORK?

(By Edmund B. Lambeth, director of the Washington Reporting Program of the University of Missouri School of Journalism)

Writing two and a half years ago from Tarn House, Norwich, Vermont, H. Wentworth Eldredge, the Dartmouth urban scholar, looked at the near future of urban America:

"At the present, there seems little likelihood, under the American federal governmental system, of making the necessary synthesis of city development, new towns and comprehensive transportation thinking in a national planned system, by regions. . . .

"And yet on the other hand, lacking population control, some form of ordered expansion of urbanization cannot be far ahead and federal legislation to that effect seems to be just around the corner, resting heavily on private experience, as it should, in our very mixed economy."

Eldredge's forecast was nothing if not prescient.

Within the Nixon Administration, and in Congress as well, a "national urban policy" is increasingly regarded as an idea whose time has come. More specifically, the new town is winning favor as a concept that may do for the urban dilemma what the moon landing did for space exploration—supply a needed focus and furnish a symbol to stimulate commitment.

The idea of new towns fits well with what little accepted wisdom there is in the inchoate field of urban affairs. Demographers predict a population increase of 100 million by the year 2000, consuming some 18 million acres of land. The bulk of this growth will occur on the fringe of some 20 metropolitan areas. The new-town advocates ask: Need this growth replicate the urban sprawl of the 1950's, with its waste of land, diseconomies of scale, and disregard of social needs?

Within the next 10 years alone 26 million dwelling units will be needed. Can planned new towns help form the large markets required to give birth to a genuine mass-production housing industry in the United States? Many new-town advocates thinks so.

Politically, the climate for new towns, linked closely to a national urban policy, has never been better. Not the least of the reasons is that the idea is one of the few that the Johnson Administration declined to embrace.

President Nixon, in his population message, called the concept "stimulating." Vice President Spiro T. Agnew, unofficial poet laureate of the new town of Columbia, Maryland, has presided over a series of meetings on the subject attended by businessmen, Congressmen, bankers, labor leaders, and spokesmen for municipal governments. The President's Urban Affairs Council, of which Dr. Daniel Patrick Moynihan is executive secretary, has appointed a cabinet-level subcommittee on land use and new towns. The subcommittee, chaired by Secretary of Transportation John A. Volpe, is expected to confront the issue in depth this fall. A new-towns task force has been formed within Volpe's department, and Sherman Unger, the ambitious and alert general counsel of the Department of Housing and Urban Development, is taking a team of experts to Britain to study new-town financing and building techniques.

HUD's Assistant Secretary for Metropolitan Development, Samuel C. Jackson, has urged that states charter urban development corporations, which would give them the eminent-domain powers needed to assemble land for new communities.

To help assure their success, Jackson held open the possibility of direct loans to pay interest and other carrying charges, loans for capital investment, "and possibly even capital grants." Jackson's view is that the existing, modest program of federal assistance to new communities—which will guarantee debentures issued by builders in such communities—is probably not enough. "It is clear," he said, "that if the full range of potential benefits of new towns is to be realized, something more than the existing program is needed."

The precedent for Jackson's proposed state initiative is New York's Urban Development Corporation, a Rockefeller-created authority with power to override local zoning codes, condemn and assemble land, and sponsor the construction of houses, factories, schools and parks.

Headed by planner Edward J. Logue, late of Boston and New Haven, UDC will break ground next spring on a new town 12 miles northwest of Syracuse. Its population is expected to reach 16,000 in 10 years. A much bigger community will take shape under UDC auspices in Amherst, a Buffalo suburb that is the site of a new state university campus.

Several strategically placed Senators, Congressmen, Governors, and Mayors have put their signatures on a report called "The New City," which urges the creation, with federal assistance, of 100 new towns of 100,000 population and 10 with a population of one million.

The report, which includes several essays financed by the Ford Foundation, was sponsored by Urban America, Inc., and—more significantly—the U.S. Conference of Mayors, the National League of Cities, and the National Association of Counties. The municipal lobbies, adamantly opposed to new towns when the issue first came up in 1964, changed to support in 1967. Their stated reason is that, properly conceived and administered, new towns could relieve existing cities, particularly when it comes to the shortage of decent houses and jobs.

In the House of Representatives, one of the signers of "The New City" report, Thomas Ludlow Ashley (D-Ohio), persuaded Wright Patman (D-Tex.), chairman of the Banking and Currency Committee, to appoint a special ad hoc subcommittee on urban growth, of which Ashley is chairman. New towns will figure prominently in the hearings, which will attempt to massage the Congressional central nervous system enough to make "urban growth"—and thus new towns—an actionable issue.

But the average member of Congress is like the citizen he represents. Few have visited a new town and those who have would be hard pressed to define what one is.

By HUD's definition—a degree of self-sufficiency and a land area of at least 1,000 acres—there are only 64 new towns in America, 40 of them built in the last decade. They range in projected population from

10,000 (Joppatowne, in Hartford County, Maryland) to 600,000 (California City, in Kern County, California). Eighteen states have new towns but most are in the playland states of Arizona, Florida, and California.

By the most generous analysis, however, new towns built so far show little promise of relieving the American city of its unemployed or ill-housed. Even the widely praised Columbia, Maryland, built between Washington and Baltimore by developer James Rouse, makes no pretension of relieving the ghettos of either city. As Morton Hoppenfeld, Columbia's chief planner, candidly explains:

"Columbia was designed to be attractive to that majority segment of the population which is economically viable in the market. As a venture of private capital, Columbia will be unable to reach and affect some of the gut social problems of American urbanization."

Many developers, moreover, do not have the "patient" money available to Rouse. Thus Dale City, Virginia, where 2,500 families have bought homes in a planned "dream community," now finds itself barren of such promised amenities as golf courses, riding trails, and Olympic-sized swimming pools. In the words of Dale City's planner, who had hoped for a city of 80,000, the community now is "just like any other typical real estate development."

The problems facing a private new-town developer are formidable. He must assemble enough land, arrange financing that is patient enough to wait 10 years for a profit, and find management experts who are willing to risk their reputations on one of the most difficult of all real estate ventures.

The American new towns that have been able to meet all these conditions have been "flukes," that is, special exceptions that prove the grim rules.

The 12,000 acres on which Litchfield Park, Arizona (population 100,000), is rising had been owned intact by the Goodyear Tire & Rubber Co. since World War I days. Irvine, California, with 88 acres of debt-free land, is the inheritance of an old southern California ranch family. Few families have acreage on hand covering four times the land area of Manhattan.

Other new towns are built by big national corporations with ready cash. The Pennsylvania railroad found itself with money aplenty when forced under anti-trust laws to sell the Norfolk & Western Railroad. As a result, it bought Macco Realty—the developer of Porter Ranch in Los Angeles county and the owner of 100,000 acres in southern California.

Other big corporations enter the new-town business to push the sale of their products. Boise-Cascade, a lumber and timber company, has bought two home-building firms (Perma-Built Enterprises and U.S. Land Corporation) and is building resort communities near Cleveland, Chicago, Gary, Kansas City, and Fredericksburg, Virginia. Westinghouse is building Coral Springs, Florida (population 60,000), as an "urban laboratory" for its products. Walt Disney Productions, Inc., likewise is building a new community near Orlando, Florida, to introduce, test, and show off new technologies. Humble Oil Company had land, investment money as well as a product sales motive in mind when it began building Clear Lake City on 15,000 acres near Houston.

But other large companies, less favorably situated with respect to the key ingredients of the new-town business, have found the entry barriers formidable. General Electric dissolved its Community System Development division last February, after a two-year exploration of whether to enter the city-building business. GE concluded that the risk was too high and the profits too slow; it also found that low-cost land and special financing were too difficult to assemble. New communities on a large scale will not flourish, GE decided, until government agrees to help.

In view of the impending policy decisions on new towns in the federal government, GE's recommendations are worth quoting in some detail:

"It just makes sense that the power of eminent domain must be granted to private corporations or to state development corporations in order to assemble land in the right location and to take advantage of existing and planned public investment in highways, water works, sewage disposal facilities, airports, and railways.

"Perhaps something similar to urban renewal must be created, whereby land is assembled, master planned, zoned, and resold at a write-down to private builders by a local development authority.

"Tax restraint must be exercised to relieve the financial burden on the developer in the early stages; taxes can then be raised on a gradual basis after actual improvements are put in place.

"At the state level, legislation must be created that will permit the developer to retain a measure of control over planning, zoning, and community services for an agreed-upon development period, so that a dissident group cannot thwart financial planning or the very concept itself."

GE said it would maintain an "avid interest" in the city business and would re-enter it "under the proper combination of conditions"—meaning a federal subsidy similar to that for urban renewal. Its recommendations have the virtue of at least forcing the new-town advocates to face some of the harder questions.

What would the public gain in return for such a subsidy? An adequate supply of low-income housing? Why will new towns allow or encourage this when it has eluded new neighborhoods, city or suburban, for 30 years?

When the state or local development authority begins searching for tracts large enough for new towns, what will govern the price paid for the land? Will the big corporations now buying land as a hedge against inflation be given the benefit of price accrual due to the government's known plans for a new town?

If autonomous new towns are the goal, can it be assumed that industry and business will voluntarily locate there to provide jobs for the new residents? If not, what will have to be done to induce them to a new-town location? Why will a new town make an industrialist more willing to invest in jobless workers than a city location?

Significantly, the report sponsored by the municipal lobbies and Urban America, Inc., called for long-term loans or loan guarantees, rather than outright subsidies. Loans would defer repayment and interest for 15 years—which amounts to a substantial indirect subsidy. And no one familiar with the way federal "loan programs" begin can have much doubt that direct subsidies would evolve.

John Gunther, executive director of the U.S. Conference of Mayors, said in an interview that the mayors' switch on new towns was merely an attempt to be constructive.

"We kept getting asked about new towns in Congress and we didn't want to be negative. We've studied the matter now and we see positive advantages, provided that it's done right. We think the ideas in 'The New City' are the right ones. Our goal is to make existing cities as good an investment as new towns and to use new towns to solve some of our problems."

Although Gunther says that the 1967 riots did not cause the mayors' change of heart, it is clear that the violence made a ghetto-dispersal policy much more attractive to big-city governments. In any event, the advocates of new towns have already begun to anticipate opposition from black-power separatists who claim, or will claim, that new towns are an attempt by the white man to decimate black majorities before they form.

Arithmetic answers the separatists. Even if new towns were to become home for 10 million Negroes in the next 30 years—a prodigious accomplishment—black voting strength in the central cities would not appreciably diminish.

Perhaps more significantly, such influential black militants as Clarence Funnye, director of planning for the National Committee Against Discrimination in Housing, have spoken up forcefully against the separatists. The ghetto, Funnye insists, has the least land available for the kind of large-scale industry which could create new jobs. That land is in outlying areas. He advocates "deghettoization" via new towns and an aggressive open-occupancy program for the suburbs.

But aside from the expected opposition of some black separatists, the policies outlined in "The New City" have a remarkable unifying power. The proposed development corporations would not only be empowered to build new towns in the countryside, but also on the metropolitan fringe, within existing cities and around small rural towns that are either dying or failing in growth.

Even though new towns on the magnitude envisioned in "The New City" would accommodate only one-fifth of the nation's urban growth over the next 30 years, this is a substantial fraction. It is a fraction, moreover, that would drain away a commodity more scarce in America than land or mortgage money—urban management talent.

The excitement of a new town is real. To the urban developer, a new town is what forgiveness is to the sinner or town drunk: a fresh start spiritually, the opportunity to begin from scratch. The old town offers no such respite. As the Rand experts imported by Mayor John Lindsay learned, the cliché "problems of the cities" masks a reality even more severe than they thought.

Nathaniel A. Owings of San Francisco, principal in the architectural firm of Skidmore, Owings and Merrill, told a recent St. Louis symposium on new towns: "To my mind they are even immoral. . . . The new town is one of these illusions used to palliate the issues and get away from the problems."

And Edmund N. Bacon, the respected Philadelphia planner, added that the new town is "representative of the American propensity, when faced with a problem of changing the subject."

These criticisms are recognized by the more cautious exponents of new towns. Thus Paul Ylvisaker, a founder of the war on poverty and now Commissioner of New Jersey's Department of Community Affairs, told a Congressional committee:

"I've considered carefully the subconscious motives behind it (the new town idea). If we are to build new communities, and I hope we will, we ought to be clear about our own motivation, since the possible motives are several. . . .

"After all, there is an escapist tendency in new-town thinking which leads people to where there are, or seem to be, no confining parameters and no conventionalism; the politics are new, the land is clear, and even the zoning laws might be changed. The danger here is that needed resources and energies will be diverted from the problems of our cities.

"There are some caveats to the building of new towns, but there is more to the idea than escapism and there are ways of nourishing the new without starving the old. The effort to build new towns may be a cathartic in our present system. We may have reached a dead end in evolving an urban culture, at least in some respects.

"We must break loose the old and invent the new. We cannot rely entirely on the in-

cremental method to achieve the full measure of progress that is now necessary. Radical departures are called for, both in reshaping our old communities and in designing the new. Certainly the new town in this sense is a healthy concept and I am among those who welcome it."

If Ylvisaker's assessment is near the mark, several overriding questions face the Nixon administration.

Can it find or afford the money to fund a new-towns program on a scale large enough to influence the direction and character of urban growth?

If it can, will the now-fragile "new federalism" become strong enough to overcome the new town's inherent tendency to overpromise and underdeliver?

PROJECT SANGUINE

Mr. NELSON. Mr. President, with the ever-increasing pressures on the natural resources of this Nation, northern Wisconsin has found itself in a special position. The State's north country is still rich in thick forests, fertile farmland, clear trout streams and hidden lakes, and room for wildlife to flourish.

Wisconsin has taken special precautions to retain the unique nature of the north country and the resources of the State. But in spite of all the work and money the State has spent for recreation and conservation, Wisconsin is now faced by a unique threat—a communications weapon with the peculiar name of Project Sanguine.

With this communications device, planned to be the largest in the world, comes the potential for serious environmental damage to a substantial area in the northern half of Wisconsin. As planned, Project Sanguine will be an antenna grid made up of thousands of miles of cables buried some 5 feet underground, and extend under more than 20,000 square miles of Wisconsin fields, forests, and lakes. Underground transmitters, carrying massive amounts of electricity necessary to run the antenna, will create a unique electrical environment, expected to be felt in 26 northern counties.

After two special briefings with Navy officials, I still have not heard or seen any convincing arguments that would justify the construction of Project Sanguine. Even the Navy admits the potential hazards connected with transmitting extremely low frequency signals are great since very little is known about the frequency level and its effect on plant and animal life.

Unfortunately many people in the State have been misled that the billion dollar project will bring an economic boom to the north country. The fact is, however, that the Navy has conceded that when finished, the project will not employ more than 300 persons, mostly technicians.

What is most reprehensible, is the fact that the highly questionable and extremely expensive project is already in the first testing phase and Congress has never debated or discussed the serious questions that must be answered to determine if the project is justified as a feasible, necessary military weapon that is not a hazard or inconvenience to residents of the State.

It seems to be another in the long line of potentially dangerous military projects that could easily escalate into several billions of dollars without any adequate discussion. The Navy has estimated it could cost some $2 billion, but assurances that the Navy will insulate away the danger to the electrification of metal objects like fence lines and railroad tracks, could rapidly increase the cost.

Navy officials have traveled throughout the towns and villages of the State in a well-organized public relations campaign, showing movies, giving speeches, and attempting to convince the uneasy residents that the communications weapon is necessary and that the military will not build it if it is harmful to people, fish, or wildlife.

Those assurances seem highly questionable, when the same Navy officials discount voltage running through miles of fence lines by offering plans to mitigate or insulate every strand to safe, nonhazardous levels.

They also say the currents will not have any effects on earthworms and have commissioned a $175,000 study at the Falls Church Hazelton Laboratories. Earthworms and other organisms are vital to living, productive soil.

It is absurd to think that the long-range effects on humans, wildlife, domestic animals, and plant life living in the range of the system can be learned from a 1-year $175,000 study.

Several objections must be adequately resolved before I will ever consider supporting the project in any way. If they are not resolved I will stand against the project and seek support in Congress for that stand.

It seems strange that Congress and the Wisconsin State officials were told nothing about what the Navy was planning for the Chequamegon National Forest area until people in the tiny community of Clam Lake became curious about what kind of construction was going on in the woods as work began on the testing phase.

In the meantime, some $50 million has been appropriated and about half that amount spent. Congress spent several months this year debating the deployment of an anti-ballistic-missile system. Why cannot time be set aside for Congress to discuss the hazards, necessity, feasibility, and arms race escalation potential of Project Sanguine?

All possible hazards to people living in the area and the inconveniences to them must be carefully evaluated. This includes the inconvenience to farmers who must contact the Navy before building or changing fence lines to protect against voltage buildups in the wires; the elimination of hazards to children and hunters who might be severely injured when coming in contact with a metal fence line or object somebody forgot to mitigate; and the elimination of all possible interference with telephones, radios, televisions, and other electrical appliances. At one small testing site with extremely low frequency waves telephones were set off and began ringing.

Clearly, no system can be installed in northern Wisconsin until it is unquestionably resolved that the system will not endanger the wildlife and natural ecology of the area's farm and forest land.

Even after all the testing is finished and the Navy and the Department of Defense has issued its assurances, an independent group of scientists, with no connection with the military, must evaluate all studies and review and make recommendations before further expenditures or construction takes the slightest movement toward completion.

The Navy has argued that it needs the antenna system because it would give the United States an almost unjammable communications system and an ability to radio deep running Polaris submarines. Almost unjammable does not mean much when it is known that an enemy Project Sanguine could jam the American Sanguine.

The Navy further argues that it presently is unable to radio commands to a submarine unless it comes to periscope depth. This is considered dangerous and the Navy contends that it hinders the Nation's retaliatory power and threatens national security.

It seems that every expensive military system, no matter how questionable or how dangerous it is to the American people, it is supposedly designed to defend, comes with the same worn argument—it is retaliatory and insures national security.

Some critics have noted, however, that Sanguine could be much more an offensive weapon than a defensive one. It has even been called a "doomsday machine" by some observers.

That criticism is not without validity when it is considered that one impulse command could set off a rain of nuclear Polaris missiles that could easily destroy an enemy.

The cynical doomsday capacity of the communications weapon is that if all other communications systems and defensive missile systems were knocked out by an enemy attack, Sanguine would remain. The Navy contends it would be too widespread in land area to knock out and would be a waste of enemy missiles. So if all else goes, Sanguine could be the vengeful hand from the grave that with a last gasp, pushes the final button to unleash the last firey revenge of deadly missiles fired from submarines hidden in the depths of the ocean.

The questions are too numerous for Congress to ignore any longer. I ask unanimous consent that several articles about the proposed project that is in the first phase of construction and testing be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Oct. 14, 1969]

CONTROVERSY AND ANTENNAS GROW IN WISCONSIN FORESTS

(By Anthony Ripley)

CLAM LAKE, WIS.—There is a strange and mighty visitor stirring in the vivid autumn woods four miles south of here.

It is the United States Navy and, depending on one's point of view, the Navy is going to turn the northern Wisconsin forests into either the world's biggest "electric chair" or a "world peace center."

These are the most emotional descriptions yet in a growing public debate over Project Sanguine, once such a highly classified matter that the Navy even stamped newspaper clippings on the subject "secret."

Beginning last fall and working through the winter, the Navy has installed one of the world's largest radio transmitters four miles south of Clam Lake, a settlement of 75 persons in the Chequamegon National Forest.

2.4 MILLION WATTS

Two 14-mile-long antennas, crossing in the middle, stretch out along 30-foot swaths cut into the forest. The antennas hang from heavy-duty utility poles and are capable of sending a powerful, low-frequency radio signal around the world.

The average toaster operates at 1,000 watts and the largest commercial AM radio stations in the nation are limited to 50,000 watts. The Clam Lake transmitter can put out 2.4 million watts.

Such current thrown into the air electrifies metal objects nearby and can upset telephones, television and household lighting.

Ultrahigh frequencies can have physical effects on man, animals and plants. The Navy plans to use ultralow frequencies where little is known about side effects because such radio waves have been little more than a laboratory curiosity in the past.

ONE-WAY TRANSMITTER

But Navy spokesmen say this curiosity can be made into a one-way transmitter. Although incapable of sending a human voice, it can slowly transmit coded signals in the 40-cycle to 80-cycle range that are practically unjammable.

The spokesmen have indicated that "hot line" messages from the White House or Pentagon could order signals from such a transmitter to Polaris submarines that cruise the world's oceans with nuclear missiles. Because of the long wavelengths, the signals penetrate the ocean water to great depths and the submarines will not have to surface for instructions.

If four to six years of testing with single transmitters go well and the giant antennas do not cause too many electrical problems in the forests and homes nearby, the Navy plans to install a gigantic underground grid of cables and transmitter stations that could cover most of northern Wisconsin.

THREAT TO WILDLIFE

Those who regard Sanguine as "an electric chair" believe its tremendous size and currents will drive away game and fish, electrifying everything in sight. And they think the project is an escalation of the arms race.

"World peace center" believers feel that the project will help guarantee peace through power, that the Navy can take care of any electrical problems and that the whole thing will help the region's depressed economy.

At Clam Lake, few are sure yet what the project means.

When the Office of Economic Opportunity opened a Job Corps center near Clam Lake, there was strong opposition initially. But the arguments died out when it was discovered that jobs and income were there for local residents. The Job Corps center is now closed.

Louis Hanson, a former State Democratic chairman, lives in Mellen, Wis., with his wife, Camilla, the former Mrs. Theodore C. Sorensen, and her three sons. He works as home assistant to Senator Gaylord Nelson, a Democrat, and thinks that Sanguine borders on insanity.

In July and August of 1968, when the Navy announced it, Senator Nelson began wondering when he had ever voted for such a project, Mr. Hanson said. "So he called an admiral and he came over with another man who had a briefcase shackled to his wrist.

"They opened the briefcase and it had newspaper articles in it stamped secret. That caused a little stir at the time. They don't do it anymore."

Mr. Hanson said the first appropriations had been voted in 1958 as part of a general Navy research and development program. Since then, at least $28-million has been spent on the project.

Northern Wisconsin was chosen as the site because of an ancient rock formation, the Laurentian Shield, which is dry and nonconductive, providing a base that will not cause heavy losses of current along the huge antennas.

The Laurentian Shield extends through 26 counties in Northern Wisconsin, Mr. Hanson said. These counties make up 41 per cent of the state and contain about a million persons.

He added that the final antenna grid might be as big 150 miles wide and 150 miles long, with 240 transmitters, and would cost from $2-billion to $10-billion.

The Navy maintains that there are no final figures on how big or costly the project might be because it is still in an early test phase. Although a number of conflicting figures have been published, they have no substance, according to John Hennessey, Public Congressional Affairs Officer for the Naval electronic systems command in Washington.

The first Sanguine experiments were conducted on a mountain top in 1962 in Southwestern Virginia and North Carolina, Mr. Hennessey said in an interview. The experiments caused some telephone and electric difficulties near Mount Airy, N.C., but the Navy said these were solved and the transmitter there was still in use.

Although confident that most of the electrical side effects in Wisconsin can be "mitigated," the Navy added a series of tests on plants and animals when protests grew. A study was ordered from Hazleton Laboratories, Inc., of Falls Church, Va., but it only added to the controversy.

In its proposal for the study, the laboratory noted:

"It has been shown that there can be pronounced effects on the longevity, body weight, growth, behavior, central nervous system, reproduction, etc., in animals as well as effects on plant development from ultrahigh frequencies."

In the low frequency ranges, the proposal added, little work has been done although "there may be some effect on sperm production," according to a study done in 1967.

POSSIBLE EFFECTS

"The antenna will be enormous and, therefore, many people, domestic and farm animals, fish, insects, earthworms, birds and indigenous plant life will all be exposed to its fields for very long periods of time unless they are killed by it, are removed, or in the case of free-ranging animals, are driven out by noxious effects. Of course, it may be that the fields will be totally benign."

Opposition has boiled up, mostly in the Democratic party and among conservationists.

A Stop Sanguine Committee has been organized by Kent D. Shiffert, a history instructor at Northland College in Ashland. The state Democratic party has passed a resolution arguing for more studies on environmental effects. Senator Nelson has branded the Hazleton study as "totally inadequate."

One of the Sanguine's prime defenders has been Representative Alvin E. O'Konski, a Republican, whose district includes the Sanguine area.

When the Navy scheduled a meeting last July to explain things to Ashland County officials, the county's New Democratic Coalition urged the public to attend in a mocking advertisement in The Ashland Daily Press that read in part:

"Hear the genuine Navy captain talk about the world's biggest electric chair. Caution! Asking questions that embarrass the Navy may be unpatriotic."

The meeting was stormy but the Navy prevailed.

William R. Hayford of Camden, N.J., an engineer who is site manager at Clam Lake for the RCA Corporation, a major contractor, said the test facility was designed to answer all the questions raised.

"We've got to convince people we're not guessing," Mr. Hayford said.

"These people are asking honest and fair questions and they have to be answered and they will be and that's why we're here."

Mr. Hennessey, the Navy spokesman, said the final Sanguine system would have to be "survivable" after an atomic attack.

In military jargon, survivability is determined by four factors: dispersion (how widely it is spread out), redundancy (having a large number of similar installations), hardness (keeping it in a safe place, such as underground) and mobility.

Mr. Hennessey said Sanguine would meet three of the four requirements.

He described the project as an "adjunct" to existing communications systems and said it was not totally protected from enemy jamming. Any radio signal can be jammed by building a larger, more powerful transmitter and overwhelming the old signal.

Mr. Hennessey emphasized that the Navy was not going ahead with Sanguine unless all problems could be "mitigated."

"Either Sanguine is compatible with its environment or we don't build it," he said.

Last summer, in Park Falls, Wis., protesters put up a picture of an electric chair on a rented billboard with the legend, "Project Sanguine—Shocking, Isn't It?"

Within 24 hours the sign was smeared with paint and someone had written, "Go Navy."
